PREFACE

VOLUME III with its two Parts comprises the third, and final, instalment of my work on Zeus: *numero deus impare gaudet*. It may be thought that a task taken in hand as far back as 1907 ought to have been completed long before 1939. But kindly critics will remember that the task itself was one of formidable complexity, that the leisure left to a teacher occupied throughout with College and University duties is necessarily limited, and that the commotions of our time have hardly been conducive to a peaceful investigation of the past. This at least I can claim that, year in, year out, I have steadily pursued the plan originally laid down for the scope and contents of the book. Volume I was to deal with Zeus as god of the Bright Sky, Volume II with Zeus as god of the Dark Sky—an arrangement of essentials approved by the high authority of Otto Weinreich (*Archiv f. Rel.* 1937 xxxiv. 138). Accordingly, Volume I included not only the Hellenic worship of the Bright Zeus, god of the Upper Sky, but also the Hellenistic attempts to connect him with Sun, Moon, and Stars, while Volume II was devoted to the Dark Zeus, god of Thunder and Lightning, in all his multifarious aspects. Thunder and Lightning proved to be so wide-spread and far-reaching that much had perforce to be left over for a third, at first un contemplated, volume. This concerns itself with Zeus in his relations to a further series of cosmic phenomena—Earthquakes, Clouds, Wind, Dew, Rain, and Meteorites. But I need not here enter into a detailed account of sections and subsections, as I have later endeavoured to trace in sequence the whole evolution of the cult of Zeus (pages 943 to 973), concluding with a statement of what I conceive to be its ultimate significance (pp. 973, 974).

The work as a whole sets out to survey the range and influence of the Greek Sky-god. It would, I suppose, have been possible to do this in less discursive fashion by means of tabulated statements and statistics—a list of his cult-centres, an index of his appellations, a classified catalogue of his representations in art—in short, to adopt the dictionary-method, admirably carried out by E. Fehrle, K. Ziegler, and O. Waser towards the end of Roscher's great *Lexikon* (vi. 564—759). But my notion of a survey is somewhat different. I find a road-map less helpful than an ordnance-sheet.

The former may simplify things and enable you to get more directly to your destination. But the latter invites you to explore the neighbourhood, marks the field-paths, puts in the contour-lines, colours the water-ways, and prints in Gothic lettering the local antiquities. Time is lost, but knowledge is gained, and the traveller returns well-content with his trapesings. So I have deliberately chosen the more devious method, and I can only fall back on Herodotos' plea that 'my subject from the outset demanded digressions.' Indeed, it was just this need for latitude that led me to widen the title *Zeus* by adding the subtitle 'a Study in Ancient Religion.' That is the real justification for long-winded footnotes and a fringe of Appendixes.

With regard to the Appendixes I regret, not so much the fifteen that I have written, as the three that I have failed to write—letters C, D, and O. Ideally C should have dealt with Zeus at Corinth, D with Zeus at Dodona, O with Zeus at Olympia. I did indeed pen a screed on 'Korinthos son of Zeus,' but I suppressed it because the aetiological myth that I thought to detect implied the existence of customs for which I could produce no adequate evidence. As to Dodona, I have made certain interim observations in the *Classical Review* for 1903 xvii. 178—186, 268 f., 278; but the problems presented by the oracular cult cannot be securely solved till the oracle itself has been fully excavated (*infra* p. 1131). On Olympia too I have said my say both in the *Classical Review* for 1903 xvii. 270—277 and in *Folk-Lore* for 1904 xv. 397—402. To describe the material remains of the famous *témenos* was no part of my programme. Dr E. N. Gardiner has covered the ground (*Olympia* Oxford 1925), and Dr W. Dörpfeld dug deep beneath it (*Alt-Olympia* Berlin 1935).

The quarter-century that has intervened between the publication of Volume I and that of Volume III has of course brought an annual harvest of discoveries and discussions bearing on the subject of Zeus, all grist to my mill. Hence the mass of miscellaneous Addenda from page 1066 onwards—'1066 and all that'! It was a cheer to find that these additions, almost without exception, fitted well into the framework of the book and very seldom called for the retraction of a definitely expressed opinion.

As before, I write with a sense of profound obligation to others. First and foremost stands my debt of gratitude to the Syndics of the University Press, who once again have borne the whole financial

burden of publishing, despite all difficulties, this costly and unprofitable work.

Zeus, I am happy to say, has been begun, continued, and ended under the auspices of two old friends, old in years but young in outlook—Sir James Frazer and Dr Rendel Harris. It was they who first welcomed the inception of the work, and, though quite aware that I often dissent from their findings, they have wished me well from start to finish.

I have further been able to count on the co-operation of many loyal helpers. Where my enquiries have trenched upon unfamiliar ground I have not hesitated to call in expert advisers. On points of Semitic lore I have consulted Professor S. A. Cook (p. 1072), the late Professor S. Langdon (p. 550 n. o), and the Reverend H. St J. Hart (p. 891). In Mesopotamian matters I have been assisted by Mr Sidney Smith (p. 832 ff.) and Dr H. Frankfort (p. 1196). Egyptian usages have been made plain to me in conversations with Mr Sidney Smith, Mr P. E. Newberry, and the late Mr J. E. Quibell (p. 305). Sir John Marshall gave me his opinion on the origin of Çiva's trident (p. 1156). Professor H. W. Bailey has reported on Sanskrit and Persian etymologies (pp. 916 n. 1, 925 n. 3). Mr A. Waley identified the source of a Chinese inscription and translated it for me (p. 1138). Dr B. F. C. Atkinson allowed me to rifle his unpublished work on Illyrian names (p. 364 n. 8). Lastly, Dr F. R. C. Reed enabled me to determine the material of an ancient cameo, while Dr F. C. Phillips as official mineralogist and petrologist made analyses on my behalf (p. 898 n. 4).

Reviewers in general have been benevolent, but superficial and sometimes woefully misunderstanding. Signal exceptions have been the detailed and very helpful *critique* of Charles Picard (*Revue de l'histoire des religions* 1926 xciii. 65—94) and a most heartening notice by Otto Weinreich (*Archiv f. Rel.* 1937 xxxiv. 137—139). For such shrewd objections and penetrating judgments I can but feel immense respect. Critics of this type are all too rare.

Among friends that have put an active shoulder to my wheel I would name first my colleague Mr C. T. Seltman, who with his amazing knowledge of ancient art and modern art-collectors has been endlessly useful. It was, for example, through his good offices that I secured the unique double axes from Crete and Athens (figs. 894, 895), the new Orpheus-vase published in pl. xvi, and that most notable of all Greek coppers the Mytilene-medallion

of pl. i. But Mr Seltman has no monopoly of kindness. Not a few of my former pupils, while engaged on quests of their own, have spared time to forage on my behalf. In particular, Mr A. D. Trendall, Fellow of Trinity College and our foremost authority on South Italian vases, has sent me a flight of valuable photographs from Athens (pl. xlvi, 2), Capua (pl. lxxv), Rome (pl. lii), Taranto (pls. xiii, xv, 2, lxxi), Berlin (pls. liv, lx), Bonn (pl. xiii, 3), Gotha (pl. lxiii), Leipzig (pls. lxii, lxv, 1), and Vienna (fig. 476). Mr J. D. S. Pendlebury, Fellow of Pembroke College, has more than once put his intimate knowledge of modern Crete at my service (pp. 1070, 1143) and himself photographed for me an early Greek *stamnos* from Knossos (pl. xxv). Mr E. J. P. Raven procured for me photographs of an interesting *pithos*-lid from the same place (pl. lxxxi) and of the relief-*plaque* from Athens representing a primitive form of Athena (pl. xxvi). And Mr R. M. Cook furnished me with the photograph of a small bronze statuette recently found in Bulgaria and important as being clearly inspired by Pheidias' Zeus *Olympios* (pl. lxxxii).

Others have gone far afield to record mountain-scenes difficult of access. Dr N. Bachtin gave me prints of Mount Ossa and of the chapel on its summit from photographs taken by Mrs Bachtin in 1934 (figs. 908, 909), and three times over climbed Mount Pelion to investigate the alleged discoveries of Arvanitopoulos (p. 1161). Ossa, Pelion, and—to complete the proverbial pile—Olympos. Mr C. M. Sleeman, Fellow of Queens' College, ascended Olympos twice, in 1926 and 1929, bringing home with him a wonderful series of views, which included not only the actual summit (pl. lxxviii) but all the principal peaks (figs. 911, 912) and the little chapel of St Elias (fig. 913). Mr Sleeman in 1926 also photographed the summit of Parnassos (fig. 907), and, being an indefatigable mountaineer, in 1936 climbed Mount Argaios and supplied me with striking photographs of the top (fig. 915) and of a rock-pinnacle beneath it (fig. 916). Mr W. K. C. Guthrie, Fellow of Peterhouse and now Public Orator, in 1932 discovered and photographed a double rock-cut throne on Findos Tepe (figs. 858—860). Mr N. G. L. Hammond, Fellow of Clare College, in 1931 told me of Mount Emertsa on the Albanian frontier, which he had found to be locally identified with Dione in repose (p. 1173). But of all these mountain-exploits none is more arresting than the narrative dictated to me by Mr H. Hunt, who in 1929 went on pilgrimage

with Bektashite monks to the summit of Mount Tomori near Berat and there actually witnessed the sacrifice of a white bull to 'Zefs' (p. 1171).

For other photographs, too numerous to specify in detail, I am indebted to a host of contributors both at home and abroad. My debt has, I think, always been acknowledged in a footnote. But I cannot refrain from mentioning here certain cases of outstanding interest. Mr Sidney Smith, Honorary Fellow of Queens' College and Keeper of Egyptian and Assyrian Antiquities in the British Museum, presented me with a magnificent photograph of the newly-discovered 'Lilith' and added to his kindness by discussing with me her status and attributes (pl. lxi). The late Dr A. H. Lloyd gave me an exquisite plate of the golden barley found amid the dust and *débris* of a grave near Syracuse (pl. xxxi). Professors G. M. Columba and E. Gàbrici supplied a fine photograph of the Oknos-vase at Palermo (pl. xxxvi); Professor D. M. Robinson, several views of the Bouzyges-vase at Baltimore (pl. xlv); Professor P. P. Jacobsthal, the print of a vase at Marseilles representing, he holds, the oracle of Orpheus' head (pl. xviii).

Casts of coins and gems have again been sent me without charge and without stint by the authorities of the British Museum, to whom I am further indebted for much encouragement and helpful talk. I am particularly beholden to Mr H. Mattingly, Mr E. S. G. Robinson, and Mr Sidney Smith, of whose prompt aid I have availed myself time after time with shameless persistence. Mr R. B. Whitehead also was good enough to send me a series of choice impressions from his own unrivalled store of Bactrian coins (figs. 369, 371). Monsieur le Comte Chandon de Briailles supplied the cast of a gem representing Kroisos on the pyre (fig. 329), and Mr C. D. Bicknell that of a gem in the Lewis Collection showing Athena as a human-headed bird (fig. 608).

Permission to produce or reproduce plans and illustrations has been generously granted by Messrs F. Bruckmann and Co. of Munich (pls. vi, vii, xxiii, xxxvii), by Sir Arthur Evans (figs. 202, 265), by Mr N. Glueck of the American School of Oriental Research, Jerusalem (fig. 876), by the Council of the Hellenic Society (figs. 578, 579), by Dr F. Matz of the Staatliches Lindenau-Museum at Altenburg (fig. 619), by Dr H. Meier of the Warburg Institute (pl. xl), by the late Mr J. E. Quibell (fig. 195), by Monsieur Richard, Conservateur des Musées at Abbeville (fig. 888), by Miss G. M. A.

Richter of the Metropolitan Museum of Art, New York (pl. xxxv, figs. 776, 883, 897), by Professor Homer A. Thompson (figs. 923, 924), by Professor A. J. B. Wace (fig. 193), by Dr C. Weickert of the Museum at Munich (pl. l), and by the Direktor of the Badisches Landesmuseum at Karlsruhe (pl. li).

In the matter of text-figures I have been lucky enough to retain the services of Miss E. T. Talbot, the artist to whom I owe the bulk of the drawings in Volumes I and II. Her work has throughout maintained a high level of exactitude. Her coins, for instance, are not merely faithful transcripts of originals or casts, but actually 'stilgetreu'—a rare achievement in draughtsmanship.

The cameo in malachite portraying the bust of a Ptolemaic Zeus (pl. xlv) was drawn from the original by Miss F. E. Severs and produced as an experiment in lithography by the Cambridge Press. But most of the colour-plates have been specially painted for me by another artist of quite exceptional powers, Mrs D. K. Kennett. She sketched the Corfu pediment from a full-size cast in the Cambridge Museum of Classical Archaeology (pl. lxiv) and the Sulis Minerva pediment from the original at Bath (pl. lxvi). But her feeling for colour is better shown by the little head of Hera in blue glass from Girgenti (pl. lxxiii), the bust of Sarapis in *lapis lazuli* (pl. lxxiv), or the bronze mace from Willingham Fen (pl. lxxviii). These are veritable triumphs of sympathetic rendering.

And here I must add a word on another of Mrs Kennett's plates, the neolithic pounder from Ephesos (pl. lxvii). That remarkable object—given me as a souvenir of Sir William Ridgeway by the President of Queens' College and Mrs Venn—has, if I am right in my interpretation of it, presented us for the first time with a prehistoric Greek *baltulos*, a stone believed to have fallen from heaven and worshipped accordingly. Not the least of its claims upon our attention is the incidental light that it throws on a passage in the New Testament (Acts 19. 35).

The passage in question sets in sharp contrast the old 'Zeus-fallen image' with the new Gospel proclaimed by St Paul. These were in effect the two extremes. Between them lay the whole history of Greek religion with its gradual development, now slower, now faster, from primitive paganism towards complete Christianity—a long story, for the telling of which three volumes would scarce suffice. My contention is that in that development the cult of the

Sky-god was one main factor, leading the minds of men upwards and onwards to ever greater heights till Zeus at his noblest joined hands with the Christian conceptions of Deity. If I have succeeded in proving that, I shall feel that the labours of half a lifetime have been well worth while.

ARTHUR BERNARD COOK.

CHAPTER II (*continued*)

ZEUS AS GOD OF THE WEATHER.

§ 5. *Zeus and the Earthquakes.*

GREECE is a land of many earthquakes. Reckoning great with small, Count de Montessus de Ballore¹, our foremost authority in seismic geography², computes a yearly average of at least 275. C. Davison³ in a recent monograph states that 3187 were recorded during the six years 1893—1898, and adds that, for every shock felt in Great Britain, 50 are observed in Japan and no less than 158 in Greece⁴. Similarly J. Partsch⁵, after consideration of Julius Schmidt's⁶ earthquake-catalogue for 1859—1878, concludes 'that

⁴ F. de Montessus de Ballore 'Introduction à un essai de description sismique du globe et mesure de la sismicité' in the *Beitrag zur Geophysik* Leipzig 1900 iv. 357 gives the following statistics for the various divisions of Greece (repeated by C. E. Dutton *Earthquakes in the light of the new Seismology* London 1904 p. 296):

LOCALITIES	EPICENTRES	EARTH- QUAKES	PERIODS OF OBSERVATION
Thessaly	13	76	1863 1867-1868 1895-1897
Euboeia and N. Sporades	23	1228	(Euboeia) 1857-1878 1895-1897

in this land hardly a week, in many years hardly a day, goes by without the ground being noticeably shaken at one point or another, while a second eminent geographer, A. Philippson¹, puts it even more forcibly: 'In Greece the soil trembles somewhere almost every day.'

Greek earthquakes, being tectonic, not volcanic, in character, occur normally along certain well-marked structural lines, which correspond with prominent features of the country—the base of a mountain-range, a straight river-valley, a rocky coast-line². These seismic zones may be enumerated as follows: the northern half of the Straits of Euboea together with the Malian Gulf and the islands Skiathos and Skopelos; an elliptical land-tract including Phokis, Lokris, and Boiotia; the northern coast of the Peloponnese from Corinth to Patrai; the western coast of the Peloponnese with Zakynthos, Kephallenia, and Leukas; the valleys that form the heads of the Messenian, Laconian, and Argolic Gulfs—the principal southerly indentations of the Peloponnese³. The distribution thus indicated for modern times is fully borne out by the record of ancient earthquakes, of which a well-arranged and critical list for the period 600 B.C.—600 A.D. has been drawn up by W. Capelle⁴.

Since most of the seismic lines traceable in Greece are definitely maritime and the rest within easy reach of the sea, it is not surprising to find that the Greeks of the classical age commonly⁵

⁵ Not invariably. Pythagoras taught that earthquakes were due to a concourse (conflict?) of the dead (*Ail. var. hist.* 4. 19 καὶ τῶν σεισμῶν ἐγεγενᾶσθαι οὐδὲν ἄλλο εἶναι ἢ σύνθοδον τῶν τεθνεώτων = H. Diels *Die Fragmente der Vorsokratiker*³ Berlin 1912 i. 357, 21 f.)—presumably a folk-belief (Gruppe *Gr. Myth. Rel.* p. 814 n. 2).

The frequent notion that earthquake-shocks are occasioned by the movements of a subterranean monster or giant or god (J. Grimm *Teutonic Mythology* trans. J. S. Stally-brass London 1883 ii. 816 f., 1888 iv. 1542, E. B. Tylor *Primitive Culture*³ London 1891 i. 364 ff., Frazer *Golden Bough*³: Adonis Attis Osiris³ i. 197 ff. ('The Earthquake God'), K. in classical tradition (M. Mayer *Die Giganten und Titanen* Berlin 1887 pp. 195 f., 208 ff., 214 f., Gruppe *Gr. Myth. Rel.* p. 434 n. 2).

In the upper-pliocene beds of Samos are extensive deposits of fossil bones—*Samootherium*, *Hipparion mediterraneum*, *Mastodon longirostris*, etc. (L. Burchner in Pauly—Wissowa *Real-Enc.* i A. 2168, 2171). These bones were attributed by Euphorion to primeval monsters called Νηάδες, who broke the very ground with their cries and occasioned the Samian proverb 'He bawls louder than the Νηάδες' (Euphor. *frag.* 25 Meineke *ap.* Ail. *de nat. an.* 17. 28 and Apostol. 9. 51). The statement goes back to the early local historian Euagon of Samos *frag.* 1 (*Frag. hist. Gr.* ii. 16 Müller) *ap.* Phot. *lex. s.v.* νῆϊς and Herakl. Pont. *frag.* 10. 1 (*Frag. hist. Gr.* ii. 215 Müller)=Aristot. *frag.* 611. 30 Rose², who however used the form Νήϊδες, not Νηάδες. Νήϊδες, which means 'Witless Ones' (cp. *h. Dem.* 256), must of course be distinguished from Νηϊδες or Νηιάδες, the Naiad nymphs, and may be an attempt to make sense of some pre-Greek name. W. R. Halliday in the *Class. Rev.* 1927 xli. 59 acutely restores Plout. *quaest.* Gr. 56 (Panaima in Samos was so named after a bloody battle between Dionysos and the Amazons) τῶν δ' ἐ<λε>φάντων ἀποθανεῖν τινες λέγονται περὶ τὸ Φλοῖον καὶ τὰ ὅσα δεικνύται αὐτῶν· τινὲς δὲ λέγουσι καὶ τὸ Φλοῖον ἐπ' ἐκείνων ῥαγῆναι, φθεγγόμενων μέγα τι καὶ διάτορον (see further Halliday *ad loc.* p. 207 ff.). S. Reinach in the *Rev. Arch.* 1928 ii. 161 quotes with approval Sir A. Evans *The Palace of Minos* London 1928 ii. 1. 324: 'The delight of the Earth-shaker in bulls, referred to in the Homeric passage [*Il.* 20. 403 ff.], may itself find a reasonable explanation in the widespread idea...that earthquakes are produced by some huge beast beneath the Earth. Sometimes, as in Japan, it is a monstrous fish, sometimes an elephant or other animal of prodigious size, but, amongst all of these, the bull is the most natural agent. According to the Moslems of Tashkend [J. Troll in the *Zeitschrift für Ethnologie* 1892 xxiv. 537 f.], Almighty God set to support the Earth a bull of such monstrous size that from his head to the end of his tail was five hundred years' journey, and the space between his two horns another two hundred [and fifty]. The bull, thus heavily laden, prompted by the Devil, shook his head and tried to throw the Earth off him with his horns. Thereat, a midge was sent to sting him in the nostril, and he set up a mighty bellowing, so that he is known unto this day as "the bellower".'

Again, there is an earthquake when the giant Briareus under Mt Aitne shifts to his other shoulder (Kallim. *h. Del.* 141 ff.), or when Enkelados beneath the same burden changes his weary side (Verg. *Aen.* 3. 578 ff.). All Sicily trembles when Typhoeus, crushed by its weight, struggles to thrust it from him (Ov. *met.* 5. 346 ff., Val. Flacc. 2. 23 ff.). A like commotion was caused when Kaineus, buried beneath a huge mound of stocks and stones, tried in vain to lift his head (Ov. *met.* 12. 514 ff.). Giants laid low by Herakles—Mimas beneath Prochyte, Iapetos beneath Inarime—made the earth shake above them and blasted the soil of Campania (Sil. It. 12. 143 ff., cp. *ib.* 529). In particular, Alkyoneus (Claud. *de rapt. Pros.* 3. 184 f.) and other giants with him were thought to lie beneath Mt Vesuvius (Philostr. *her.* 2. 7), and during the eruption of 79 A.D. many gigantic phantoms appeared by day and night on the mountain, in the neighbouring towns, and in the sky—a prelude to periods of severe drought and appalling earthquakes (Dion Cass. 66. 22). We may venture to compare the happenings described in Matthew 27. 51—53. Analogous beliefs still linger in Greek lands: a short, sharp earthquake accompanied by a peculiar crash occurred in Zakynthos on Aug. 4/16, 1862, and the next day a peasant employed over the currant-crop in the village of Hagios Kyrkos observed with regard to it 'Some building of the giants must have collapsed' (B. Schmidt *Das Volksleben der Neugriechen* Leipzig 1871 i. 33, 201 κατὰ χρίσιν τοῦ γιγάντωνε θὰ ἔπεσε. Cp. *supra* ii. 505 f.). It should, however, be recognised that the express connexion of earthquakes with buried giants or the like is Hellenistic, not Hellenic. Earlier sources (e.g. Hes. *theog.* 859 ff., Pind. *Pyth.* 1. 29 ff., Pherekyd. *frag.* 14 (*Frag. hist. Gr.* i. 72 Müller)=*frag.* 54 (*Frag. gr. Hist.* i. 76 Jacoby) *ap.* schol. Ap. Rhod. 2. 1210 ff.) emphasise volcanic rather than seismic effects.

Other gods could on occasion produce a quake. Athena did so at Troy when

wroth with Laokoon (Quint. Smyrn. 12. 395 ff.). Dionysos in Soph. *Ant.* 153 f. ὁ Θήβας δ' ἐλελίζων (ἐλελίζων cod. L with γρ. ἐλελίζων written above by scholiast) | Βάκχος ἄρχοι bears the title of an earthquake-god (the schol. vet. *ad loc.*, followed by Sir R. C. Jebb, is inadequate—ὁ Θήβας δ' ἐλελίζων Βακχείος : ὁ κινήσιχθων· ἐλελίζοντα δὲ τὸν Διόνυσον φησι διὰ τὰς ἐν ταῖς Βακχεαῖς κινήσεις· ἢ τὸν τὴν γῆν σείοντα καὶ ἀναβακχεύοντα ταῖς χορείαις) and in Eur. *Bacch.* 586 ff., 605 f., 622 f., 632 f. shatters, or at least is believed to shatter, the house of Pentheus (G. Norwood *The Riddle of the Bacchae* Manchester 1908 p. 37 ff., *id.* *Greek Tragedy* London 1920 p. 281 f., A. W. Verrall *The Bacchantes of Euripides and other Essays* Cambridge 1910 pp. 26 ff., 64 ff.)—an exploit compatible with Orphic belief (Orph. *h. Perikion.* 47. 1 ff. κικλήσκω Βάκχον Περικιόνιον, μεθυδῶτην, | Καδμείοισι δόμοις ὅς ἐλισσόμενος πέρι πάντη (so G. Hermann for περὶ πάντα) | ἔστησε κρατερὸν βρασσὸν γαῖης ἀποπέμψας, | ἦνίκα πυρφόρος αὐγὴ ἐκίνησε (so P. Scriverius for ἐκίνησε) χθόνα πᾶσαν | πρηστῆρος ροίζοις· ὁ δ' ἀνέδραμε δεσμός ἀπάντων). Nereus, like Poseidon, makes and can therefore unmake earthquakes (Orph. *h. Ner.* 23. 5 ff. δε κλονέεις Δηοῦς ἱερὸν βάθρον (cp. ἐννοσι-Δᾶς *infra* p. 9 n. o), ἦνίκα πνοιᾶς | ἐν μυχίοις (so G. Hermann for ἐννυχίοις) κενθμῶσιν ἐλαυνόμενας ἀποκλείεις | ἀλλὰ, μάκαρ, σεισμούς μὲν ἀπότρεπε, πέμπε δὲ μύσταις | ὄλβον κ.τ.λ.). But Usener's contention that Aloeus, son of Poseidon by Kanake, 'ist der "Drescher" gewiss nicht allein wortlich als Gott des Landbaues, sondern vorzugsweise bildlich als Erderschütterer, 'Ελελίζων 'Εννοσίγαιος' (H. Usener in the *Rhein. Mus.* 1898 liii. 349=*id.* *Kleine Schriften* Leipzig—Berlin 1913 iv. 278) strikes me as far-fetched and improbable.

The epithet ῥήξιχθων (ῥησίχθων), the 'land-breaker,' has reference in all probability to the disruptive effect of earthquakes, and is applied in Orphic hymns to Dionysos (Orph. *h. Lys. Len.* 50. 5 ῥήξιχθων (E. Abel cj. ῥήξιχθων), ληναίε, μεγασθενές, αἰολόμορφε, *h. triet.* 52. 9 ῥήξιχθων (E. Abel cj. ῥήξιχθων), πυριφεγγές, ἐπάφιε, κοῦρε διμήτορ (so E. Abel for διμάτωρ)) and in magical spells etc. to a variety of chthonian powers including Hekate (C. Wessely *Griechische Zauberpapyrus von Paris und London* Wien 1888 p. 88 pap. The fact is that any and every subterranean deity invoked by the magician might be expected to cause an earthquake. Jehovah himself is conjured as the god who rends the mountains and breaks the rocks in pieces (1 Kings 19. 11), who makes the earth to tremble and shake (Ps. 77. 18), the hills to move to and fro (Jer. 4. 24) (A. The sire of men and gods thundered on high
 Horrific, and beneath Poseidon shook
 The boundless earth and the tall mountain-tops.
 Yea, all the feet of many-fountained Ide
 And all her crests were swaying to and fro,
 • Troy-town to boot and the Achaean ships.
 Deep underground Aidoneus, king of the dead,
 Trembled and, trembling, sprang from his throne and shouted
 Lest o'er his head Poseidon, shaker of land,
 Should cleave the very earth and bring to the ken
 Of mortals and immortals his grim realm,
 A mouldering realm that ev'n the gods abhor¹.

scene. On the left Poseidon, holding a dolphin (?), threatens the ground with his trident. On the right Hades, a rod or sceptre in his hand, springs from his throne in terror. Zeus, standing between them, with *himdtion* and sceptre, raises his hand to quell the tumult. The whole must refer to some historic earthquake, and may have been struck to commemorate it.

interpolation¹. But in cantos of earlier date Homer calls Poseidon *enosichthon*, the 'land-shaker' (?), or *ennosigaios*, the 'earth-shaker' (?), and often uses both appellatives as substitutes for his name². Pindar

² The epithet *ἐνοσίχθων* is used of Poseidon 23 times in the *Iliad*, 18 times in the *Odyssey* (A. Gehring *Index Homericus* Lipsiae 1891 p. 289), always in the nominative case and always as last word of the hexameter—except *Od.* 3. 6 *ἐνοσίχθονι κνανοχαίτην*. The usual locution is *Ποσειδάων ἐνοσίχθων* (24 times), for which *κρείων ἐνοσίχθων* (7 times) and *εὐρυκρείων ἐνοσίχθων* (once, *Il.* 11. 751) are convenient substitutes. *Ἐνοσίχθων* alone occurs 8 times (H. Ebeling *Lexicon Homericum* Lipsiae 1885 i. 424).

Ἐννοσίγαιος is similarly used of Poseidon 20 times in the *Iliad*, 6 times in the *Odyssey* (A. Gehring *op. cit.* p. 288). The common phrases are *γαίηχος ἐννοσίγαιος* (nom. 4 times, acc. once, dat. twice)—extended in *Il.* 13. 43 *Ποσειδάων γαίηχος ἐννοσίγαιος* (cp. *Hom. ep.* 6. 1 *Ποσειδάων μεγαλοσθενὲς ἐννοσίγαιε*—and *κλύτος ἐννοσίγαιος* (nom. 7 times, acc. twice). *Ἐννοσίγαιος* alone occurs 6 times (nom. twice, voc. thrice, acc. once), *ἐννοσίγαι'* *εὐρύσθενες* thrice. The word mostly occupies the end of the line, but not in *Il.* 7. 455, 8. 201, 12. 27, 20. 20, 20. 310, 21. 462, *Od.* 11. 102, 13. 140, *h. Pos.* 4 (H. Ebeling *op. cit.* i. 422).

Hence it may be inferred that the old pre-Homeric tags (*supra* i. 444, ii. 384 n. o) for dactylic tripodies with anacrusis were *Ποσειδάων ἐνοσίχθων* and *γαίηχος ἐννοσίγαιος*, for dactylic dipodies with anacrusis *κρείων ἐνοσίχθων* and *κλύτος ἐννοσίγαιος*. In view of the extreme antiquity of such tags we can hardly expect their interpretation to be free from doubt.

The *ν* of *ἐνοσίχθων* becomes *νν* in *ἐννοσίγαιος metri gratia* (Cornut. *theol.* 22 p. 42, 2 Lang has *ἐνοσίγαιον*, a spelling found in late prose—Soud. *ἐνοσίγαιος* (cod. A gives *νν* against the *ordo verborum*), *et. mag.* p. 344, 43 *ἐνοσίγαιος*, Zonar. *lex.* *ἐνοσίγαιος*, Favorin. *lex.* p. 213, 27 *ἐνοσίγαιε*); and the same reason suffices to explain the lengthened first syllable of *ἐννοσίφυλλος* (*Il.* 2. 632, 2. 757, *Od.* 9. 22, 11. 316. Simon. *frag.* 41. 1 Bergk⁴, 52. 1 Edmonds, 40. 1 Diehl *ap.* Plout. *symp.* 8. 3. 4 has *ἐννοσίφυλλος*, Favorin. *lex.* p. 658, 59 *ἐννοσίφυλλον*, Hesych. *ἐνοσιφύλλον* (A. Meineke cj. *ἐνοσίφυλλον*)) (W. Schulze *Quaestiones epicae* Gueterslohiae 1892 p. 159 f.). But the common assumption (with query in Prellwitz *Etyim. Wörterb. d. Gr. Spr.*² p. 146, without query *ib.* p. 521 and in Boisacq *Dict. étym. de la Langue Gr.* pp. 258, 1080, Walde—Pokorny *Vergl. Wörterb. d. indogerm. Spr.* 1. 254 f.) that *ἐνοσι- ἐννοσι- εἰνοσι-* are derived from *ἐν-φοθ* of *ἐνωθέω* (Hesych. *ἐθευ- φθείρει* and *ἔθων- φθείρων* are misleading glosses, based on a wrong interpretation of *Il.* 9. 540, 16. 260. Cp. schol. A. *Il.* 9. 540) is thoroughly unsatisfactory. **ἐν-φοθ-νι-ς* would have produced, not *ἐνοσις*, but **ἐνφοστις *εἰνοστις *ενοστις* (L. Meyer *Handb. d. gr. Etym.* 1. 410, K. F. W. Schmidt in the *Zeitschrift für vergleichende Sprachforschung* 1913 xlv. 234 n. 3. Boisacq *op. cit.* p. 1109 and Walde—Pokorny *op. cit.* i. 255 adduce unconvincingly *ῥσις: ὠθέω, πείσις: πείθω*, etc.). Besides, *ἐνωθέω* is a late compound (Ap. Rhod. 4. 1243, Plout. v. *Lucull.* 28) and yields no tolerable sense.

Impressed by these difficulties I endeavoured years ago to divide *ἐν-νοσι-γαιος* (a compound like *ἐμπυριβήτης*), 'the earth-god in the water,' cp. Poll. i. 238 γῆ . νότιος, *ἐννοσιος*, if not also Eur. *I.T.* 161 f. *γαίης ἐννοτίος* (so A. Kirchhoff for *ἐν νότοις*) | *πηγάς*. On this showing *ἐνοσίχθων* would be a later form due, like *εἰνοσίφυλλος*, to a mis-conception (*Class. Rev.* 1903 xvii. 176). The occurrence of Zeus *Νόσιος* for *Νότιος* at Miletos (*supra* i. 733 n. 6, ii. 317 n. 2) might indeed be held to support the connexion with *νότιος*, *noris*, etc. and perhaps *Neptunus* (Walde *Lat. etym. Wörterb.*² pp. 516 s.v. 'Neptūnus,' 521 s.v. 'no'). But the suggestion really makes shipwreck on the sense, which I now see to be nonsense. Dr B. F. C. Atkinson improved upon my notion by pointing out to me (Dec. 1925) that *ἐ-* might be a prothetic vowel, the epithets *ἐ-νοσι-χθων*, *ἐ-ννοσι-γαιος* denoting

follows suit with *Ennosidas*¹, and coins fresh compounds to express

the god 'that waters the earth.' But, unknown to us both, A. Goebel of Magdeburg had already tried that tack fifty years ago. In a remarkable paper 'Ueber den homerischen Ποσειδάων γαίφροχος ἐννοσίγαιος' (*Zeitschrift für die österreichischen Gymnasien* 1876 xxvii. 241—252) he had argued that there is in truth no Homeric evidence for Poseidon as an earthquake-god, *Il.* 20. 56 ff. being a 'späteres Einschiebsel' and ἐννοσίγαιος, ἐνοσίχθων, εἰνοσίφυλλος involving prothetic ε and the root *sna* of νότιος, νοτίς, etc.—to be rendered 'erdenetzend,' 'Erdbewasserer,' 'feuchtablaubig.'

Another possibility suggested to me by Dr Atkinson (Dec. 1925) is that ἐνο-σί-χθων, ἐνο-σί-γαιος, εἰνο-σί-φυλλος may be related to *onus* < **enos*, 'burden' (Walde *op. cit.* s.v. 'onus'), and mean 'burdened with the ground,' 'burdened with earth,' 'laden with leaves.' The suffix -σί- is frequent in epic compounds (D. B. Monro *A Grammar of the Homeric Dialect* Oxford 1891 p. 118 f.).

But against all these fancies must be set the solid fact that the said epithets are traditionally interpreted 'shaking the ground,' 'shaking the earth,' 'shaking the leaves' (so all lexicons, ancient or modern). And this tradition must be as old as Hesiod, since ἐνοσίς is applied by him to a 'shaking' of the earth (*Hes. theog.* 681, 706) or sea (*Hes. theog.* 849). Euripides similarly uses the word of an earthquake (*Bacch.* 585) or a city's overthrow (*Tro.* 1326) or the whirling of *rhomboi* (*Hcl.* 1363). Goebel *loc. cit.* p. 249 of course maintains that we have here to do with a learned, or unlearned, misunderstanding of ἐνοσί-χθων. On the whole, it is safer to accept the traditional rendering and to assume a verbal stem **eno-* without recognised cognates (L. Meyer *op. cit.* i. 410).

C. T. Damm *Novum lexicon Graecum etymologicum et reale* Berolini 1765 p. 2867 *his* connects the second element in the compound Ἐννοσί-δας with 'dā dorice pro γῆ.' That δā was Doric for γῆ is indeed affirmed by ancient scholiasts and lexicographers (Aisch. *P.v.* 568 ἀλευ' ὦ (δ ex α factum cod. It should, however, be observed that the ancient grammarians in general are by no means committed to this view.

With the dawn of modern philology scholars began to doubt the equation δᾶ=γη. H. L. Ahrens *De dialecto Dorica* Gottingae 1843 p. 80 f. definitely denied it. He explained 'Εννοσίδᾶς either as a simple derivative of *Ennois*, or as a blundered form of *'Εννοσίγας, or as equivalent to 'Εννοσίγαιος, δᾶ being in this case an ancient but unrelated name of the goddess Γῆ (H. L. Ahrens in *Philologus* 1866 xxiii. 207 n. 20). Later, on the strength of Cypriote δᾶ=Attic γῆ (W. Deecke and J. Siegmund in the *Studien zur griechischen und lateinischen Grammatik* herausgegeben von G. Curtius Leipzig 1875 vii. 221 f., O. Hoffmann *Die Griechischen Dialekte* Göttingen 1891 i. 221, A. Thumb *Handbuch der griechischen Dialekte* Heidelberg 1909 p. 292, C. D. Buck *Introduction to the Study of the Greek Dialects* Boston 1910 p. 55, F. Bechtel *Die griechischen Dialekte* Berlin 1921 i. 411), Ahrens admitted δᾶ as a Doric form of γῆ (H. L. Ahrens in *Philologus* 1876 xxxv. 21)—an admission in which he was followed by J. Schmidt in the *Zeitschrift für vergleichende Sprachforschung* 1881 xxv. 145 ff. and R. Meister *Die griechischen Dialekte* Göttingen 1889 ii. 221, 254, cp. G. Meyer *Griechische Grammatik*³ Leipzig 1896 p. 268 (δᾶ ist wohl bloss für die Erklärung von Δᾶμάτηρ erfunden). But the normal Doric form of γῆ was γᾶ (É. Boisacq *Les dialectes doriens* Paris 1891 p. 48 f.), and no recent philologist—even when confronted with Laconian δίφουρα (Hesych. s.v. διφούρα (M. Schmidt corr. δίφουρα)· γέφυρα. Λάκωνες) and Gortynian δέφῦρα (D. Comparetti in the *Mon. d. Linc.* 1893 iii. 293 ff. no. 154, ii. 14 ff. with facsimile = F. Blass in Collitz—Bechtel *Gr. Dial.-Inschr.* iii. 2. 286 f. no. 5000, ii. 14 ff. τὰν δὲ ροὰν λει[π]εν ὅττον κατέχει δ (Comparetti reports Δ, a mason's error) ἐπ' ἀγορᾷ· δέφῦρα ἡ πλῖον, μείον δὲ μή) = γέφυρα—would support the claim that δᾶ is a legitimate Dorism for γῆ.

That being so, we must abandon the attempt to make 'Εννοσίδᾶς a dialect form of 'Εννοσίγαιος. For all that, it may amount to much the same thing. Personally I incline to the view that Δᾶ was an ancient name of the earth-mother (*supra* ii. 584 nn. 0, 1, 585 n. 1), Δᾶς an ancient name of the sky-father, ultimately related to Ζεὺς (H. L. Ahrens in *Philologus* 1866 xxiii. 206 f.) and found as second element in the compounds ποτι-Δᾶς, 'Lord Zeus' (*supra* ii. 582 ff.), and ἀν-Δᾶς ἀν-Δᾶς, 'Zeus of the Earth' (*Class. Rev.* 1903 xvii. 175 f., *Folk-Lore* 1904 xv. 280 ff.); and I should interpret ἐννοσι-Δᾶς as 'He that maketh Da, the Earth' rather than as 'Das or Zeus of the earthquake' (cp. *Class. Rev.* 1903 xvii. 175). The later accentuation Ποτιδᾶς, Αἰδᾶς, 'Εννοσίδᾶς was due—I conceive—to the false analogy of patronymics.

Others prefer to suppose that in the tragic exclamation δᾶ we have the vocative and in the bucolic abjuration οὐ δᾶν the accusative case of Δᾶς, 'Zeus' (so H. L. Ahrens in *Philologus* 1866 xxiii. 206 f., R. Kühner—F. Blass *Ausführliche Grammatik der griechischen Sprache*³ Hannover 1890 i. 144, 459).

⁴ Homer uses this epithet sometimes with (*Il.* 13. 43, 20. 34, *Od.* 1. 68, 3. 55, 8. 322, 8. 350, 9. 528. *h. Later poets, misconceiving the second element in the compound, applied it to other deities (Aisch. *suppl.* 813 ff. σεβίζον δ' ἱκέτας σέθεν, γαίῳχε παγκρατὲς Ζεῦ, Soph. *O.T.* 159 ff. πρῶτά σε κεκλόμενος, θύγατερ Διός, ἀμβροτ'.

(xl.iii. 749 A Migne) ἐν ἀχλυνόεντι δὲ κόσμῳ | οὐρανίας σελάγισε βολαῖς γαιήοχος αἴγλη). Another and less pardonable blunder in etymology accounts for Bekker *anecd.* i. 229, 8 γαιήοχος ἵππος, ἀπὸ τοῦ τοῖς ὀχήμασι χαίρειν.

In Hes. *theog.* 15 ἥδ' Ποσειδάωνα γαιήοχον ἐννοοῦσι γαίον cod. D reads γεήοχον, which is accepted by K. W. Goettling—J. Flach and H. G. Evelyn White. But the vulgate is defensible as an example of internal shortening (R. Kuhner—F. Blass *Ausführliche Grammatik der griechischen Sprache*³ Hannover 1890 i. 312 f.).

The supposed derivation from ἔχω gave rise to various forms in -οῦχος (Hesych. s.v. γαιηούχῳ· τῷ τὴν γῆν ὀχοῦντι, καὶ συνέχοντι, γεούχος· ὁ τὴν γῆν ἔχων, γηούχος· ὁ τὴν γῆν συνέχων, Souid. s.v. γαιούχος· ὁ τὴν γῆν ὀχῶν, γεούχος· ὁ Ποσειδῶν, ὁ τὴν γῆν ἔχων, Schöll—Studemund *anecd.* i. 267 Ἐπίθετα Ποσειδῶνος (4) γαιηούχου. γεούχου δέ, Eustath. in *Od.* p. 1392, 23 ff. σημειῶσαι δὲ ὡς γαιήοχος μὲν μοναχῶς διὰ διφθόγγου, γεούχος δὲ καὶ γηούχος καθ' Ἡρφιδανὸν μὲν καὶ Δίδυμον διὰ ἑ ψιλῶς παρὰ τὴν ψιλογραφουμένην γέαν ἧς συναίρεμα ἡ γῆ· ἄλλοι δὲ διὰ τῆς αἰ διφθόγγου παρὰ τὴν λοιπὴν γαίαν ἐξ ἧς καὶ ὁ γαιήοχος).

Schöll—Studemund *anecd.* i. 267 Ἐπίθετα Ποσειδῶνος (3) γαιείου. γαιηίου δὲ possibly preserves a genuine appellative of Poseidon, though the glossator—according to O. Jessen in Pauly—Wissowa *Real-Enc.* vii. 484—was thinking of the phrase Γαίηος νιός (*Od.* 7. 324, *Anth. Pal.* 14. 23. 1).

¹ Near Therapne was a sanctuary of Poseidon Γαῖόχοος (Paus. 3. 20. 2 τοῦτον δὲ οὐ πολὺ Ποσειδῶνος ἀφίστηκεν ἱερὸν ἐπὶ κλησιν Γαῖαόχου) with a hippodrome, which was visited by Epameinondas' cavalry in 369 B.C. (Xen. *Hell.* 6. 5. 30 ἐκ τούτου δὴ ἡμέρα τρίτη ἢ τετάρτη προῆλθον οἱ ἵπποις εἰς τὸν ἵππῳδρομον εἰς Γαῖαόχου κατὰ τάξεις, οἳ τε Θηβαῖοι πάντες καὶ οἱ Ἥλείοι καὶ ὅσοι Φωκίων ἢ Θετταλῶν ἢ Λοκρῶν ἵπποις παρήσαν). The festival of the god Γαῖόχοος is mentioned repeatedly on a *stèle* of white marble, which was found in two portions—the one in the monastery of the Ἀγιοὶ Τεσσαράκοντα or Σαράντα between Sparta and Chrysapha (W. M. Leake *Travels in the Morea* London 1830 ii. 521 with pl. 71 at end of vol. iii, Roehl *Inscr. Gr. ant.* no. 79, *id. Beneath a spirited, though much damaged, relief of a four-horse chariot driven from right to left (M. N. Tod and A. J. B. Wace *op. cit.* p. 176 no. 440) comes a long inscription in Doric, to be dated shortly before 431 B.C. The opening lines (1—5) contain a metrical dedication: Δαμόνον | ἀνέθεκε Ἀθαναία[ι] Πολιάχοι κ.τ.λ. Then follow four lists of victories: (6—34) those of Damonon in chariot-races; (35—49) those of Damonon's son Enymakratidas; (49—65) those of Damonon as a boy; (66—96) those of Damonon and Enymakratidas at the same contests. The record includes various events ἐν Γαῖαόχῳ, 'at (the festival) of Gaióchos' (*Inscr. Gr. Arc. Lac. ² There was at Gythion a sanctuary of Demeter and, adjoining it, a statue of Poseidon

Γαῖαρχος (Paus. 3. 21. 8 καὶ Δήμητρος ἱερὸν ἄγιον καὶ Ποσειδῶνος ἀγαλμα Γαῖαρχον (so codd. Va. Ag. Pc. Lb. γαῖαρχου codd. Vb. La. R. Pa.)). Both deities figure on coins of the town—Demeter seated, holding corn-ears and sceptre, on a bronze coin struck by Geta (*Numismata quædam cuiuscunque formæ et metalli musei Honorii Arizoni, Veneti* Tarvisii 1741 i. 9 no. 134, Imhoof-Blumer and P. ³ Athens had a priest of Poseidon Γαῖαρχος and Ἐρεχθεύς (*Corp. inscr. Att.* iii. 1 no. 276 = Michel *Recueil d'Inscr. gr.* no. 860, 37 = Roberts—Gardner *Gk. These inscriptions imply a rather half-hearted identification of Erechtheus with Poseidon Γαῖαρχος. Other available evidence points in the same direction; for, whereas in s. iv B.C. the tribe Erechtheis is careful to distinguish its eponymous hero from Poseidon (*Corp. inscr. ³ In view of the form Γαῖόχος (*supra* p. 11 n. 1), philologists are all but unanimous in deriving the compound from γαῖα + -φοχος and in referring the second element to *fēxō* = Lat. *veho* (A. Bezenberger in Collitz—Bechtel *Gr. Dial.-Inscr.* i. 367 ff. no. 1267, 24 (Silyon in Pamphylia) *fēxētō* 'let him bring,' R. Spr.* i. 249 'der die Erde bewegt.' The history of *ἔχος, ἐχέσθαι* is—pace the pundits—decisive for the meaning 'earth-carrier' as against 'earth-shaker.'

P. Kretschmer ploughed a lonely and fruitless furrow, when he sought to take the epithet as the equivalent of *Γαῖαν ἐχέων* 'mating with Gaia' (*Glotta* 1914 v. 303 and 1924 xiii. 270).

Poseidon appears as 'earth-carrier' in ceramic illustrations of the Gigantomachy (Overbeck *Gr. Kunstmyth.* Poseidon pp. 328—331 Atlas pl. 4, 6, 8, 12 b, pl. 5, 1 b, 1 c, pl. 12, 25—27, pl. 13, 1, B. According to the oldest accessible form of the myth 'Polybotes, chased through the sea by Poseidon, came to Kos; whereupon Poseidon, breaking off a piece of that island now called Nisyros, hurled it upon him' (Apollod. 1. 6. 2, cp. Strab. 489, Eustath. in Dionys. per. 525, Plin. nat. hist. 5. 133 f.). A variant version tells how Polybotes, when struck by Zeus, started to swim, and how Poseidon flung a trident at him but failed to hit, the missile becoming the island Nisyros or Porphyris (Steph. Byz. s.v. Νίσυρος (= Eudok. zool. 764, Favorin. lea. pp. 1311, 14 f., 1536, 18 ff.)). Black-figured vases regularly show Poseidon moving from left to right and bearing on his left shoulder the mass of rock with which he is about to overwhelm his opponent (Overbeck *op. cit.* p. 328 ff. enumerates fourteen such vases). But only one vase, an Ionian *amphora*, adds the name Polybotes (*supra* ii. 713 pl. xxx). Red-figured vases of the strong style (c. 500—460 B.C.) give Poseidon in the same attitude, but further characterise his rock as the island by representing on it an assortment of land- and sea-creatures (Overbeck *op. cit.* p. 330 f. lists eight such vases. Typical are (1) an *amphora* from Vulci, now in the Vatican, referred by J. D. The change of name is ingeniously explained by O. Benndorf in the *Arch.-ep. Mitth.* 1893 xvi. 106 (followed by O. Hofer in Roscher *Lex. It is noteworthy that Nisyros occurs, not only as the name of the island off Kos, but also as that of a town on Kalydna (Plin. *nat. hist.* 5. 133) and as that of a town on Karpathos (Strab. 489, cp. an inscription from *Tristomo* in Karpathos published by M. probable that Platon's picture combining a straight axis of light with a curved periphery of light (*supra* ii. 44) was derived from the Pythagorean doctrine, which combined a fire at the centre of the universe with a fire girdling the sphere of the universe, and further that Platon's phrase *ὅλον τὰ ὑποζώματα τῶν τριήρων* presupposes the Pythagorean *ὁλάς* (*Class. Quart.* 1926 xx. 113—133).

Georgios the Pisdian, who was deacon of St Sophia and record-keeper at Byzantium under the emperor Herakleios (610—641 A.D.), has introduced the same conception into his *ἐξαήμερον ἢ κοσμουργία*, a philosophico-theological poem in iambics on the creation of the world (K. Krumbacher *Geschichte der byzantinischen Litteratur von Justinian bis zum Ende des Ostromischen Reiches*² München 1897 p. 710). The passage is as follows: ὦ γῆς ὑποστήριγμα τυρνεῶν ὕδωρ, | ἰστών δὲ τὴν βρίθουσιν ἀστάρῃ βάσει, | ἡ βάθρον αὐτῇ προσχέων τὸν αέρα, | οὐκ οἶδα ποίαν ἐδράσας ἄλλην βάσιν, | ποῖον δὲ ταύτη δημιουργῶν πυθμένα, | ὡς μὴ δεσθῇ τοῦ μετ' αὐτὸν πυθμένος, | σειραῖς δὲ μᾶλλον ἡγνοσημέναις ὁλοῖς | ποῖων κρεμαστῇ τὴν πᾶντορον ὁλκάδα | (ἡ γῆ γὰρ ὁλάς ἐστιν εἰς ὕδωρ τάχα | ἐστῶσα καὶ φέρουσα τὴν οἰκουμένην), | γάμμου δὲ τεύχος τῇ θαλάσῃ συλλέγων, | καὶ λεπτὸν ἀντίφραγμα τῇ ξάλῃ πλέκων, | κτίζων δὲ βροντὴν, ἀστραπὴν δὲ θεσπίσας | ἐκ τῶν ἐνύγων ἐκτρέχων πυρεκβόλων (Georg. Artemidoros of Ephesos, who c. 100 B.C. issued his *Γεωγραφούμενα* in eleven books, utilising the results of the Peripatetic Agatharchides and others (H. Berger in Pauly—Wissowa *Real-Enc.* ii. 1329 f., W. Christ *Geschichte der griechischen Litteratur*⁶ München 1920 ii. 1. 423), seems to have described the earth as floating on the ocean (Plin. *nat. hist.* 2. 242 pars nostra terrarum, de qua memoro, ambienti, ut dictum est, oceano velut innatans longissime ab ortu ad occasum patet, hoc est ab India ad Herculis columnas Gadibus sacratas [LXXXV]. LXXVIII p., ut Artemidoro auctori placet, etc., Dicuilius *liber de mensura orbis terrae* 5. 1 (ed. G. Parthey Berolini 1870 p. 18, 1 ff.). Idem dicit in tertio (Letronne cj. *secundo*): pars nostrarum terrarum de qua commemoro, ambienti ut dictum est oceano velut innatans, longissime ab ortu ad occasum patet, hoc est ab India ad Herculis columnas Gadibus sacratas, centum mil. sexagies et sexies et XXXta [simpliciter triginta (uncis inclusi A.B.C.)] milia passuum, ut Artemidoro auctori placet). But it is not quite certain that the phrase 'floating on the ocean' goes back beyond Pliny to Artemidoros, nor, if it does, that we should see in it more than a rhetorical flourish.

Somewhat similar in expression, though diverse in origin, is Io. Chrys. *hom. in Genes.* 12. 2 (liii. 100 Migne) ταύτην αὐτὴν τὴν βαρεῖαν, καὶ τὸν τοσοῦτον κόσμον ἐπὶ τῶν οἰκείων νῶτων φέρουσαν ἐπὶ τῶν ὑδάτων ἐθεμελίωσε, καθὼς ὁ προφῆτης φησὶν, 'ὁ θεμελίωσας ἐπὶ τῶν ὑδάτων τὴν γῆν' (Ps. 135. 6).

⁵ Sen. *nat. quaest.* 3. 14. 1 quae sequitur Thaletis inepta sententia est. ait enim terrarum orbem aqua sustineri et vehi more navigii mobilitateque eius fluctuare tunc, cum dicitur tremere. non est ergo mirum, si abundet humore (so F. Now we have already seen reason to suppose that Poseidon was but a specialised form of Zeus¹, his trident being originally the lightning-fork of a storm-god². We should therefore expect to find at least some traces of the conviction that earthquakes were ultimately caused and controlled by Zeus.

In point of fact, the earliest extant description of an earthquake attributes the phenomenon, naively enough, to the action of Zeus, who nods his head, shakes his hair, and thereby makes the mighty mass of Mount Olympos to tremble³. That is pure magic⁴, and none the less magical because the magician was a god. Later epic writers imitate the scene⁵, which must have appealed to folk-belief of a deep-seated and permanent sort. Indeed, the same belief still lurks in the background of the peasant's brain. B. Schmidt⁶ pointed out that in Zakynthos, an island peculiarly liable to seismic vibrations⁷, people explain them by saying 'God is nodding his head towards the earth' or 'God is shaking his hair'⁸—both expressions being virtually identical with those used in the Homeric episode.

Other poets, classical and post-classical, associate the most awe-inspiring of nature's moods with the anger of the greatest nature-

god. At the close of Aischylos' *Prometheus bound* the defiant Titan challenges the Almighty and bids him do his worst:

Let his blast rock the earth, roots and all, from its base¹.

And when the answering thunderstorm bursts, the very first symptom of the wrath of Zeus is an earthquake-shock:

Lo, now in deed and no longer in word

The earth is a-quake².

Similarly in the brilliant *éxodos* of Aristophanes' *Birds* Pisthetairos, who is clearly conceived as the new Zeus³, wields the nether thunders and thereby causes an earthquake⁴. The same feeling that the failure of the solid ground can be ascribed to no power lower than the highest prompts the Orphic hymn-writer boldly to transfer the epithet *seistichthon*, 'who maketh the land to quake,' from Poseidon⁵ to Zeus⁶ and the author of a Sibylline oracle to use the like language of his supreme Deity⁷.

The fact is that, as the centuries went by, Poseidon lost while Zeus gained in religious significance. Earthquakes came to be connected less and less with the former, more and more with the latter. A short series of examples will here be instructive. In 464 B.C. a great earthquake laid waste the town of Sparta: the Spartans themselves believed that this was because they had once put to death certain Helot suppliants, who had fled for refuge to the sanctuary of Poseidon at Cape Tainaros⁸. In 387 B.C.⁹ the Spartans under Agesipolis I were invading the Argolid, when they were overtaken near Nemea by an alarming earthquake: they at once raised the paeon to Poseidon, and most of them were for beating a retreat; but their commander, putting the best construction he could on the ominous incident, offered sacrifice to that god and pushed on into the territory of the Argives¹⁰. near the coast of Achaia were swallowed in a single night¹ by the most appalling of all Greek earthquakes: the catastrophe was attributed to the vengeance of Poseidon, who was angry because the men of these towns had refused to allow their colonists in Ionia to carry off or copy their statue of him or even to sacrifice unmolested on the ancestral altar². Apameia in Phrygia was repeatedly devastated by earthquakes—a fact which, according to Strabon, explains the honours granted to Poseidon by that inland city³. But Poseidon was not the only deity concerned. In the days of Apollonios of Tyana (s. i A.D.), when the towns on the left side of the Hellespont were visited by earthquakes, Egyptians and Chaldaeans went about collecting ten talents to defray the cost of sacrifices to Ge as well as to Poseidon⁴. An interesting transitional case is afforded by an earthquake at Tralleis (s. ii A.D.), which was authoritatively set down as due to the wrath felt by Zeus for the city's neglect of Poseidon: the Trallians were ordered to make ample atonement to both gods⁵. But when in 115 A.D. Antiocheia on the Orontes was severely shaken, the survivors of the disaster ignored Poseidon altogether and founded a temple at Daphne for Zeus *Sotér*⁶. Again, in or about the year 178 A.D. Smyrna was overthrown by an earthquake. P. Aelius Aristides⁷, who was living in the neighbourhood, received divine injunctions to sacrifice an ox in public to Zeus *Sotér*. At first he hesitated to do so. But he dreamed that he was standing beside the altar of Zeus in the market-place and begging for a sign of the god's approval, when a bright star shot right over the market and confirmed his intention. He carried through the sacrifice, and from that moment the dread disturbances ceased. Moreover, five or six days before the first shock he had been bidden to send and sacrifice at the ancient hearth adjoining the sanctuary of Zeus *Olympios* (at Dios Chorion in Mysia⁸) and also to set up altars on the crest of the Hill of Atys. No sooner were these precautions taken than the earthquake came and spared his estate Laneion, which lay to the south of the Hill⁹.

Frequently, of course, an earthquake is recorded without explicit mention of any deity. Neither Poseidon nor Zeus is named as subject of the vague reverential phrases 'He shook'¹⁰ or, more often, 'God

shook¹. Scholars have assumed that the god in question was Poseidon². But the analogy of similar expressions relating to the weather points to the possibility that the name suppressed was that of Zeus³. And certainly in late times earthquakes were reckoned as a particular variety of Zeus-sign (*Dioseμία*)⁴.

The Romans exhibited, on the whole, a more marked tendency towards cautious anonymity. They said that once during an earthquake a voice was heard from the temple of Iuno on the Capitol directing them to sacrifice a pregnant sow—a direction which earned for the goddess the title of *Moneta*⁵. A pregnant sow was on other occasions sacrificed to Tellus⁶ or Terra Mater⁷ or Ceres⁸ or Maia⁹.

as a means of communicating fertility to the ground¹, so that it had probably come to be regarded as a victim suited to the earth-goddess and therefore appropriate to a grave disturbance of the earth. Again, in 268 B.C., when Rome was waging war in Picenum, the battlefield was shaken by a seismic crash², whereupon P. Sempronius Sophus, the Roman general, vowed a temple to Tellus and in due time paid his vow³. But such cases were exceptional. As a rule the Romans were studiously vague and non-committal. Aulus Gellius, who brought out his *Attic Nights* in 169 A.D.⁴, has some interesting remarks on the point⁵:

THAT IT HAS NOT BEEN DISCOVERED TO WHAT GOD SACRIFICE SHOULD BE
MADE ON THE OCCASION OF AN EARTHQUAKE.

The ostensible cause of earth-tremors has not been discovered by the common experience and judgment of mankind, nor yet satisfactorily settled by the various schools of natural science⁶. Are they due to the force of winds pent

in caverns and clefts of the ground? Or to the pulsation and undulation of waters that surge in subterranean hollows, as the ancient Greeks, who called Poseidon *seisichthon*, seem to have supposed? Or to any other specific cause, or to the force and will of another deity? As I said, belief does not yet amount to certainty. Accordingly the Romans of yore, who in all the affairs of life and above all in the ordering of religious ritual and the tending of immortal gods displayed the utmost propriety and prudence, whenever an earthquake had been perceived or reported, proclaimed by edict a solemn holiday on account of it, but refrained from fixing and publishing as usual the name of the god for whom the holiday was to be kept, lest by naming one in place of another they might bind the people in the bonds of a false prescription. If the said holiday had been polluted by any man and need for a piacular sacrifice had therefore arisen, they slew the victim 'to god or to goddess' (*si deo, si deae*)¹; and this regulation was strictly observed in accordance with the decree of the pontiffs, as M. Varro² states, because it was uncertain to what force and to which of the gods or goddesses the earthquake was due.

Two centuries later Ammianus Marcellinus, *à propos* of a devastating earthquake at Nikomedeia in 358 A.D., observes that, when

of a quaking world. But ultimately men in general and moralists in particular settled down to the belief that an earthquake as such was a divine visitation meant to vindicate the power of the Creator¹ or to chasten and reform his erring creatures².

Painters and poets, who from time to time personified the Earthquake, naturally reverted to earlier mythological conceptions³. Raphael in one of the marvellous tapestries designed by him (1515—1516)⁴ for the Sistine Chapel at Rome and woven by Pieter van Aelst of Brussels⁵ represented the imprisonment of St Paul at

Philippos (fig. 6).¹ Above we see the gaol and the gaoler about to kill himself; below, the earth cracking as a gigantic nude bearded figure emerges breast-high with scowling forehead and uplifted fists¹. In the Second Part of Goethe's *Faust* (1827—1832) an earthquake suddenly disturbs the peace of the upper Peneios. Seismos, 'rumbling and grumbling down below,' groans out:

Heave again with straining muscle,
With the shoulders shove and hustle,
So our way to light we justle,
Where before us all must fly².

He is however conscious that he makes the mountains picturesque, and claims that by so doing he benefits the very gods:

Apollo now dwells blithely yonder,
With the blest Muses' choir. 'Twas I
For Jove himself, with all his bolts of thunder,
That heaved the regal chair on high³.

Less intelligent, but more intense, and quite refreshingly direct is the attitude of the modern Greek peasant in regions where the earthquake is no theme for artistic representation⁴ or academic interest. Natives of Zakynthos, when the shock is felt, will cry out in deprecation 'My God, cease thine anger!'⁵ And the inhabitants of Arachova on Mount Parnassos fancy that God in rage and fury 'rolls his eyes and is minded to ruin the world, only the Blessed Virgin beseeches him and stays his wrath⁶.'

whose business it is to protect their votaries against earthquake. They include: (1) St Agatha of Catania (Feb. 5), during whose martyrdom in 251 A.D. a fearful earthquake occurred. (2) St Emygdios of Ascoli (Aug. 5), whose father, a prominent citizen of Augusta Trevirorum, tried to make him forswear his faith before a heathen altar till the very ground gave way beneath his feet. Others said that the saint averted an earthquake from Ascoli, where he was martyred in 303 or 304 A.D. (3) St Justus of Catalonia (May 28), bishop of Urgel from before 527 until after 546 A.D., whose body was found uninjured beneath the ruins of a wall that had collapsed above his grave. (4) St Petrus Gonsalez, better known to Spanish sailors as Sant Elmo (April 15), who died in 1240 A.D. He was once preaching in the open air near Bayonne, when an earthquake threatened. The congregation was for fleeing into the town; but the preacher detained it, and all ended well. (5) St Petrus Paschalis (Dec. 6), bishop of Jaen, who was martyred by the Moors at Granada in 1300 A.D. Soon after his death the town was plagued with famine, pestilence, earthquakes, and storms. (6) St Albertus of Trepano (Aug. 7), who died at Messina in 1307 A.D. and is reckoned as patron of all Sicily, an island much given to seismic shocks. (7) St Francesco Borgia (Oct. 10), duke of Gandia, who died in 1572 A.D. In 1625 A.D. he was chosen as a recent and popular saint to protect the new realm of Granada against earthquakes. (8) St Philippus Neri of Rome (May 26), who died in 1595 A.D. When, on June 5, 1688 A.D., an alarming earthquake visited Beneventum, Pope Benedict xiii escaped by lying directly under the saint's reliquary. (9) St Franciscus Solanus of Lima (July 24), who died in 1610 A.D. Seven years before his death he predicted the downfall of the town Truxillo. It was destroyed by earthquake on Feb. 14, 1618 A.D.

Of these passages two have a noteworthy context: 9. 67 ff. νηυσὶ δ' ἐπ' ὤρσ' ἄνεμον βορέην νεφεληγερέτα Ζεύς | λαίλαπι θεσπεσίῃ, σὺν δὲ νεφέεσσι κάλυψε | γαίαν ὁμοῦ καὶ πόντον· ὁρώρει δ' οὐρανόνθεν νύξ = 12. 313 ff. ὦρσεν ἐπὶ ζαῆν ἄνεμον νεφεληγερέτα Ζεύς | λαίλαπι θεσπεσίῃ, σὺν δὲ νεφέεσσι κάλυψε | γαίαν ὁμοῦ καὶ πόντον· ὁρώρει δ' οὐρανόνθεν νύξ. Much the same is said of Poseidon in *Od.* 5. 291 ff. ὥς εἰπὼν σύναγεν νεφέλας, ἐτάραξε δὲ πόντον | χερσὶ τρίαιναν ἑλών· πάσας δ' ὁρόθιεν ἀέλλας | παντοίων ἀνέμων, σὺν δὲ νεφέεσσι κάλυψε | γαίαν ὁμοῦ καὶ πόντον· ὁρώρει δ' οὐρανόνθεν νύξ, on which Eustath. in *Od.* p. 1538, 7 ff. remarks, θεωρητέον ὅτι τὸ σύναγε νεφέλας νεφεληγερέτην καὶ Ποσειδῶνα εἶναι ὑποδηλοῖ. ἐπειδὴ περ ὕδωρ ἔλη τοῖς νέφεσιν, εἰς δ' μεταλαμβάνεται ὁ Ποσειδῶν. ὁκρεῖ δὲ ὅμως ὁ ποιητὴς τὸν τὰς νεφέλας συνάγοντα Ποσειδῶνα καὶ νεφεληγερέτην συνθέτως εἶπεν. ἀπεκληρώθη γὰρ τοῦτο Διὶ τῷ ποιητικῷ τῶν νεφελῶν αἰτίῳ.

a pre-Homeric tag¹ originally descriptive of Zeus as a rain-making² magician³. In Greece, as elsewhere⁴, the primitive rain-maker, probably clad in a sheep-skin to imitate the fleecy vapours⁵, mounted some neighbouring height and did his puny best to allay the mid-summer heat by calling the clouds to draw their welcome veil across the sky. This at least seems a plausible inference⁶ from one curious Greek custom, the procession of men clad in thick sheep-skins which on the very hottest day of the year toiled up the slopes of Mount

Accordingly the Latin poets speak of fleecy clouds as *vellera* (Verg. *georg.* 1. 397, Varr. *Atac. frag.* 21 Baehrens *ap. anon. brev. expros.* Verg. *georg.* 1. 397 (in the ed. of Servius by G. It is possible that the dappled fawnskin of the Bacchant, trimmed with tufts of white wool (Eur. *Bacch.* 111 ff. στικτῶν τ' ἐνδυνὰ νεβρίδων | στέφετε λευκοτρίχων ποκάμων, μαλλοῖς and Sir J. E. Honor.* 606 f. talis Erythraeis intextus, nebrida gemmis | Liber agit currus), seems to have borne a cosmic character (R. Eisler *Weltenmantel und Himmelszelt* München 1910 i. 76, 256 n. 4, who cites Nonn. *Dion.* 40. 577 f. Attic vases signed by the potter Brygos (c. 505—475 B.C.) or attributed to his painter (lists in Hoppin *Red-fig. Vases* i. 106 ff., J. D. Beazley *Attische Vasenmaler des rotfigurigen Stils* Tübingen 1925 p. 175 ff.) often show garments decorated with dots (O. S. Tonks 'Brygos: his Characteristics' in *Memoirs of the American Academy of Arts and Sciences* 1908 xiii. 69, 95, Pfuhl *Malerei u. Zeichnung d. Gr.* i. 460). In view of Brygos' name with its northern connexions (Βρύγοι, Βρύγες = Φρύγες: see W. Pape—G. E. Benseler *Wörterbuch der griechischen Eigennamen*³ Braunschweig 1875 i. 231, E. Oberhummer in Pauly—Wissowa *Real-Enc.* iii. 920 f.) it is just conceivable that this craftsman was popularising at Athens a custom which originated in Thraco-Phrygian ritual. But the hypothesis would be *risqué*, since dotted garments are not strictly confined to the output of Brygos (P. Hartwig *Die griechischen Meisterschalen der Blüthezeit des strengen rotfigurigen Stils* Stuttgart—Berlin 1893 p. 310 n. 4).

Pelion to the sanctuary of Zeus *Aktaios* on its summit¹. And the sheep-skin of the human magician would be readily transferred to his divine counterpart²—witness the title of Zeus *Melósios*, Zeus 'Clad in a sheep-skin' (*melotē*)³. It is, however, reasonable to suppose that already in Homeric times the word *nephelegerēta* had lost something of its early import and had taken on a meaning half-religious and half-picturesque. But worse was in store, for in the fifth century B.C. it was frankly travestied. Perikles⁴ as the greatest man of his age was dubbed Zeus by the comedians⁵ and figures in a brilliant fragment of Kratinos, not as *nephelegerēta*, 'the cloud-gatherer,' but as *kephla-*

legeréta, 'the crowd-gatherer'.¹ Truth to tell, a parody of the old appellative can still raise a laugh. Does not Clough in the immortal *Bothie* speak of his cheery, cigar-loving friend Lindsay as 'the Piper, the Cloud-compeller'?²

Of course, on occasion, magic might be employed, not to collect the clouds, but to scatter them. If for example hail threatened, old-fashioned farmers had recourse to magicians who chased the clouds away³ and were known as *nephodiôktai*. Nowadays magic or ancient science has joined hands with science or modern magic, and on many a Swiss hillside may be seen the mortar from which maroons are fired when hail-clouds are gathering above the vineyard.

Less magical but more majestic is a second stock epithet of the epic minstrel—*kelainephês* Kronion, Kronos' son 'of the dark clouds'.⁵ For, though sundry scholiasts and lexicographers attempt to render it 'he who gathers the black, or dark, clouds together'⁶ and expound

¹ Kratin *Chirones frag.* 3 (*Frag. com. Gr.* ii. 147 f. Meineke prints καλοῦσιν).' I have assumed that Kratinos meant 'collector of heads, crowd-collector,' but there is of course a further hint at the peculiar shape of Perikles' cranium, as is clear from the context. With Kratinos, as with Aristophanes (*c.g. supra* ii. 2 n. 4, 118 n. 3, 1166 n. 3), word-play tends to produce harmonics.

Clearly the νεφοδιώκται claimed the ability to divert the clouds from their course and to precipitate them as hail or drenching rain in any desired direction. Stephanus *Thes. Gr. 34 Zeus and the Clouds in Literature

it as meaning 'the rain-maker¹,' yet the title itself calls up no such primitive picture, nor has it quite the same claim as *nephelegereta* to be recognised as a poetic heirloom of fixed and unalterable pattern². A point deserving of notice is its constant association with Kronion or Kronides. It is seldom, if ever, used of Zeus pure and simple till long after classical times. Normally Zeus is *kelainephés* as being the son of Kronos; or, more rarely, both the divine names are dropped and *kelainephés* stands as an independent appellative. It looks as though this particular title had been attached to Zeus in early Homeric days as affiliated successor of the 'Minoan' storm-god Kronos³.

According to the *Iliad*, the three sons of Kronos divided the world between them and

Zeus' portion was
Broad heaven in the *aithér* and the clouds⁴.

Zeus sits on the peak of Mount Olympos and, when he is visited by Hera and Athena, the Horai fling wide a cloudy portal to admit them:

Then Hera with the lash swift smote the steeds,
And of their own accord the gates of heaven
Groaned, held by the Horai. These are they who keep
Great heaven and Olympos; theirs the task
To ope the thick cloud or to close the same.
So through the gateway guided they their steeds
Patient o' the goad, and Kronos' son they found
Sitting apart from all the other gods
On the topmost peak of many-ridged Olympos⁵.

At the beginning of a hexameter the formula is *Ζηνὶ κελαϊνεφεΐ Κρονίδῃ* (*Od.* 9. 552, 13. 25, but never in the *Iliad*). *Κρονίδῃ* is not omitted except by late authors (Maximus *περὶ καταρχῶν* 605 *Ζηνὶ κελαϊνεφεΐ* refers to the planet Zeus and is followed immediately by a *lacuna* (see A. Ludwig *ad loc.*). Tzetz. *alleg. Od.* 9. 118, 13. 7 (in P. Matranga *Anecdota Graeca Romae* 1850 i. 277, 293) *Ζηνὶ κελαϊνεφεΐ* is more *ad rem*).

After the *iactura* *κελαϊνεφές* occurs either in conjunction with other vocatives (*Il.* 2. 412 *Ζεῦ κῦδιστε, μέγιστε, κελαϊνεφές*, 22. 178 *ὦ πάτερ ἀργυκέρανε, κελαϊνεφές*) or standing by itself (*Il.* 15. 46, *Od.* 13. 147 where Nikanor read *διοτρεφές* of Artemis (schol. Zeus and the Clouds in Literature 35

Similarly Apollon and Iris, when sent by Hera to Mount Ide, discover Zeus seated on the summit of Gargaron¹—

And ringed about him was a fragrant cloud².

It was on the same mountain-top that Zeus, succumbing to the wiles of Hera, promised privacy within a cloud:

Hera, fear not: nor god, nor man shall see it;
So thick the golden cloud that I will wrap
Around us, Helios himself could ne'er—
Though keen his radiance beyond all—espy us³.

And Zeus was as good as his word. The sequel tells how

o'er them spread a cloud magnificent
And golden: glittering dew-drops from it fell⁴.

Clearly cloudland is characteristic of the sky-god. Later poets harp on the theme. Aischylos says simply 'the clouds of Zeus⁵.' Pindar *more suo* mints fresh and ringing epithets for Zeus himself—*orsinephés*, 'he that causeth the clouds to rise⁶,' *hypsinephés*, 'he of the towering clouds⁷,' *polynephélas*, 'the many-clouded' ruler of the sky⁸. There is a would-be return to Homeric *naïveté* in the *Birds* of Aristophanes, when the Chorus of songsters chant:

Then take us for Gods, as is proper and fit,
And Muses Prophetic ye'll have at your call
Spring, winter, and summer, and autumn and all.
And we won't run away from your worship, and sit
Up above in the clouds, very stately and grand,
Like Zeus in his tempers: but always at hand
Health and wealth we'll bestow, as the formula runs,
ON YOURSELVES, AND YOUR SONS, AND THE SONS OF YOUR SONS⁹—

or when Prometheus, much in awe of his Aeschylean persecutor, asks in a scared tone:

What's Zeus about?

Clearing the clouds off, or collecting them¹⁰?

Latin poets likewise associate the clouds with the sky-god—Statius for instance speaks of 'cloudy Iupiter'¹—and the notion passed into the common poetic stock.

This canonical conception of the sky-god sitting among his clouds can be illustrated from early imperial art. A fine fresco from Herculaneum, now in the Museo Nazionale at Naples (pl. iv, fig. 8)²,

Eros appearing behind his right shoulder points downwards to some cause of interest, not improbably to Ganymedes or some other of the god's numerous flames¹. Above the pair stretches the arc of a rainbow, beyond which, half-hidden by the clouds, is perched an eagle looking towards its master. So much is certain. But further, a comparison of this fresco with 'Apulian' vase-paintings² or with the relief by Archelaos of Priene³ raises a suspicion that here, as there, Zeus is really couched on a mountain-top, say the cloudy summit of Olympus. Be that as it may, the painter has managed to combine a variety of Hellenistic *motifs*—the recumbent Zeus⁴, the prompting Eros⁵, the expectant eagle⁶—in a fairly consistent and effective whole.

Somewhat similar is the design that adorned the central medallion in the barrel-ceiling of Room 60, the famous *Volta Dorata*, of Nero's Golden House (fig. 9)⁷. Here against a circular field of blue is seen

¹ F. G. Welcker *loc. cit.* p. 104 held that Eros is directing attention to the sceptre of Zeus, O. Benndorf *loc. cit.* p. 444 that he is indicating the heart as the seat of the god's malady. E. Braun *loc. cit.* had come nearer to the truth, when he assumed that Eros is pointing downwards to some human fair.

Von oben schwebt ein Eros auf das Liebespaar zu'), Reinach *Rép. Peint. Gr. Rom.* p. 15 no. 2 ('Jupiter, Ganymède, Minerve, Mercure, Eros').

¹ Other identifications (see the preceding note) are much less probable. Iuno would not have been represented as a naked woman, and Venus could at most claim a parental kiss. Besides, the eagle spells Ganymedes.

its wings still spread—beneath the left foot of Zeus, to serve him as a living footstool. Eros hovers near at hand with welcoming arms. Hermes in winged *pétasos* and loosely draped *chlamýs* holds up, from a lower level of cloud, a *phiale*—possibly that from which Ganymedes had fed the eagle¹. In the background to the left Athena, equipped with helmet, spear, and Gorgon-shield, turns her head to address another goddess imperfectly seen behind her. The painting no doubt has merits. The choice of subject suits its position of central importance. The blue circle overhead suggests the sky and helps the spectator to realise that this is no mountain-top but the heaven above it². Hermes' gesture secures uplift³. Detachment from earth is complete. Yet the composition in general is not very well adapted to fill the circular space. The fusion of three types—Zeus enthroned. Zeus on the eagle⁴, Ganymedes on the eagle—is decidedly awkward. Hermes' action after all is a little meaningless. And the two goddesses, perhaps intended for those of the Capitoline triad, are obviously *de trop*.

These weaknesses disappear in a third fresco, which again formed the ceiling-decoration in a room of the Golden House (pl. v)⁵. The circular design, according to a sketch of it made by that consistently careful draughtsman P. S. Bartoli, depicts Zeus seated on a cloudy throne with a *himation* wrapped about his legs, a thunderbolt brandished in his right hand, and an eagle perched at his side. The medallion was surrounded by a triple row of gods and goddesses with, beyond them, a series of sportive Tritons.

An engraved onyx in my collection (fig. 10)⁶ represents the whole company of heaven as conceived in Roman imperial times.

⁶ The stone, which is circular and plano-convex (here figured to a scale of $\frac{1}{2}$), possibly served as a pendant or ear-ring. On such purely ornamental *phaleræ* see E. Saglio in Daremberg—Saglio *Dict. Ant.* iv. 427. This one is from the Wyndham Cook and Sir Francis Cook collections. It does not appear in the privately printed Catalogue of the Wyndham Cook Collection, but was in the Sale of Humphry W. Cook (July 1925), who inherited from Sir Francis Cook. There is an impression of the same intaglio in the Museum of Classical Archaeology, Cambridge, no. 472 in the Impressions of Engraved Gems (Ancient and Modern) got together by John Wilson (1790—1876). It is described in the MS. *Catalogue* as 'Jupiter between Juno & Minerva to witness a Chariot Race'!

The convex circular field is admirably suggestive of a cosmic scene. Above a thick stratum of cloud sit the Capitoline three. Jupiter in the centre, with a *himátion* draped round his knees and over his left shoulder, has a small twisted thunderbolt in his right hand¹ and a long sceptre in his left. The *motif* is normal in the standing type of the Capitoline Minerva (e.g. *supra* i. 44 fig. 13, 45 fig. 14). The omission of the spear on the onyx may imply that the pose was modified into a gesture of entreaty or the like (C. Sittl *Die Gebarden der Griechen und Römer* Leipzig 1890 pp. 51, 188 ff.).

chiton, *himation*, and veil. She too holds a short sceptre in one hand and with the other extends a *patera* towards Jupiter. The triad is flanked by a pair of nude beardless wind-gods blowing conch-shells¹ as they emerge from the cloudy band. Beneath the clouds Sol in a *quadriga* pursues Luna in a *biga*: he is distinguished by his *chlamys* and radiate crown, she by her arched drapery and crescent. Lowest of all reclines Oceanus portrayed as an elderly river-god with water flowing from his urn². The Capitoline group as here represented resembles so closely—even to the modified gesture of Minerva's hand—the same group as it appears on bronze medallions of Antoninus Pius (fig. 11)³ and of Marcus Aurelius and Lucius Verus (fig. 12)⁴ that we may fairly attribute the intaglio to a period not much later than the middle of the second century A.D. Similar in age and *motif* are two, if not three, gems in our national collection⁵. Ultimately the deities, seated or standing, are accompanied by their favourite birds—graphic labelling of the usual sort (figs. 13, 14).⁶ It is interesting to observe that the whole subject was used with happy effect in the decoration of a terra-cotta lamp, now at Berlin (fig. 15)⁷, which—to judge from its heart-shaped nozzle—can be referred to the third century A.D.⁸

(c) Nephelokokkygia¹.

It remains to consider in greater detail the most famous conception of Cloud-land bequeathed to us by classical antiquity, the Nephelokokkygia of Aristophanes' *Birds*. That remarkable drama raises many problems, some of which we must attempt to solve. Why did the poet choose Birds for his theme? Why lay such stress on the Hoopoe, the Woodpecker, the Cuckoo? Who is Pisthetairos? Who is Basileia? And what light does the whole *fantasia* throw on the relation between Zeus and the Clouds? I begin by passing in review the relevant incidents of the play.

Two typical Athenians, Pisthetairos and Euelpides, tired of Athens and its perpetual lawsuits, set out, under the guidance of a crow and a jackdaw, to seek the hoopoe Tereus. They would learn from him, since he too had been a man and suffered like troubles, where they may find peaceful quarters—

Fleecy as a rug and soft to lie upon².

They want something more comfortable than their own Rock Town, but scout his suggestions of the Red Sea in the east, Lepreos down south, Opous up north. Euelpides thinks there is much to be said for staying where they are, with the Birds. And Pisthetairos is struck by a grand idea. If Tereus and the Birds would but hearken to him, they might take possession of the Clouds—why not?—and transform the very *pólos* into a *pólis*. This would enable them to starve out the gods, who could receive no savoury sacrificial smoke without first paying tribute to them! Hereupon Tereus and his mate, Prokne the nightingale, summon an assembly of the Birds, a suspicious and hostile crowd³.

To allay their fears, Pisthetairos in a persuasive speech develops his scheme⁴. He tells them that the Birds were formerly lords of creation, being of older lineage than Kronos, the Titans, or Earth herself—witness Aesop's fable of the Lark which, before earth existed, had to bury her father in her own head⁵. Clearly then the Birds are

⁵ This fable, which is of a type still common in the Balkans (cp. M. Gaster *Rumanian Bird and Beast Stories* London 1915 p. 236 f. no. 78 'Why has the lark a tuft?', p. 238 f. no. 79 'Why is the tuft of the lark dishevelled?'), is not found in any ancient collection of Aisopika. more ancient than the gods, and Zeus ought to relinquish his sceptre to the Woodpecker¹. Again, the Birds are the rightful rulers of mankind. The Cock with his upright tiara was once king of Persia, and still summons men to their labours². The Kite lorded it over

merely paraphrase or transcribe Aristophanes. Galen *de simplicium medicamentorum temperamentis et facultatibus* 11. 37 (xii. 360 f. Kühn) likewise cites Aristophanes and rightly cp. the ἐπιτυμβίδιαi κορυδαλλίδες of Theokr. 7. 23 (see O. Crusius on Babr. 72. 20 κορυδαλλὸς οὐν τάφοις παίζων). Ail. *de nat. an.* 16. 5 (copied by the paroemiographers Apostol. 7. 74, Arsen. *viol.* p. 239 Walz s.v. ἔκποπος 'Ἰνδοῦ στοργή) thinks that the Greeks got their story of the Lark from one told by the Brachmanes about the Hoopoe, a bird which the Indians deem the right pet for royalty. The story is as follows. A certain Indian king had a son, whose [two?] elder brothers grew up lawless and violent. They scorned their brother as too young and scoffed at their father and mother as too old. So the parents took their youngest boy and fled. Their journey was too much for them and they died. But the boy, far from despising them, split his own head with a sword and buried them in it. The Sun, who sees all, amazed at this remarkable instance of filial piety, turned the boy into a beautiful and long-lived bird. On his head is a crest, which keeps his exploit in memory....An Ogygian length of time has elapsed since the Indian Hoopoe was a boy and treated his parents thus. A. Hausrath in Pauly—Wissowa *Real-Enc.* vi. 1727, 1730 f. makes it probable that the simple Greek tale is not actually derived from the more rhetorical Indian tale. Nevertheless the two are so similar that they cannot be regarded as wholly unrelated. There is of course a superficial resemblance between the crested lark (e.g. R. Lydekker *The Royal Natural History* London 1894—95 iii. 420 f. with fig. on p. 418) and the hoopoe (*id. ib.* 1895 iv. 57 ff. with col. pl.), and it is reasonable to suppose that Greeks and Indians, distant cousins by race, elaborated analogous stories to account for parallel features. But D'Arcy W. Thompson *A Glossary of Greek Birds* Oxford 1895 p. 97 is in danger of going too far when he says: 'The κορυδαλλὸς and ἔκποψ (both crested birds) are frequently confused: the very word *Alauda* is possibly an Eastern word for the Hoopoe, Arab. *al hudhud*.' This etymology, first found in, or rather implied by, the Pandectarius Arabicus Matthaei Sylvatici (an Arab commentator on the *Pandectae* of Matthaeus Sylvaticus, physician of Salerno, published at Naples in 1474) quoted by S. Bochart *Hierozoicon* rec. E. F. C. Rosenmuller Lipsiae 1796 iii. 115, is nowadays commonly rejected in favour of a Celtic origin (Plin. *nat. hist.* 11. 121 Gallico vocabulo, Suet. *Iul.* 24 vocabulo ..Gallico, Marcell. *de medicamentis* 28. 50 p. 299, 1 Helmreich Gallice): see L. Swainson *The Folk Lore and Provincial Names of British Birds* London 1886 p. 25) and sundry other birds (Plin. *nat. hist.* 10. 203 dissident *aquila* et *trochilus*, si credimus, quoniam rex appellatur avium, cp. 8. 90 *parva avis*, quae *trochilos* ibi vocatur, rex avium in Italia, with the remarks of D'Arcy W. Thompson *A Glossary of Greek Birds* Oxford 1895 p. 171 f.), was popularly held to be a king? Keleos the Green Woodpecker (*supra* i. 226) was one of the 'kings' at Eleusis (*supra* i. 211).

Hellas: Hellenes grovel yet at the sight of him¹. The Cuckoo was sovereign of Egypt and Phoinike, and his cry sent the circumcised to reap their plains: young stalwarts still follow their example². Tragedy-kings bear a bird-tipped sceptre³. Zeus himself has an eagle on his head, Athena an owl, Apollon a hawk⁴. No wonder men swear 'by the Goose'⁵.

¹ The kite was in general a bird of ill omen (L. Hopf *Thierorakel und Orakelthiere in alter und neuer Zeit* Stuttgart 1888 p. 94 f. ('Weihen')), whose advent shortly before the vernal equinox (Gemin. *calendarium*; *Pisces* p. 228, 1 f. Manitius *εν δὲ τῇ ἱστ* (March 9) *Εὐδόξω χειμαίνει· καὶ ἰκτίνος φαίνεται*, 6 f. *εν δὲ τῇ κβ* (March 14) *Εὐκτῆμονι ἰκτίνος φαίνεται· ὀρνιθίαί πνέουσι μέχρις ἰσημερίας*, 10 f. *εν δὲ τῇ λ* (March 22) *Καλλιππῶ τῶν Ἰχθύων ὁ νότιος ἐπιτέλλων λήγει· ἰκτίνος φαίνεται· βορέας πνέει* with the observations of D'Arcy W. Thompson *A Glossary of Greek Birds* Oxford 1895 p. 68 f. Cp. Aristoph. *av.* 713 f.) might well be greeted by the superstitious with grovelling prostration (schol. Aristoph. *av.* 501 *προκυλινδεῖσθαι· ἔσρος ἀρχομένου (ἐρχομένου cod. R.) ἰκτίνος φαίνεται εἰς τὴν Ἑλλάδα. ἐφ' ᾧ ἡδόμενοι κυλινδόνται (ὡς ἐπὶ γόνυ. παισας οὖν ὡς βασιλεῖ φησι τὸ κυλινδεῖσθαι). ἴδιον γὰρ βασιλέως τὸ γονυπετεῖσθαι ὑπὸ ἀνθρώπων. ἄλλως. (τοὺς ἀνθρώπους δηλονότι. τὸ διὰ μεταβολὴν δὲ καιροῦ γινόμενον εἰς βασιλικὴν ἐπέτρεψε τιμὴν.) οἱ γὰρ ἰκτινοὶ το παλαιὸν ἔαρ ἐσήμαινον. οἱ πένητες οὖν ἀπαλλαγέντες τοῦ χειμῶνος ἐκυλινδοῦντο καὶ προσεκύνουν αὐτοὺς. Soud. s.v. ἰκτίνος merely copied this scholion, prefixing the words καὶ παροιμία· προκυλινδεῖσθαι ἰκτίνους. No such saying, however, appears in the paroemiographers). There is no doubt that Aristophanes has here preserved for us a genuine scrap of ancient folk-custom. W. Mannhardt *Wald- und Feldkulte*² Berlin 1904 i. 483 adduces an interesting parallel: 'Beim ersten Kukuksruf walzt sich der Meininger, hessische, westfälische Bauer ein paarmal auf der Erde, um das Jahr hindurch frei von Ruckenschmerzen zu bleiben'. (⁵ Zs. f. D. A. III, 362, 13. XII, 400. Zs. f. D. Myth. IV, 447. Kuhn, Westfal. Sag. II, 74, 221.) Gradoso warf sich im alten Griechenland rucklings (*ἰππίος*) nieder und walzte sich auf dem Boden, wer zum erstenmale im Frühling eines Weihen (*ἰκτίνος*) ansichtig ward⁶. (⁶ Aristophan. *av.* 498 ff. c. schol.) See further Seemann in the *Handwörterbuch des deutschen Aberglaubens* Berlin—Leipzig 1933 v. 713, 721 n. 170.*

² We have no reason to think that Egyptians and Phoenicians were specially devoted to the Cuckoo. But it is likely enough that they regarded his cry in the spring-time as a signal for returning to work in the fields (cp. J. Hardy 'Popular History of the Cuckoo' in *The Folk-Lore Record* 1879 ii. 56 ff.). Aristophanes uses words with a double meaning: *κόκκυ* suggests at once 'cuckoo' and 'cuckold' (W. Mannhardt 'Der Kukuk' in the *Zeitschrift für deutsche Mythologie und Sittenkunde* 1855 iii. 246 ff. 'Vor allem stand der kukuk den functionen der zeugung vor.' Etc.); *ψωλοί* means both *circumcisi* and *verpi*; *πεδῖον* is not only 'plain' but also *pueritium* (schol. Aristoph. *av.* 507 ἄλλως. τὸ αἰδοῖον, cp. *λειμών, κῆπος, hortus*, and the like).

³ E.g. *supra* i. 251 pl. xii (Kreon).

⁴ The type is so unusual that the scholiast *ad loc.* is reduced to saying *δέον εἰπεῖν ἐπὶ τοῦ σκήπτρου εἶπεν ἐπὶ τῆς κεφαλῆς*! His alternative explanation *ἐπειδὴ εἰώθεσαν τὰ ἀφιερωμένα ἐκάστω θεῷ ὄρνα ἐπὶ κεφαλῆς ἰδρῦσθαι* is simply untrue. Hieratic effigies of the sort are all pre-Hellenic, e.g. the faience goddesses surmounted by snake and lioness (? leopard) from the temple-repository of 'Middle Minoan iii' date at Knossos (Sir A. J. Evans in the *Ann. Brit. Sch. Ath.* 1902—1903 ix. 74 ff. figs. 54—57, *id.* *The Palace of Minos* London 1921 i. 500 ff. with col. Frontispiece and figs. 359—362, H. T. Bossert *Alt-kreta*² Berlin 1923 pp. 22, 72 ff. figs. 103—106) or the terra-cotta goddess with a dove on her head from the small shrine of 'Late Minoan iii' date on the same site (*supra* ii. 536 fig. 406 c). We need not suppose that such archaic forms had survived into classical Greece. If a bird on the head was modified into a bird on the helmet, that would lend point enough to Aristophanes' lines. And of this usage we have some few traces. There was a chrysele-

phantine statue of Athena with a cock on her helmet, said to be the work of Pheidias, on the *akrópolis* of Elis (Paus. 6. 26. 3, cp. Plin. *nat. hist.* 35. 54 where the same (?) statue is attributed to Kolotes the pupil of Pheidias: see further H. Hitzig—H. Blümner on Paus. *loc. cit.*). A bronze formerly in the cabinet of St Germain des Prez represents Athena wearing a helmet the crest of which is supported by a cock (Montfaucon *Antiquity Explained* trans. D. Humphreys London 1721 i. 82 f. pl. 39, 19 ('*Hermathena*')) = Reinach *Rép. Stat.* ii. 276 no. 10). Another bronze at Agram makes her crest-support an owl (J. Brunšmid 'Monuments du Musée d'Agram' in the *Viestnik* 1914 [*Vjesnik* N. S. xiii 1913/1914] p. 212 cited by Reinach *Rép. Stat.* v. 120 no. 9). A third, in the Bammerville collection, repeats the motif (W. Frohner *Collection de feu M. Joly de Bammerville* Paris 1893 pl. 19 = Reinach *Rép. Stat.* ii. 278 no. 9).

⁹ E. von Lasaulx *Der Eid bei den Griechen* Wurzburg 1844 p. 27 f. and R. Hirzel *Der Eid* Leipzig 1902 pp. 96 n. 2, 100 n. 3 collect most of the passages that bear on this curious practice. From them we learn (a) that Rhadamanthys would not suffer his subjects to take an oath by the gods, but bade them swear by goose, dog, ram, etc., and (b) that Sokrates conformed to the same usage, swearing by dog, plane-tree, etc. Cp. Plat. *apol.* 21 E, *Gorg.* 466 C, *Phaedr.* 228 B, *rep.* 399 E, *Phaedr.* 98 E νῆ τὸν κύνα, *Gorg.* 461 A μὰ τὸν κύνα, *Gorg.* 482 B μὰ τὸν κύνα τὸν Αἰγυπτίων θεόν, *Phaedr.* 236 D—E ὀμνυμι... τὴν πλάτανον ταυτηνί.

But we have yet to determine the origin and significance of the oath by goose, dog, ram, etc. No one nowadays is likely to share the view of Tertullian and Lactantius (*loc. cit.*) that Sokrates was deliberately making a mock of the gods by his appeal to some trumpery substitute. Nor, on the other hand, shall we rest satisfied with the contention of L. Preller (Preller—Plew *Gr. Myth.* ii. 130 n. 4) that the said substitutes were originally sacred trees and animals. The Platonic Sokrates, to be sure, says μὰ τὸν κύνα τὸν Αἰγυπτίων θεόν (Plat. *Gorg.* 482 B). But then the Platonic Phaidros can retort ὡς Σωκράτης, ῥαδίως σὺ Αἰγυπτίους καὶ ὀποδαπούς ἂν ἐθέλης λόγους ποιεῖς (Plat. *Phaedr.* 275 B). The Lucianic Sokrates, who identifies the ‘dog’ with Anubis or Seinos or Kerberos (Loukian. *vit. aut.* 16), would presumably have interpreted the ‘ram’ as Ammon. A *mintis* like Lampon might swear by the ‘goose’ as a mantic bird (schol. Aristoph. *av.*

521 ὁ δὲ λάμπων θύτης ἦν καὶ χρησμολόγος καὶ μάντις. ὤμνε δὲ κατὰ τοῦ χηνὸς ὡς μαρτικοῦ ὀρνέου). And a little mythological ingenuity could doubtless discover some spark of sanctity in the 'plane-tree,' the 'cabbage,' the 'poppy' (Soud. s.v. μὰ μήκωνος χλόην· "ναὶ ναὶ μὰ μήκωνος χλόην" and s.v. ναὶ ναὶ μὰ μήκωνος χλόην· ὄρκος ἐπὶ χλευασμῷ), and what not? All the same, there was sound sense in the *dictum* of Apollonios that Sokrates swore by these things οὐχ ὡς θεοῦς, ἀλλ' ὥς μὴ θεοὺς ὀμνέουσι (Philostr. *loc. cit.*). Finally, we shall not subscribe to the well-meant but unconvincing claim of St Augustine, that Sokrates' attribution of divinity to natural objects was an expedient intended to deter men from the worship of artificial objects and to direct their thoughts toward the one true God (Aug. *de vera religione* 2 (i. 1207 c ff. ed.² Bened.) credo, intelligebat qualiacumque opera naturae, quae administrante divina providentia gignerentur, multo quam hominum et quorumlibet opificum esse meliora, et ideo divinis honoribus digniora, quam ea quae in templis colebantur. non quod vere lapis et canis essent colenda sapientibus, sed ut hoc modo intelligerent qui posent, tanta superstitione demersos esse homines, ut emergentibus hic esset tam turpis demonstrandus gradus, ad quem venire si puderet, viderent quanto magis pudendum esset in turpiore consistere. simul et illos qui mundum istum visibilem, summum deum esse opinabantur, admonebat turpitudinis suae, docens esse consequens ut quilibet lapis tanquam summi dei particula iure coleretur. quod si exsecrarentur, mutarent sententiam, et unum deum quaerent, quem solum supra mentes nostras esse, et a quo omnem animam et totum istum mundum fabricatum esse constaret. etc.).

What then, after all, is the explanation of these strange oaths? J. Vendryes *Language* trans. P. Radin London 1925 p. 221 observes: 'In many languages oaths undergo a conventional alteration which allows them to be introduced into the best society; thus, for example, *bigre*, or *fichtre*. The French say: *palsambleu*, *parbleu*, *pargmeu*, *pardienne* instead of *par le sang de Dieu* or *par Dieu*, just as the English turned "By Mary" into "Marry," "By God's Little Body" into "Odds Boddikins." Similarly E. Weekley *The Romance of Words* London 1912 p. 60: 'In *drat*, formerly 'od rot, *zounds*, for *God's wounds*, 'sdeath, *odsbodikins*, etc., there is probably a deliberate avoidance of profanity. The same tendency is seen in *Gogs* (*Shrew*, iii. 2), Fr. *parbleu*, and Ger. *Potz* in *Potztausend*, etc.' Accordingly W. A. Becker long since conjectured that χῆρα in this connexion was a distorted form of Ζῆρα (W. A. Becker *Charikles*² Leipzig 1854 i. 154 'Es kann fast scheinen, als ob man ausweichend τὸν χῆρα statt τὸν Ζῆρα gesagt habe, wie auch bei uns dergleichen Verdrehungen nicht ungewöhnlich sind'). The same view was advocated by K. Lehrs *Platos Phadrus und Gastmahl* Leipzig 1870 p. 142. R. Hirzel *Der Eid* Leipzig 1902 p. 96 n. 2 objects that nobody said νῆ τὸν Ζῆρα (despite *Il.* 23. 43 and *Od.* 20. 339 οὐ μὰ Ζῆν', Soph. *Trach.* 1188 ὀμνυμι' ἔγωγε, Ζῆν' ἔχωιν ἐπώμοτον, *Phil.* 1324 Ζῆρα δ' ὄρκιον καλῶ, Eur. *Hipp.* 1025 f. νῦν δ' ὄρκιον σοι Ζῆρα καὶ πέδον χθονὸς ὀμνυμι κ.τ.λ.) and consequently nobody would have altered it into νῆ τὸν χῆρα. But this objection ignores the fact that in Crete—the very home of Rhadamanthys—oaths were regularly taken at Dreros by τὸν Δῆρα (Dittenberger *Syll. inscr. Gr.*² no. 463 (*ib.*³ no. 527), 14 ff. cited *supra* i. 729 n. 2), at Priansos, Gortyna and Hierapytna by Τῆρα (F. Blass in Collitz—Bechtel *Gr. Dial. Inscr.* iii. 2. 301 ff. no. 5024, 59 ff. cited *supra* ii. 723 n. o), at Hierapytna and one of its colonies by Τῆρα (F. Blass *ib.* iii. 2. 311 f. no. 5039, 11 f. cited *supra* ii. 723 n. o), at Lyttos by Τῆρα (F. Blass *ib.* iii. 2. 380 f. no. 5147 b, 5 cited *supra* ii. 934 n. o) and by Ζῆρα (Michel *Recueil d'Inscr. gr.* no. 29, 13 f. cited *supra* ii. 723 n. o).

I conclude, therefore, that in Crete, where men swore officially by τὸν Δῆρα or Τῆρα or Τῆρα or Ζῆρα—so many ways of representing the initial Δε in the name of Zeus (É. Boisacq *Les dialectes doriens* Paris 1891 p. 153, G. Meyer *Griechische Grammatik*³ Leipzig 1896 p. 338, C. D. Buck *Introduction to the Study of the Greek Dialects* Boston 1910 pp. 31, 67, 86)—a popular distortion νῆ τὸν χῆρα arose and was in due course fathered upon Rhadamanthys. R. Hirzel *loc. cit.* aptly observes that in Crete people still say μὰ τὸ θειό, 'by the beast, dragon, giant,' or μὰ τὸ χυλό, 'by the sap,' for μὰ τὸ θεό, 'by God' (A. Jeannarakis [= A. N. Jannaris] ΔΕΣΜΑΤΑ ΚΡΗΤΙΚΑ Leipzig 1876 p. 327 'μὰ τὸ θειό, statt μὰ τὸ θεό, bei Gott, ἀνάλεμα statt ἀνάθεμα, verflucht etc.', *ib.* p. 379 'Da

The Birds, flattered and fluttered by this speech, are willing to accept the plan of Pisthetairos, to build a great wall¹ round the air,

sich das Wort *χυλός* mit dem Worte *θεός* reimt, so sagt man sehr oft *μὰ τὸ χυλό* statt *μὰ τὸ θεό* um die Gotteslasterung zu vermeiden. Gleichfalls sagt man *μὰ τὸ θερίο*, *μὰ τὸ νιό*, auch *διάβοντρος* statt *διάβολος* (vgl. hole mich der Kukuluk?). Perhaps *κύνα* in turn was a substitute for *χῆνα*, if not *κρίον* for *Κρόνον* (*supra* ii. 548 ff.). But successive links soon become impossible to trace.

¹ The notion of a cosmic wall is found in the teaching of Parmenides (Aet. 2. 7. 1 (H. Diels *Doxographi Graeci* Berolini 1879 p. 335 a 11 ff., b 8 ff.) *ap. Plout. de plac. phil.* 2. 7 *καὶ τὸ περιέχον δὲ πάσας* (sc. τὰς στεφάνας) *τείχους δίκην στερεὸν ὑπάρχειν* and *ap. Stob. ecl.* 1. 22. ¹³ p. 195, 7 f. Wachsmuth = H. Diels *Die Fragmente der Vorsokratiker*³ Berlin 1912 i. 144, 16 f. *καὶ τὸ περιέχον δὲ πάσας τείχους δίκην στερεὸν ὑπάρχειν, ὅφ' ὃ πυρώδης στεφάνη*). It reappears in the Epicureanism of Lucretius (Lucr. 1. 73 *flammantia moenia mundi*, cp. 1. 1102, 2. 1045, 1148, 3. 16, 5. 119, 454, 1213, 6. 123), and as a Lucretian touch in the poems of Ovid (*Ov. met.* 2. 401 f. *at pater omnipotens ingentia moenia caeli | circuit*) and Manilius (Manil. 1. 150 f. *summaque complexus stellantis culmina caeli | flammaram vallo naturae moenia fecit*, 486 f. *qui primus moenia mundi | seminibus struxit minibus inque illa resolvit*). Hence the imitations of later poets, e.g. Milton *Paradise Lost* 3. 721 'The rest in circuit walls this universe,' R. Browning *Easter-Day* 15 *fin.* 'Leaving exposed the utmost walls | Of time, about to tumble in | And end the world,' *Epilogue to Dramatis Personae* 3. 11 'Why, where's the need of Temple, when the walls | O' the world are that?'

Analogous conceptions are found here and there in the religious imaginings of the ancient world. R. Eisler *Wellenmantel und Himmelszelt* München 1910 ii. 627 notes that the cosmic wall figures in a cuneiform text (an astronomical document of 138 B.C. published by J. Epping and J. N. Strassmaier in the *Zeitschrift für Assyriologie und verwandte Gebiete* 1891 vi. 243 Sp. i. 131, 30). The Manichaeans recognised a whole series of such walls (Epiphani. *adv. haer.* 2. 66. 31 (iii. 52 f. Dindorf) *αἱ δὲ προβολαὶ πάσαι, ὁ Ἰησοῦς ὁ ἐν τῷ μικρῷ πλοίῳ, καὶ ἡ μήτηρ τῆς ζωῆς, καὶ οἱ δώδεκα κυβερνήται, καὶ ἡ παρθένος τοῦ φωτός, καὶ ὁ πρεσβύτερος ὁ τρίτος ὁ ἐν τῷ μεγάλῳ πλοίῳ, καὶ τὸ ζῶν πνεῦμα, καὶ τὸ τεῖχος τοῦ μεγάλου πυρός, καὶ τὸ τεῖχος τοῦ ἀνέμου καὶ τοῦ ἀέρος καὶ τοῦ ὕδατος καὶ τοῦ ἔσθωθεν πυρός τοῦ ζῶντος πρὸς τὸν μικρὸν φωστῆρα οἰκοῦσιν, ἄχρις ἀν τὸ πᾶρ καταναλώσῃ τὸν κόσμον ὅλον ἐν ποσὶς ποτε ἔτεσιν, ὧν οὐκ ἔμαθον τὴν ποσότητα* = Hegemonios *acta Archelai* 13. 2 (p. 21 f. Beeson) *prolationes autem omnes Iesus est in modica navi, et mater vitae et duodecim gubernatores et virgo lucis et senior tertius. unde et maiori in navi vivens spiritus adhibetur, et murus ignis illius magni, et murus venti et aeris et aquae et interioris ignis vivi, quae omnia in luna habitabunt, usquequo totum mundum ignis absumat; in quot autem annis numerum non didici.* On this Latin version C. H. Beeson *ad loc.* remarks 'eine ziemlich ungenaue Paraphrase' and F. Legge *Forerunners and Rivals of Christianity* Cambridge 1915 ii. 326 n. 1 'which appears to be nonsense'—five in number, according to the fragments in Estrangelo script from Turfan, which mention one of *aithér*, one of wind, one of light, one of water, and one of fire, together with twelve or fourteen heavenly gates (F. W. K. Müller in the *Abh. d. berl. Akad.* 1904 Phil.-hist. Classe p. 38 f. *frag. M.* 98, 7 ff. 'Sie ferner auf zur Grenze und | dem Obersten des Lichtes fuhrte er hinauf und | aus Wind und Licht, Wasser und Feuer. | welches aus der Mischung gelautert war, hat er Licht- | Fahrzeuge? zwei jenes der Sonne aus | Feuer und Licht mit fünf Mauern, | einer atherischen, windigen, leuchtenden, wasserigen | und einer feurigen und zwölf Toren und | Hausern fünf und Thronen drei und | seelensammelnden Engeln fünf sc. in | der feurigen Mauer, und jenes [Fahrzeug] | des Mond-Gottes aus Wind und Wasser | mit fünf Mauern, einer atherischen, windigen | leuchtenden, feurigen und wasserigen und | vierzehn Toren und Hausern fünf und | Thronen drei und seelensammelnden Engeln | fünf, sc. in der wasserigen Mauer, | hat er gemacht und angeordnet'). Somewhat similar is the vision of 'the holy city, new Jerusalem, coming

down out of heaven from God' (Rev. 21. 2, cp. 21. 10), 'having a wall great and high; having twelve gates, and at the gates twelve angels' etc. (Rev. 21. 12).

Later the church fell to a lower level and was content with would-be scientific speculation. So Kaisarios, brother to Gregorios of Nazianzos, in his *πεύσεις καὶ ἀποκρίσεις* (on which see W. Christ *Geschichte der griechischen Litteratur*⁶ Munchen 1924 ii. 2. 1415 n. 6) *dialogus 1 interrogatio* 99 (xxxviii. 964 Migne) πῶς οὖν δύνει ὁ ἥλιος, εἰ μὴ ὑπὸ γῆν φέρεται; καὶ τίς τόπος ὁ τὰς ἀκτῖνας αὐτοῦ σκιάζων; *responsio* ὠκυποδήσας τὰ οὐράνια τέρματα, καὶ ὑπὸ τινα τοίχων, τὸ βόρειον γενόμενον κλίμα, ὑπερανέστωτος τοῦ Καππαδοκῶν ἐδάφους, ἀποσκιάζεται μὲν τὴν ἀστραπὴν τῶν ἀκτῖνων ταῖς λόχμας καὶ τοῖς ὕδασι, τῷ ὑπερ-τεροῦντι πεισμῷ τοῦ στερεώματος, διακλωμένων τῶν μαρμαρυγῶν ἐπὶ τὰ πλάγια, καὶ τῇ ὑπεροχῇ τῆς χέρσου τὴν φαῦσιν εὐργόμενος, κατὰ τὴν προεκδοθεῖσαν εἰκόνα τῆς παρ' ἡμῖν λαμπάδος and Severianus of Gabala (on whom see Lietzmann in Pauly—Wissowa *Real-Enc.* ii A. 1930 ff., W. The cosmic walls of philosophy, religion, and so-called science presuppose mythopoeic attempts to explain the construction of the visible world. More frankly mythological is Pindar's 'road of Zeus' leading up 'to Kronos' tower' (*supra* ii. 36, 52), which—like its Celtic counterpart the 'castle of Gwydion' (*supra* ii. 52)—appears to be the poetic survival of some otherwise forgotten myth.

It seems possible that in the west, if not also in the east, the belief in a celestial city was partly based upon popular interpretations of cloudland. E. H. Meyer *Germanische Mythologie* Berlin 1891 p. 88 f. collects a whole series of relevant folk-names from the Germanic area. Thus at Glandorf near Iburg in Prussia a black storm-cloud that rears itself above the horizon is called a *grommeltorn* or 'rumbling tower' (A. Kuhn *Sagen, Gebräuche und Märchen aus Westfalen* Leipzig 1859 ii. 89 no. 277 a, cp. *eund.* in the *Zeitschrift für deutsche Mythologie und Sittenkunde* 1855 iii. 378 'noch heut begegnet man nicht selten der bezeichnung grummel- oder grommelthurm für gewitter'), while on the Moorhausmoor in Thüringen the *witte torn* or 'white tower' seen in the sky is a sign of bad weather (A. Kuhn—W. Schwartz *Norddeutsche Sagen, Märchen und Gebräuche* Leipzig 1848 p. 458 no. 428, W. Mannhardt *Germanische Mythen* Berlin 1858 p. 186). In Oldenburg the northern lights are also known as *Turm*, the 'tower,' and taken to be a vivid red cloud (L. Strackerjan *Aberglaube und Sagen aus dem Herzogthum Oldenburg* Oldenburg 1867 ii. 63 f.); in the same locality heavy, white clouds are called *Mauern*,

and to demand the submission of Zeus. If he refuses, they will proclaim a holy war against him and forbid the gods to traverse their realm in search of fresh amours. A herald will be sent to inform men that in future all must worship birds before gods—the coot¹ before Aphrodite, the duck² before Poseidon, the sea-gull³ before Herakles, the wren⁴ before Zeus. Birds have wings, good evidence

'walls' (*id. ib. ii. 64*). P. Sébillot *Le Folk-lore de France* Paris 1904 i. 128 f. adduces French examples. Sailors in the Channel regard certain big black clouds as dangerous and speak of them as *les Châteaux* (*id. in the Archivio per lo studio delle tradizioni popolari* v. 521). In Provence black clouds brushing past the horizon are called an *emparo* or 'wall.' A long stretch of *emparo* is termed *bérri*, 'ramparts.' A small coloured cloud rising above these 'ramparts' is dubbed *tourello*, a 'turret.' A big cloud may tower up charged with thunder and hail; it is then called *tourrougat* a 'keep.' Finally, when black threatening clouds begin to break up, with their towers and ramparts, they are known as *castèu*, 'castles' (G. de Montpavon 'Mistral' in *Armana Prouvençau* 1877 p. 45).

This was at least one reason for the first element in Aristophanes' *Nephelo-kokkygia*—a typical 'castle-in-the-air.'

¹ *φαληρίς*, though a derivative of *φαλός*, 'white' (Prellwitz *Etym. Wörterb. d. Gr. Spr.* p. 481, Boisacq *Dict. étym. de la Langue Gr.* p. 1013 f.), hints at *φαλλός* (Athen. 325 B καὶ Ἀφροδίτῃ φαλαρίδα, ὡς Ἀριστοφάνης ἐν Ὀρνισι (av. 565), κατὰ συνέμφασιν τοῦ φαλλοῦ, schol. Aristoph. av. 565 ἐσχημάτισε δὲ παρὰ τὸν φαλλόν) or *φαλῆς* (J. van Leeuwen *ad loc.* cp. Aristoph. *Ach.* 263): D'Arcy W. Thompson *A Glossary of Greek Birds* Oxford 1895 p. 176 is unusually obtuse.

² This is not religion, but common sense. Athen. 325 B καὶ τὴν νῆτταν δὲ καλουμένην Ποσειδῶνι τινες οἰκειοῦσι, as is clear from the previous clause (cited *supra* n. 1), depends on Aristoph. av. 566.

³ The *λάρος* is assigned to Herakles merely because of its notorious greed (schol. Aristoph. av. 557 τὸν λάρων διὰ τὴν ἀδυναμίαν Ἡρακλεῖ προσανάπτει, cp. Aristoph. *eg.* 956, *nub.* 591).

⁴ Aristoph. av. 567 ff. κῆν Διὶ θύῃ Βασιλεῖ κρινόν, βασιλεὺς ἔστ' ὀρχίλος ὄρνις. | ᾧ προτέρῳ δέῃ τοῦ Διὸς αὐτοῦ σέρφον ἐνόρχην σφαγιάζειν. | ΕΤΕΛΠ. ἦσθην σέρφω σφαγιαζομένῳ. "βροντάτω νῦν ὁ μέγας Ζάν" with schol. *ad loc.* ὀρχίλος ὄρνις διὰ τὰς μοιχείας τοῦ Διὸς τὸν ὄρνιν παρέλαβεν (the clause διὰ—παρέλαβεν is absent from codd. R.V.). ἐπλάσατο τὸ ὄνομα τοῦ ὄρνιθος. ἐπεὶ κατωφερὴς ὁ Ζεὺς καὶ μοιχός, διὰ τοῦτο ὀρχίλον παρέλκεν διὰ τοὺς ὄρχεις. τὸ δὲ σέρφον ἐνορχιν, ὡς κρινὸν ἐνορχιν. This again is not a case of ritual usage, but of comic invention. There is no special link between Zeus and the wren beyond the fact that, as Zeus was *Βασιλεὺς*, so the wren was *βασιλεὺς* or *βασιλίσκος* (*supra* p. 45 n. 1). On the wren as king of birds see further C. Swainson *The Folk Lore and Provincial Names of British Birds* London 1886 p. 36: 'The tradition of the sovereignty of the wren over the feathered race is widely spread. Hence we find the Latin name for the bird to be *Regulus*, the Greek *βασιλίσκος*, the French *Routelet*, *Roi des oiseaux*, *Roi de froidure*, *Roi de guille*, *Roi Bertaud*, the Spanish *Reyezuelo*, the Italian *Reatino* or *Re di siepe* (king of the hedge), the Swedish *Kungs fegæl*, the Danish *Fugle Konge* or *Elle Konge* (alder king), the German *Zaunkönig* (hedge king), *Schneekönig* (snow king).' E. Rolland *Faune populaire de la France* Paris 1879 ii. (Les oiseaux sauvages) 288 ff., 301 f. collects a vast number of such names applied to the wren (both the *Troglodytes Europaeus* and the *Regulus cristatus*) in the various districts of France. It would seem reasonable to suppose that the kingship in question properly belonged to the fire-crest (*Regulus ignicapillus*) or gold-crest (*Regulus cristatus*). Both species occur in Greece (D'Arcy W. Thompson *A Glossary of Greek Birds* Oxford 1895 p. 174) and both on the crown of the head have a conspicuous streak of reddish orange bordered by bright lemon yellow (good illustrations in J. L. Bonhote *Birds of Britain* London 1907 p. 50 f. col. pl. 15). The flame-coloured

of their divinity, and are obviously competent to harm or help mankind.

Tereus next invites the two friends into his nest, promising to find them a magic root¹ which will enable them too to grow wings. Meantime his wife Prokne comes out and together with the Choros chants the *parábasis*, a brilliant vindication of the claims put forward by the Birds. It tells the old Orphic tale², how Eros sprang from the wind-egg laid by black-winged Night, the egg which split into Ouranos and Ge, primaeval parents of all the gods. Birds declare the seasons, birds utter oracles, birds give omens; birds in short are manifestly divine and must be worshipped as such without more ado.

That conclusion reached, out come Pisthetairos and Euelpides in their fine feathers and at once set about naming the new town—no Sparta this, but something splendid and sonorous, say Nephelokokkygia³. Heralds are despatched to gods and men. Euelpides must lend a hand in the actual building. Pisthetairos will fetch a priest to sacrifice to the newfangled gods.

The novel foundation of course attracts the usual influx of busybodies—a needy lyrical poet, an itinerant soothsayer, the astronomer Meton, a pompous commissioner, a statute-seller. At last they are all got rid of and Pisthetairos quits the stage to sacrifice the goat within.

Then follows a second *parábasis*, in which the Birds appropriate epithets formerly belonging to Zeus⁴ and justifiably put a price on the head of the bird-catcher Philokrates.

crest at any rate accounts for the belief in the wren as a fire-bearer (E. Rolland *op. cit.* ii. 293 f., C. Swainson *op. cit.* p. 42).

¹ Aristoph. *av.* 654 ἔστι γάρ τι ῥίζιον κ.τ.λ. Cp. Pisthetairos announces that the sacrifice has proved to be most auspicious, and a Messenger brings word that the great wall is now completely built—six hundred feet high and broad enough for two chariots to pass.

After this, enter Iris. She has been sent by Zeus to bid men sacrifice to the gods¹. But Pisthetairos scares her off with threats reminiscent of Zeus himself²:

Knowest thou this? If Zeus keeps bothering me,
His halls palatial, yea Amphion's house,
Will I burn down with eagles bearing fire³,
And up against him to the sky I'll send
Six hundred stout Porphyryion-gallinules⁴,
All clad in leopard-skins. Yet I remember
When one Porphyryion gave him toil enough⁵.

¹ Aristoph. *av.* 1230 ff. Earlier and cruder is the conception of 'the Brygos painter,' who on a *kýlix* in the British Museum (*Brit. Mus. Cat. Vases* iii. 87 ff. no. E 65 *Mon. d. Inst.* ix pl. 46, 1 (coloured and gilded), Furtwangler—Reichhold *Gr. Vasenmalerei* i. 238 ff. pl. 47, 2, Perrot—Chippiez *Hist. de l'Art* x. 560 ff. fig. 323, Hoppin *Red-fig. Beazley *Attische Vasenmaler des rotfigurigen Stils* Tübingen 1925 p. 176 no. 5) represents Iris ambushed by the Silenoi Echon, Lepsis (Nepsis?), and Dromis (on these names see Charlotte Frankel *Satyr- und Bakchennamen auf Vasenbildern* Halle a. S. 1912 pp. 23, 25 ff.) just as she has collected an oxtail from the altar of Dionysos. The scene, which recurs in abbreviated form on a red-figured *skyphos* from Nola, now at Berlin (Furtwangler *Vasensamml. Berlin* ii. 732 no. 2591, Gerhard *Ant. Bildw.* p. 294 ('Irene'!) pl. 48, Welcher *Alt. Denkm.* iii. 243 ff. ('Eirene'!) pl. 16, 2, J. D. Beazley *Attische Vasenmaler des rotfigurigen Stils* Tübingen 1925 p. 276 no. 58), was presumably taken from some Satyric drama, though hardly from the *Iris* of Achaïos (W. Helbig in the *Bull. d. Inst.* 1872 p. 41, F. Matz in the *Ann. d. Inst.* 1872 xlv. 299 f., C. Robert *Bild und Lied* Berlin 1881 p. 28 n. 29) or the *Inachos* of Sophokles (K. L. von Ulrichs *Der Vasenmaler Brygos* Wuerzburg 1875 p. 5 on the strength of Soph. *Inachos frag.* 250 Nauck², 272 Pearson *ap. schol.* Aristoph. *av.* 1203), these plays being of later date (Furtwangler—Reichhold *op. cit.* i. 241, L. Séchan *Études sur la tragédie grecque dans ses rapports avec la céramique* Paris 1926 p. 41).

² Aristoph. *av.* 1246 ff. ἀρ' ὅσθ' ὅτι Ζεὺς εἰ με λυπήσει πέρα, | μέλαθρα μὲν αὐτοῦ καὶ (F. But G. Setti in the *Rivista di filologia* 1903 xxxi. 112 f. justly defends the text in view of Soph. *Ant.* 1155 Κάδμου πάροιχοι καὶ δόμων Ἀμφίωνος = dwellers in Thebes. Aristophanes, according to his scholiast, is quoting Aisch. *Niobe frag.* 160 Nauck². Apparently in that play Zeus threatened to burn the palace and walls of Amphion, husband of Niobe (H. W. Stoll in Roscher *Lex. Myth.* i. 314, K. Wernicke in Pauly—Wissowa *Real-Enc.* i. 1946, Gruppe *Gr. Myth. Rel.* pp. 509, 1251 n. o). whose house had notoriously come to a bad end (Paus. 2. 21. 10 οὗτος μὲν δὴ (sc. Homer) τὸν οἶκον τὸν Ἀμφίωνος ἐκ βάρων ἀνατραπέντα οἶδε). Here Pisthetairos threatens to turn the tables on Zeus by burning his 'palace and Amphionian walls.' The whole phrase μέλαθρα ..καὶ δόμους Ἀμφίωνος must be taken with the possessive αὐτοῦ, sc. Διός.

Newton *A Dictionary of Birds* London 1896 p. 591, and the enthusiastic description in O. Keller *Die antike Tierwelt* Leipzig 1913 ii. 209: 'Wenn die wundervoll metallglänzenden blauen Hühner truppweise durch die reifen goldigblonden Ahrenfelder streifen, entsteht eine ganz einzige Farbenwirkung.' Dionys. *de avib.* i. 25 (prose paraphrase in Didot's *Poetae Bucolici et Didactici* p. 111) ἔστι δὲ καὶ πορφυρίων ἀπὸ τῆς χροῖας καλούμενον ὄρνεον· ἐρυθρὸν αὐτῷ τὸ ῥάμφος ἐστί, καὶ κατὰ κεφαλῆς ἔχει ὥσπερ τινὰ πῖλον, ὁποίους οἱ τοξόται Περσικοὶ φοροῦσι· κ.τ.λ. Despite this warlike appearance, the bird is easily captured (*id. ib.* 3. 21 (p. 124 Didot))—a piquant contrast to the Πορφυρίων of verse 1252, cp. Mart. *ep.* 13. 78. I nomen habet magni volucris tam parva gigantis?

⁵ The villagers of Athmonon (Steph. Byz. s.v. "Αθμονον) or Athmonia (Harpokr. s.v. "Αθμονεύς, Bekker *anecd.* i. 349, 30 s.v. "Αθμονεύς, Suid. s.v. "Αθμωνία (sic)), an Attic deme, identified with the modern Marousi (from Artemis "Αμαρυσία: see O. Jessen in Pauly—Wissowa *Real-Enc.* i. 1743, K. Wernicke *ib.* ii. 1380, 1402 with W. Judeich's map *ib.* ii. 2204) on the way from Athens to Marathon, declared that Porphyryion, who was king in the days before Aktaios, had founded a sanctuary of (Aphrodite) Οὐρανία in their midst (Paus. i. 14. 7). From this local legend C. Wachsmuth *Die Stadt Athen im Alterthum* Leipzig 1874 i. 413 f. inferred that Porphyryion, the prehistoric introducer of an oriental cult, was 'identisch mit Phoinix, und gleich diesem Repräsentant der Phönikier.' This inference, even if supported by the plea that Πορφυρίων means the 'Purpurmann' (E. Curtius *Peloponnesos* Gotha 1852 ii. 517), is very precarious and has been definitely rejected by U. von Wilamowitz-Moellendorf *Aus Kydathen* Berlin 1880 p. 134 n. 57. There is more to be said for the view (J. Ilberg in Roscher *Lex. Myth.* iii. 2779) that Porphyryion's connexion with Athmonon points to his pedigree as the son (Nonn. *Dion.* 9. 317) or brother (schol. B.L. II. 2. 511, cp. schol. D. II. 2. 499, schol. Ap. Rhod. 3. 1094) of Athamas. It is possible too that Porphyryion's relation to Aphrodite hangs together with the belief that she was his opponent in the Gigantomachy (schol. Aristoph. *az.* 553, 1252).

But the outstanding fact is that Porphyryion, like Periphas (*supra* ii. 1121 ff.), was a very ancient Attic king. If he was son or brother of Athamas, he too was one of those kings descended from Aiolos who played the rôle of Zeus (*supra* ii. 1088, 1122). And his name, 'the Purple-clad,' may well have been an epithet of Zeus himself (*supra* i. 56 ff.). Naevius *frag.* 20 Baehrens, 10 Vahlen *ap.* Priscian. 6. 6 (i. 199, 1 Hertz) calls him Purpureus (so the second hand in cod. B. *pur* cod. R. with *pureus* added in margin by second hand. *purpureus* codd. B.H. *porpureus* codd. G L.K.), and we have already met with a Iupiter *Purpurio* (*supra* i. 58, 782). On this showing, Zeus Πορφυρίων gave rise to Zeus *versus* Porphyryion just as Athena Έγκέλαδος (Hesych. s.v. Έγκέλαδος· ἡ Ἀθηνᾶ) gave rise to Athena *versus* Enkelados (Preller—Robert *Gr. Myth.* i. 69 n. 5 'Nach dem Giganten ist angeblich Athena έγκέλαδος genannt' inverts cause and effect).

If Porphyryion was thus *ab origine* a prehistoric king who claimed to be Zeus incarnate, we can understand better the curious tradition that in the Gigantomachy Zeus inspired Porphyryion with love for Hera and slew him with a thunderbolt when he made an amorous attempt upon her (Apollod. i. 6. 2 Πορφυρίων δὲ Ἡρακλεῖ κατὰ μάχην ἐφώρμυσε καὶ Ἡρᾶ. Zeus δὲ αὐτῷ πόθον Ἡρας ἐνέβαλεν, ἥτις καὶ καταρρηγνύντος αὐτοῦ τοὺς πέπλους καὶ βιάζεσθαι θέλοντος βοηθοὺς ἐπεκαλεῖτο· καὶ Διὸς κεραυνῶσαντος αὐτὸν Ἡρακλῆς τοξεύσας ἀπέκτεινε, Tzetz. *in* Lyk. *Al.* 63 Πορφυρίωνι δὲ Zeus Ἡρας ἐπιθυμίαν ἐμβάλλει καὶ τοῦτον Ἡρακλῆς ἐν τῷ καταρρηγνύειν Ἡρας τὰ πέπλα (τοὺς πέπλους codd. sec. class., sc. Johannis Tzetz.) τοξεύσας καὶ τοῦ Διὸς κεραυνῷ πλήξαντος ἀναιρεῖ). We can understand also Pindar's description of Porphyryion as king of the Giants (Pind. *Pyth.* 8. 12 Πορφυρίων, 17 βασιλεὺς Γιγάντων. But see Welcker *Gr. Gotterl.* i. 793 n. 18): Typhos and he 'were laid low by the thunderbolt and by the bow of Apollon' (*id. ib.* 16 ff. Cp. Claud. *carm. min.* 52 (37) *Gigantomachia* 34 f., 114 ff.).

Vases (2) and (3) presuppose a famous original, probably the Gigantomachy painted inside the shield of Athena *Parthenos* (*ib.*). The semicircular band of *bákchoi*, which on vase (3) denotes the arch of heaven, may well perpetuate the rim of Athena's shield (Sir C. Smith in the *Ann. Brit. Sch. Hydria from Vulci, now in the British Museum :
Athena v. Enkelados, Zeus v. Porphyron (?).

The herald sent to men now returns with a golden crown voted by the states to Pisthetairos; for every one has gone bird-mad and is eager to obtain wings. Accordingly, in comes a second group of visitors, bent on getting them,—a father-beater, Kinesias, an informer, and lastly Prometheus, who wants to know whether Zeus is

Clearing the clouds off, or collecting them¹.

He is desperately anxious to escape notice from above and produces an umbrella, under cover of which he explains that Zeus is ruined by the Birds' blockade, that the Triballian gods, yet higher up, are threatening to come down upon him, and that envoys are now on their way to treat for peace. But the Birds must make no peace unless Zeus restores the sceptre to them and hands over *Basileia*, the 'Queen,' a beautiful girl who keeps his thunderbolts and other belongings, to be the bride of Pisthetairos.

The envoys in due course arrive—Poseidon, Herakles, and the uncouth Triballian². Pisthetairos is busy preparing a savoury stew

shoulder, where it is gripped by the claws of Zeus' eagle (H. Winnefeld in *Pergamon* iii. 2. 48 ff. Atlas pl. 10=my pl. ix, *Die Skulpturen des Pergamon-Museums in Photographien* Berlin 1903 pl. 15, Collignon *Hist. de la Sculpt. gr.* ii. 520 ff. pl. 12, H. Winter *Hellenistische Skulptur (Kunstgeschichte in Bildern*² I Das Altertum xi—xii) Leipzig 1925 p. 352 fig. 6).

A comparison of these representations will show that Porphyryon is normally (so in (1), (2), (3), (5)) conceived as a sturdy antagonist, full of fight and seen from the back as he stands up to Zeus (Hor. *od.* 3. 4. 54 minaci Porphyryon statu), but that on occasion (so in (4)) he borrows the type of a vanquished giant (cp. the youthful figure in the centre of (5)). His leopard-skin or lion-skin is of course parodied in Aristoph. *av.* 1249 f. *πορφυρίωνας ... παρδαλῶς ἐνημμένους*.

The giant defeated by Zeus on a red-figured *hydria* from Vulci, now in the British Museum (*Brit. Mus. Cat. Vases* iii. 149 f. no. E 165, Lenormant—de Witte *Él. mon. céram.* i. 8 f. pl. 3, O. Overbeck *loc. cit.* says 'das Fell eines wilden Thieres, eines Wolfes oder Luchses (?)') and, as he collapses, is heaving a rock on which is a vine-leaf (Lenormant—de Witte *loc. cit.* suppose 'une feuille de platane'). This would constitute an earlier type of Porphyryon, if we could but be sure that it is he.

¹ *Supra* p. 35.

² Triballos (on whom see J. Schmidt in Roemer *Lex. Myth.* v. 1102 f.) could claim some connexion with the Birds, for a Thracian myth told how his granddaughter Polyphonte had been transformed into an owl (*στύξ*), her two sons by the bear—Agrios and Oreios—into a vulture (*γύψ*) and a sort of swallow (?) (*λαγώς*) respectively, and their maid into a woodpecker (*ἰππη*) (Ant. Lib. 21 after Boios *ὑποθρονίας β*). Not improbably Aristophanes regarded Τριβαλλός as the north-Greek form of *Τρι-φαλλός, cp. Soud. s.v. Τριφάλης, Τριφάλης· ὄνομα κύριον παρὰ Ἀριστοφάνει with Gell. 2. 19. 6 Naevius in Triphallo (*Com. Rom. frag.* p. 27 Ribbeck), Non. Marc. p. 191, 27 f. Lindsay Varro

and will listen to no proposals, unless Zeus consents to restore the sceptre to the Birds. In that case, he invites all the envoys to his feast. Herakles, greedy as usual, jumps at the offer and interprets in his own sense the Triballian's barbarous growl. Poseidon gives in, but when Pisthetairos claims Basileia too, is for walking off and wants Herakles to go with him as the prospective heir of Zeus. Pisthetairos, however, proves by Attic law that Herakles as a bastard has no right of inheritance and undertakes to feed him all his days on 'birds' milk.' Upon this, Herakles agrees to hand over Basileia and once more puts his own construction on the doubtful utterance of the Triballian. Poseidon is silenced, and Herakles invites Pisthetairos to ascend to heaven with them and claim Basileia as his own. The feast in preparation will serve as his wedding banquet.

The play ends with the appearance of the new bridal pair in a blaze of glory. The Birds, parting on either hand, greet them with a chorus of exuberant delight¹:

Chor. Back with you! out with you! off with you! up with you!

Flying around

Welcome the Blessèd with blessedness crowned.

O! O! for the youth and the beauty, O!

Well hast thou wed for the town of the Birds.

Great are the blessings, and wondrous, I ween,

Which through his favour our nation possesses.

Welcome them back, both himself and his Queen,

Welcome with nuptial and bridal addresses.

Mid just such a song hymenaeae

Aforetime the Destinies led

The King of the thrones empyréan,

The Ruler of Gods, to the bed

Of Hera his beautiful bride.

Hymen, O Hymenaeus!

And Love, with his pinions of gold,

Came driving, all blooming and spruce,

As groomsman and squire to behold

The wedding of Hera and Zeus,

Of Zeus and his beautiful bride.

Hymen, O Hymenaeus!

Hymen, O Hymenaeus!

Pisth. I delight in your hymns, I delight in your songs ;
Your words I admire.

Chor. Now sing of the trophies he brings us from Heaven,
The earth-crashing thunders, deadly and dire,
And the lightning's angry flashes of fire,
And the dread white bolt of the levin.

Blaze of the lightning, so terribly beautiful,
Golden and grand !

Fire-flashing javelin, glittering ever in
Zeus's right hand !

Earth-crashing thunder, the hoarsely resounding, the
Bringer of showers !

He is your Master, 'tis he that is shaking the
Earth with your powers !

All that was Zeus's of old
Now is our hero's alone ;
His the Queen, fair to behold,
Partner of Zeus on his throne,
Now and for ever his own.
Hymen, O Hymenaeus !

Pisth. Now follow on, dear feathered tribes,
To see us wed, to see us wed ;
Mount up to Zeus's golden floor,
And nuptial bed, and nuptial bed.
And O, my darling, reach thine hand,
And take my wing and dance with me,
And I will lightly bear thee up,
And carry thee, and carry thee.

Chor. Raise the joyous Paean-cry,
Raise the song of Victory.
Io Paean, alalalae,
Mightiest of the Powers, to thee !

Throughout this splendid *éxodos* Pisthetairos is clearly conceived as the new Zeus. He is no longer referred to by his old name, but always by some phrase descriptive of the Olympian king. He comes

Wielding the wingèd thunderbolt of Zeus¹.

line or two to avoid his rendering 'Miss Sovereignty,' which, I fear, implies a confusion of βασιλεια, 'queen,' with βασιλεια, 'kingdom.' That the former, not the latter, word was intended by the poet is clear from the metre of verses 1537, 1753. The same slip is made by G. Caramia in his article on βασιλεια in the *Birds* of Aristophanes (*Rivista indogreco-italica di filologia—lingua—antichità* 1925 ix. 3—4. 51 ff. cited by H. J. Rose in *The Year's Work in Class. He is your Master, 'tis he that is shaking the
Earth with your powers!—

'He means Zeus of course, or Pisthetairos now that he has got Basileia².' But the meaning of the chorus is quite unmistakable. When Pisthetairos, bride in hand, is escorted 'to Zeus' floor and marriage-bed³, they acclaim him with all the emphasis of a farewell line as 'highest of the gods⁴.'

Pisthetairos is Zeus. And Basileia is—who? Scholars ancient and modern have given a variety of answers to the question⁵. An

Aristoph. *av.* 1536 regarded her as a daughter of Zeus—probably an inference from Aristoph. *av.* 1537 ff.

(3) Others held that she dispensed immortality, as Athena in Bakchyl. *frag.* 45 Jebb was about to dispense it to Tydeus; and some actually called her Athanasia (schol. Aristoph. *av.* 1536). This was perhaps one of the many (Cornut. *theol.* 20 p. 36, 1 ff. Lang) etymologies suggested for Athena (so even in Prellwitz *Etym. Wörterb. d. Gr. Spr.*⁷ p. 11).

(4) F. Wieseler *Adversaria in Aeschyli Prometheum Vincitum et Aristophanis Aves* Göttingae 1843 p. 124 ff. contends that she was Athena, *cp.* Tzetz. in Lyk. *Al.* 111 'Αθηνᾷ τι νὶ βασιλίδι τῇ καὶ βαλενικῇ λεγομένῃ, θυγατρὶ δὲ Βροντῆου (*supra* ii. 833 n. 7).

(5) Others cite Dionysios Skytobranchion (E. Schwartz in Pauly—Wissowa *Real-Enc.* v. 673) *ap.* Diod. 3. 57, who in his romantic vein told how Basileia, a daughter of Ouranos by Titaia (Ge) and a sister of Rhea (Pandora), brought up her brothers the Titans and hence was known as the Megale Meter, inherited her father's kingdom, and ultimately became by her brother Hyperion the mother of Helios and Selene.

(6) Others again equate the Aristophanic Basileia with the goddess worshipped at Athens under the name Βασίλη or Βασίλεια (O. Kern in Pauly—Wissowa *Real-Enc.* iii. 41 ff., Gruppe *Gr. Myth. Rel.* pp. 1081 n. 5, 1521 n. 1), whom some take to be a 'Queen' of Heaven (H. Usener *Götternamen* Bonn 1896 p. 227 ff.), some a 'Queen' of the Underworld (G. Loeschcke *Vermutungen zur griechischen Kunstgeschichte und zur Topographie Athens* Dorpat Livonorum 1884 pp. 14—24).

(7) C. Pascal *Dioniso* Catania 1911 pp. 99—110 argues that the Basileia of the play is 'Queen' of the Underworld and at the same time goddess of the mysteries and of fertility, in fact a variant of Kore. Marriage with her means death (*supra* ii. 1163 ff.). Pisthetairos the pretender, after a career of hitherto unbroken success, is thus at the last politely handed over to the other world (E. Wüst in the *Jahresbericht über die Fortschritte der klassischen Altertumswissenschaft* 1916—1918 clxxiv. 135).

(8) J. T. Sheppard 'τίς ἐστὶν ἡ Βασίλεια;' in the *Fasciculus Ioanni Willis Clark dicatus* Cantabrigiae 1909 pp. 529—540, after rightly insisting that the solemnity of the final scene in the *Birds* implies a clear reference to the sacred marriage of Zeus and Hera,

Athenian audience in the days of Aristophanes could hardly have hesitated. The partner of Zeus must needs be Hera. And Hera in that very capacity was often called *Basileia*¹. Besides, on the present occasion there was a special reason for picking out just this title and no other as appropriate to the goddess. For it would seem that the political circumstances in which the play was first planned prompted the author to the better part of its nomenclature—Euelpides, Pisthetairos, Nephelokokkygia, and finally Basileia.

Aristophanes brought out his *Birds* at the City Dionysia of the year 414 B.C.² But B. B. Rogers has shown that in all probability the play had been 'long in incubation,' indeed that it had been taken

turns aside to the sacred marriage of Dionysos and the *βασιλισσα* (*supra* i. 672 n. o, 686, 709 f. pl. xl, 3), and concludes that *Basileia* is an imaginary goddess, whose name suggests the consort of the god of comedy. 'Peithetairos, on this hypothesis, recalls to the audience Zeus, with a touch of Dionysos. Basileia recalls the Basilissa, not without a touch of Hera' (J. T. Sheppard *op. cit.* p. 540). The *ιεροκῆρυξ* and the *γεραπαί* attendant on the *βασιλισσα* (Dem. c. *Neaer.* 78) may be found in the messenger of Aristoph. *av.* 1706 ff. and in the conjectural bridesmaids of Basileia. Mr Sheppard's article marks a real advance in the interpretation of this difficult scene; but—to quote his own words—'That Basileia has been caught in her true shape at last would be a bold assertion.'

¹ Zeus *Βασιλεύς* is associated with Hera *Βασίλεια* in a federal oath of the Phocians and Boeotians (H. G. Lolling in the *Ath. Mitth.* 1878 iii. 19 ff. line 14 f. cited *supra* ii. 731 n. o (1)). Zeus *Βασιλεύς* at Lebadeia (*supra* ii. 899 n. 2, 1073 f., 1076) appears to have had as his consort Hera *Βασιλῖς* (W. Dittenberger in *Inscr. Gr. sept.* i no. 3097, 1 ff. in hand soon after the production of the *Peace* in 421¹. Now the events of the period immediately succeeding the peace of Nikias had turned all eyes towards Argos, which then became the centre

¹ B. B. Rogers *The Birds of Aristophanes* London 1906 p. v f.: 'It is by far the longest of the extant comedies; and dealing as it does with a subject outside the ordinary range of the poet's thoughts and language...it is obviously a comedy which must have been long in incubation, and could not (as was the case with the *Peace*) have been hastily put together to meet a particular emergency. Indeed there are not wanting indications from which we may surmise that it was taken in hand, if not immediately after the production of the *Peace*, at all events whilst the mind of Aristophanes was still filled with the topics and ideas which possessed it while he was engaged in the composition of the earlier play. In the vagrant Oracle-monger (χρησμολόγος) of the *Birds*, with his prophecies of Bakis, his lust for a share of the σπλάγχνα, and finally his ignominious expulsion, we cannot fail to recognize the exact counterpart of Hierocles, the χρησμολόγος of the *Peace*. The description which Cinesias gives of the sources from whence the dithyrambic poets derived their inspiration is merely an amplification of a sarcasm placed previously in the mouth of Trygaeus; whilst the whole scheme of the proposed sacrifice on the stage, its preparation, interruption, and final abandonment, with the allusion to the predatory habits of the Kite, and to the unwelcome pipings of Chaeris, is substantially identical in the two plays.

So again the two plays have an idyllic character which belongs to no other of the poet's comedies: the innocent charms of a country life are depicted as they are depicted nowhere else; in each of them, and in them only, we hear the "sweet song" of the τέττιξ, and in each it is designated by its Doric name ὁ ἀχέτας, the chirruper. Here too, and nowhere else in Aristophanes, the coaxing address ὦ δειλακρίων is employed; and although the Aeschylean phrase ξουθὸς ἱππαλεκτρῶν is found also in the *Frogs*, yet it there occurs in its natural place as part of a criticism on the style and the language of Aeschylus, while in each of these two plays it is introduced, apropos of nothing, in the Parabasis, as the sarcastic description of a showy military officer. And possibly the germ of the present drama may be discovered in the determination of Trygaeus μετ' ὀρνίθων ἐς κόρακας βαδίσειν [cp. *av.* 155, 753]. Minor coincidences, such as ποδαπὸς τὸ γένος, are very numerous, but are hardly worthy of mention.

So again, although the Athenian dependencies on the coasts of Macedonia and Thrace were in a chronic state of disturbance, and were giving some trouble at this very time, yet the advice to the reckless young Athenian to "fly off to Thrace-ward regions and fight there" would seem more naturally adapted to a time when those regions were the chief seat of Athenian warfare, than to a time when the entire attention of the Athenian people was directed to the military operations in Sicily. And the very remarkable verbal allusions to the History of Herodotus would seem more suitable to a period when that History was still fresh in the hands and thoughts of the poet and his audience.

But whatever weight may be due to these considerations, the comedy would of course not receive its final touches until it was about to be sent in to the Archon, in the winter of 415—414 B.C.*

I have quoted at length the wise words of Mr Rogers because they form the best reply to an objection raised by E. Wüst in the *Jahresbericht über die Fortschritte der klassischen Allertumswissenschaft* 1923 xcxcv. 151, who urges against me the contention of A. Ruppel *Konzeption und Ausarbeitung der Aristophanischen Komodien* Darmstadt 1912 'dass der Dichter immer nur 3—4 Monate mit der Ausarbeitung eines Stückes beschäftigt war' (E. Wüst *loc. cit.* 1916—1918 clxiv. 133). But such a rule was obviously open to exceptions. U. von Wilamowitz-Moellendorf 'Über die Wespen des Aristophanes' in the *Sitzungsber. d. Akad. d. Wiss. Berlin* 1911 p. 460 ff., rightly holding that the Kyon v. Labes trial of *vesp.* 894 ff. travestied the Kleon v. Laches trial of the year 425 B.C., infers that the play was planned three years before its performance in 422 (E. Wüst *loc. cit.* 1916—1918 clxiv. 132, 155).

of more than one new political combination¹. The Argives in a sense held the balance between Athens and Sparta, a fact that the playwright fully appreciated². And at Argos there had been a deal of wobbling. The successive alliances of the Argives with the Athenians (420), with the Spartans (418), and with the Athenians again (417) must have been received at Athens with alternate outbursts of enthusiasm and disgust. What the Athenian 'optimist,' the *Euelpides* of the moment, really wanted was a staunch and loyal ally, a 'trusty comrade,' a *Pisthetairos*³.

More than that. If, while the play was being drafted, popular attention was thus directed to Argos, it may fairly be surmised that Aristophanes' castle-in-the-air *Nephelokokkygia* contained—*inter alia*⁴, no doubt—an allusion to the Argive Mount Kokkygion⁵ with its myth of Zeus the cuckoo⁶. Aristotle⁷ tells the story.

³ That this is the true form of the name appears from *Corp. inscr. Att.* ii. 3 no. 1723 on an architrave of Pentelic marble in the church of St Theodoros near the village of *Marousi* ΠΙΣΤΟΚΛΗΣ : ΠΙΣΘΕΤΑΙΡΟ : ΑΘΜΟΝΕΥΣΣ (K. Meisterhans *Grammatik der attischen Inschriften*⁴ Berlin 1900 p. 54). E. Wüst *loc. cit.* 1923 cxcv. 151 deems this evidence 'nicht zwingend.' He is hard to please.

⁴ A. Todesco 'ΚΟΚΚΥΓΙΑ' in *Philologus* 1914—1916 lxxiii. 563—567 (an article which Prof. A. D. Nock kindly brought to my notice) thinks that *Νεφέλοκοκκυγία* was a name invented by Aristophanes (Loukian. *ver. hist.* 29), in accordance with Greek usage, to denote a chaos of clouds (*av.* 178) and a babble of political intriguers (*Ach.* 598). 'Ganz vernünftig wurde auch diese neue Erklärung sein *Νεφέλοκοκκυγία* sei die Idealstadt der schlaunen Feiglinge, welche auf Kosten des Nächsten leben wollen. Wenn man besonders den Begriff der Schlaueheit betont, so sind diese *κόκκυγες* die Demagogen, und wir sehen im Hintergrund die anderen Leute, die Athener, welche *κεχνηότες* alle Prahlereien ernst nehmen.'

⁵ A similar allusion to Argive topography occurs in Aristoph. *av.* 399 *ἀποθανεῖν ἐν Ὀρνεαῖς*, where again the name is selected partly because it suggests birds (*ὄρνεα*) and partly because the town was uppermost in the thoughts of the people owing to its capture by Athenians and Argives in 416 B.C. Miss R. E. White (Mrs N. Wedd) in the *Class. Rev.* 1904 xviii. 100 f. finds the same point in *av.* 15 f. *ὅς τῳδ' ἔφασκε νῶν φράσειν τὸν Τηρέα τὸν ἔποφ', ὅς ὄρνις ἐγένετο' ἐκ τῶν ὀρνέων* and aptly defends the variation in the use of the article by citing Thouk. 6. 7 *τοὺς ἐν Ὀρνεαῖς. οἱ ἐκ τῶν Ὀρνεῶν*.

Does the oracle in *av.* 967 f. *ἀλλ' ὅταν οἰκήσωσι λύκοι πολιαί τε κορώναι | ἐν ταύτῳ τῷ μεταξὺ Κορίνθου καὶ Σικυνῶνος*,—*κ.τ.λ.* refer to the alliance of Argos, whose symbol was the wolf, with Corinth (*Κόρινθος*—*κορώνη*)?

F. Creuzer *Symbolik und Mythologie*³ Leipzig and Darmstadt 1841 iii. 248 n. 2 saw that *Nephelokokkygia* stood in some relation to Mt Kokkygion or Thornax in Argolis (*supra* i. 135, ii. 893 n. 2), but thought that the topic might have been suggested to Aristophanes by the existence of another Mt Thornax near Sparta (*supra* ii. 893 n. 2).

⁶ Nilsson *Min.-Myc. Rel.* p. 481 contributes an acute surmise: 'Zeus often appears as a lover in the guise of a bird. As a swan he begot the Dioscuri at Sparta, at Argos it was said that in the shape of a cuckoo he deceived Hera and won her love on the Mountain of

the Cuckoo. I venture to guess that these myths, which appear in old Mycenaean centres, are remains of the Minoan belief that the gods appeared in the shape of birds.'

It must not, however, be forgotten that in the Old Slavonic area there was, or is said to have been, a fairly close parallel to the cuckoo-Zeus of Mt Kokkygion. J. Grimm *Teutonic Mythology* trans. J. S. Stallybrass London 1883 ii. 679 cites from the Polish chronicle of Prokosz the following remarkable account of a Slavic god Zywie: *Chronicon Slavo-Sarmaticum* ..Procossii ed. H. Kownacki Varsaviae 1827 p. 113 'divinitati Zywie fanum exstructum erat in monte ab ejusdem nomine Zywiec dicto, ubi primis diebus mensis Maji innumerus populus pie conveniens precabatur ab ea, quae vitae auctor habebatur, longam et prosperam valetudinem. Praecipue tamen ei litabatur ab iis qui primum cantum cuculi audivissent, ominantes superstitione tot annos se victuros quoties vocem repetiisset. Opinabantur enim supremum hunc universi moderatorem transfigurari in cuculum ut ipsis annuntiaret vitae tempora: unde crimini ducebatur, capitalique poena a magistratibus afficiebatur, qui cuculum occidisset.' This chronicle, which professed to be the work 'Procossii sec. X scriptoris,' was denounced by Dobrowski in the *Wiener Jahrbucher d. Liter.* xxxii. 77—80 as a pure fabrication and is described by A. Potthast *Bibliotheca historica medii aevi*² Berlin 1896 ii. 940 as 'Ein unsauberes Machwerk des Przybysław Dyamentowski (saec. XVIII).' But J. Grimm *op. cit.* ii. 679 n. 1 protested that Dobrowski had gone too far: the chronicle, though not so old as s. x, 'is at any rate founded on old traditions.' Partial confirmation of the alleged statements of Prokosz may be found in those of J. Długosz, a canon of Cracow who died in 1480 A.D. and has left what purports to be an account of the ancient Polish pantheon. According to the careful critique of A. Bruckner in the *Archiv für slavische Philologie* 1892 xiv. 170 ff., Długosz did not invent the names of his divinities, but took them from old ritual folk-songs still current in the fifteenth century, dignifying inferior powers with the rank of gods and comparing them with the gods of Greece and Rome. Thus *Jesca*=Iupiter, *Lyada*=Mars, *Dziedzilelya*=Venus, *Nya*=Pluto, *Pogoda*=Temperies, *Żywyce*=deus vitae, *Dzeuwana*=Diana, *Marzyana*=Ceres (L. Niederle *Manuel de l'antiquité slave* Paris 1926 ii. 152). Other Polish chroniclers of the fifteenth and sixteenth centuries complete the list by adding from a similar source the names *Lel* and *Polel*, which M. de Miechow *Chronica Polonorum a Lecho usque ad annum MDvi* Cracoviae 1521 equated with Castor and Pollux (L. Niederle *op. cit.* ii. 153 n. 1). The relevant passages in Długosz are as follows: Io. Długossus *historia Polonica* Lipsiae 1711 I (i. 34 A) 'BABA, mons altissimus supra fluvium *Sola*, herbas multiferas germinans, & oppido *Zywiec* imminens' (sc. Zywiec on the *Sola*, some 40 miles south-west of Cracow), *ib.* I (i. 37 B) 'Item *Deus vitae*, quem vocabant *Zywie*.' The fuller, but less authoritative, account of Prokosz is quoted, with various comments, by W. Mannhardt in the *Zeitschrift für deutsche Mythologie und Sittenkunde* 1855 iii. 230, J. Hardy in *The Folk-Lore Record* 1879 ii. 85, C. Swainson *The Folk Lore and Provincial Names of British Birds* London 1886 p. 121, O. Keller *Die antike Tierwelt* Leipzig 1913 ii. 66. C. de Kay *Bird Gods* New York 1898 p. 116 speaks of 'a goddess Zywie' etc.: he has misconstrued the Latin of Prokosz.

Other considerations, which deserve to be weighed before the testimony of the chroniclers is rejected, are these. The name *Żywyce*, which is akin to *ζῆν, vivere* (Boisacq *Dict. étym. de la Langue Gr.* p. 120, Walde *Lat. étym. Wörterb.*² p. 846 f., F. Müller Jzn *Altitalisches Wörterbuch* Gottingen 1926 p. 211 f.), recalls the Thracian or Thraco-Phrygian *Enkepaio*s, whose name was interpreted as meaning *ζωοδοτήρ* (*supra* ii. 1024 f.). Again, the notion that the cuckoo is an ominous bird, which declares to men how many years they have to live etc., is wide-spread in Europe (see W. Mannhardt *loc. cit.* p. 231 ff., J. Grimm *op. cit.* ii. 676 ff., J. Hardy *loc. cit.* p. 86 ff., C. Swainson *op. cit.* p. 115 ff., L. Hopf *Thierorakel und Orakelthiere in alter und neuer Zeit* Stuttgart 1888 p. 154 f., O. Keller *op. cit.* ii. 66). Typical are the folk-lines of Lower Saxony *Kukuk zam hawen. | wo lange sall ik leven?* (J. F. Schuetze *Holsteinisches Idiotikon, ein Beitrag zur Volkssittengeschichte* Hamburg 1801 ii. 363), or those of Guernsey *Combien d'ans je vivrai* (Sir E. MacCulloch *Guernsey Folk Lore* ed. Miss E. F. Carey London 1903 p. 503, P. Sébillot *Le Folk-lore de France* Paris 1906 iii. 200), or those of

Zeus, seeing Hera all by herself, was minded to consort with her. To secure her by guile, he transformed himself into a cuckoo and perched on a mountain, which had previously been called *Thronax*, the 'Throne,' but was thenceforward known as *Kókkynx*, the 'Cuckoo.' He then caused a terrible storm to break over the district. Hera, faring alone, came to the mountain and sat on the spot where there is now a sanctuary of Hera *Teletia*. The cuckoo flew down and settled on her knees, cowering and shivering at the storm. Hera out of pity covered it with her mantle. Thereupon Zeus changed his shape and accomplished his desire, promising to make the goddess his wedded wife. Pausanias¹ adds that Mount Kokkygion and Mount Pron over against it were topped by sanctuaries of Zeus and Hera respectively. Further², he brings the myth into connexion with the famous cult of Hera at Argos. The temple-statue was a chryselephantine masterpiece by Polykleitos. The goddess sat enthroned. On her head was a band decorated with figures of the Charites and the Horai. In one hand she held a pomegranate, about which a tale not rashly to be repeated was told; in the other she had a sceptre surmounted by a cuckoo, the subject of the foregoing myth. Strabo³ says of this statue that, though in point of costliness and size it fell short of the colossal works of Pheidias, yet for sheer beauty it surpassed all others. Maximus Tyrius⁴ in a few well-chosen epithets records the

the modern Greek κοῦλο μου, κοικάκι μου, , κι ἀργυροκουκάκι μου, , πόσους χρόνους θὲ νὰ ζήσω : (J. Grimm *op. cit.* ii. 676 n. 3). Étienne de Bourbon, a thirteenth-century Dominican, states that the cuckoo-oracle was consulted on the first of May (A. Lecoy de la Marche *Anecdotes historiques légendes et apologues tirés du recueil inédit d'Étienne de Bourbon* Paris 1877 § 52 p. 59 f., § 356 p. 315). Prokosz therefore may, after all, be right in what he tells us of the May-day celebration on Mt Żywiec. His further assertions, that the ruler of the world was believed to take the form of a cuckoo and that the killing of a cuckoo was a capital offence, cannot be controlled, but are at least consistent with one another and not *per se* wholly incredible. Yet the cautious enquirer would do well to digest what Seemann in the *Handwörterbuch des deutschen Aberglaubens* Berlin—Leipzig 1933 v. 749—751 has to say against e.g. W. Mannhardt's attempt to treat the cuckoo as an animal form of Donar or Frò and C. L. Rochholz' contention that St Gertrude with her cuckoo was 'eine Stellvertreterin Freyas oder Idunas.'

effect produced by the ivory arms, the exquisite face, the gorgeous drapery, the queenly bearing, and the golden throne. Greek and Roman writers vied with each other in praising the sculptor's creation. To cite but a single epigram, Martial¹ wrote:

Thy toil and triumph, Polykleitos, stands—
Hera, beyond the reach of Pheidias' hands.
Had Paris this sweet face on Ida seen,
The judge convinced, the rivals scorned had been.
Loved he not his own Hera's form divine,
Zeus might have loved the Hera that is thine.

I need not labour the point. The myth was well known, and the statue immensely famous. What concerns us at the moment is the fact that the Argive Hera herself was worshipped expressly as Hera *Basileia*². Aristophanes, true to a long-established tendency of the mythopoeic mind, has split off the cult-title *Basileia* and transformed it into a new and brilliant personality—the *quasi*-Hera of Athens³. This bold stroke of genius⁴ was necessitated and justified by the

³ There appears to have been no temple of Hera at Athens till the time of Hadrian (Paus. 1. 18. 9), unless we reckon the ruined temple on the way from Phaleron to Athens, said to have been fired by Mardonios (Paus. 1. 1. 5, 10. 35. 2).

⁴ Possibly not so original as we might suppose. I incline to think that Kratinos had hit upon a very similar idea. He is known to have dubbed Perikles Ζεὺς (*supra* i. 280, iii. 32 f., cp. ii. 816 n. 1) and Aspasia Ἡρα, if not also Τύραννος or Τυραννοδαίμων (Meineke *Frag. com. Gr.* ii. 61 f., 147 ff., *supra* iii. 32 n. 5). When, therefore, we read in schol. Aristoph. *av.* 1536 ἔστι δὲ καὶ παρὰ Κρατίνῳ ἡ Βασιλεία, it is tempting to conclude that Kratinos spoke of Perikles and Aspasia as the Zeus and the Hera Βασιλεία of Athens.

whole plot of the bird-comedy. The bird-Zeus was the mate of Hera *Basileia*: Pisthetairos must follow suit. The sceptre, of which we hear so much in the course of the play¹, was perhaps directly suggested by the cuckoo-sceptre of the Argive Hera².

I end by anticipating an objection. Aristophanes (it may be urged), lover of old-fashioned Athens as he was, would not have appealed to an Athenian public by thus dwelling on a virtually foreign cult. Still less (I shall be told) could he have assumed in his work-a-day audience familiarity with or appreciation of a cult-statue carved by an alien sculptor for a Peloponnesian town. The objection may be met, or at least minimised, by the consideration of a certain red-figured *likythos* from Ruvo, now in the British Museum³, which—if I am not in error—makes it probable that this very statue was known and admired by ordinary folk at Athens in the days of Aristophanes. The vase-painting (pl. xi)⁴, which is contemporary or nearly contemporary with our play, represents a frequent subject—the judgment of Paris. To our surprise, however, the central goddess is not Aphrodite but Hera, who sits on a throne raised by a lotos-patterned base. As befits a 'Queen,' she wears a high decorated *stephane* and holds in her left hand a long sceptre tipped by a cuckoo with spread wings. Her feet rest on a footstool, and beside the further arm of her throne is an open-mouthed panther sitting on its hind legs⁵. Advancing towards her comes Nike with

It is important to note that both Egypt (Epaphos, Memphis, Libye, Belos, Anchinoe, Aigyptos, Danaos, etc.) and Phoinike (Agenor, Kadmos, Phoinix, etc.) play a large part in the mythology of the early kings of Argos.

⁴ The vase, when I first saw it, had been very skilfully repainted so as to appear quite complete. My friend Mr H. B. Walters kindly had it cleaned for me with ether (Sept. 29, 1910), and thus fixed the exact limits of the restoration. I was therefore enabled to publish in the Ridgeway volume (*supra* p. 44 n. 1) for the first time an accurate drawing of the design by that excellent draughtsman, the late Mr F. Anderson. The present plate is reproduced from his coloured drawing to a larger scale.

⁵ The panther appears to be a variant of the lion, which on other vases representing the judgment of Paris precedes (Welcker *Alt. Denkm.* v. 388 no. 22) or is carried by Hera (*ib.* v. 398 f. no. 52 pl. B, 2, Furtwangler *Vasensamml. Berlin* ii. 716 ff. no. 2536,

a palm-branch¹. In front of her sits Paris; behind stands Hermes; above are Athena and Aphrodite—all with their usual attributes. It seems clear that the vase-painter, wishing to give an individual turn to a common type², has made Paris award the prize of beauty, not—as tradition prescribed—to Aphrodite, nor even—as patriotism might suggest—to Athena, but to Hera, the Hera of Polykleitos. The rival goddesses are relegated to the far corners of the scene, and the *chef-d'œuvre* of the sculptor queens it in the centre. Doubtless the vase-painter showed his ingenuity by treating the pomegranate in Hera's hand as if it were the apple of discord that Paris had just presented to the fairest. In short, the vase as a whole forms an amusing parallel to the epigram by Martial already quoted.

But whether the second half of the name Nephelo-kokkygia was or was not inspired by the Argive cult, it is certain that the first half owed much to the common Greek conception of Zeus enthroned above the clouds. Above them rather than upon them. Prometheus, arriving in Cloudland, is terribly afraid that Zeus will see him 'from above³'. Hence his ludicrous umbrella. And Pisthetairos, aspiring to the home and the very couch of Zeus, must needs bear his bride upwards from the celestial city on pinions that soar to yet higher heights⁴. After all, that is as it should be. The clouds, if strictly described, are of the *aér*; and the *aér* is a lower stratum than the *aithér*⁵. The realm of the sky-god was rightly pictured by Homer as

Broad heaven in the *aithér* and the clouds⁶.

From the ritual of Zeus *Aktaios* we have inferred that in early days Greek rain-makers clothed themselves in sheep-skins by way

These adjuncts recall another statue of Hera at Argos: Tert. *de cor. mil.* 7 Iunoni vitem Callimachus induxit (perhaps the seated Hera *Νυμφενομένη* at Plataiai, made by Kallimachos (Paus. 9. 2. 7)). ita et Argis signum eius palmitē redimitum, subiecto pedibus eius corio leonino, insulantem ostentat novercam de exuvius utriusque privigni (*sc.* Dionysos and Herakles).

¹ Mr H. B. Walters in the *Brit. Mus. Cat. Vases* iv. 61 says: 'Before Hera hover, Iris or Nikè, with wings spread,' etc. But, if Nike were hovering in the air, her feet would point downwards: see e.g. F. Studniczka *Die Siegesgöttin* Leipzig 1898 pl. 3, 19 ff.

of copying the fleecy clouds¹. Such a usage goes some way towards explaining another drama of exceptional brilliance², the *Clouds* of Aristophanes; for he, in common with all the writers of old Attic comedy, was largely indebted for his choruses to the mimetic dances of the past³. The Clouds, however, to whom the Aristophanic Sokrates would introduce his elderly pupil and initiate, Strepsiades, are not mere masses of vapour that the magician can coax into sending a shower, but rather august, and indeed divine, personifications of the same:

Old man sit you still, and attend to my will, and hearken in peace to my prayer,
O Master and King, holding earth in your swing, O measureless infinite Air;
And thou glowing Ether, and Clouds who enwreath her with thunder, and lightning, and storms,
Arise ye and shine, bright Ladies Divine, to your student in bodily forms⁴.

Sokrates speaks of them as 'our deities⁵,' and again as 'heavenly Clouds, great goddesses⁶.' Strepsiades, taking his cue, salutes them

¹ *Supra* p. 31 f.

² When first exhibited at the Dionysia of 423 B.C. the *Nephelai* of Aristophanes gained only the third prize, being beaten by the *Plutus* of Kratinos and the *Kóvnos* of Ameipsias—a judgment hard to understand. We have the play in part rewritten, a second edition which was never staged (W. Christ *Geschichte der griechischen Literatur*⁶ München 1912 i. 422 f.), being either 'composed to be read and not to be acted' (B. B. Rogers in his ed. 1916 p. xii), or planned for performance some time after 421 B.C. (G. M. Bolling 'The two recensions of *The Clouds*' in *Class. Philol.* 1920 xv. 83 ff., reported in the *Berl. philol. Woch.* Juli 30, 1921 p. 736).

³ So at least I have argued in the *Journ. Hell. Stud.* 1894 xiv. 163 ff. Note that the *chorontai* impersonating the Clouds are likened to spread fleeces (*nub.* 343 *εἴξασιν γοῦν ἐρίοισιν πεπταμένοισι*). Why attention is drawn to their noses (*ib.* 344 *αἶται δὲ ῥίνας ἔχουσιν*), is not quite clear. The schol. *ad loc.* says *εἰσεληλύθασι γὰρ οἱ τοῦ χοροῦ προσώπεια περικείμενοι μεγάλας ἔχοντα ῥίνας καὶ ἄλλως γελοῖα καὶ ἀσχημόνα*. The sequel (*nub.* 346 ff.) of course shows that the Greeks, like other children, formed fancy-pictures in the sky and took the clouds to be a Centaur, a leopard, a wolf, a bull—in fact, as Lowell puts it, 'Insisted all the world should see | camels or whales where none there be!' But that is hardly the import of *ῥίνας*. I should rather suppose that the *Nephelai* are entirely wrapped in fleeces except for their nostrils. Cp. the use of *νεφέλη* in Greek (Hesych. s.v. *φάρη*) and *nebula* in Latin (De Vit. Lat. Lex. s.v. 'nebula' § 9) for a thin, flowing garment, or of 'cloud' in English for a voluminous woollen scarf (J. A. H. Murray *A New English Dictionary* Oxford 1893 ii. 526 s.v. 'Cloud' § 8).

as 'Queens over all¹.' Sokrates outdoes even this by declaring that the Clouds are 'the only goddesses', the rest being pure rubbish². Zeus? There's no such person³. But the Clouds themselves are more orthodox, and in their *parábasis* begin by invoking four gods with whom they are specially concerned—Zeus, Poseidon, Aither their father, and Helios⁴. It would seem that Aristophanes, who throughout the play is presenting the grossest caricature of Sokrates, has foisted upon him a worship of the Clouds more properly belonging to Orphic votaries. The comedian of course accounts that way for Sokrates' nebulous notions and shifty morals⁵. But the Orphists, who from of old had been devotees of nature, were perfectly serious. Their hymns to Zeus *Keraúnios* and to Zeus *Astrípios* are immediately followed by another to the Clouds, which is prefaced by the rubric that the proper burnt-offering to be made is myrrh, and continues:

Clouds of the air, that nurture the crops, and that roam in the sky,
Parents of rain, driven wide o'er the world by the blasts of the wind,
Brimful of thunder and fire, loud-roaring, of watery ways,
Ye that make horror of sound in the echoing bosom of air,
Rent by the winds or charging amain with a crash and a clap,
You I beseech, that are clad in the dew, and that breathe in the breeze,
Send us the showers to nurture the crops of our Mother the Earth⁶.

points of Orphic doctrine¹ and apt to recrudescence in popular practice², was naturally ridiculed as fatuous and futile³. But that was a reproach which it shared with the highest conception of the Hebrews⁴. Christianity itself has cherished, not only the recollection of 'a cloud that overshadowed them'⁵ and 'a cloud' that 'received him out of their sight'⁶, but also the anticipation of 'another mighty angel come down from heaven, clothed with a cloud'⁷, and the final vision of 'a white cloud, and upon the cloud one...like unto the Son of man'⁸.

72 The Clouds personified in Cult and Myth

For, after all, a cloud may symbolise mystery as well as mystification; and what began as a *nimbus* may end as a glory¹.

Nephele, the personified Cloud, figures in one or two Greek myths which deserve attention. Pherekydes of Athens (or Leros², the earliest Attic prose-writer (*floruit* 454¹/₃ B.C.), tells the tale of Kephalos and Prokris in the following form³:

Kephalos, the son of Deïoneus, married Prokris, the daughter of Erechtheus, and dwelt at Thorai⁴. Wishing to make trial of his wife, he went abroad—it is said—and left her for the space of eight years⁵ while she was yet a bride. After that, he adorned and disguised himself and, coming to his house thus tricked out, persuaded Prokris to receive him and consort with him. Prokris, eyeing his adornment and seeing that Kephalos was a very handsome man, lay with him. Thereupon Kephalos revealed himself and took Prokris to task. However, he made it up with her, and sallied forth to the chase. As he did this repeatedly, Prokris suspected that he had intercourse with another woman. So she summoned the serving-man and asked if he knew aught of it. The thrall said he had seen Kephalos repair to the top of a certain mountain and often exclaim 'O Nephele, come to me!'—that was all he knew. Prokris on hearing it went to that mountain-top and hid herself. Then, when she heard him saying the same words, she ran towards him. Kephalos, seeing her, was seized with sudden madness and, on the spur of the moment, struck Prokris with the javelin in his hand and slew her. Then he sent for Erechtheus and gave her a costly burial.

Schwenn⁷ in a recent discussion of the myth very justly observes that Nephele here must be a flesh-and-blood personification, not a mere amorphous vapour. Ovid⁸ goes off on a wrong tack, when he

substitutes *aura*, the cool breeze beloved by the hunter. And Hyginus¹ makes confusion more confounded by importing *Aurora* from the myth of Heos. Schwenn, however, has not perceived that the story as a whole involves a modified mixture of two folk-tale *motifs*. J. G. von Hahn² long since pointed out that Prokris, who first succumbs to the trinkets of a stranger and later lives with him as his wife, illustrates one variety of *weibliche Käuflichkeit*. This has been crossed with the 'Melusine'-*formula*³ of a mortal man, who is unfaithful to a more-than-mortal woman and is therefore deserted by her and punished for his offence. Such stories ultimately go back to a very primitive type of tale which, according to Sir James Frazer⁴, has its roots in a totemic taboo. Be that as it may, it certainly seems probable that in the original version Nephele the cloud-goddess bestowed her favours upon Kephalos and was jealous of his relations to the mortal wife Prokris. Her death was his punishment—a scene graphically portrayed on a red-figured *kratér* with columnar handles now in the British Museum (pl. xii)⁵.

Essentially similar is the myth of Athamas⁶. He too deserted the goddess Nephele for a mortal wife, and was punished by a drought for his desertion. Again the tale has come down to us with

much admixture and amplification. A. H. Krappe¹ has analysed it, in my opinion successfully, and has shown that it combines, not only the old Greek belief in the king's responsibility for the crops and the old Greek custom of sacrificing him or his son in time of famine, but also a whole bunch of folk-tale *motifs*—the jealousy of the heavenly wife ('Melusine²'), the wicked step-mother ('Brüderchen und Schwesterchen³'), and the helpful animal ('Einäuglein, Zweinäuglein und Dreinäuglein⁴').

A curious modification of this union between a mortal man and the cloud-goddess may be detected in sundry other myths. It would seem that the ancient mating of man with goddess struck the later Greeks as blasphemous. They therefore said that such and such a hero had become enamoured of such and such a goddess, but that Zeus had substituted for her a phantom made out of cloud. Thus Endymion, in the Hesiodic poem entitled *The Great Eoiai*⁵, was raised to heaven by Zeus and fell in love with Hera, but was deluded by a cloud-phantom and cast down to Hades⁶. Similarly, when Ixion paid court to Hera, Zeus, according to the usual version⁷, or

¹ G. Kieseritzky 'Iasios' in the *Strena Helbigiana* Lipsiae 1900 pp. 160—163 with fig. (= my fig. 22) published a fragmentary red-figured *kratēr* of late style, from Chersonesos Taurike, now in the Hermitage at Petrograd, which appears to represent the scene. A young man (ΙΑΞΟΞ) in oriental garb flings up both arms with a gesture of despair and looks back in terror towards the left, where just beyond a neighbouring hill Nike is seen driving the chariot of Zeus (?). On the right sits a bearded god holding a long staff (trident? sceptre??). Beside him was a goddess, whose arm with its arm-band is visible leaning on his left shoulder. They are probably Poseidon and Amphitrite. Beneath the necks of the horses appears the corner of some squared structure. Above it the letters ..ΞΟΞ suggest comparison with the ΧΡΥΞΟΞ and ΠΛΟΤΟΞ, who flank the chariot of ΝΙΚΗ on a gilded *oinochē* from Athens, now at Berlin (Furtwangler *Vasensamm.* Berlin ii. 761 f. no. 2661, Lenormant—de Witte *Él. mon. chr.* i. 307 ff. pl. 97, O. of both Homer¹ and Hesiod², and was almost certainly based on actual agrarian usage³, nevertheless could not escape the charge of derogating from the dignity of the goddess and was therefore modified by the later Greeks in one of two directions. Either, as the logographer Hellanikos⁴, the historian Idomeneus⁵, and the geographer who passes under the name of Skymnos⁶ agree, the hero had outraged a statue (*ágalma*) of Demeter; or, as the rhetorical mythographer Konon⁷ preferred to put it, the hero had consorted with a mere phantom (*pháisma*) of the goddess.

Konon's expedient was in all probability suggested by Stesichoros' solution of a similar problem. Having penned an ode about Helene on the traditional Homeric lines he, like Homer, had lost his eyesight. But, unlike Homer, he recovered it when, realising the nature of his offence, he wrote his famous palinode:

The tale's untrue!
Thou didst not go on board the well-planked ships,
Nor ever camest to the towers of Troy⁸.

78 The Clouds personified in Cult and Myth

Stesichoros now asserted that Greeks and Trojans fought one another for the sake of a mere wraith (*eidolon*), in ignorance of the genuine Helene¹. What, in his reconstruction, the genuine Helene was doing all the time, we do not know: perhaps she never left Sparta². Herodotos³ gives a different turn to the story. According to him, Helene was stolen from Menelaos at Sparta by Alexandros, driven by a storm out of the Aegean to Egypt, and there taken from her paramour by Proteus and kept at Memphis for the coming of her lawful husband. Euripides in his *Helene* combines the two versions. Like Stesichoros, he preserves the innocence of Helene by making the truant a wraith (*eidolon*), fashioned of *ouranós* or cloud or *aithér* and substituted by Hera for the faithful wife⁴. Like Herodotos, he sends the real Helene to Egypt, whither she is conducted by Hermes

³ The passages relating to Stesichoros' *παλινωδία* are collected and discussed by T. Bergk in his note on *frag.* 32 (*Poet. lyr. Gr.* iii. 217—219 Bergk⁴). To his bibliography add R. Hirzel 'Die Homonymie der griechischen Gotter nach der Lehre antiker Theologen' in the *Ber. sachs. Gesellsch. d. Wiss.* Phil.-hist. Classe 1896 xlviii. 290 f. That the genuine Helene never left Sparta may be inferred from Dion Chrys. *or.* 11 p. 323 Reiske καὶ τὸν μὲν Στησίχορον ἐν τῇ ὕστερον ῥῳδῇ λέγειν ὅτι τὸ παράπαν οὐδὲ πλεῦσειεν ἡ Ἑλένη οὐδαμῶς· ἄλλοι δὲ τινες (sc. at the command of Zeus¹. Menelaos, escorting the phantom home from Troy, arrives in Egypt and is there confronted with the true Helene. He is desperately puzzled. But, just as he begins to think himself either a bedlamite or a bigamist, the misty Helene evaporates²—a sufficiently whimsical situation.

If Euripides' Hera outwitted Paris by making a phantom Helene of *aithér*, Euripides' Zeus outwitted Hera by means of a similar trick—witness a curious passage of the *Bacchae*³ in which Teiresias attempts to explain the story of Dionysos being sewn up in the thigh of Zeus as due to a verbal confusion of *lómeros*, 'hostage,' with *merós*, 'thigh':

And dost deride the tale that he was sewn
I' the thigh of Zeus? I'll tell it all aright.
When Zeus had caught him from the lightning-fire
And borne him, babe divine, to Olympos' height,
Hera was fain to cast him forth from heaven.
But Zeus, a very god, met plot with plot:
Breaking a portion of the *aithér* off,
Which rings the earth, he made that same a hostage
Against the strifes of Hera and sent out
Dionysos elsewhere⁴. Thus in course of time
Man said that he was sewn i' the thigh of Zeus—
Changing the word, since once he served as hostage
To Hera, god to goddess,—such their tale.

80 The Clouds personified in Cult and Myth

The real explanation of the story is of course very different from the sophisms of Teiresias. The pretended birth from the thigh of Zeus¹, which from the sixth, if not the seventh, century onwards is attested by vases², frescoes³, reliefs⁴, and other works of art⁵,

Myth.* i. 1045 f., E. Thraemer *ib.* i. 1123, Preller—Robert *Gr. Myth.* i. 661 f., Farnell *Cults of Gk. States* v. 110.

I see no probability in the suggestion that Hesych. s.v. ἀκαρὰ τὰ σκέλη Κρήτες and *et. mag.* p. 45, 16 f. ἀκαρὰ τὰ σκέλη Κρήτες. 'Ἀκαρὰ πόλις τῆς Ἀσίας, ἣ νῦν καλουμένη Νύσσα. κ.τ.λ. (Nysa in Lydia, near which is *Acharaka*: *supra* i. 503) imply a localised myth of the birth of Dionysos from the leg of Zeus.

² (1) R. Rochette *Choix de peintures de Pompéi* Paris 1848—1856 p. 76 ff., with coloured design on p. 73 (part of which = my fig. 23), published a yellow-ground Corinthian *pyxis* of c. 600 B.C., found in a tomb between Corinth and Sikyon, on which he thought to recognise the earliest extant representation of Zeus bearing Dionysos from his thigh. This view, accepted by F. Lenormant *loc. cit.* i. 602 and by E. Thraemer *loc. cit.* i. 1123, was called in question by H. Heydemann *op. cit.* p. 4 ('die altkorinthische Vase mit einfachen Genrescenen'). E. Wilisch *Die altkorinthische Thonindustrie* Leipzig 1892 p. 49 f. apparently reverts to R. Rochette's explanation (*op. ib.* pp. 62 'Bakchusgeburt', 63 'Bakchus-geburt', 97 n. 353 'Bacchus-geburt', 143 'die sogenannte Bakchus-geburt'). The vase is now in the Bibliothèque Nationale at Paris (P. Milliet—A. Graudon *Vases peints du Cabinet des Médailles & Antiques* (Bibliothèque Nationale) Paris 1891 i. pl. 10 11^e Classe, 1^{re} Série, E, De Ridder *Cat. Vases de la Bibl. Nat.* i. 42 ff. no. 94 'Scène d'enfantement (?)' etc.). The hair and the girdle of the central figure prove it to be female. Unless, therefore, we are prepared to hold that Zeus in labour was represented as a woman, this cannot be he. To left and right of the seated woman are the Eileithyiai. Another female on the right holds a distaff and spindle, less probably a branch of ivy (?): Klotho?

(2) A black-figured *amphora* from S. Maria di Capua, likewise in the Bibliothèque Nationale (no. 219), shows Dionysos (ΔΙΟΣΠΟΣ = Διὸς φῶς) as a naked boy, with two torches, standing on the lap of a seated Zeus (*supra* ii. 273 with fig. 177, *infra* § 9 (h) ii (θ) (4)).

(3) A red-figured *kylix* at Boston (no. 95. 39) is described and illustrated by J. D. Beazley *Attic red-figured Vases in American Museums* Cambridge Mass. 1918 p. 134 ff. fig. 83 (= my fig. 24): 'Zeus, naked, very tall, his long hair and beard curiously neat, is sitting out of doors on a stone, which is covered by his clothes, and carefully easing the small god out of his thigh: his trusted Hermes stands beside him, watching, and holding his master's sceptre.' The vase is referred by the same authority to 'the

(4) A south-Italian vase, now lost, but seen by A. L. Millin at Naples in private possession ('Vaso che si trova in casa del S^{re} d. Genn. Patierno, restauratore, alla salita de' Reggij Studj, n. 63: altezza, palmi $2\frac{1}{2}$; diametro, 1 palmo, $3\frac{1}{2}$ oncie') and drawn for him (drawing extant in the Cabinet des Estampes of the Bibliothèque Nationale), is described by R. Rochette *Choix de peintures de Pompéi* Paris 1848—1856 p. 81 with n. 4, recorded by L. Stephani in the *Compte-rendu St. Pet.* 1861 p. 13, and published by F. Lenormant in the *Gaz. Arch.* 1880 vi. 72—74 with two figs. (of which the first = my fig. 25). In the upper register is Zeus, seated on a throne with a footstool. He wears a *himation* (scaled *agis*?) and a bay-wreath, and holds a thunderbolt in his right hand, an eagle-tipped sceptre in his left. From his right thigh emerges a diminutive Dionysos. The boy stretches out his arms to Eileithyia, who bends towards him, holding in readiness a cloth or garment. Behind Zeus stand a Bacchant (*thyrsos*) and a Maenad (panther-skin, torch(?))—hardly Apollon and Artemis. In the lower register, on rocky ground, is Athena (*Gorgoneion*, helmet(?), shield, spear) conversing with two Maenads (*thyrsos*, torch)—hardly Demeter and Hekate. Athena was perhaps made out of a third Maenad (timbrel(?), *thyrsos*). The reverse of the same vase depicts the madness of Lykourgos, who brandishes a club(?) in the midst of four Satyrs. Both designs have been copied 'par une main singulièrement maladroite et inexpérimentée'.

His head is surrounded by a halo of rays; his legs are wrapped in an ample wind-swept *himation* of flame-coloured fabric. His eagle is perched beside him. With his right hand he grasps a thunderbolt, with his left he reaches towards the undersized babe ('als Embryo gekrümmt,' says Gerhard) of Semele, who half-clad in a yellow robe lies dead on the couch before him. Hellbig *Fuhrer durch die öffentlichen Sammlungen klassischer Altertümer in Rom*³ Leipzig 1912 i. 168 f. no. 259), has the following scene (Visconti *Mus. Pio-Clém.* iv. 165 ff. pl. 19 (= my fig. 27), A. L. Millin *Galerie Mythologique* Paris 1811 i. 51 no. 223 (wrongly described) pl. 53. H. Brunn in the *Bull. d. Inst.* 1858 p. 128. Welcker *Gr. Reinach *Rép. Reliefs* iii. 362 no. 2). Zeus, with bent head, is seated on a rock. He leans heavily, not to say painfully, on his right hand and grasps a long sceptre with his left. His *limdion* is so arranged as to leave bare the further leg, from the upper part of which emerge the infant Dionysos and leaps with outstretched arms towards Hermes. That god (*peplos, chlamys*, boots, but no *caduceus*) advances with a panther-skin in which to wrap the babe. Behind him are three stately female figures bearing long sceptres and variously interpreted as Eileithyia, Kore, and Demeter (E. Q. Visconti, A. L. Millin, and S. Reinach *loc. cit.*), as the Charites (H. Brunn *loc. cit.*), as Nymphs (H. Heydemann *loc. cit.*), or as the Fates (F. Hauser *loc. cit.*). The identification of the third female with Demeter is borne out by the bunch of corn-ears held stiffly in her right hand. Heydemann's conjecture that all three are the Nymphs of Nysa ready to receive their nursing might claim the support of Nonn. *Dion.* 9. 16 ff. καὶ μιν ἔσω Δρακάνοιο (E. Maass in *Hermes* 1891 xxvi. 189 n. 2 equates Δράκανον here with τὸ Δρέκανον in the south of Kos (Strab. 657. cp. Agathem. *geogr.* 18 (*Geogr. Gr. min.* ii. 479 Müller), L. Others have supposed that Nonnos was alluding to Δράκανον a town and promontory (now Cape Phanari) at the north-east end of the island Ikaros (*Nikaria*) (R. Kohler *Über die Dionysiaka des Nonnus von Panopolis* Halle 1853 p. 17 f. Preller—Robert *Gr. Myth.* i. 677 n. 5), or to Δρέπανον (*Trafani*) the promontory in the north-west of Sicily (B. Graef *De Bacchi expeditione India monumentis expressa* Berolini 1886 p. 10 f. n. 15) λεχώων ἀμφὶ κολώνῃν | πήχεϊ κολπαθέντι λαβὼν Μαιήιος Ἑρμῆς | ἠερόθεν πεπότητο· λοχεομένῳ δὲ Λυαίῳ | πατρὸρ ἑπέθηκεν ἐπωρυμνίῃ τοκετοῖο | κυκλήσκων Διόνυσον· ἐπεὶ ποδὶ φόρτον αἰείρων | ἦε χυλαίων Κρονίδης βεβρλότι μῆρῳ, | νύσος ὅτι γλώσσην Συρακοσίδι χυλὸς ἀκούει (νύσος. 'hobbled' (?) might be akin to *Schnur* etc., cp. Walde *Lat. etym. Wörterb.*² p. 530 f. s.v. 'nurus')· καὶ θεὸν ἀρτιλόχευτον ἐφήμισαν Εἰραφύτων, | ὅττι μιν εὐώδιι πατὴρ ἐρράψατο μῆρῳ (lines 17, 19—24 are quoted in *et. nag.* p. 280, 13 ff.). καὶ μιν ἀχτυλῶτοιο διατσοῦντα λοχείης | πήχεϊ κοῖρον ἀδακρὺν ἐκούφισε σύγγονος Ἑρμῆς, καὶ βρέφος εὐκεράοιο φνὴς Ἰνδαλμα Σελήνης (sc. horned like the Moon) | ὥπασε θυγατέρεσσι Λάμου ποταμῷσι Νύμφαις (= the Hyades: see H. W. Stoll and W. Drexler in Roscher *Lex. Myth.* ii. 1822, Gruppe *Gr. Myth. But the corn-ears are ill-suited to Nymphs. Besides, Hauser rightly insists on the points of similarity between this relief and that of the *Madid puteal* (*infra* § 9 (h) ii (η)). Dionysos springs

The Clouds, personified in Cult and Myth 85

from the seated Zeus much as Nike does on the *puteal*: and here, as there, the three females grouped on the right must be the Fates. If so, the corn-ears are a later modification of the lots held by Lachesis (*pace* Helbig *loc. cit.*: 'Indes hat eine erneute Untersuchung ergeben, dass an den Ähren von U'berarbeitung keine Spur zu finden ist'). What purpose was served originally by this frieze (Visconti *loc. cit.*: 'Haut. trois palmes, un tiers; longueur dix palmes moins deux onces'), and whether it was continued by means of other figures to the right, we cannot say.

(2) A child's sarcophagus of late Roman date (White marble. Height 0'29^m: length 0'69^m), in the collection formed by Field-marshal Count Lavall Nugent, was found at Minturnae (?), was exhibited at the Palazzo Pisani in Venice, and is now preserved in Tersatto Castle near Fiume. Its front represents the birth of Dionysos in a series of three scenes separated by herms (E. Wolff in the *Bull. d. Inst.* 1831 p. 67, C. Lenormant in the *Ann. d. Inst.* 1833 v. 210—218, *Mon. d. Inst.* i pl. 45, A (= my fig. 28), F. Wieseler in C. O. Müller *Denkmäler der alten Kunst* Göttingen 1835—1856 ii. 2. 13 f. pl. 34, 392, Welcker *Gr. Gotterl.* ii. 580 n. 20, F. To the right Semele lies

Fig. 28.

exhausted on a couch, her left hand propping her head, her right drooping as if she held flowers (Schneider, Heydemann). Beneath the couch a jug and bowl are in readiness for the bath of the expected infant. Zeus appears above a wall in the background, lays his left arm on Semele's neck (Schneider, Heydemann), and brandishes a thunderbolt in his right hand. To the left Zeus sits erect on a chair with a footstool, upon which is set a large urn. His right hand presses hard on the chair; his left grasps a long sceptre. A winged goddess, presumably Nike playing the part of Eileithya (E. Gerhard in the *Bull. d. Inst.* 1831 p. 67 n. 1, followed by Wieseler, Schneider, Heydemann, Baur, was content to describe her as a winged Eileithya), touches with her outstretched left hand the right leg of Zeus, which is bandaged (Schneider, Heydemann), not bare: the god has been already delivered. In the centre Hermes, looking round towards Zeus, carries off the newborn babe to the Nymphs, one of whom is seen reclining behind him (so E. Wolff *loc. cit.* C. Lenormant, Wieseler, and Schneider would recognise Gaia).

Similar in type, but with sides reversed, is a fragmentary relief (Luna marble. Height 1'20^m: length 0'54^m) found on the Esquiline in 1874 and now in the Palazzo dei Conservatori at Rome (C. L. Visconti 'Frammento di rilievo rappresentante la nascita di Bacco' in the *Bull. Comm. Arch. Comun. di Roma* 1874 n. 89—96 pl. 1. 3 (= my fig. 29), H. Heydemann *op. cit.* p. 17, G. Lafaye in Daremberg—Saglio *Dict. Ant.* ii. 982 fig. 2884, P. V. C. Baur *op. cit.* p. 86, Stuart Jones *Cat. Sculpt. Pal. d. Conserv. Rom.* p. 85 Galleria no. 16 pl. 31). Zeus is seated to the left. His left leg, covered by a

himation, uses a globe as a footstool (cp. *supra* i. 47 ff.). His right leg is bare and is being bandaged by the same winged goddess (wings broken away), on whose shoulder he rests his hand. This relief too perhaps formed part of a sarcophagus. C. L. Visconti *loc. cit.* p. 94 describes the work as mediocre and dates it about the end of s. ii A.D.

Eileithyia. Hermes, als Kinderwarter der Gotter und insbesondere des Dionysos bekannt, steht seines Berufes gewartig daneben und sieht aufmerksam und wie verlegen zu. R. Kekulé *Das akademische Kunstmuseum zu Bonn* Bonn 1872 p. 113 no. 452 adds: 'Das Bruchstück, welches mit dem Relief bei Muller—Wieseler II, 34, 392 zu vergleichen ist, ist in dem jetzigen Zustand mindestens in der Figur des Hermes schwerlich durchaus antik.'

This second series of reliefs is perhaps derived, though not without modification, from the painting by Ktesilochos (*supra* p. 82 n. 3). The rebirth of the infant was a subject admirably suited to a child's sarcophagus and, doubtless, often repeated (cp. *supra* ii. 309, 417).

⁵ An Etruscan mirror, of unknown *provenance*, at Naples (A. Soghano in the *Guida del Mus. Napoli* p. 358 no. 1525), long cited under the misleading name of the '*Palera Borgia*,' represents the actual birth-scene in early fourth-century style (A. (H. L.) Heeren *Expositio fragmenti tabulae marmorae Musei Borgiani Vcltris Romae* 1786 p. 9 n. (c), L. Lanzi *Saggio di lingua Etrusca e di altre antiche d' Italia per servire alla storia de' popoli, delle lingue, e delle belle arti* Roma 1789 ii. 195—198, Visconti *Mus. Pic-Clém.* iv. 362 ff. pl. A less considerable fragment of the same design, which has been worked into a patch-work sarcophagus now in the Loggia Scoperta of the Vatican, shows the veiled head and powerful body of Zeus sitting on a rock to the right and leaning hard on his right hand (Visconti *Mus. Pic-Clém.* iv. 269 ff. pl. 37 ('le fleuve Isménus'), A. L. Millin *Galerie Mythologique* Paris 1811 ii. 20f. no. 429 pl. 109 ('le fleuve Ismenius'), J. G. Zoega in the *Zeitschrift für Geschichte und Auslegung der alten Kunst* Herausg. von F. G. Welcker 1818 i. 402 f. (first critical account: 'Okeanos'), F. Matz in the *Bull. d. Inst.* 1870 p. 70f. (first identification as 'Giove nell' atto di sgravarsi da Bacco bambino'), H. Heydemann *op. cit.* pp. 10 n. 28, 12. 17).

H. Heydemann *op. cit.* p. 15 draws attention to a lost relief, of which a cast has been for over a century at Bonn. F. G. Welcker *Das akademische Kunstmuseum zu Bonn*² Bonn 1844 p. 115 no. 353 describes it as follows: 'Eileithyia, die Lende des Zeus vom Dionysos entbindend. Nur das eine Bein des Zeus bis an das Knie ist erhalten und ein Flügel des Adlers, der über ihm schwebte, vielleicht angestollt ihn umflatterte [? the wing of a winged Eileithyia. In the centre sits Zeus (*Tinia*) wearing a wreath of lilies (*supra* i. 622 f., 736 n. o, ii. 740) and a *himation*, which leaves his right leg bare. He leans with his right hand on a long sceptre surmounted by an eagle (Gerhard wrongly took this to be a Dodonaean dove) and holds a winged thunderbolt in his left. From his right thigh emerges Dionysos as a nude baldish infant with a string of *bullae* across his chest. The child carries in his left hand a *narthex* with umbelliferous head (so Heydemann. Gerhard made it a ferule and grape-bunch; Visconti, followed by Wieseler, a small *pedum*) and raises his right to greet the birth-goddess (*Thalna*) who, arrayed in Ionic *chiton* and *himation* with *stephane*, ear-ring, and necklace, stoops forward to receive him. Behind Zeus is a winged goddess (*U[er]an*, on whom see W. Deecke in Roscher *Lex. Myth.* ii. 2481) wearing an Ionic *chiton* with girdle and cross-bands; she too has *stephane*, ear-ring, and necklace. She uplifts a dipper in one hand and grasps an *alabastron* with the other (not a pen and ink-bottle, as though about to inscribe the child's destiny). To the left of the group stands Apollon (*Apulu*), his long hair rolled round a fillet, a *chlamys* over his shoulders, a bay-branch in his left hand, and a doe behind him. To the right, room is found beneath the wings of *Mean* for the infant's cradle or, more probably, swaddling-clothes (so Heydemann. Inghirami had spoken of a *vanus*, Gerhard of a mystic *cista*). The whole composition, probably derived from some Greek vase-painting, is enclosed between two purely decorative figures—above, a wild bearded head with streams or streamers flowing from the mouth (Gerhard thought of Phobos, or of the Dodonaean Zeus! Visconti saw a lion's head and a snake!!); below, a winged goddess swathed in a *himation*. Over her runs an inscription, which has lately been read by C. Pauli *loc. cit.* as $\Delta\alpha\alpha\mu\mu[\alpha\gamma]\ \chi\omega\omega[\delta\upsilon\delta]$ *Fufluns Semeleal*, 'Dionysos son of Semele.' The reverse of the handle shows a pair of scantily draped dancers, male and female.

C. Lenormant in the *Ann. d. Inst.* 1833 v. 215 ff. and J. de Witte in the *Nouv. Ann.* 1836—1837 i. 369—371 pl. A 1837, 1—2 published two *bullae* of thin gold foil (diameter c. 1½ inches), found in a tomb at Vulci and preserved in the Cabinet des Médailles at Paris. They are both decorated with a *repoussé* design representing the birth of Dionysos (cp. the series of sarcophagus-reliefs described *supra* p. 85 n. o (2)). Zeus with bowed head sits to the left on a rock (?). He wears a *himation* round his loins and over his left shoulder. His right hand clasps his right knee. His left hand rests on the rock. From his right thigh emerges the infant god, uplifting both arms. He is received by a winged Athena, clad in a Doric *péplos* with long overfold, *aigis*, and *Gorgoneion*. Between Zeus and Athena is a lotiform thunderbolt (?). J. de Witte's description of the scene is full of bad blunders. My pl. xiv, 1 is from a fresh photograph by Giraudon. Another gold *bulle* from Italy, of third-century work, shows Zeus in labour flanked by two winged Eileithyiai (*Brit. Mus. Cat. Jewellery* p. 262 f. no. 2285 pl. 46 with fig. 75 (= my pl. xiv, 2)).

Lastly, a bronze coin of Nysa Skythopolis, the ancient Beth-Shan and modern *Beisan*, struck by Gordianus Pius in the year 304, *i.e.* some year between 240/1 and 243/4 A.D., has for reverse type Zeus standing to the left and the city-goddess standing to the right. Zeus is clad in a *himation*, which passes like a veil over the back of his head. His right foot is raised on some uncertain object (? a rock), while the head and shoulders of the infant Dionysos emerge from his right thigh. He rests his left hand on a long sceptre and extends his right towards the goddess. She is dressed in *chiton* and *himation*, and wears a turreted crown and a veil (?). She holds a long sceptre in her right hand and the babe Dionysos in her left. The legend is [NV] CCKV IEPAC and in the exergue [Δ]T (G. F. Hill in

¹ So first J. J. Bachofen *Das Mutterrecht* Basel 1897 pp. 243, 256, 259, though he confused the issue by importing a reference to the *couvade* (hence Gruppe *Gr. Myth. Rel.* p. 904 goes off on a wrong path). Farnell *Cults of Gk. States* v. 110 keeps a clearer head: 'The old attempts to interpret this as nature-symbolism have failed ludicrously. The first to strike the right track was Bachofen, who, following the anthropological method, explained the myth as the reflex of some primitive social institution; but his suggestion that we have here a divine example of the *couvade* was not altogether happy, though the *couvade* was practised by primitive peoples of the Mediterranean area. The travail of Zeus is more naturally explained by him as a primitive mode of adoption, wherein the father pretends to actually [(sic)] give birth to the adopted son; and this would be the natural method for a people passing from the rule of the matrilinear to that of the patrilinear descent^b. [We hear of the same fashion of adoption among the Haidas of North America who are in the transition-state between the two systems.] Dionysos, therefore, was accepted and affiliated in this wise to Zeus by some Hellenic tribe who were still in that stage, and whom we cannot discover, for we do not know whence the story first radiated, though we may surmise that it arose in Boeotia.' The latter part of this statement, however, will have to be modified by those who accept the recent attempts of H. J. Rose ('On the alleged Evidence for Mother-right in Early Greece' in *Folk-Lore* 1911 xxii. 277—291, 'Prehistoric Greece and Mother-Right' *ib.* 1926 xxxvii. 213—244) to disprove the existence of mother-right in early Greece.

Frazer *Golden Bough*³: The Magic Art i. 74 f. illustrates 'Simulation of birth at adoption' from a wide area, including one classical myth: Diod. 4. 39 (from an older handbook of mythology (E. Schwartz in Pauly—Wissowa *Real-Enc.* v. 674)) προσθετόν δ' ἡμῖν τοῖς εἰρημένοις ὅτι μετὰ τὴν ἀποθέωσιν αὐτοῦ Ζεὺς Ἦραν μὲν ἐπέισεν νιοποιήσασθαι τὸν Ἡρακλέα καὶ τὸ λοιπὸν εἰς τὸν ἅπαντα χρόνον μητρὸς εὐνοίαν παρέχεσθαι (παρέχεσθαι cod. Cp. three important mirrors which represent Hera suckling a full-grown Herakles: (a) An early fourth-century mirror in the Museo Civico at Bologna (F. Schiassi *De Pateris*, c.3 *sententia* J. T. Bianconi *sermo* Bononiæ 1808 pl. 10, Gerhard *Etr. Spiegel* iii. 125 pl. 126 (=my fig. 32), E. Brizio in the *Guida del Museo Civico di Bologna* Bologna 1882 p. 24 Sezione antica, Sala viii, *E Vetrina* di fronte, Sezione di mezzo, J. Bayet *Hercule Étude Critique des principaux monuments relatifs à l'Hercule Étrusque* Paris 1926 p. 150 ff. no. D) shows Herakles as a well-grown youth, with his lion-skin round his neck and a smooth club at his side, bending forward to be suckled by Hera. She sits on a throne, the footstool of which is seen in perspective, and holds up her bared right breast to the hero's lips. Behind her and leaning on her shoulder is Iolaos (Gerhard says Ares), with *chlamys* and lance. The whole is surrounded by a beautiful ivy-wreath; and the reverse has a frilled (=rayed) solar (?) head. A similar design on a terra-cotta medallion in relief was reported by W. Helbig in the *Bull. d. Inst.* 1866 p. 65 f. It was found probably at Palestrina and was then in the possession of Castellani. Helbig took the medallion to be a model for a *bullā*. But A. Kluegmann in the *Ann. d. Inst.* 1871 xliii. 21 regarded it with more likelihood as the centre of a bowl. The group of Hera suckling Herakles was flanked by two standing youths clad in *chlamydes*—apparently a duplication of Iolaos. (b) A fourth-century mirror from Volaterræ (*Vulturna*), now in the Museo Archeologico at Florence, elaborates the subject (G. Korte in Gerhard *Etr. Spiegel* v. 73—78 pl. 60 (=my fig. 33). A. B. Cook in the *Class. Rev.* 1906 xx. 416 f. fig. 4, J. Bayet *op. cit.* p. 150 ff. no. E.

pl. 4). In the centre sits Hera on a handsome throne, the seat of which is seen from below (cp. *supra* ii. 738 fig. 668), with a footstool. She is attired in an Ionic *chiton* and a *himation* drawn over her head. She has a profusion of trinkets (*stephane*, ear-ring, finger-rings, necklace, bracelet) and is shod with strap-work shoes. Her right hand pulls forward her *himation*; her left, with spread fingers, presses her naked breast, which is being sucked vigorously by Herakles. He is a bearded man with a broad fillet on his hair, a lion-skin round his neck, a short *chiton* about his waist, and a knotty club in his right hand. He leans over the goddess' lap to play the infant's part. To the right of these two stands Zeus, with *himation*, shoes, and sceptre, signing to a young undraped goddess, who wears a large necklace with pendants of three drops (cp. *II.* 14. 183, *Od.* 18. 298 *τρίγλῃνα μωρόεντα*) and, like Zeus, displays two leaves stuck in her hair. To the left stands Apollon with *chlamys*, bay-wreath, and bay-branch. In the background an older goddess appears in three-quarter position: she wears a *stephane*, a necklace with pendants, and a *himation* like that of Hera (there is indeed some confusion between the two) drawn over her head. Behind Hera's throne is an Ionic pillar supporting a tablet inscribed *εκα : σρεν : | τνα : ιχνα | c : hercle : | unial : clan : θρα : see*. The only words at present intelligible to us, *hercle : unial : clan*, denote 'Hercules son of Uni (Iuno)' and certainly suggest that the inscription is a label explaining the scene rather than a votive dedication involving other names. They do not of course justify Ptolemy Chennos of Alexandria (c. 100 A.D.) in his paradoxical notion that Herakles was the son of Zeus and Hera (Ptol. *nov. hist.* 3 p. 186, 28 ff. Westermann *ap.* Phot. *bibl.* p. 148 a 38 ff. Bekker *τινος ἐστίν ὁ ὕμνος ὁ ἀδόμενος ἐν Θηβαίοις* (I. Bekker *cj.* Θήβαις) *εἰς Ἡρακλέα, ἐν ᾧ λέγει* (either read *λέγεται* or, less probably, supply the author *Μάρτις ὁ Θηβαῖος ὕμνογράφος* from the context and suppose a direct quotation of the following words) *Διὸς καὶ Ἡρας υἱός*). The whole composition is enclosed between an upper and a lower band of herring-bone pattern. Above is a bald Silenos, with pig's ears, drinking from a *phiale*. He sprawls along the upper line, and from his incredibly clumsy neck I should infer that the artist had at first intended him to be an upright head (cp. Gerhard *Etr. Spiegel* pl. 212) or one of two (cp. *ib.* pl. 291, A), but had later altered him into a recumbent figure (cp. *ib.* pl. 323). Below is Eros, crouching almost *en face*, with a *bullā* slung round his throat and an ovoid object (egg? ball?) in either hand. (c) An early third-century mirror from Vulci, now at Berlin, introduces some variations and adds names (C. Robert in the *Arch. Zeit.* 1882 xl. 173, A. Furtwangler *ib.* 1883 xli. 271, Gerhard *Etr. Spiegel* v. 72 f. pl. 59 (=my fig. 34), J. Bayet *op. cit.* p. 151 ff. no. F). Herakles (*Heracle*) sits on a low stool, beardless but adult and equipped with lion-skin and club. He is about to suck the right nipple of Hera (*Uni*), who stoops towards him with bared breast, clasping him with her right hand and holding a horn (cp. *supra* ii. 347 fig. 241) in her left. Behind Herakles sits *Meau* raising two sprigs of olive, bent to form a wreath for the hero. In the background stands Zeus (*Tinia*), his head surrounded by two streamers and a lotiform bolt visible at his right side. He is flanked on his right by Aphrodite (*Turan*), on his left by Athena (*Merva*, a mistake for *Menrva*) with *agis*, *Gorsounion*, and shield bearing a star. Below is a large female head between two stars. These three mirrors clearly postulate a common original, perhaps a fifth-century fresco, from which is also descended—with sundry important modifications—a *lekythos*—a 'Apulian' style found at Anxia (*Anzi di Basilicata*) and now in the British Museum (G. Minervini in the *Bull. d. Inst.* 1842 p. 160, *id.* in the *Bull. Arch. Nap.* 1842—1843 i. 6 f., *id.* *Il mito di Ercole che succhia il latte di Giunone* Napoli 1854 pp. 1—34 with pl. (extr. from the *Memorie della Regale Accademia Ercolanense* Napoli 1853 vi. 317 ff.). Overbeck *Gr. Kunstmyth.* Hera p. 141 no. L, G. Korte in Gerhard *Etr. Spiegel* v. 76 ff., *Brit. Mus. Cat. Vases* iv. 60 no. F 107). Herakles is here reduced to the proportions of a boy and has lost his lion-skin and club. But that he and no other is meant appears from the presence of his patroness Athena (*agis*, spear), who offers Hera a lily—not, as Minervini thought, in allusion to the later legend of the Milky Way (*supra* i. 624 n. 5), but merely as the favourite flower of the goddess (*supra* i. 624 n. 2, ii. 515 n. 10) and a fitting reward for her services. Hera herself is a queenly figure, seated with a floral *stephane* on her head and a lily-topped sceptre in her hand. She presses

goddess Rhapso¹, but was presumably stressed as a means of explaining the obscure appellative *Eiraphiotes*². The same etymologising tendency dates the whole hostage-episode, with its play on

the boy to her right breast, where he drinks his fill. Behind her stands Iris in short *chiton* and high boots. She has wings on her shoulders, and a knotted or studded staff by way of *caduceus*. She talks with a seated wreath-bearing goddess, who is difficult to identify,—probably not Peitho (G. Korte), certainly not Alkmene (G. Minervini, H. B. Walters). This couple is balanced by a standing Eros (wreath, *sphendone*) and a seated Aphrodite (mirror) on the left. A. D. Trendall cp. a *lekkythos* of 'early Apulian' style, by the same hand, at Taranto (my pl. xv, 2), which substitutes Aphrodite and 'Ερωτώλοι for Athena and Herakles.

It is noteworthy that in the case of Dionysos the simulated birth is from the god (Zeus), in the case of Herakles from the goddess (Hera). Parallels to both forms of the rite can be adduced.

Expert philologists have advanced widely different explanations. W. Sonne in the *Zeitschrift für vergleichende Sprachforschung* 1861 x. 103 connected *ειραφιώτης*, Aeolic *ἐρραφιώτης*, with the Sanskrit *rshabha* 'bull,' so that the word would mean 'Befruchter.' R. Meister *Die griechischen Dialekte* Göttingen 1882 i. 146 followed suit. W. Prellwitz in the *Beiträge zur Kunde der indogermanischen Sprachen* 1897 xxi. 99 was still inclined to agree ('Sonne...vielleicht mit recht,' etc.), and F. Solmsen in the *Indogermanische Forschungen* 1897 vii. 46 ff. definitely accepted the same view, not only connecting Lesbian *Ἐρραφείωτας*, Ionic *Εἰραφιώτης*, with the Old Indian *rshabhis* 'bull,' but (after A. Meillet *ib.* 1895 v. 328 f.) bringing into relation with them *ἐρραος*, which meant either 'ram' (Lyk. *Al.* 1316 with Tzetz. *ad loc.*) or 'boar' (Kallim. *frag.* 335 Schneider *ap.* Tzetz. *in* Lyk. *Al.* 1316, Hesych. s.v. *ἐρραος* (so M. Schmidt for *ἐρράος* cod.)· *κριός*), and drawing attention to *Ἀρράβαιον τὸν Βρομεροῦ, Λυγκηστῶν Μακεδόνων βασιλέα* (Thouk. 4. 83), a man who was *τοῦ Βακχιαδῶν γένους* (Strab. 326)—an obviously Dionysiac group of names. F. Froehde in the *Beiträge zur Kunde der indogermanischen Sprachen* 1896 xxi. 199, while not doubting the possibility of *Εἰραφιώτης*, *Ἐρραφείωτας* being related to the Sanskrit *rshabhi* 'bull,' regarded the word as another form of *Ἐρίφιος*, the goat too being a 'Verkörperung des lebenerzeugenden Numens des Gottes' (F. A. Voigt in Roscher *Lex. Myth.* i. 1079). G. Legerlotz in the *Zeitschrift für vergleichende Sprachforschung* 1859 viii. 53 had long since derived *Εἰραφιώτης* 'von einem *εἰρ-α-φος* = *ἐρ-ι-φος* (vgl. *στρατιώτης*, *ἡλικιώτης*)' and had noted the Laconian cult of Dionysos *Ἐριφος*. H. Ehrlich *ib.* 1906 xxxix. 567 f. likewise dwells on the connexion of Dionysos with the goat (*supra* i. 674 ff.) and remarks: 'Daher denken Wieseler Philol. 10, 101 und Wide Lakonische Culte p. 168 an *ἐριφος*, und eine nebenform **ἐριαφος* = **εἰραφος* **ἐρραφος* were wohl annehmbar. Da -αφος tiersuffix ist (cf. *ἐλαφος ἀσκάλαφος κιδάφη κόραφος* Hes.), könnte man **ἐριαφος* auch mit *εἰρων* "listig" (**ἐριων*; zu *errare* st. **er-sā* eigentlich "der in die irre führt") zusammenbringen und darin ein altes wort für den "fuchs" sehen...vgl. auch Philemon fr. 89^b II p. 504 K.: *οὐκ ἔστ' ἀλώπηξ ἢ μὲν εἰρων τῇ φύσει, ἢ δ' αὐθέκαστος*,...Die adjectivischen ableitungen **εἰραφιο*· **ἐρραφιο*· bezeichneten dann "das zum fuchs gehörige, dafuchsfell," und *Εἰραφιώτης* **Ἐρραφείωτας* wäre sozusagen die griechische übersetzung von *Βασσαρεύς*, "dem fuchsfellträger" nach alter überlieferung, die recht haben kann.' A. Fick in the *Beiträge zur Kunde der indogermanischen Sprachen* 1894 xx. 179 f. cp. *Ἑρмес σπαργανιώτης* (*h. Herm.* 301), *μηχανιώτης* (*ib.* 436), *Διονύσος βακχειώτης* (Sapph. *frag.* 147 Bergk⁴, 172 Edmonds = Simon. *frag.* 210 A Bergk⁴ *ap.* Hini. *or.* 13. 7), *Παν ὀρειώτης* (*Anth. Pal.* 9. 824. 2 (Erykios)). As *σπαργανιώτης* meant 'wrapped in the *σπαργάνιον* or "swathing-band",' so *εἰραφιώτης*, Aeolic *ἐρραφείωτας*, must have meant 'wrapped in the **εἰραφίον* or "tufted skin"—a word related to *εἶπος*, Aeolic *ἐρρος* "wool" as *χρυσάφιον* to

hómēros and *mēros*¹, as the effort of Prodikos² or some other fifth-century sophist, though the particular incident of the *aithér*-phantom, with its further play on *mēros*, 'portion', is attributable to Euripides himself³.

χρυσός. Dionysos εἰραφιώτης "in the tufted skin" was a kid, cp. Hesych. s.v. εἰραφιώτης. . . καὶ ἔριφος παρὰ Λάκωσιν. [Observe, however, that εἰραφιώτης 'wrapped in a tufted garment' might equally well, or even better, describe the Bacchant garbed in an artificial skin (Eur. *Bacch.* 111 ff. στικτῶν τ' ἐνδυτὰ νεβρίδων | στέφετε λευκοτρίχων πλοκάμων | μαλλοῖς with Sir J. E. Sandys *ad loc.*). A. B. C.]. F. Bechtel *Die griechischen Dialekte* Berlin 1921 i. 128 f. approves this derivation, but notes two difficulties: 'Die eine ist die, dass, wenn ἐρφάφιον die Grundlage des Gottesnamens bildet, dieser bei den Lesbiern die Gestalt Ἐραφιώτας haben müsste, da, wie speciell *ἔπερος* lehrt, *f* hinter Consonanten spurlos untergegangen ist. Man kann ihr mit dem Einwande begegnen, dass die Verdopplung des ρ die metrische Dehnung der ersten von drei auf einander folgenden Kurzen bezeichne, wie in *πέρρυσιν* Theokr. 29₂₆. Nicht beseitigen aber lässt sich die zweite Schwierigkeit. Nach den Ausführungen Wackernagels Glotta IV 243 f. kommt den Deminutiven auf -άφιον langes α zu, dem im Ionisch-Attischen η entspricht: *ξυλήφιον* im Corpus der Hippokratischen Schriften und bei Alexis. Also musste die Namenform bei den Lesbiern Ἐραφιώτας, bei den Ioniern Εἰρηφιώτης lauten. Hier kann man nur mit einer auf unsicherer Grundlage ruhenden Hypothese helfen: da das Erscheinen der Lange in -άφιον von Wackernagel selbst als "Rätsel" bezeichnet wird, darf man vielleicht annehmen, dass neben ihr die Kurze gelegen habe, die kein Rätsel sein wurde.' K. Brugmann *Griechische Grammatik*⁴ München 1913 p. 232 pronounces the verdict: 'Εἰραφιώτης lesb. Ἐρραφεωτάς . . . ist zweifelhaften Ursprungs.' Possibly fresh evidence may yet be forthcoming—from Hittite sources?

The month Εἰραφιών at Arkesine in Amorgos (*Inscr. Gr. ins.* vii no. 62, 28 = F. Bechtel in Collitz—Bechtel *Gr. Dial.-Inscr.* iii. 2 558 f. no. 5371, 28 = Dittenberger *Syll. inscr. Gr.*² no. 531, 28, *ib.*³ no. 963, 28 ἐμ μηνὶ Εἰραφιώνι) probably corresponds with the Ionic Lenaion and the Attic Gamelion (J. Delamarre in the *Rev. Philol.* N.S. 1901 xxv. 180 f., W. Dittenberger in Pauly—Wissowa *Real-Enc.* v. 2118 f.).

¹ ὁ μῆρος = ὁμηρος.

² Euripides is said to have been a pupil of Prodikos (*v. Eur.* i in schol. Eur. i. 2, 7 f. Dindorf, Soud. s.v. Εὐριπίδης *τερ*, Gell. 15. 20. 4), who was interested on the one hand in linguistic discussions (E. Zeller *A History of Greek Philosophy* trans. S. F. Alleyne London 1881 ii. 489 ff., 512), on the other in the origins of Dionysiac worship (*id. ib.* p. 482 f.).

³ The foregoing paragraph must not be taken to imply that mythical birth from the thigh always betokens the ritual of adoption. F. Liebrecht *Zur Volkskunde* Heilbronn 1879 p. 490 f. (= *id.* in *Germania* 1860 v. 479 f.) compiles a list of such births from the leg, the foot, the hand, etc., each of which calls for separate investigation. They include the following:

(1) A. Kuhn *Die Herabkunft des Feuers und des Göttertranks*² Gutersloh 1886 pp. 13 f., 148 f. draws attention to Aurva, son of Cyavana (son of Çukra son of Bhrgu) by Ārushi daughter of Manu, who was sprung from his mother's thigh (*Mahabharata* trans. M. N. Dutt Calcutta 1895 i. 93 = *Mahabh.* 1. 66. 47 'Arushi, the daughter of Manu, became the wife of the wise Chyavana, and the greatly illustrious Aurva was born in her, ripping open her thighs,' *ib.* 1896 iii. 453 = *Mahabh.* 3. 314. 17 'O sinless one, you have further heard how the Brahmanic sage Aurva at one time remaining concealed in his mother's thighs served the purpose of the celestials.' On Aurva see further S. Sorensen *An Index to the Names in the Mahabharata* London 1904 p. 100 f.).

(2) A. Kuhn *op. cit.*² p. 149 ff. compares the case of Vena, son of Anga and Sunthā, who produced Nishāda from his thigh and Pṛthu from his arm (*Mahabharata* trans. M. N. Dutt Calcutta 1903 xii 86 = *Mahabh.* 12. 59. 94 'Vena, a slave of anger and malice, became impious and tyrannical towards all creatures. The Brahnavadin Rishis killed him

with Kusha blades inspired with Mantras. 95—96. Uttering Mantras all the while, those Rishis pierced the right thigh of Vena. Thereupon, from that thigh, sprang a short-limbed person on earth, resembling a charred brand, having blood-red eyes and black hair. Those Brahnavadins said to him,—Nishida (sit) here. 97. From him have originated the Nishadas, *viz.*, those wicked tribes who live in the hills and the forests, as also those hundreds and thousands of Mlecchas, living on the Vindhya ranges. 98. The great Rishis then pierced the right arm of Vena. Thence originated a person who was a second Indra in form' (*sc.* Prithu). H. H. Wilson *Works* London 1864 vi. 181 ff. = *Vishṇu Purāṇa* 1. 13 'And they fell upon the king, and beat him with blades of holy grass, consecrated by prayer, and slew him, who had first been destroyed by his impiety towards god... The sages, hearing this, consulted, and together rubbed the thigh of the king, who had left no offspring, to produce a son. From the thigh, thus rubbed, came forth a being of the complexion of a charred stake, with flattened features (like a negro), and of dwarfish stature. "What am I to do?" cried he eagerly to the Munis. "Sit down" (*nishīda*), said they: and thence his name was Nishāda. His descendants, the inhabitants of the Vindhya mountain, great Muni, are still called Nishādas, and are characterized by the exterior tokens of depravity. By this means the wickedness of Vena was expelled; those Nishādas being born of his sins, and carrying them away. The Brahmins then proceeded to rub the right arm of the king, from which friction was engendered the illustrious son of Vena, named Pṛithu, resplendent in person, as if the blazing deity of Fire had been manifested. There then fell from the sky the primitive bow (of Mahādeva) named Ājavā, and celestial arrows, and panoply from heaven. At the birth of Pṛithu, all living creatures rejoiced; and Vena, delivered, by his being born, from the hell named Put, ascended to the realms above.' H. H. Wilson *ad loc.* cites the parallel passage in the *Bhāgavata-purāṇa* 4. 14. 43—46 with the rendering of E. Burnouf *Le Bhāgavata Purāṇa* Paris 1844 ii. 2. 78: 'Ayant pris cette résolution, les Richis secouèrent rapidement la cuisse du roi qu'ils avaient tué, et il en sortit un nain. Noir comme un corbeau, ayant le corps d'une extrême petitesse, les bras courts, les mâchoires grandes, les pieds petits, le nez enfoncé, les yeux rouges et les cheveux cuivrés. Prosterné devant eux, le pauvre nain s'écria: Que faut-il que je fasse? et les Brāhmanes lui répondirent: Assieds-toi, ami. De là lui vint le nom de Nishāda. C'est de sa race que sont sortis les Nāichādas qui habitent les cavernes et les montagnes; car c'est lui dont la naissance effaça la faute terrible de Vēna,' *ib.* 4. 15. 1—6 (ii. 2. 79 Burnouf) 'Māitrēya dit: Les Brāhmanes ayant ensuite agité les bras du roi Vēna, qui était mort sans postérité, en firent sortir deux enfants, un fils et une fille. A la vue de ces deux enfants, les Richis qui expliquent le Vēda, y reconnaissant une portion de la substance de Bhagavat, s'écrièrent, pleins d'une extrême joie: Celui-ci est une portion de la substance du bienheureux Viṣṇu, qui est faite pour purifier le monde; celle-là est une création de Lakṣmī, la compagne fidèle de Puruṣa. De ces deux enfants, le mâle deviendra le premier roi; ce sera le Mahārādja, nommé Prithu, dont la gloire et la renommée seront répandues au loin. Celle-ci sera sa royale épouse; douée d'une taille parfaite et de belles dents, faite pour rehausser les ornements et la vertu elle-même, elle sera, sous le nom d'Artchis, inviolablement attachée à Prithu. Cet enfant est sans contredit une portion de Hari, qui est né dans le désir de sauver le monde; et cette fille est certainement Çrī son épouse dévouée, compagne inséparable du Dieu qu'elle a suivi [sur la terre].' H. H. Wilson *op. cit.* vi. 182 n. 1 further remarks: 'The Padma (Bhūmī Khaṇḍa) has a similar description [of Nishāda]; adding to the dwarfish stature and black complexion, a wide mouth, large ears, and a protuberant belly. It also particularizes his posterity as Nishādas, Kirātas, Bhīllas, Bāhanakas, Bhrahmaras, Pulindas, and other barbarians or Mlechchhas, living in woods and on mountains.' A. Kuhn *op. cit.* 2 p. 149 f. refers to the *Harivaṃśa*, a supplement to the *Mahābhārata*, for the same tale.

(3) Māndhātṛ, an ancient king, son of Yuvanāṣva, was born from his father's side. Yuvanāṣva, when hunting, had drunk sacrificial butter and so become pregnant (*Mahābhārata* trans. M. N. Dutt Calcutta 1896 iii. 187 = *Mahābh.* 3. 126. 24—31 'O great king, as you, being very thirsty, have drunk the water prepared with sacred hymns which was

filled with the virtue of my religious labours, you must bring forth out of your own body a son as described above. We shall perform for your sake a sacrifice of wonderful effect, so that you will bring forth a son equal to Indra. You will not feel any pain at the time of the delivery. When one hundred years passed away, a son, as effulgent as the sun, came out by riving the left side of that high-souled king. The greatly effulgent child came out, but king Yuvanashwa did not die,—it was no doubt a great wonder. Then greatly effulgent Indra came there with the desire of seeing him. Thereupon the celestials asked Indra, "What is to be sucked by this boy?" Then Indra gave his own fore finger into his mouth (to suck), and the wielder of thunder said, "he will suck me." Thereupon the dwellers of heaven with Indra gave him the name "Mandhātā", H. H. Wilson *op. cit.* London 1866 viii. 267 = *Vishnu Purāṇa* 4. 2 'When the Munis rose, and found that the water had been drunk, they inquired who had taken it, and said: "The queen that has drunk this water shall give birth to a mighty and valiant son." "It was I," exclaimed the Raja, "who unwittingly drank the water"; and, accordingly, in the belly of Yuvanāśwa was conceived a child. And it grew; and, in due time, it ripped open the right side of the Raja, and was born: and the Raja did not die. Upon the birth of the child, "Who will be its nurse?" said the Munis; when (Indra,) the king of the gods, appeared, and said, "He shall have me for his nurse" (mām ayām dhāsyati); and, hence, the boy was named Māndhātā. Indra put his fore-finger into the mouth of the infant, who sucked it, and drew from it (heavenly) nectar.'

(4) The *Buddha-karita* of Asvaghosha (c. 100 A.D.) narrates the birth of Buddha from the side of queen Māyā: *Buddha-karita* trans. E. B. Cowell 1. 25, 26, 29 (*The Sacred Books of the East* Oxford 1894 xlix. 5 f.) 'At that time the constellation Pushya was auspicious, and from the side of the queen, who was purified by her vow, her son was born for the welfare of the world, without pain and without illness. Like the sun bursting from a cloud in the morning,—so he too, when he was born from his mother's womb, made the world bright like gold, bursting forth with his rays which dispelled the darkness. ... As was Aurva's birth from the thigh, and Prithu's from the hand, and Māndhātā's, who was like Indra himself, from the forehead [but see *supra* (3)], and Kakshivat's from the upper end of the arm,—thus too was his birth (miraculous).' The *Fo-sho-hing-tsan-king*, a translation of the *Buddha-karita* into Chinese made by the Indian priest Dharmaraksha (c. 420 A.D.), repeats the narrative: *Fo-sho-hing-tsan-king* trans. S. Beal 1. 9—11 (*The Sacred Books of the East* Oxford 1883 xix. 2 f.) 'While she (thus) religiously observed the rules of a pure discipline, Bodhisattva was born from her right side, (come) to deliver the world, constrained by great pity, without causing his mother pain or anguish. As king Yu-liu [*sc.* Aurva] was born from the thigh, as king Pi-t'au [*sc.* Prithu] was born from the hand, as king Man-to [*sc.* Māndhātā] was born from the top of the head [but see *supra* (3)], as king Kia-k'ha [*sc.* Kakshivat] was born from the arm-pit. So also was Bodhisattva on the day of his birth produced from the right side; gradually emerging from the womb, he shed in every direction the rays of his glory.'

(6) S. Baring-Gould *Legends of Old Testament Characters* London and New York 1871 p. 20 f. 'The inhabitants of Madagascar have a strange myth touching the origin of woman. They say that the first man was created of the dust of the earth, and was placed in a garden, where he was subject to none of the ills which now affect mortality; he was also free from all bodily appetites, and though surrounded by delicious fruit and limpid streams, yet felt no desire to taste of the fruit or to quaff the water. The Creator had, moreover, strictly forbidden him either to eat or to drink. The great enemy, however, came to him, and painted to him in glowing colours the sweetness of the apple, the lusciousness of the date, and the succulence of the orange. In vain: the first man remembered the command laid upon him by his Maker. Then the fiend assumed the appearance of an effulgent spirit, and pretended to be a messenger from Heaven commanding him to eat and drink. The man at once obeyed. Shortly after, a pimple appeared on his leg; the spot enlarged to a tumour, which increased in size and caused him considerable annoyance. At the end of six months it burst, and there emerged from the limb a beautiful girl. The father of all living was sorely perplexed what to make of his acquisition, when a messenger from heaven appeared, and told him to let her run about the garden till she was of a marriageable age, and then to take her to himself as his wife. He obeyed. He called her Bahouna, and she became the mother of all races of men.' The relation of this and similar Malagasy tales to Biblical teaching is discussed by J. A. MacCulloch in J. Wolf *Deutsche Märchen und Sagen* Leipzig 1845 p. 599 (on no. 198): 'Die Einwohner von Madagaskar erzählen, Adam habe stark gegessen und in Folge dessen einem natürlichen Bedürfnisse genügen müssen, was sich aber gleich im Paradiese durch den Geruch verrathen. Darob sei er vom Teufel verklagt worden und Gott habe ihn aus dem Paradiese geworfen. Einige Zeit nachher ware sein Bein aufgeschwollen und man habe ein jung Mädchen heraus geholt, welches er geheirathet.'

Phantoms were in fashion. The Platonic Phaidros, perhaps taking a hint from Stesichoros¹ or Euripides², tells how the gods, indignant that Orpheus was unwilling to die for love, sent him back empty-handed after showing him a mere phantom of his wife, not her very self³.

In this connexion the design on a red-figured *hydria* in my possession is deserving of notice (pl. xvi)⁴. It is Attic work dating from the last quarter of the fifth century B.C. In the centre stands a slender, youthful Apollon. He wears a bay-wreath on his flowing locks and a *chlamys* with weighted corners over his left arm. In his right hand he holds a long bay-branch; in his left, a lyre. Both hands are lowered, and the god looks downwards at the head of Orpheus, which with parted lips and upturned face is

Maass *De Aeschylis Supplicibus commentatio* Gryphiwaldiae 1890 pp. xix, xxxvi f. suggest that *Χειρογονία* must be daughter of a Zeus **Χειρογόνος*, 'qui ut infans nascatur manu efficit.' He compares, not only the Zeus *Δεχέαρης* of Aliphera in Arkadia (Paus. 8. 26. 6 καὶ Διὸς τε ἰδρύσαντο Δεχέαρτον βωμόν, ἃτε ἐνταῦθα τὴν Ἀθηνᾶν τεκόντος) and the Zeus *εὐώδιον* of Nonnos (*Dion.* 48. 974 f. καὶ θεὸς ἀμπελόεις πατρώων αἰθέρα βαινῶν πατρὶ συν εὐώδιον μῆς ἔψανσε τραπέζης. See further Stephanus *Thes. Gr. Ling.* iii. 2532 B), but also (Zeus) Agamemnon **Ὀρσίλοχος* assumed to account for Iphigeneia *Ὀρσίλοχία* (Ant. Lib. 27) and Zeus **Ἐπαφος* assumed to account for Dionysos *Ἐπάφιος* (Orph. h. *Lys. Len.* 50. 7 and h. *triet.* 52. 9 cited *supra* p. 4 n. o). *Id. Aratea* Berlin 1892 p. 349 add: 'Ac fortasse de Dactylorum etymo hac eadem ratione edocebimur quid sibi velit. Quid? si *χειρογόνους* credebantur et digitis placide venter immixtis contrectando efficere, ut parerent parturientes? Essent igitur *Δάκτυλοι* = *Δακτυλόγονοι*.... Conjectura haec est, nihil amplius.' Gruppe *Gr. Myth. Rel.* p. 860 n. 2 concludes: 'Orsiloechia und Persephone Cheroгонία... sind selbst Geburts-gottinnen gewesen, nicht nach (Zeus) Agamemnon *Orsilochos oder Zeus *Cherogonos... genannt.' F. Liebrecht *loc. cit.* would bring Persephone into line with Prithu (*supra* (2)): 'Persephone heisst die Fingergeborene (*χειρογονία*) und deshalb auch wieder aus den Fingern Gebarende.' This is attractive, but cannot claim the support of any actual myth. The preceding statement 'die Paliken erscheinen als Fingergeburten' is erroneous, the whole context being presumably copied from J. J. Bachofen *Versuch über die Grabersymbolik der Alten* Basel 1859 p. 174 'Darum erscheinen die Paliken auf bekannten Vasenbildern als Fingergeburt; darum heisst auch Persephone selbst *Χειρογονία*, die Fingergeborene. und deshalb auch wieder aus den Fingern Gebarende.'

chanting an oracle from the ground¹. Behind Orpheus stands a young woman, presumably the Pythia. She too looks down, and holds her right hand with a deprecatory gesture above the head. She has a beaded fillet and upright bay-leaves in her hair, and she is clad in a *péplos* with long overfold and girdle. Behind Apollon stands another woman, closely swathed in *chiton* and *himation*. She also gazes at the head of Orpheus, but with loosened hair and a look of such obvious distress that we must surely identify her with Eurydike². I take the whole design to portray the visit of Apollon to the Lesbian oracle of Orpheus—a scene graphically described by Philostratos³ the Athenian early in s. iii A.D.:

‘He (sc. Apollonios of Tyana) put in at Lesbos and made his way to the *addyton* of Orpheus. The story goes that once on a time Orpheus here practised seercraft with pleasure, until Apollon took notice of him. For men no longer resorted to Gryneion for oracles, nor to Klaros, nor yet to the Apolline tripod⁴; but Orpheus alone gave oracles, his head having lately arrived from Thrace. Wherefore the god came upon him as he was chanting an oracular strain and said: “Leave my business to me: I have borne long enough with your singing”.’⁵

Hitherto the only available illustration of this narrative was the design on a red-figured *kylix* now in the Lewis collection at Cambridge, published many years ago by G. Minervini (fig. 35) and noted by A. Furtwangler as Attic work referable to the time of the Peloponnesian War⁶. The obverse of this vase shows Apollon’s

² The only other possibility would be to regard her as ‘the Muse herself that Orpheus bore,’ whether Kalliope or another (O. Gruppe in Roscher *Lex. Myth.* iii. 1073 f.). But this is not the type of any known or recognisable Muse.

⁵ The concluding words are ἐφίσταται οἱ χρησµωδοῦντι ὁ θεὸς καὶ “πέπανσο” ἔφη “τῶν ἐµῶν, καὶ γὰρ δὴ (καὶ) ᾄδοντά σε ἱκανῶς ἤνεγκα.” Possibly the original source of the story (Damis of Nineveh? Maximus of Aigai? see Philostr. *v. Apoll.* 1. 3 p. 3 f. Kayser) had a hexameter passage such as χρησµωδοῦντι θεὸς ποτ’ ἐφίστατο καὶ προσέειπε | ‘παῦσαι ἐµῶν, καὶ γὰρ σ’ ἱκανῶς ᾄδοντ’ ἤνεγκα’ or ‘τῶν δ’ ἄρ’ ἐµῶν—καὶ γὰρ σ’ ἱκανῶς ἤνεγκα—πέπανσο.’ But the later oracles of Apollon tend to drop verse for prose (Frazer *Pausanias* v. 238). It is curious, if no more, that the words τὰ ἐµά occur again in the oracle spoken by Orpheus’ head to Kyros the Elder (Philostr. *her.* 6. 4 τάµά, ὦ Κύρῃ, σά.)

⁶ G. Minervini ‘Oracolo di Orfeo e dell’ Apollo Napeo in Lesbos: vaso dipinto di fabbrica nolana’ in the *Bull. Arch. Nap.* 1858 vi. 33—39 pl. 4. 1 (= my fig. 35) held that on one side Pelops is taking down an oracle pronounced by the head of Orpheus under the protection of Apollon Νηπαῖος (schol. Aristoph. *nub.* 144), and that on the other Kalliope has picked up her son’s lyre and a second Muse the strap from which it was hung. Reinach *Rép. Vases* 1. 493, 2 is more cautious: ‘(A) La tête coupée d’Orphée rend des

new vase also amplifies the oracular visit by the addition of two women, but lends a far greater significance to them by making one the devotee of Apollon, the other the wife of Orpheus. And, if that

is the case, Eurydike must necessarily be present in phantom form—a figure comparable with the ghost of Klytaimestra as she appears on more than one Greek vase¹. Mr C. T. Seltman further points out to me that both these Orpheus-vases presuppose an interest at Athens in the *sacra* of Lesbos and handle the theme with a light-hearted semi-humorous touch understandable enough during the Athenian domination of the island in 427—412 B.C.²

But Furtwangler *Ant. Gemmen* iii. 247 ff. fig. 139 has more to say: 'Als Beschützer des Kopfes [Ov. *met.* II. 20 ff., cp. Stob. *flor.* 64. 14 Phanokles (ed. Gaisford ii. 418 f., Wachsmuth—Hense iv. 1. 461 f.)] und Herr des Ortes erscheint Apollon offenbar auch auf dem Vasenbilde. Auf der Rückseite derselben Schale scheint die Lyra des Orpheus in den Händen einer Muse dargestellt, während eine zweite eine Tante bereit halt, um die Leier damit als Weihgeschenk zu umschlingen. Das Bild scheint darauf anzudeuten, dass die Leier dem Apollon geweiht ward [Loukian. *adv. indoct.* II.].' C. Robert 'Das orakelnde Haupt des Orpheus' in the *Jahrb. d. kais. deutsch. arch. Inst.* 1917 xxxii. 146 f. fig. 1 rightly holds that the vase-painter, like Philostratos, is depicting the myth of Apollon's protest. See further C. D. Bicknell in the *Journ. Hell. Stud.* 1921 xli. 230 pl. 12, H. Philippart in *L'Antiquité Classique* 1935 iv. 209 pl. 27, 1.

To the gems discussed by Furtwangler *Ant. Gemmen* iii. 245 f. add a sliced chalcedony in my collection (fig. 36 scale $\frac{1}{2}$), which resembles his pl. 20, 53=pl. 22, 5, cp. 6, ii. 100, 107. A chip above the young man's head has been crudely altered by some later hand into a would-be *petasos*. See too the Etruscan mirrors figured on my pl. xvii, and a 'Campanian' *amphora* of c. 450—425 B.C., now in the Musée Borély at Marseille, interpreted by Prof. P. P. Jacobsthal, to whom I am greatly indebted for my pl. xviii, as a youth consulting the oracular head of Orpheus.

¹ O. Hofer in Roscher *Lex. Myth.* II. 1244 ('Das Schattenbild Klytaimestras'). The greatest resemblance to our Eurydike is shown by the phantom Klytaimestra of a *kratēr* from Armento (c. 420 B.C.), now in the Louvre (J. de Witte in the *Ann. d. Inst.* 1847 xix. 413 ff., *Mon. d. Inst.* iv. pl. 48=Reinach *Rép. Vases* i. 132, 2, Overbeck *Gall. her. Bildw.* i. 714 f. Atlas pl. 29, 7, F. Hauser in Furtwangler—Reichhold *Gr. Vasenmalerei* ii. 330 ff. pl. 120, 4. Pfuhl *Malerei u. Zeichnung d. Gr.* ii. 576, 597 f., iii. 356 fig. 798, L. Séchan *Études sur la tragédie grecque dans ses rapports avec la céramique* Paris 1926 p. 97 ff. pl. 1, 2), who likewise occupies a position on the extreme left of the group.

² Mr Seltman also suspects that the story told by Philostratos about Kyros the Elder (*supra* p. 100 n. 1) belongs more properly to Kyros the Younger. If the former captured Babylon in 538, the latter had designs upon it in 401. If the corpse of the one was beheaded by Tomyris, that of the other was beheaded by Artaverxes. Confusion might result, and some points of the story suit the Younger better than the Elder. Be that as it may, Philostratos' mention of Babylon suggests that he may here be indebted to Dami of Nineveh.

in order to lure Turnus from the fight¹. The Roman poet probably based his figment on a passage of the *Iliad*, in which Apollon rescues Aineias from Diomedes by carrying off his *protégé* and substituting a phantom resembling him in person and equipment². We are not, however, told that the Homeric phantom was made of cloud; indeed, it would appear that in genuine Greek myth, as distinct from the inventions of a Euripides or a Virgil, the cloud-effigy was always female, since the cloud itself was feminine.

§ 7. Zeus and the Wind.

(a) Men believed to control the winds.

The Greeks, like other imperfectly civilised nations³, credited certain persons with the power of controlling the winds. At Athens the *Heudánemoi* or 'Lull-winds' had an altar near the Metroon⁴: they seem to have been a clan tracing their descent from an eponymous founder *Heudánemos*, who was revered as an angel in Christian times⁵. At Eleusis too there was a well-known altar of

*Heudánemos*¹; and that the *Heudánemoi* had something to do with Eleusinian ritual appears from the title of a speech fathered upon Deinarchos, viz. 'The *Heudánemoi* v. the *Kérykes* in re the Basket²'—presumably the sacred basket of Demeter³. At Corinth there was a similar clan of *Anemokoítai* or 'Wind-layers,' whose business was to hush the winds to sleep⁴. Even in the days of Constantine Sopatros of Apameia, a pupil of Iamblichos⁵, was accused of having bound the south winds and so prevented the corn-ships of Egypt, Syria, and Phoinike from reaching Byzantion: his enemies actually induced the emperor to order his execution⁶.

With regard to the precise rites practised by the wind-layer there is a dearth of evidence. Perhaps the harmful gale was conjured into a jar⁷ or bag⁸. Empedokles of Akragas was surnamed

Hesychios seems to imply that the pagan eponym became a Christian angel without losing his special function of tempering the wind.

It was believed that a toad imprisoned in a new jar and buried in the field would safeguard the crops against stormy weather (Plin. *nat. hist.* 18. 294 Archibius (on whom see M. Wellmann in Pauly—Wissowa *Real-Enc.* II. 466) ad Antiochum Syriae regem scripsit, si fictili novo obruatur rubeta rana in media segete, non esse noxia tempestates). The same remedy served to protect millet against sparrows and worms (Plin. *nat. hist.* 18. 158 multi ad mili remedia rubetam noctu arvo circumferri iubent, priusquam sariatur, defodique in medio inclusam fictili, ita nec passerem nec vermes nocere, sed eruendam, priusquam metatur; alioquin amarum fieri, *Georpon.* 2. 18. 14 'Ἀπολλῆος δὲ φησι (see L. von Schwabe in Pauly—Wissowa *Real-Enc.* II. 249, E. His choice of the ass was certainly not accidental, for at Taras a sacred ass was allowed to run wild till it was sacrificed

And very similar beliefs on French soil are noted by P. Sébillot *Le Folk-lore de France* Paris 1906 iii. 264 f. In Italy toads are said to spring from the first large rain-drops of a storm (A. de Gubernatis *Zoological Mythology* London 1872 ii. 379 n. 2), and in France to announce the coming downpour by repeated croaks (P. Sébillot *op. cit.* iii. 260) or leaps (*ib.* iii. 267). In Switzerland a toad crawling across the road betokens rain (H. Plutarch substitutes a practical wall for the bag-magic (Plout. *de curiositate* 1 ὁ δὲ φυσικὸς Ἐμπεδοκλῆς ὄρους τινὰ διασφάγα βαρὺν καὶ νοσῶδη κατὰ τῶν πεδίων τὸν νότον ἐμπνέουσιν ἐμφράξας λοιμὸν ἔδοξεν ἐκλείσαι τῆς χώρας, *adv. But the fame of the exploit lasted on into the twelfth century (Tzet. *chil.* 4. 524 ff. τῷ παύειν δ' ὄμβρους καὶ αὐχμούς καὶ προγινώσκειν πάντα | Θαλῆς καὶ Πυθαγόρας τε σὺν τῷ Ἀναξαγόρῃ· | Ἐμπεδοκλῆς Μελίτωνος ὁ καὶ Κωλυσανέμας).

Aisch. *Ag.* 214 πανσανέμον... θυσίας) Πυθαγορικῶς παραινέειν τὰ δόγματα στέγειν ἔσω φρενὸς κ.τ.λ. or the like (see D. Wytténbach *ad loc.*).

to the Winds¹. And his employment of bags recalls the methods used by unsophisticated folk to capture souls².

The same power of controlling violent winds was ascribed by the Greeks to Pythagoras, Epimenides, and Abaris³. Indeed, any and every wonder-worker could claim the prerogative—even Sophokles⁴. Nowadays, it would seem, the mere mention of the great man's name will suffice. In the Macedonian district of Liakkovikia, during an *anemospláda* or 'whirlwind,' people often mutter the charm: 'Alexander the Great liveth, aye he doth live and reign⁵.'

(b) Aiolos Hippotades.

A figure interesting in this connexion is that of Aiolos Hippotades. He appears in the *Odyssey*⁶ as Lord of Aiolie, a floating island⁷ with sheer rocky sides crowned by a wall of unbreakable bronze. Here he feasted with his six sons, whom he had united in wedlock with his six daughters. Here too he entertained Odysseus for a month, at the end of which time he slew an ox, made a bag of its skin, bound the blustering winds within it, and gave it as a parting gift to the hero, fastening it with a silver cord on board his ship. He also supplied him with a west wind to waft him on his way homewards. But later, while Odysseus slept, his comrades, under the belief that the bag was full of treasure, untied it and, to their own discomfiture, let loose the warring winds.

Now Aiolos is said to have been established as keeper, or king,

of the winds by Zeus¹. And Aëthlios, son of Aiolos, was reputed to be the son of Zeus². There is therefore something to be urged for Usener's suggestion that Aiolos himself was 'a sort of Zeus³.' Perhaps the same thought occurred to Ovid, when he made Iupiter shut Aquilo in the caves of Aeolia and send forth Notus to cause a deluge⁴.

Others, however, have rightly insisted that the Homeric Aiolos is not as yet fully deified⁵. Hence his description as 'dear to the immortal gods⁶.' Rather, he is a subordinate power, not improbably a dead tribal chieftain, who lives on in his Otherworld island⁷ and is conceived as a superhuman magician, the wind-controller *par excellence*. His bag of winds recalls an odd superstition recorded by Tzetzes and the scholiast on the *Odyssey*⁸:

'Artful contrivers and those who write on infamous practices declare that, if a man flays a dolphin and makes its skin into a bag and then keeps it at home, he will cause to blow whatever wind he may choose.'

Somewhat similar is Philostratos' account of Indian weather-magic⁹. Apollonios of Tyana and his party are visiting the cloud-capped hill of the Brachmanes, four days' journey from the city Parax:

'And they say that they saw two jars of black stone, filled with rains and winds respectively. The jar of the rains is opened, if India should be oppressed

We need not, of course, subscribe to Usener's view that Αἰόλος was the 'Zig-zag' lightning of Zeus (cp. Pind. *Ol.* 9. 42 αἰολοβρόντα Διὸς αἶσα), or that his six pairs of children were the twelve months of the year. G. Libertini *Le isole Eolie nell' antichità greca e romana* Firenze 1921 p. 61 f. argues that Hippotes was a degraded form of Poseidon Ἰππιος, Aiolos an ex-appellative of Zeus (Pind. *Ol.* 9. 42 αἰολοβρόντα, Orph. *h. Zeus* 15. 10 αἰολόμορφε) or perhaps rather of Poseidon, the ever-changeful.

by drought, and sends up clouds to moisten the whole country; but if rains should be in excess, it is shut up and puts a stop to them. The jar of the winds, I suppose, plays the same part as the bag of Aiolos; for they open the jar ever so little and let one of the winds blow in season, whereby the country is refreshed.²

Other parallels to Aiolos Hippotades are collected by Sir James Frazer¹. The closest hails from the Slavonic area:

'It is said that Perdoytus, the Lithuanian Aeolus, keeps the winds enclosed in a leathern bag; when they escape from it he pursues them, beats them, and shuts them up again².'

Certain features in the myth of Aiolos invite further investigation. His bag full of winds, opened by the prying followers of Odysseus, bears at least a superficial resemblance to the *pitthos* or 'jar' containing evils opened by the inquisitive woman in Hesiod's *Works and Days*³, or to the *pitthos* of Zeus containing good things opened by the over-curious man in a fable of Babrios⁴. The resemblance is increased if, with Miss J. E. Harrison⁵, we accept O. Gruppe's⁶ conjecture that the *pitthos* in question was that

of the earth-goddess Pandora opened once a year at the festival of the *Pithoigia* for the temporary release of souls. For winds are notoriously akin to souls¹. Indeed, Greeks of the mythopoeic age would probably have assented to the direct equation winds *are* souls. It may even be that the very name *Aiolos* is cognate with the Gothic *saiwala* and the English *soul*². The island of Aiolos would on this showing too be an island of souls³—a typical Otherworld island, as we had already seen reason to suspect.

Aiolos Hippotades has both in ancient⁴ and in modern⁵ times been identified with Aiolos, the eponymous ancestor of the Aeolians. K. Tümpel⁶ thinks that the Hesiodic *Catalogue*⁷ described the latter

as *hippioclármes*, 'fighting with chariot and horses,' in obvious imitation of the patronymic *Hippotádes* applied in the *Odyssey* to the former¹. And both epithets might conceivably have reference to the frequent conception of the winds as horses². I should, however, prefer to stress another point of contact between Aiolos Hippotades and Aiolos son of Hellen, I mean the abnormal endogamic character of the marriage-custom that obtained among their descendants.

According to Homer, the six sons of Aiolos Hippotades married their six sisters³. Greeks of the Hellenistic age, perhaps jibbing at the idea, felt it necessary to invent some explanation. Thus Parthenios, Virgil's tutor⁴, making a *précis* of Philetas' *Hermes* for the benefit of Virgil's friend Cornelius Gallus⁵, told how Odysseus in the course of his wanderings round Sicily had reached the island of Meligounis (later called Lipara⁶) and there fallen in love with Polymele, one of Aiolos' daughters; how, after his departure with the bag of winds, she had been found in love-sick plight weeping over certain spoils of Troy; how Aiolos had reviled the absent Odysseus and resolved to take vengeance on Polymele; and finally how her brother Diore, who was enamoured of her, had begged her off and persuaded his father to give her to him as his wife⁷.

Now the same peculiar usage occurs again in connexion with the other Aiolos, eponym of the Aeolians. For he was king of Thessaly⁸; and the marriage of brother with sister is expressly stated to have been an ancient custom among the Thessalians⁹. Moreover, Makedon the ancestor of the Macedonians was, in the opinion of Hellanikos¹⁰, a son of Aiolos. Hence the fact that the

Ptolemies married their own sisters is probably to be explained, not merely as a concession to Egyptian feeling¹, but also as a survival or revival of a practice proper to an old Macedonian family of Aeolic extraction. It will be observed that the spelling of the Ptolemies' name—*Ptolemaïos*, not *Polemaïos*—certifies their Aeolic descent². Finally, H. D. Muller sought to prove that Hera was originally a goddess of the Aeolians³. If so, the conception of her as sister and yet wife of Zeus may have arisen on Aeolic ground.

Be that as it may, I am disposed to conclude that Aiolos Hippotades was in pre-Homeric days⁴ none other than Aiolos

Frazer *Golden Bough*¹: The Dying God p. 193 f. comments: 'On this hypothesis we can understand why the custom of marriage with a full or a half sister has prevailed in so many royal families. It was introduced, we may suppose, for the purpose of giving the king's son the right of succession hitherto enjoyed, under a system of female kinship, either by the son of the king's sister or by the husband of the king's daughter; for under the new rule the heir to the throne united both these characters, being at once the son of the king's sister and, through marriage with his own sister, the husband of the king's daughter. Thus the custom of brother and sister marriage in royal houses marks a transition from female to male descent of the crown¹ [This explanation of the custom was anticipated by McLennan. ... (*The Patriarchal Theory, based on the Papers of the late John Ferguson McLennan*, edited and completed by Donald McLennan (London, 1885), p. 95)]. In this connexion it may be significant that Cronus and Zeus themselves married their full sisters Rhea and Hera, a tradition which naturally proved a stone of stumbling to generations who had forgotten the ancient rule of policy which dictated such incestuous unions, and who had so far inverted the true relations of gods and men as to expect their deities to be edifying models of the new virtues instead of warning examples of the old vices² [Compare Cicero, *De natura deorum*, ii. 26. 66; [Plutarch], *De vita et poesi Homeri*, ii. 96; Lactantius, *Divin. Inst.* i. 10; Firmicus Maternus, *De errore profanarum religionum*, xii. 4].'

(c) The Tritopatores or Tritopatris.

The results of the last section throw a new and welcome light on one of the outstanding problems of Greek religion—the true character of the mysterious powers known to the ancients as *Tritopatores* or *Tritopatris*³.

Phanodemos, a Hellenistic historian interested in religious

² A. D. Fraser 'The origin of Aeolus' in *The Classical Journal* 1933 xxviii. 364—366 cites *inter alia* a parallel from the north-east coast of Scotland (D. A. Mackenzie *Tales from the Moors and the Mountains* Glasgow 1931 pp. 62—67 'A weather witch, Stine Veg, supplies a party of fishermen with a collection of winds confined in a water jar whose mouth is stopped with a wisp of straw. Like the Ithacans, they are a prey to curiosity and, upon unstopping the jar, are blown back to their starting-point'). Prof. Fraser concludes: 'The tradition apparently accompanied the Achaeans in their wanderings from some point near the Baltic to the Mediterranean, while a somewhat different version was carried by another branch of Indo-European speaking people into the heart of India.'

³ P. Kretschmer in *Glotta* 1920 x. 41 showed that *Τριτοπατρεις* was originally a verse-form of *Τριτοπάτορες* ('Wenn *Τριτοπάτορες* in daktylischem Versmaass gebraucht werden sollte—möglicherweise wurde der Name in Hymnen, Gebeten oder Epigrammen genannt—so war diese Form mit ihren fünf Kurzen selbst bei metrischer Dehnung der ersten Silbe noch nicht anwendbar und mag daher durch *Τριτοπατρῆς* *Τριτοπατρεις* ersetzt worden sein, wobei man die auch im Epos nicht ganz seltene Kurze vor Muta cum Liquida mit in Kauf nehmen musste').

The attempt of M. Budimir, a Serbian scholar, to invalidate this conclusion, reported by L. Radermacher in the *Berl. philol. Woch.* Marz 4, 1922 p. 199 f. ('Das, diese Form nur eine epische Bildung aus *τριτοπάτωρ* sei des Hexameters wegen, wie P. Kretschmer meint, ist nicht anzunehmen, da Cicero und attische Inschriften, die Prosa schreiben, ausschliesslich die Form *Τριτοπατρεις*—*Τριτοπατρεις* [sic] kennen. Es ist also auch aus diesem Grunde der Name der attischen *ἄνακες* von dem gutbürgerlichen Verwandtschaftsnamen *τριτοπάτωρ* zu trennen, und die attischen *Τριτοπατρεις* haben mit *τριτοπάτορες* nichts zu tun'), fails to reckon with the fact that an epic appellative may pass into popular parlance and acquire ritual (e.g. *Γαμήχος*: *supra* p. 10 ff.) or mythical (e.g. *Ἰφιδέχεια*) importance. The point is one deserving of further investigation.

showed that the spot was taboo¹. Behind it were vestiges of a low circular tomb marked out by large stones. Beyond that in turn was a four-walled enclosure roughly trapezoidal in shape. In front of its two eastern corners stood a pair of similar boundary-stones (fig. 37, nos. 2 and 3), both inscribed in lettering of *c.* 450—400 B.C.

Yet another ancient stone, built into the southern wall of the precinct, reads:

Here, then, in immediate juxtaposition with the Street of Tombs, was the simple *ábaton* of the fifth-century Tritopatreis. Within a stone's throw of it stood till recently the modern Church of the Hagia Trias (fig. 37), which by a curious coincidence, if no more², recalls the triple character of the local *numina*.

U. Köhler³ in 1879 published a similar but somewhat later boundary-stone, which he had copied years before in the Central Museum at Athens. It is inscribed in letters of *c.* 400—350 B.C.

The Church of the Hagia Trias was removed in 1931. Excavations conducted by the German Archaeological Institute in the mound beneath it and in some neighbouring areas proved that the whole site had been used as a cemetery from the Protogeometric period down to the Byzantine Age (K. Whether the Zakyadai, whose name does not occur elsewhere, formed a *génos* or a *phratría*, has been disputed¹. But it is clear that the addition of the last word was meant to limit the circle of worshippers to members of a specified tribal division, bound together by real or fictitious community of descent.

The sacrificial calendar from *Koukounari* in the Epakria district, which again belongs to the earlier part of s. iv B.C.², mentions among the annual rites of Marathon that in Skirophorion before the Skira a sheep was offered to the Tritopatreis and another to the Akamantes³, also among the trieteric rites of the same place that at the same time of year a table was set for the Tritopatreis⁴. The

context in both cases is suggestive of fertility and fertilisation. P. Maas⁵ claims that the Tritopateres are again connected with the *Akamantes* in an important ritual text of s. iv B.C. found at Kyrene and first published by S. Ferri in 1927 (fig. 38)⁶; and

K. Latte¹ suggests that these 'Unwearied Ones' might be either wind-spirits² or else a euphemistic³ expression for the dead (*kamóntes*).

One other example of actual cult has been furnished by the French excavations in Delos⁴. Close to the south-east angle of the great precinct of Apollon, at a spot where three roads meet, G. Leroux in 1906 uncovered a paved triangular place of small size (25^m by 12^m). Towards its southern end was a circular structure of white marble consisting of curved slabs (0.54^m high), which rest on a raised course of masonry and carry a projecting cornice with bevelled top (fig. 39). The ring-wall is broken on the north-west by an aperture (0.80^m wide). Inside is a pavement of gneiss, from which sundry slabs are missing. Above this pavement were found sherds of coarse vases, a piece of stag's antler, ashes and fragments of carbonised wood. Below it, excavations pursued down to the

level of the virgin soil discovered not only ashes and charcoal, but also the bones of small cattle. Trial pits sunk outside the ring-wall beneath the paving of the triangular place brought similar *débris* to light. It was obvious that the cult here celebrated was older than the construction of the circular edifice. And an inscription (fig. 40) incised on the inner surface of one of the curved slabs, beneath the cornice, reads as follows¹:

Τριτοπάτωρ	'Tritopator

Αἰγυλίων	from Aigilia.'

The first two lines are engraved *stoichedón* in careful lettering of

c. 400 B.C. The third line is less well cut and appears to have been crowded, as an afterthought, into the narrow margin left by the other two. M. Holleaux notes that the Pyrrhakidai were an Attic *génos*, familiar to us from Delphic records of the Athenian Pythais², and P. Roussel points out that their *archegétes* Pyrrhakos is described as a contemporary of Erysichthon³, who went from Athens to

Delos¹ and there set up the first wooden statue of Apollon². On this showing the circular structure found by Leroux would be in the nature of a Delian family *heroon*³. Immediately to the south of it are the remains of a Byzantine church. Was this another case of the pagan Tritopatores being replaced by the Christian Trinity?

Putting together these various indications of popular worship, we perceive that the Tritopatores from the fifth century onwards had been established at the cross-roads (Kerameikos, Delos), where a hypaethral enclosure, either trapezoidal (Kerameikos) or circular in plan (Delos), was set apart for them in a roughly triangular space. The cult there carried on might be limited to members of a particular clan (the Zakyadae at Athens, the Pyrrhakidae in Delos) and involved the sacrifice of sheep etc. (Marathon, Delos). In some respects, therefore, the Greek Tritopatores recall the Lares *Compitales*, who were likewise worshipped at the cross-roads—that immemorial *rendez-vous* of family-ghosts⁴. This disposes us to see in the former, as in the latter⁵, ancestral spirits watchful over the welfare of their descendants.

Literary evidence with regard to the nature of the Tritopatores follows two lines of tradition, one supporting, the other supplementing, the inferences drawn from the monuments.

120 The Tritopatores or Tritopátreis

On the one hand, the Tritopatores are described as remote and mythical ancestors. The author of the work known as the *Exegetikón*, who has been plausibly identified¹ with Kleidemos or 'Kleitodemos, the oldest of all writers on the local customs of Athens², and would thus be referable to the middle of the fourth century B.C.³, stated that the Tritopatores were sons of Ouranos and Ge, named Kottos, Briareos, and Gyges⁴. Philochoros, the most important of the Attidographers, followed suit with the assertion that the Tritopatreis were the earliest offspring of Ge and Ouranos, and the first to begin generation⁵. Elsewhere he gave a slightly divergent account. The Tritopatreis were the first of all. At that time men believed that the earth and the sun, Ge and Apollon as they called them, were their parents, and that the offspring of these were Tritoi Pateres⁶. The meaning of these two passages is not over-clear. But C. A. Lobeck⁷ makes it probable that, in Philochoros' view, the earth fructified by the sun produced the Tritopatreis, who acting as procreators for the first time thereby became the parents of all mortal men. Cicero, quoting from a Greek Catalogue of the gods which seems to have been drawn up in the second or first century B.C.⁸, makes Zeus, 'a very ancient king,' the father by Persephone of the first Dioskouroi—a triad of brothers known as Anaktes at Athens and named Tritopatreus, Eubouleus, and Dionysos⁹. These varying versions agree in attributing the names Tritopatores, Tritopatreis, Tritopatreus to prehistoric progenitors of a more or less superhuman sort. It is possible that behind them

If this passage is rightly assigned by C. Muller to the *Attis*, it may be surmised in view of the inscription from Epakria (*supra* p. 115) that the other passage (*supra* n. 5) occurred in Philochoros' treatise on the Attic Tetrapolis (*Frag. hist. Gr.* i. 410 f. Muller).

all lay the greater authority of Aristotle, who is said to have used the word *tritopátor* in the sense of 'great-grandfather'.¹

On the other hand, somewhat to our surprise, the Tritopatores are identified with, or at least brought into close connexion with, the winds. Demon in his *Atthis* (c. 300 B.C.) roundly declared that the Tritopatores were the winds²—a statement implicitly traversed by his critic and rival Philochoros³. The author of the Orphic *Physiká*, which was attributed (no doubt, wrongly⁴) to Brontinos⁵ of Metapontum⁶, explained that the Tritopatores were 'door-keepers and guardians of the winds'⁷ and gave their names as Amalkeides, Protokles, and Protokreon⁸—a trio well adapted for hexameter

Nun ist τριπάτωρ (vgl. τριπάππος tritavus Corpus Glossariorum Latinarum II 459, 31) die Form, die man für ein Wort mit der Bedeutung πρόπαππος (dritte Generation vom Vater an) erwarten sollte, und Wilamowitz (Aristoteles und Athen II 268 Anm. 11) hat die Gleichung πρόπαππος=τριτοπάτωρ für grammatisch unmöglich erklärt. Es ist also sehr gut denkbar, dass das jetzt nur schwach bezeugte τριπάτωρ in der Bedeutung πρόπαππος bestanden hat und erst in der lexikalischen Überlieferung mit Τριτοπάτωρ, mit dem sich wegen seiner dunklen Etymologie die Lexikographen viel beschäftigten, zusammengeworfen wurde. Dann wurde Aristoteles als Zeuge für Τριτοπάτωρ ausscheiden. Über den mutmasslichen Zusammenhang der Aristotelesstelle vgl. Budimir, the Serbian scholar reported by L. Radermacher in the *Berl. philol. Woch.* Marz 4, 1922 p. 199, comes to a very different conclusion: 'Demnach kann τριτοπάτωρ "tertium patrem, das heisst πρόπαππον" und "eum cui tertius pater superest" bezeichnen, ebenso τριπάτωρ "eum cui tres patres sunt" (wie τριάνωρ), was aber keinen Sinn hat, und wie τριγέρων τριδούλος trifur triparcus triscurria, den Erzvater, προπάτωρ, ἀρχηγὸς γενέσεως, ὁ πρῶτος ἀρχηγέτης.' verse¹. Others went on to compare them with Aiolos Hippotades², and in so doing all but reached the only satisfactory solution of the whole problem.

For, if the Tritopatores on the one hand are ancestral spirits and on the other hand are winds, that is but another proof of our contention that to naive Greek thinking winds are souls and souls are winds³. The *Tritopátōres*, the 'Great-grandfathers,' were naturally invoked 'for the procreation of children⁴.' It was they who gave life to each succeeding generation in the form of wind or breath⁵. Nay more, it was they who *were* the life of each generation. Every infant lived just because there had entered into its body the breath or wind that was the soul of some long-buried ancestor⁶. That—I take it—was the original function of the Tritopatores, dimly remembered in fifth-century Athens, but still lingering in the background of popular belief, and strong enough to assert itself here and there, in a suburb like the Kerameikos, in a country-town like Marathon, in a distant island like Delos.

'Bei der Begattung tritt sie [*sc.* πνεῦμα] aus dem Munde der Eltern aus und vermischt sich mit der wachsenden Frucht... Der Name bedeutet dasselbe wie πρόπαππος It. tritavus = "Drittater" ... also einfach Ahne, ἀρχηγέτης des Geschlechts, der "rechte Vorfahr"').

⁶ On the reincarnation of ancestors in their descendants see E. B. Tylor *Primitive Culture*³ London 1891 ii. 3—5, Frazer *Golden Bough*¹: Taboo pp. 365—372. Evidence drawn from Greek and Roman burial customs, Greek nomenclature, etc. is collected by F. B. Jevons 'Greek Law and Folk Lore' in the *Class. Rev.* 1895 ix. 248 f., J. E. King 'Infant Burial' *ib.* 1903 xvii. 83 f. (*supra* ii. 1059), Frazer *Totemism and Exogamy* iii. 298 f.

So much for the main point. Sundry side-issues have yet to be settled. If *tritopátor* meant strictly a 'father in the third (ascending) generation' and so, more generally, a 'lineal ancestor,' its correlatives would be represented by such words as *tritogénēs*¹ and *tritokoúre*². G. Lippold³ has ingeniously suggested that an echo of the prayer addressed before marriage to the Tritopatores⁴ may be heard in the first half⁵ of the proverbial line:

Grant me a child that is *tritogénēs*, not *tritogéneia*⁶—

in other words, a boy of true descent in preference to a girl of true descent. In this connexion the old problem as to the meaning of Athena *Tritogénēs*⁷ or *Tritogéneia*⁸ simply solves itself. The epithet

Woch.* Marz 4, 1922 p. 198, rightly retorts: 'Die Worte "μὴ τριτογένεια" sind kein späterer Zusatz, ...denn sie geben dem Gebet die notwendige Pointe und bilden mit dem Vorherigen einen Hexameter.'

⁶ Schol. B. L. T. v. II. 8. 39 ἡ δὲ τριτὴ φθίνοντος ἐτέχθη· καὶ παροιμία 'παῖς μοι τριτογενὴς εἴη, μὴ τριτογένεια.' ἀρρενώδεις γὰρ αἱ τοιαῦται γυναῖκες. The scholiast's explanation of *τριτογένεια* is, of course, late and worthless (G. Lippold *loc. cit.* p. 107 f.), but his citation of the proverb is important.

P. Kretschmer in *Glotta* 1920 x. 42 f. 'Wie erklären sich nun aber hierbei *τριτογενὴς* und *Τριτογένεια*?—Das ist eine Schwierigkeit, die im ersten Augenblick unüberwindlich scheint; denn *τριτογενὴς* müsste den in der 3. Generation geborenen bedeuten, und so könnte der junge Ehemann doch nicht den Sohn nennen, den er sich wünscht, und auch die Tochter des Zeus konnte so nicht heissen. Die Lösung des Rätsels ergibt sich aus jenem Prinzip, das Sommer "Kontrarbildung" genannt hat und das ich kürzlich in der Anzeige meines Aufsatzes, *Glotta* VIII 266 f. erörtert habe. Nach *τριτοπάτωρ*, das nicht mehr wörtlich, sondern nur als Stammvater verstanden wurde, wurde *τριτογενὴς* im Sinne von 'Stammsohn,' *τριτογένεια* oder *τριτοκούρη* 'Stammtochter' gebildet' (cp. *proavus*—*pronepos*, *Grossvater*—*Grosssohn*, *grandfather*—*grandson*, etc.).

G. Lippold's attempt in the *Ath. Mitth.* 1911 xxxvi. 106 to explain the element *τριτο-* in *Τριτοπατρεῖς*, *τριτογενὴς*, *Τριτογένεια*, *Τριτοκούρη* as = *γνήσιος*, *γνήσια* breaks down through lack of any etymological cognates.

⁷ *Τριτογενὴς* as an epithet of Athena is not Homeric (T. W. Allen and E. E. Sikes on *h. Ath.* 4 *Τριτογενῇ*), but becomes fairly frequent in later verse (Bruchmann *Epith. deor.* p. 15). The earliest examples of it are Aristoph. *eq.* 1189 ἡ *Τριτογενὴς* (where *Τριτογένεια* is a not very probable conjecture: see F. H. M. Blaydes *ad loc.*) and *orac.* *ap.* Hdt. 7. 141 = *Anth. Pal.* 14. 93. 6 *Τριτογενεῖ*.

⁸ *Τριτογένεια* is an appellation of Athena, used normally without her name. It is frequent in Homeric and post-Homeric verse (not, however, in tragedy) (Bruchmann *Epith. deor.* p. 15), and occasional even in prose (Stephanus *Thes. Gr. Ling.* vii. 2472 C—D).

The significance of the titles *Τριτογένεια*, *Τριτογενὴς* as applied to Athena is discussed by T. Bergk in the *Jahrb. f. Philol. u. Pädag.* 1860 lxxxi. 305—309 = *id. Kleine philo-*

124 The Tritopatores or Tritopatreis

claims that the goddess was the genuine descendant of Zeus, Kronos, and Ouranos—a claim whose validity we shall later have occasion to test.

Again, the use of such a term as *Tritopátōres* to signify a line of remote ancestors implies the primitive view that 'three' is a typical plurality¹. And the successive 'three' (= many) generations naturally enough leads to the simultaneous 'three' (= many) generators. Accordingly, when names are given to the Tritopatores, they are a triad such as Kottos, Briareos, Gyges², or Amalkeides, Protokles, Protokreon³, or Tritopatreus, Eubouleus, Dionysos⁴. But this last and latest specification offers quite inadequate support to S. Eitrem's hypothesis that the Tritopatores were originally, like the Dioskouroi, two in number, the addition of a third being due to a mere misconception of their name⁵.

Misconception, however, of a sort there certainly was, and indeed still is. For as soon as the prose *Tritopátōres* became the poetic *Tritopatreis*, the way was open for the whole group of *Trito-* names to overlap and get entangled with an entirely different group of *Trito-* names, represented by the sea-god Triton, the sea-goddess Amphitrite, a river Triton, a spring or lake Tritonis, etc. These names presuppose *triton* or the like as an early word for 'water.' É. Boisacq⁶, for example, following in the steps of E. Windisch⁷, H. Osthoff⁸, A. Fick⁹, K. Brugmann¹⁰, and H. Pedersen¹¹, relates

Triton the god to the Old Irish *triath*, genitive *trethan*, the 'sea.' This formidable array of philologists may be supposed to have fixed with some certainty the derivation of the names in question. And their assumption, that a word once existing in common speech may have survived only in a handful of proper names, is fully justified by analogous examples¹. Confusion between the stems *Trīto-* and *Trīto-* undoubtedly modified the meaning of the appellative *Tritogénēia*, which ceased to be thought of as 'Great-granddaughter,' the pendant of *Tritopátor*, 'Great-grandfather²,' and was re-interpreted as 'Born beside the Triton,' a river variously located in Libya³, Crete⁴, Arkadia⁵, Boiotia⁶, and Thessaly⁷. Carcopino *La Basilique pythagoricienne de la Porte Majjeure* Paris 1927 p. 301 ff.).

These Cretan legends are of little or no authority. They were possibly prompted by the fact that coins of Itanos from c. 460 to the beginning of s. iv B.C. have for obverse type a sea-god, probably one with the 'Dagon' of Arados (*Brit. Mus. Cat. Coins Phoenicia* pp. xx f., 1 ff. pl. 1, 1—10, E. Babelon *Les Perses Achéménides* Paris 1893 p. 123 ff. pl. 22, 1—9, *id. Monn. gr. rom.* ii. 2. 511 ff. pl. 116, 4—18), since the eponym Itanos is described as a Phoenician (Steph. Byz. s.v. Ἰτανός. πόλις ἐν Κρήτῃ, ἀπὸ Ἰτανοῦ Φοίνικος, ἡ τῶν Κουρήτων ἐνὸς μυγᾶδος), but in aspect indistinguishable from Triton (J. N. re-interpretation, a commonplace of classical mythology, is not expressly recorded till the Graeco-Roman period, though there are stray hints of it as early as the fifth century B.C.¹

Whether the same confusion of *Trito-* with *Trīto-* ever brought the Tritopatores or Tritopatris into relation with the water-powers seems to me more problematic. M. Budimir, who claims that the Tritopatris had something to do with wells, quotes from the Epakria calendar certain 'priestly dues on account of the well for the Tritopatris'.² Unfortunately—as may be seen from J. von Prott's edition of the text³—the priestly dues and the well belong to one clause, the Tritopatris to another. The two are juxtaposed, but not connected. Apart from this, Budimir has to fall back on the somewhat remote analogy of the Vedic god Trita, who sits in wells and presses *soma*.⁴

No doubt, the deities of wind and water do draw together in late classical belief. Horace⁵ describes the South-wind as the

Mightiest power that Hadria knows,
Wills he the waves to madden or compose.

*Minyer*² Breslau 1844 p. 349 ff. argued that the 'Ursitz' of Athena Τριτογένεια was Boiotia, whence the myth spread with the Minyai to Libya. Similarly Farnell *Cults of Gr. States* i. 266 ff. holds that Athena Τριτογένεια originated in Thessaly or Boiotia, and thence passed to Kyrene.

In art, as H. Steinmetz¹ pointed out, wind-gods approximate to the Tritonian type. Lucian² touches in the portrait of Thrasykles the philosopher with a few effective phrases:

‘Here he comes—beard all a-spread, eyebrows arched, arrogance in the air, an up-against-Olympos look, the tresses waving over his forehead, a very Boreas or Triton in the manner of Zeuxis.’

En revanche Triton, blowing a blast with his sonorous conch, easily takes on the duties of a wind-god. A mosaic³ found in 1833 at Saint Rustice, north-west of Toulouse, among the ruins of a Roman bath, represents a huge head of Okeanos⁴ surrounded by various marine subjects. These include sea-divinities mounted on Tritons, all labelled in Greek lettering of the third century A.D.⁵ Adjacent bays on the right show *Thétis* carried by *Triton*, *Panópea* by *Bórios*; on the left, *Dotó* by *Nynphogenés*, *Palémon* and *Inó* by *Glaúkos*. The artist’s signature is incomplete—...*génios Sikiliótes*. Here then we have a genuine Triton wearing a fish-skin as a *chlamys*, but actually bearing the name of a wind-god *Bór(ε)ios*. More than that, one interesting monument made Triton in a sense the ruler of all the winds that blow. The Horologion of Andronikos Kyrrhestes⁶, built at

P. Graindor in *Le Musée Belge* 1906 x. 353 ff. and in *Byzantion* 1926 iii. 29 ff. notes the discovery in Tenos, about the year 1906, of a tower like that of the Winds at Athens. This new tower has an inscription (*Inscr. Gr. ins.* v. 2 no. 891, cp. A. Rehm in Pauly—Wissowa *Real-Enc.* viii. 2427) which shows that Andronikos, the constructor of both, was a native of Kyrrhos in Makedonia (not Kyrrhos in Syria) and that the tower at Athens must be dated in the time of Julius Caesar.

130 The Tritopatores or Tritopatris

Athens in the first century B.C. and better known to us as the 'Tower of the Winds,' was an octagonal structure of white marble containing a water-clock. The upper part of its exterior was decorated with eight reliefs of the wind-gods, arranged in accordance with the wind-rose of Eratosthenes¹,—Boreas, Kaikias, Apeliotes, Euros,

Notos, Lips, Zephyros, Skiron. And the roof was crowned by the bronze figure of a Triton, who swung round in the wind and pointed with his rod to the appropriate deity².

132 The Tritopatores or Tritopatreis

If Triton thus played the part of Aiolos, can we go further and maintain that the former, like the latter, was a keeper of souls in some island of the Otherworld? It must, I think, be admitted that Tritons on occasion were viewed as protectors of the dead. A *stèle* of Pentelic marble in the Peiraieus Museum (fig. 49), assigned by A. Brückner¹ to the end of the second or the beginning of the first century B.C., represents the dead man standing in an architectural niche (*naískos*?) with his left hand on the head of a Siren at his side. Below this group are carved in slight relief two bearded Tritons, wreathed with reeds (?), who confront one another, each blowing a conch and shouldering a paddle. Why are they there? Brückner describes them as 'das mythologische Ornament,' which is true but not particularly helpful. I take it that Triton with his echoing horn, like the cock with his lively din², was believed to keep maleficent spirits at a distance. And this may well account for the persistent popularity of Tritons on *sarcophagi* and other sepulchral monuments of Graeco-Roman and Etruscan art³. They are often accompanied by a train of Nereids and sea-beasts, with diminutive Erotes here, there, and everywhere. I figure a couple of *sarcophagi*, one made for a Roman lady in the third century A.D. (fig. 52)⁴, the other made

One of these, originally constructed towards the end of 5. 1 A.D. (fig. 5 = my fig. 50), had a circular well-shaft (0.95^m across, 2.30^m deep) in the floor of its inner chamber—perhaps to quench the thirst of the departed (Gruppe *Gr. Myth. about the same time but used for a Christian burial perhaps two centuries later (fig. 53)¹.

The significance of this marine *cortège* has been differently conceived by different critics. F. Buonarroti² in 1698 held that graceful Oceanic figures were believed to escort deserving souls to the Islands of the Blest. His view, accepted by archaeologists of the eighteenth century, was extended by E. Q. Visconti³, who remarked that sea-processions of the sort were suggestive of a Bacchic *thíasos*. E. Petersen⁴ caught at the notion and regarded the riot of sea-creatures as an attempt to symbolise the joyous revels of pious souls on entering the Otherworld. He observed that the movement of such groups is centripetal, not processional, and consequently abandoned the idea of an escort to the Islands of the Blest. He failed, however, adequately to explain why ordinary mortals should thus suffer a sea-change. Neither Ino⁵ nor Enalos⁶ is typical of commonplace humanity. W. H. Roscher⁷ suspected that the clue lay in the Samothracian mysteries. Sundry myths of the

Tyrsenian Pelasgoi, who founded these mysteries, told how mortals were transformed into sea-deities or sea-creatures—witness Ino Leukothea, Halia, Kombe, Palaimon, Glaukos Pontios, Enalos, and the Tyrsenian pirates metamorphosed into dolphins. Accordingly Roscher conjectured that any Samothracian mystic drowned at sea was said to have become a deity or a denizen of the deep. Hence the frequency of these 'Samothracian' designs. H. Steuding¹ replied that, if so, we ought to see the deceased himself portrayed as one of the marine powers rather than his effigy borne aloft in their midst. The matter is still in dispute. Personally, I am impressed by F. G. Welcker's² claim that these *sarcophagi* are descended from the famous group by Skopas, of which Pliny³ says:

'But most highly esteemed of all his works is the group in the temple built by Gnaeus Domitius in the Circus of Flaminius: it comprises Poseidon himself with Thetis and Achilles, Nereids riding on dolphins and sea monsters or on sea horses, and Tritons and the train of Phorkos, with sea beasts and a tumult of creatures of the deep, the whole by the same hand, a wondrous work, even were it that of a life-time.'

If, as is commonly supposed⁴, the Scopaic group—almost certainly a pedimental group—represented the passing of Achilles to the Islands of the Blest, or more precisely to Leuke or Borysthenis in the Black Sea⁵, it is at least legitimate to interpret the scene on the *sarcophagi* as that of a safe and superhuman convoy moving forward⁶ to some Otherworld island⁷. And here it will be remembered that the magnificent stucco-relief, which fills the semi-dome of the subterranean basilica outside the Porta Maggiore at Rome, depicts an analogous scene (pl. xix)⁸. Before us lies a stormy

sea with threatening breakers. A rock-bound coast looms up on either hand. From the headland on the right, where a tree is growing, a veiled woman with a lyre steps down towards the water, attended by Eros. In front of her a Triton, or perhaps rather a personification of the Wind, holds a mantle to serve as her ferry-boat across the flood. On the cliff to the left sits a man, who leans his head on his hand in an attitude of deep dejection. In front of him a second and unmistakable Triton turns away, blowing a blast on his horn. Finally, in the distance is seen a rocky island, on which stands Apollon holding out his hand as if to welcome the woman. F. Fornari¹, one of the two scholars first privileged to publish this wonderful composition, saw at once that the subject must be the last voyage of the soul over the waters of death to the Islands of the Blest. Much has been written on the relief since then², and, though various points of content³ and style⁴ remain uncertain, it

by G. Bendinelli in the *Mon. d. Linc.* 1926 xxxi pls. 11 (= my pl. xix), 12 (centre), 13 (right side), 14 (drawing). To photograph well an apsidal relief in such a position is something of a technical triumph.

² The bibliography given by J. Carcopino *La basilique pythagoricienne de la Porte Majeure* Paris 1927 pp. 388—391 mentions thirty-nine articles, paragraphs, and letters dealing directly with the basilica. And the end is not yet. The most important accounts are the following: F. Cumont 'La basilique souterraine de la Porta Maggiore' in the *Rev. Arch.* 1918 ii. 52—73, R. Lanciani 'Il santuario sotterraneo recentemente scoperto ad Spem Veterem' in the *Bull. Comm. Arch. Commun. di Roma* 1920 pp. 69—84, R. Stud.* 1924 xlv. 65—111. To these must be added the clear-headed and well-documented monograph of J. Carcopino *op. cit.* pp. 1—414 with 24 plates and 6 plans, and finally the sumptuous publication of G. Bendinelli 'Il monumento sotterraneo di Porta Maggiore in Roma' in the *Mon. d. Linc.* 1926 xxxi. 601—860 with 54 figs. and 43 pls.

³ It is *a priori* probable that the conch of the apse represented a myth rather than a belief. There was therefore something to be said for the suggestion of C. Denmore Curtis 'Sappho and the "Leucadian Leap"' in the *Am. Journ. Arch.* 1920 xxiv. 146—150 that the stucco portrays 'a well-known story, namely the famous "Leucadian Leap" of Sappho in her attempt to be freed from her hopeless love for Phaon' (*Ov. her.* 15. 157—184). F. Cumont 'La basilica sotterranea presso Porta Maggiore a Roma' in the *Rassegna d'Arte* 1921 pp. 37—44 held that this explanation of the scene was possibly compatible with his own Pythagorean hypothesis. J. Carcopino 'Encore la Basilique de la "Porta Maggiore"' in the *Rev. Arch.* 1923 ii. 1—23 turned possibility into something very like certainty by pointing out that the Pythagoreans were much concerned with the myth of

Sappho and Phaon (Plin. *nat. hist.* 22. 20 ob hoc (*sc.* male root of white eryngo) et Phaonem Lesbium dilectum a Sappho, multa circa hoc non Magorum solum vanitate, sed etiam Pythagoricorum). E. Strong and N. Jolliffe 'The Stuccoes of the Underground Basilica near the Porta Maggiore' in the *Journ. Hell. Stud.* 1924 xliv. 65—111 justly observe (p. 103 f.): 'It is true that Pliny says nothing about the death or leap of Sappho, nothing therefore bearing on the subject of the apse stucco, yet we may now reasonably assume that the whole Sappho legend entered into Pythagorean lore, and that M. Carcopino by this timely discovery has disposed of any doubt as to the Pythagorean character of the basilica, or as to Sappho's leap being the subject of the apse stucco.' They themselves go further and, taking a hint from H. Stuart Jones (*ib.* p. 103 n. 124 a), interpret the relief as a scene of apotheosis by water (cp. G. Glotz *L'ordalie dans la Grèce primitive* Paris 1904 pp. 34—50 ('Le saut de Leucade'))—'the root idea of baptism.' See further P. Boyancé 'Leucas' in the *Rev. Arch.* 1929 ii. 211—219—an interesting discussion of Pliny's *candida eryngis* = *Γοργύβειον*, μῶλυ, ἱμερτός, etc. (Dioskor. 3. 21 (24) p. 363 f. Sprengel), ἀέλων (Mart. Cap. 141. where cod. A has λευκῶς with gloss *herba albulata ut quidam lilium*).

Fig. 51.

Whatever be thought of this catena of interpretations, it can hardly be denied that Ovid's description of Sappho and the Leap does fit the design of the relief with remarkable aptitude. The single tree overlooking the water (Ov. *her.* 15. 159 f. quem supra ramos expandit aquatica lotos, | una nemus). Apollon on his rock (165 Phoebus ab excelso, quantum patet, ad-picit aequor), the woman stepping down from the cliff (172 nec saxo desiluisse time), the personification of wind with a mantle for a boat (177 f. aura, subito: | et mea non magnum corpora pondus habent), the attendant Eros (179 tu quoque, mollis Amor, pennas suppone cadenti), the lyre carried by the woman (181 inde chelyn Phoebos, communia munera, ponam),—almost every point in the picture can be paralleled from the poem.

⁴ The art-type of Sappho stepping off the rock for love of Phaon was, I think, derived from the earlier art-type of Aphrodite stepping on to the ferry-boat of Phaon, as shown by a red-figured *kratér* found in 1909 'nella proprietà Tamburini fuori Porta Castiglione' and now at Bologna (Pellegrini *Cat. vas. gr. dipint. Bologna* pp. 133—135 no. 288¹⁶ fig. 77 (= my fig. 54)).

Apollon, according to C. Densmore Curtis in the *Am. Journ. Arch.* 1920 xxiv. 150, appears to be the Apollon *Λευκάτης* of a coin of Nikopolis struck by Trajan (*supra* i. 345 n. 8).

The dejected man on the rocks to the left has been compared by F. Cumont in the *Rassegna d'Arte* 1921 p. 39 with analogous figures on Attic sepulchral *stélai*.

But much has yet to be done by way of investigating the antecedents of these and other individual *motifs*.

Fig. 55.

is now generally admitted that the whole design illustrates the entrance of the soul into the Otherworld as conceived by some Pythagorean sect in the middle of the first century A.D. But we are concerned with the Tritons only, who here as on the *sarcophagi* are present to control the winds and waves, thereby averting the perils of the last dread voyage. If on the *sarcophagus* in the Galleria Corsini at Rome (fig. 55)¹ they are exceptionally equipped with the thunderbolt of Zeus², the helmet sword and shield of Ares, the arrows and torch of Eros, etc., that is tantamount to saying that Tritons and the like in this connexion are not merely graceful gambollers but the equivalent of a whole heavenly host.

To sum up, it would seem that the Tritons came to be regarded as, like the Tritopatores, at once controllers of the wind and guardians of the soul. But this was a matter of similarity, not of identity. If *Tritogénéia* meant first 'Great-granddaughter' and then 'Born

beside the Triton³, that was a case of sheer verbal confusion. Nor have we the right to infer from it a real relationship between the Tritopatores and the Tritons. And, in the absence of any inward identity, I find no sufficient reason for thinking that the Tritopatores were ever outwardly figured as Tritons with fishy tails; still less, for supposing that they already had the Tritonian type in the sixth century B.C. Accordingly, I definitely reject the view of Furt-

(d) *Zeus Oúrios, ikmenos, Euánemos, Bóreios.*

The primitive fancy that winds are the souls of ancestors dead and buried was followed, and largely superseded, by the more intelligent notion that winds are atmospheric forces controlled by a sky-god.

This transition from a lower to a higher view was, it would seem, facilitated by long-standing local beliefs. The Aeolians held that the winds were kept by an eponymous forefather Aiolos⁵, who dwelt in Aiolie a floating island⁶ perhaps originally located in the Black Sea⁷, like Leuke or Borysthenis the final abode of Achilles⁸. ⁷ This is nowhere stated. But the early connexion of Aeolians with Asia Minor (V. G. Christ *Geschichte der griechischen Litteratur*⁶ München 1912 i. 63 and 97 to s. viii B.C.) combine to give the surmise some measure of probability. Later, of course, Aiolie was located in the west, being identified with one of the Liparenese Insulae. But K. Tümpel in Pauly—Wissowa *Real-Enc.* i. 1032 ff. makes it clear that this transference from Aegean to Sicilian waters was the work of Chalcidian colonists.

W. W. Merry in his note on *Od.* 10. 3 writes: 'May not the whole story of the floating island with its precipitous sides be a poetical reproduction of the story of some Phoenician sailors, who had voyaged far enough to the north to fall in with an iceberg? The sheer face of ice and the glittering summit seem to be perfectly described by the words *χάλκεον τεῖχος* and *λευσὴ ἀναδέδρομε πέτρη*.' When it comes to the interpretation of an ancient myth, rationalism is usually wrong (*supra* i. 418). Nevertheless Merry's suggestion should not be scouted; for a perusal of Append. P will suffice to show that the floating islands of the Greeks and Romans have almost invariably some foundation in fact. Moreover, icebergs in the Black Sea are not beyond the pale of possibility. W. B. Carpenter in *The Encyclopaedia Britannica*⁹ Edinburgh 1875 iii. 797 says: 'It is reported...that in 401 A.D. the surface of the Euxine was almost entirely frozen over, and that when the ice broke up enormous masses were seen floating in the Sea of Marmora for thirty days [*Chron. Pasch.* 307 B (i. 568 Dindorf)]. In 762 A.D., again, the sea is said to have been frozen from the

there is good reason to think that Aeolian kings (Salmoneus, Keyx, Ixion, etc.) were at one time regarded as human embodiments of Zeus¹. Indeed, modern mythology is inclined to conjecture that Aiolos himself began life as an appellative of the same god². It would not, therefore, be surprising to find that in saga expanded from Aeolian lays a favouring wind was deemed the special gift of Zeus, or that the cult of Zeus as sender of such a wind persistently clung to the Aeolian coast-line.

In point of fact both expectations are justified. It is often and, in my opinion, rightly supposed that the Homeric poems were essentially the dactylic lays of Aeolian Thessaly put together in hexameter form by a poet or poets who somewhere on the fringe of Asiatic Aiolis, not improbably at Chios, used an Ionic dialect with an inevitable admixture of Aeolisms³. Hence Homer, true to Aeolic

terminal cliffs of the Caucasus to the mouths of the Dniester, Dnieper, and Danube; and contemporary writers assert that the quantity of snow which fell on the ice rose to the height of from 30 to 40 feet, completely hiding the contour of the shores, and that on the breaking up of the ice in the month of February, the masses of it carried by the current into the Sea of Marmora reunited in one immense sheet across the Hellespont between Sestos and Abydos [Theophan. *chron.* i. 670 Classen, Zonar. 15. 7, Glykas *ann.* 4 p. 527 Bekker]. No similar occurrence has been subsequently recorded.' According to *Chambers's Encyclopedia* London and Edinburgh 1923 ii. 206 s.v. 'Black Sea,' 'All the coasts are high, with good harbours, except between the mouths of the Danube and the Crimea: there the land is low, and the danger of navigation greatly increased in winter by the presence of floating ice. The shores from Odessa to the Crimea are ice-bound during January and February; and although the harbour of Odessa is never frozen up, yet the drift-ice frequently renders the entrance to it dangerous.' Witte in Pauly-Wissowa *Real-Enc.* viii. 2220 f., Lubker *Reallex.*⁵ p. 473, P. Cauer *Grundfragen der Homerkritik*⁸ Leipzig 1921 i. 136—179. The topic is dealt with here and there by D. I follow the lead of my friend Dr P. Giles in the *Cambridge University Reporter* for March 9. 1915 p. 696, as does that trenchant critic T. W. Allen *Homer: the Origins and the Transmission* Oxford 1924 p. 103 (who, however, will not admit any 'Aeolic lays'). But see now M. P. Nilsson *Homer and Mycenae* London 1933 p. 167 ff., who argues afresh that the Homeric language is a 'Kunstsprache' and concludes a most temperate discussion thus: 'We may surmise that the first Ionic minstrels took over Aeolic epics—but not the songs which we read to-day—perhaps rather mechanically substituting their own dialect and admitting chiefly such Aeolic stock expressions, words, and forms, for which metrically equivalent Ionic forms were wanting. As the songs were constantly rehandled and even new songs composed, the close fusion of Aeolic words and forms with an Ionic basis was the ultimate result. It is impossible to guess how long a time such a process may have taken. We can only be certain that it must have been long,

tradition, recognises Zeus as natural lord and master of the winds. The *Odyssey* speaks of ships 'delighting in the fair breeze of Zeus'¹ or 'driven by the fair breeze of Zeus²', and tells how 'Zeus sent a fair breeze' to certain Phoenician mariners³. Similar expressions occur in later poetry⁴, sometimes with special reference to a westerly gale⁵ or to the etesian winds⁶.

Again, Zeus as sender of the fair breeze (*oúros*) bore the cult-title *Oúrios* at least as early as 475 B.C. For, writing about that date, Aischylos makes the suppliant Danaides appeal to Zeus *Oúrios*⁷. They had travelled far and would fain reach the haven of their desires. Who should waft them on their way, if not the great Argive⁸ god from whom through Epaphos they traced their descent⁹?

Zeus *Oúrios* had a sanctuary on the Asiatic side of the Thracian Bosphoros¹⁰. This was known to the Greeks as *Hieron*, the 'Sanctuary' *par excellence*¹¹. The *tabula Peutingeriana* at Vienna, a road-map of the Roman world drawn and painted at the beginning of the

because the evolving of such an artificial language is a slow process. We have further to admit that this formation of a traditional epic language took place twice, first in Aeolic dialect and for a second time in the Ionic dialect, the creation of the fundamentally Ionic language of Homer with an Aeolic admixture.' Etc.

Above this rises an archway in the castle-wall, topped by a Byzantine cross; and finally a marble slab on the right-hand tower is inscribed with the ancient formula 'The light of Christ shineth over all².' It is possible that a large Ionic capital found by E. D. Clarke on the neighbouring headland of Argyronion came, as he supposed³, from the same site. Philostratos of Lemnos in the first half of the third century A.D. describes a picture of the Bosphoros, and bids us notice various details of its coast-scenery 'until we reach Hieron. And'—he continues—'I think you can see the temple there and *stélai* set round it and the beacon at the mouth of the straits, hung aloft as a signal to ships sailing from the Pontos⁴.' ² F. Bucheler in the *Rhein. Mus.* 1881 xxxvi. 338 ff. identifies this Philon with the Philon Antas of a sepulchral inscription at Brundisium published by G. Fiorelli in *Not. Scavi* 1880 p. 255. a : Philon | Antas Antipatri | Tyri filius v(ixit) a(nnos) LX | h(ic) s(itus) | Marcia C. I. Syntyche. His father, Antipatros of Tyre, was presumably the Stoic philosopher who died at Athens shortly before 44 B.C. (H. von Arnim in Pauly—Wissowa *Real-Enc.* i. 2516). He in turn appears to have been descended from Antipatros of Sidon, the epigrammatist, who was born at Tyre (*Anth. Pal.* 7. 428. 11 f. Meleagros) and flourished *c.* 150—120 B.C. (W. Christ *Geschichte der griechischen Literatur*⁶ München 1920 ii. 1. 327). On this showing the inscription from Chalkedon may be dated at the end of 5. i B.C. or the beginning of 5. i A.D. Hence too the poetic merits of Philon, who perhaps—as Bucheler conjectured—chose to describe Zeus by the rare epithet *εὐάντητος* on account of his own name Ἀντᾶς.

on his return from Kolchis first sacrificed to the twelve gods¹. Pomponius Mela (c. 43/4 A.D.) puts it more curtly: 'The god of the temple is Zeus, its founder Iason².' But Timosthenes of Rhodes, who commanded the fleet of Ptolemy ii Philadelphos, makes the altar to the twelve gods a dedication of Phrixos³. And Dionysios of Byzantion recognises two sanctuaries, one on the European, the other on the Asiatic, side of the strait. Of the former he notes: 'They say that here Iason sacrificed to the twelve gods'⁴. Of the latter he states: 'Hieron, the "Sanctuary," was built by Phrixos, son of Nephele and Athamas, on his voyage to Kolchis'⁵. The founder, then, was either Iason or Phrixos. Both attributions amount to much the same thing. For Iason was son of Aison, son of Kretheus, son of Aiolos; while Phrixos was son of Athamas, son of Aiolos⁶. The cult was essentially Aeolian, and Zeus *Oúrios* was but a later religious manifestation of Aiolos himself.

If Zeus *Oúrios* may thus be traced back to a buried tribal ancestor, we can understand an otherwise puzzling feature of his art-type—its markedly heroic character. The Zeus *Oúrios* whose statue Verres carried off from Syracuse was known to the Romans as *Imperator*⁷, and is almost certainly represented on a Syracusan coin as a dignified male figure leaning upon his spear⁸. As such he closely resembles the Zeus *Strategós* of Amastris in Paphlagonia⁹. We divine that the old warrior-king, who had led his Aeolians to victory during life, continued to supply them with favouring winds after death, and sent the same from his island-home in the Black Sea.

Boidas¹ of Byzantion², son and pupil of Lysippos³. The boy uplifts his face towards Zeus and, with hands turned outwards in the customary attitude of prayer⁴, asks for the fair breeze to speed him on his way. This, the most spiritual of all extant Greek bronzes⁵, is of course a votive offering, public or private, and stands for the success of some venturesome quest. One thinks of Pindar's Iason⁶:

A golden bowl he took, and at the stern
Called on the Father of the Sons of Heaven—
Zeus of the Lightning-Lance,
Called on quick waves and winds' advance,
Called on the nights and tracks thro' deep seas driven,
For friendly days and fortune-blest return.

Nevertheless it would be rash to identify the 'Praying Boy' with Iason, or—as L. Stephani suggested⁷—with Phrixos. He is a Lysippian modification of an earlier athletic type⁸. More than that

we do not know. Yet it may be permitted us to wonder whether the fame of this solitary figure standing with outstretched arms on the shore of the strait reached the ears of Virgil and prompted one of the most wonderful couplets in the *Aeneid*, his description of the souls on the banks of Acheron:

*stabant orantes primi transmittere cursum
tendebantque manus ripae ulterioris amore*¹.
They stood and prayed to be first ferried o'er,
Yearning with outstretched hands for the further shore.

Be that as it may, there was inspiration both literal and metaphorical about Zeus *Oúrios*, and the poets were duly impressed. The epigram of Philon² can be capped by another of Meleagros³:

Sea-going ships that thread the Dardanelles
Deep-laden, while the north your canvass swells,
If on the Coan shore ye chance to see
My Phanion looking o'er bright waves for me,
Say this to her, good ships,—Love speeds me fast:
I come afoot, waiting no other blast.
Should you thus bear my message without fail,
Zeus of the Fair Breeze fill your every sail.

Merchants trading with the Euxine introduced the cult of Zeus *Oúrios* to Delos⁴, where it acquired an almost cosmopolitan character. Worshippers from far and near linked the name of this Zeus with those of their own special deities and recorded their vows *in primis* to him. Thus a citizen of Askalon, who had escaped from pursuing pirates⁵, attested his gratitude by erecting a neat little cylindrical altar inscribed in lettering of s. i B.C. (fig. 65)⁶:

which gives us 'die Vorstellung von einer alteren Stufe derselben Composition.' Scale: rather less than $\frac{1}{2}$.

The altar (height 0.53^m: lower diameter 0.41^m), found during August 1907 in a Byzantine wall to the south of the 'Hypostyle Hall,' is inscribed: *Διὶ Οὐρίῳ καὶ Ἀστάρτῃ Παλαιστίνῃ*, (Clermont-Ganneau here wrongly inserts *καὶ*) *Ἀφροδίτῃ Οὐρανίᾳ, θεοῖς ἐπηκόοις, | Δάμων Δημητρίου Ἀσκαλωνίτης, | σωθεὶς ἀπὸ πειρατῶν, | εὐχὴν* and in smaller lettering *οὐ θεμιτὸν δὲ προσάγειν | αἵγιον, ὑϊκόν, βοὸς θηλείας*.

Fig. 65.

The associates of Zeus *Oúrios* are two goddesses, who in function must have borne a rough resemblance to each other, Astarte *Palaistíne* and Aphrodite *Ouranía*. The former appears for the first time in this inscription: she was perhaps the patron-deity of the port (Iamneia? Ioppe?) to which Damon's ship belonged, or possibly

the figure-head of the good ship herself. The latter goddess had a celebrated temple at Askalon¹, Damon's native city.

Dedications to Zeus *Oúrios*, which date from the closing years of the second century B.C., have been found in the Egyptian sanctuary on a terrace to the north-west of Mount Kynthos². There two Athenian brothers, about the year 112—111 B.C., erected a cylindrical base to Zeus *Oúrios*, Sarapis, [Isis,] Anoubis, Harpokrates³. Of greater interest was another dedication⁴—

To Zeus *Oúrios* on behalf of King
Mithradates Eupator
and his brother
Mithradates Chrestos
and their
fortunes.

The bluish marble slab thus inscribed was discovered, in front of a small marble pedestal or altar of irregular shape, to the east of the paved way leading through the precinct⁵. Mithradates vi Eupator (120—63 B.C.) was associated in the government of Pontos first with his mother Laodike and then, for a short while in 111 B.C.⁶, with his younger brother Mithradates Chrestos. But being of a bloodthirsty and cruel disposition he let his mother die in prison and murdered his brother⁷. The prayer to Zeus 'of the Fair Breeze' for one who was heading straight towards family shipwreck sounds to us almost grimly ironical. A third dedication, by a native of Velia in Lucania, is a white marble base of the year 107—106 (?) B.C., which was found on the eastern slope of the Inopos ravine,

below the sanctuary of the foreign gods¹. A fourth is a small base of white marble with a square hole for insertion or attachment. It is dated to the year 105—104 or 104—103 B.C.², and was set up by a citizen of Nymphaion (*Eltegen*) on the western shore of the Bosphoros Kimmerios³ as a thank-offering to Zeus *Oúrios*, Sarapis, Isis, Anoubis, and Harphokrates (*sic*)⁴ on behalf of himself, his son, and—a noteworthy touch of altruism—all that go down to the sea in ships.

At a point near the south-west angle of the 'Hypostyle Hall' was found the fragment of a circular altar, bearing a dedication to Zeus *Oúrios* in letters of c. 100 B.C.⁵ Lastly, a wall of late date built against the south wall of the 'Hypostyle Hall' contained a quadrangular block of white marble with two square holes for insertion on its upper surface. The front of the block bore a carefully cut bilingual dedication of c. 110 B.C. by the Hermaistai, Apolloniastai, and Poseidoniastai to Zeus *Oúrios* or—as his name was translated by the Roman merchants—Iupiter *Segundannus*⁶.

156 Zeus *Oúrios*, *íkmenos*, *Eucánemos*, *Bóreios*

This curious title was known already from a passage of Martianus Capella¹, which assigns Iupiter *Secundanus* together with Iovis Opulentia and Minerva to the third of the sixteen regions of the sky recognised in Etruscan lightning-lore². Since the series commences with the north, the third division of the first quarter³ would correspond with the sector N.E. to E.N.E. of our mariner's compass, and this (north-east by east) is just the direction of a wind blowing down the Dardanelles. The inscription equating Iupiter *Secundanus* with Zeus *Oúrios* explains in fact Capella's epithet, which had previously puzzled the commentators⁴.

Moreover, it adds point to a well known phrase of Catullus⁵. He is telling how his yacht brought him safely from Bithynia to Italy in 56 B.C.:

And thence through all the seas that break
She bore her master well,
Whether the breeze her sail would shake
And left or right compel,
Or Jove who followed in her wake
Full on the canvas fell.

The poet's use of Iupiter *Secundus* is obviously a variation on the more prosaic and technical Iupiter *Secundanus*. The homeward journey through the Bosporos⁶ was sped, appropriately enough, by the god whom we have seen identified with Zeus *Oúrios*⁷. And the

religious interest of the passage lies in the fact that the wind astern is distinctly conceived as Zeus or Jupiter in person. The wind is his spirit, the spirit—let us say—of a tribal chief, long since dead and buried, but rightly named Aiolos¹.

It is possible that some such conception underlies the remarkable epithet of Zeus *íkmenos*, 'who follows in our wake'². The Homeric poems apply this participle exclusively to the *oúros* or 'fair breeze' sent by Apollon³, Athena⁴, and Kirke⁵, which is on occasion personified and described as 'a good companion'⁶. But Eustathios goes further and quotes from an unspecified source the significant expression 'Zeus *íkmenos*'⁷, perhaps the product of some late epic poet, who had in mind Jupiter *Segundanus* or *Secundus*.

Again, a parallel may be found in the case of Androgeos. L. Weber⁸ has drawn attention to the very ancient character of this mythical figure, whom he believes to have been originally a Cretan god, transplanted to Attike and there transformed, first into a hero possessed of chthonian powers, and last into a human prince affiliated to Minos. I should prefer to invert the sequence god, hero, man, and to regard Androgeos as *ab initio* a mortal, heroified after death and worshipped in the Kerameikos under the name *Eurygyēs*⁹. Such an appellative was, not improbably, employed from the outset, as a means of avoiding the actual name of the dead¹⁰. After all,

It is tempting to infer from the first sentence that Zeus *íkmenos* is a mere blunder for Zeus *Ἰκμαῖος* (*infra* § 8 (c)). But in view of Jupiter *Segundanus* or *Secundus* the inference would be precarious.

Andrógeos, 'The man of earth'¹, might fairly be dubbed *Eurygýes*, 'He of the broad acres'². It should also be noticed that the names *Andrógeos* and *Eurygýes* are Greek, not pre-Greek; which means that we have to do with a genuine Hellenic, not 'Minoan,' hero. It is therefore interesting to find that at Phaleron, where he had an altar, he was worshipped not only as a nameless 'hero'³, but also more definitely as 'the hero astern'⁴. This expression might no doubt be taken to imply that an actual effigy of Androgeos was fixed on the vessel's poop⁵, like that of the bifrontal Lithuanian *Ujeopatis*⁶ or those of the dwarfish Phoenician *Pátaiкои*⁷ (figs. 68, 69)⁸.

But Herodotos' statement is borne out by the numismatic evidence (*infra* n. 8).

Pataikos appears to have been the Phoenician form of the Egyptian Ptaḥ (see J. Ilberg in Roscher *Lex. Flinders Petrie *Amulets* London 1914 p. 38 pl. 31 fig. 176 a—m, pl. 46 fig. 176 n, p, pl. 47 fig. 176 o. I illustrate a single and a double amulet of Ptaḥ-Seker, in green glaze, from my collection (figs. 66, 67) and presumably served a prophylactic purpose. But to my ear it suggests rather that Androgeos unseen followed the ship's trail and supplied her with a steady breeze, much as Boreas with puffed cheeks blows along the raft of Odysseus on a grotesque vase from the Theban Kabeirion (fig. 70)¹. In either case it is clear that in the Ionian, as in the Aeolian, area the wind following aft might be attributed to, nay more, might be identified with, an ancestral spirit.

Nor were the Dorians wholly untouched by the same superstition, for at Sparta there was a sanctuary of Zeus *Euánemos*, the 'Giver of a Good Wind'.² But here an obvious difficulty must be

A modern parallel to Zeus *Euánemos* may be found in *Buenos Aires*, 'Good Winds' (W. Sturmfels *Etymologisches Lexikon deutscher und fremdlandischer Ortsnamen* Berlin—Bonn 1925 p. 28). The town owes its name to 'Our Lady of the Favourable Wind' (A. J. stood a shrine of the hero Pleuron¹, eponym of Pleuron in Aitolia², and infers that the cult of Zeus the wind-god had been brought from Pleuron, a town adjoining the Calydonian Gulf, to Sparta. I accept Wide's explanation, but go one step further. When we remember that Pleuron stood in a district called Aiolis³, it becomes at least possible that the original 'Giver of a Good Wind' was, in accordance with Aeolian thinking⁴, none other than Pleuron the local hero. It is tempting, though perhaps over-venturesome, to suppose that his very name meant, or was taken to mean, the 'Wind-Blower'⁵. Be that as it may, a happy coincidence led Theokritos, writing in the Aeolic dialect, to say of his journey from Syracuse to Miletos:

For hither we pray Zeus grant the way with a capful of good wind (*eúánemos*)⁶.

Zeus *Eúánemos*, then, like Zeus *Oúrios*, was on this showing an Aeolian god evolved out of an Aeolian hero. But though Zeus as a wind-god thus presupposes the primitive conception of wind as the soul of a tribal ancestor, we must not imagine that the civilised Greek of the classical period was mindful of origins. He thought of Zeus as a sky-god. The wind blew in the *aér* or lower sky⁷. Clearly therefore Zeus was responsible for the wind. Accordingly the rock-cut inscription from Thera which commemorates *Boreaios*⁸ may well be understood of Zeus *Boreaios*, god 'of the North Wind.' Indeed, an altar dedicated to Zeus *Bóreios* has actually come to light near Seleukeia in Kilikia (fig. 71)⁹. When Herodes Attikos

⁵ Πλευρών is certainly a cognate of πλευρόν, πλευρά, 'side', and πλευρόν, πλευρά are possibly related to πλεύμων, 'lung' (Prellwitz *Etym. Wörterb. d. Gr. Spr.* 2 p. 374 f., F. Muller *Altitalisches Wörterbuch* Göttingen 1926 p. 345. Boisacq *Dict. étym. de la Langue Gr.* p. 794 disagrees: 'Un rapport avec πλεύμων. se justifie mal'). Presumably in the first instance Πλευρών meant 'Seidler' (W. Pape—G. E. Zeus bade the Elysian breezes of the West

Scattered allusions to Zeus as a power controlling the winds may be found throughout Greek literature, even as late as Byzantine times. Eumathios Makrembolites⁶ in his *Romance of Hysmine and Hysminias* makes the lovers, eloping from Eurykomis⁷, pray both Zeus and Poseidon to favour their voyage:

‘So to the harbour we came, and stretching our hands toward the bright sky said—“Father Zeus, yielding to thee and thy mystic omens we embark on this journey. Thy son Eros has laid siege to our hearts and is dragging us as his booty away from our fatherland. And do thou, Poseidon, blow from our back, not in our face. Oppose not with thy breath the calm breath of Zeus, oppose not the west wind of Eros, whose well-tempered help has brought us to the haven⁸.”

Finally, there is some slight reason to suppose that whirlwinds (*stróbiloi* by land and *dínoi* by sea⁹) were specially connected with Zeus. His approach at the close of Aischylos’ *Prometheus Bound*¹⁰ is heralded by an earthquake, a roar of thunder, spiral flashes of lightning, spinning dust-storms¹¹, and a windy warfare that confuses

sky with sea. Aristophanes in the *Clouds* personifies *Dínos* in a manner highly suggestive of Zeus¹. Nay more, in the *Lysistrate*² he virtually identifies Zeus with the tornado that is to sweep the perfidious Myrrhine to perdition:

Sweet, sweet, do you call her? Vile, vile, I repeat.
Zeus, send me a storm and a whirlwind, I pray,
To whisk her away, like a bundle of hay,
Up, up, beyond human aid,
And toss her and swirl her, and twist her and twirl her,
Till, tattered and torn, to the earth she is borne,
Astride of an unsheathed blade.

In many parts of the globe whirlwinds have been regarded as demons or witches or wandering souls³. And not least in modern Greece, where they are commonly attributed to the Nereids⁴ or

In the parallel passage, *thesm.* 56 ff., the diction again suits a whirlwind or waterspout (56 γογγύλλει, 57 χροανέει, 61 συγγογγυλίσας καὶ συστρέψας, 62 χροανέουσαι), though of course other meanings are attached to every phrase. It may be suspected that Aristophanes had recently (? 411 B.C.) witnessed some striking example of a στροβίλος or δίνος.

§ 8. *Zeus and the Dew.*

(a) *The Arrhephóroi.*

Like most atmospheric phaenomena, dew had for the Greeks a certain sanctity. The wide-spread belief that, if gathered on the first of May (May Day) or the twenty-fourth of June (Midsummer Day), it beautifies or cures the human body, makes the cattle yield more milk and butter, multiplies the hay, etc.³, will serve to explain a somewhat mysterious Athenian rite known as the *Arrhephoría*⁴. The fullest account of this rite is given by Pausanias⁵, who after discoursing on the Erechtheion at Athens continues:

‘What surprised me very much, but is not generally known, I will describe as it takes place. Two maidens dwell not far from the temple of the Polias: the Athenians call them Arrephoroi. These are lodged for a time with the goddess: but when the festival comes round they perform the following ceremony by night. They put on their heads the things which the priestess of Athena gives them to carry, but what it is she gives is known neither to her who gives nor to them who carry. Now there is in the city an enclosure not far from the sanctuary of Aphrodite called Aphrodite in the Gardens, and there is a natural underground descent through it. Down this way the maidens go. Below they leave their burdens, and getting something else, which is wrapt up, they bring it back. These maidens are then discharged, and others are brought to the Acropolis in their stead.’

Now the *Arrhephoría* took place in the month Skirophorion⁶, which corresponds roughly with our June-July. Moreover, there can be little doubt⁷ that the name *Arrhephóroi* means the ‘Dew-

bearers.' Inscriptions show that the earlier form of the word was *Errhéphoroi* or *Ersephoroi* rather than *Arrhéphoroi*, and that the cognate verb was *errhéphoreîn* far more often than *arrhéphoreîn*¹. This enables us to derive the terms in question from *érse* or *hérse*, 'dew.' And conformably with this derivation the ancient grammarians state, on the authority of Istros of Kyrene (c. 200 B.C.), that the *Ersephoria* was a procession for *Érse* or *Hérse*, the daughter of Kekrops², while Moiris the Atticist (c. 200 A.D.) expressly declares that the *Errhéphoroi* are 'those who bear dew for *Érse*, one of Kekrops' daughters'³.

But, if the business of the *Arrhéphoroi* was only to carry dew, why did the Greeks make such a song about it? At Athens four girls of noble birth were elected by show of hands. Of these four two were chosen to start the weaving of Athena's *péplos*. Their own garments were white, and any gold worn by them *ipso facto* became the property of the goddess⁴. The final selection of the girls was made by the 'king⁵,' who is known to have had special responsibilities in connexion with the mysteries⁶. Once appointed, these

28 f., Favorin. *lex.* p. 287, 53 f., and even L. Meyer *Handb. d. gr. Etym.* i. 266). But this is a piece of false etymology, perhaps occasioned by the fact that the *Θεσμοφόρια* in Pyanopsion were called also *Σκιροφόρια* (schol. Loukian. *dial. mer.* 2. 1 p. 275 f. Rabe) and *Ἀρρητοφόρια* (Clem. Al. *protr.* 2. 17. 1 p. 14, 4 ff. Stahlin): see Mommsen *Feste d. Stadt Athen* p. 510 n. 1, Gruppe *Gr. Myth. Rel.* p. 34 n. 2.

Lobeck *Aglaophamus* ii. 872 f. held that *ἀρρηφόροι* meant 'basket-bearers,' the first part of their name being connected with the root of *ἀρριχος*, 'basket.' This view too has found defenders, e.g. F. Hiller von Gaertingen in Pauly—Wissowa *Real-Enc.* vi. 551. But it is altogether too hypothetical.

Miss J. E. Harrison *Myth. Mon. Anc. Ath.* p. xxxiv derived the name from *έρση*, in the sense of a 'young animal,' and compared the use of *ὄρσοι* in Aisch. *Ag.* 141. But later, in her *Proleg. Gr. Rel.*¹ p. 122 n. 2, she abandoned this ingenious suggestion and *ib.*² p. 131 speaks of 'the Arrephoria or Arretophonia'. 'The Arretophonia or Arrephoria.' See also her *Themis*² p. 266.

Personally, I see no sufficient reason for discrediting the explicit statements of Istros, Moiris, etc.

little maids, who were mere children from seven to eleven years of age¹, enjoyed sundry peculiar privileges. They were housed near the Erechtheion². They had a tennis-court (*sphairístia*) on the Akropolis, which could boast a bronze figure of Isokrates as a boy on horse-back³. And they were fed on cakes that were specially 'risen' (*anástatoi*)⁴—possibly⁵ in view of the *Arrhephoria*, that great ritual for the proper performance of which they had been set apart. Again, an Athenian inscription of Hellenistic date (c. 137/6 B.C.) tells how a certain priest of Asklepios and Hygieia gave his own daughter to serve as *Arrhephóros* at the Epidauria⁶, which had by that time become a recognised part of the Eleusinian mysteries⁷. Finally, an Aeolic inscription from Mytilene, referred to s. iii A.D., commemorates Aurelia Artemisia as 'priestess of the goddesses Etephilai (that is, Demeter and Persephone⁸) and Karissai⁹ and *Ersóphoros* of the most holy mysteries¹⁰'.

To understand these honours and prerogatives we must, I think, bear in mind the general similarity subsisting between the Thesmophoria and the Arrhephoria. The latter, like the former, appears to have been a ceremony intended to promote fertility¹. In the Thesmophoria we have the worship of Demeter and Kore, the two *Thesmophóro*². The *Arrhephóros* at Eleusis³ and the *Ersóphoros* at Mytilene⁴ were at least connected with the cult of the same pair of deities. An Athenian inscription of Roman date commemorates 'Aristokles' daughter, who served as *Errhephóros* for Demeter and Kore⁵. Seats in the theatre at Athens were in imperial times reserved for two *Hersephóroi* of Ge Themis (fig. 72)⁶ and, immediately behind them,

for two *Hersephóroi* of Eilithyia at Agrai (fig. 73)⁷. It would seem, therefore, that Dew-bearers stood in some relation to Mother Earth; and it is probable that they were regarded as fertilising agents. This squares with the fact that their rite took place near the sanctuary of Aphrodite in the Gardens⁸. The Thesmophoria too

⁸ *Supra* p. 165. The precise route followed by the *Arrhephóroi* is a matter for conjecture. If they lived 'not far from the temple of the Polias' and 'lodged for a time with the goddess' (Paus. 1. 27. 3), we may assume that their official quarters were in or near the Pandroseion. On the occasion of the *Arrhephoría* they may, no doubt, have quitted

the Akropolis by way of the Propylaea and the western slope (A. Mommsen *Heortologie* Leipzig 1864 p. 447—an idea tacitly dropped by the same writer in his *Feste d. Stadt Athen* p. 509). But, in view of the close connexion between Aglauros, Pandrosos, and Heise (*infra* § 8 (b)), it is highly probable that the *Arrhéphoroi* went *viâ* the Aglaurion. If so, their most direct and also most secluded exit would have been, not the *póros*-walled stairway in an angle of the north wall 200 ft west of the north porch of the Erechtheion (J. H. Middleton *Plans and Drawings of Athenian Buildings* London 1900 pl. 1 no. 38), as has been maintained by various critics (W. Dorpfeld in the *Ath. Mitth.* 1887 xii. 59 pl. 1, H. G. Lolling 'Hellenische Landeskunde und Topographie' in I. Müller's *Geographie und politische Geschichte des klassischen Altertums* Nordlingen 1889 p. 351, Harrison *Myth. Mon. Anc. Ath.* p. 163), but the stairway of later construction which led (by means of a hanging ladder?) right down into the cave at a point some 50 ft east of the *póros*-stairway (J. H. Middleton *op. cit.* pl. 1 no. 42), as is urged by P. Kabbadias in the *Εφ. Ἀρχ.* 1897 p. 26 ff., M. L. D'Ooge (*The Acropolis of Athens* New York 1908 pp. 10, 297 with plan 7), and O. Broneer in *Hesperia* 1932 i. 51 f., 1935 iv. 129 with figs. 14 and 15. C. Belger 'Der Abstiegsweg der Arrhéphoren, der Aufstieg der Perser' in the *Berl. philol. Woch.* Sept. 25, 1897 pp. 1212—1214 (followed by W. Judeich *Topographie von Athen* München 1905 p. 170 n. 4) is non-committal: 'Wir können also mit unseren Mitteln nicht konstatieren, welchen Weg die Arrhéphoren wirklich gingen.'

Equally beset with uncertainties is the other end of their journey. Their destination, according to Paus. i. 27. 3, was *περίβολος ἐν τῇ πόλει τῆς καλουμένης ἐν Κῆποις Ἀφροδίτης οὐ πόρω*. But Plin. *nat. hist.* 36. 16 (probably copying Varro, [? who copied Pasioteles (born c. 108 B.C.)], who copied Antigonos of Karystos (born c. 295 B.C.), who copied Douris of Samos (born c. 340 B.C.): see E. Sellers *The Elder Pliny's Chapters on the History of Art* London 1896 p. xlii f.) describes the same Aphrodite as being outside the city-wall: he speaks of Alkamenēs 'cuius sunt opera Athenis complura in aedibus sacris praeclarumque Veneris extra muros, quae appellatur Ἀφροδίτη ἐν Κῆποις. huic summam manum ipse Phidias imposuisse dicitur.' The discrepancy between *ἐν τῇ πόλει* and *extra muros* was explained by C. Wachsmuth *Die Stadt Athen im Alterthum* Leipzig 1874 i. 228 f., who pointed out that in the time of Pausanias the brick wall of Athens (Vitr. 2. 8. 9) had been cleared away to make room for the Hadrianic town (the *novae Athenae* of Corp. *inscr. Lat.* iii no. 549 = Orelli *Inscr. Lat. sel.* no. 511 = Dessau *Inscr. Lat. sel.* no. 337, cp. Ael. Spart. *v. The precinct, on this showing, adjoined the garden-quarter on the right bank of the Ilissos (H. Hitzig and H. Blummer on Paus. i. 19. 2), and somewhere in that neighbourhood must have been the natural underground descent, through which the girls went to leave their burdens and bring back something wrapt up (Paus. i. 27. 3 καὶ δι' αὐτοῦ (sc. τοῦ περιβάλου) κάθοδος ὑπόγαιος αὐτομάτῃ ταύτῃ κατὰσιν αἱ παρθένοι. κάτω μὲν δὴ τὰ φερόμενα λείπουσιν, λαβοῦσαι δὲ ἄλλο τι κομίζουσιν ἐγκεκαλυμένον). The actual chasm or fissure has not yet been located. But E. A. Gardner *Ancient Athens* London 1902 p. 251 n. 1 throws out an interesting suggestion: 'It seems probable that the shrine in question may have been that of earth (Ge Olympia), and the cleft may be the same one by which the waters of Deucalion's deluge were said to have disappeared' (Paus. i. 18. 7 ἔστι δὲ ἀρχαία ἐν τῷ περιβάλῳ Ζεὺς χαλκοῦς καὶ παῖς Κρόνου καὶ Ῥέας καὶ τέμενος Ἰῆς (so J. A. Letronne for τὴν codd. E. Clavier cj. γῆς τὴν, W. M. Bekker, followed by H. C. Schubart and H. Hitzig—H. Blummer, cj. μάξαντες cp. 5. 15. 10, 9. 39. 11)).

Recently O. Broneer of the American School at Athens has found on the N. slope of the *Akrópolis*, E. of the Erechtheion, 'directly below the point where the Acropolis wall makes the obtuse angle at which are the traces of the Mycenaean postern gate,' a small

sanctuary of Eros and Aphrodite attested by numerous niches in the rock and two rock-cut inscriptions dating from the middle of 5. v B.C. (*Hesperia* 1932 i. 31—55 with figs. 1—17, of which fig. 2 gives a ground-plan and figs. 10 and 11 facsimiles of the inscriptions on rock B: (1) $\tau\omicron\iota \epsilon\rho\omicron\tau\iota \kappa\epsilon \epsilon\omicron\rho\tau\epsilon$ [τ]εραπόδι $\kappa\iota\sigma\tau\alpha\upsilon\epsilon\nu[\omicron]$ Μοιχιόη[ο]ς μεν[ός] and (2) Ἀφροδ[ί]τη). Adjoining the sanctuary, on the west was a small area (Z) which yielded a Hellenistic relief of Eros; on the east, a cave in which were found a small votive shield of painted stone and fragments of undecorated shields in terra cotta, also the figurine of a sleeping babe. North-east of the cave was a space dotted with small stuccoed altars(?) of various shapes (α—π), oval, rectangular, triangular, or like a low wall, poorly built and resting on loose earth. These had carried small stones (*phalloi*?) set upright in mortar—one was still *in situ*—and, further east, close to another group of niches (N) was a *phallós* of island marble (*id. ib.* 1933 ii. 329—417 with pl. xi (extended plan) and figs. 1—91, of which figs. 9, 14, 18 = my fig. 74 a, b, c, *id. ib.* 1935 iv. 109—188 with pl. 1 (= my pl. xxi) and figs. 1—77, of which figs. 8 and 9 show the ‘altars.’ See further *infra* § 9 (h) ii (θ)

sub fin.). It is highly probable that the relief-frieze with a procession of Erotes, c. 350—300 B.C. (Svoronos *Ath. Nationalmus.* p. 453 ff. nos. 1451, 1452 pl. 102), and the relief of a draped woman, with a child, sitting on a rock with a cave in it (National Museum no. 3257) came from the same sanctuary of Eros and Aphrodite (O. Broneer *loc. cit.* 1935 iv. 143 ff. no. 17 figs. 33—35 and 36).

As to the bearing of these finds on the *Arrhephoria*, Broneer *loc. cit.* i. 52 (cp. iv. 126) writes: ‘The whole action of the ceremony becomes clear if we admit that the sanctuary just discovered is the peribolos mentioned by Pausanias. Below the underground stairs to the Aglaurion a modern path leads eastward to the new sanctuary, and it is reasonable to suppose that the same path may have existed in ancient times, connecting with the rock-cut *περίπατος* below. The immense chasm, through which the descent from the Acropolis began, might well have lent color to Pausanias’ weird description of the place. The only inaccuracy which remains is the impression which the Greek text gives that the subterranean passage and the sanctuary are immediately contiguous, while actually one must first pass through the one and thence by a short path reach the other’ (‘Doubtless the passage in the sanctuary itself was somehow used in the ceremony; but until we know how it connected with the cave to the east it is unsafe to make any definite statement about it). It can hardly be a coincidence that a sanctuary of Aphrodite which fits so well the account

in Pausanias should be found close to the place where we would naturally expect the Arrhephoroi to have descended. We can only conclude that there were two sanctuaries of Aphrodite ἐν Κήποις, a more ancient one, which we have just discovered on the Acropolis slope, and a later one, with a temple containing the famous statue of Alkamenes, near the Ilis-us.' Broneer *ib.* p. 53 f. adds: 'The objection will naturally be raised that the text of Pausanias does not admit of such an interpretation.' He replies that most probably 'Pausanias himself confused the two sanctuaries.' *Vix liquet.*

Aphrodite ἐν Κήποις is seldom mentioned by the classical authors. But an inscription of c. 420—417 B.C. informs us that during the years 426/5—423/2 the expenses of the Peloponnesian War were in part met by money borrowed from her temple-treasury at a nominal rate of interest— $\frac{3}{8}$ of a drachmé per miná per day (*Corp. inscr. Att.* i no. 273 f, 12 f. = Michel *Recueil d'Inscr. gr.* no. 561, 78 = Roberts—Gardner *Gk. Epigr.* ii. 299 ff. no. 109, 78 [Ἀφροδίτης ἐν Κήποις ΤΤΡΗΔΔΔΓΓ]. τόκος τοῦτου ΓΓΓΓΓΓΓΓΓΓΓΓΓΓΓΓ], cp. W. Larfeld *Handbuch der griechischen Epigraphik* Leipzig 1898 ii. i. 44). Near her temple stood a square herm of Aphrodite, which bore an inscription stating that Aphrodite Οὐρανία was the eldest of the Moirai (Paus. i. 19. 2, cp. Loukian. *dial. mer.* 7. 1 τῇ Οὐρανίᾳ δὲ τῇ ἐν Κήποις δαμαλῶν): some notion of this herm may be had from the Dareios-kratér (*supra* ii. 854 pl. xxxviii).

Of Alkamenes' masterpiece we know practically nothing (Plin. *nat. hist.* 36. 16, Paus. i. 19. 2, Loukian. *imagg.* 4, 6). Sundry critics have somewhat carelessly assumed that it was none other than the herm just mentioned (J. Silhig *Catalogus Artificum* Dresdae et Lipsiae 1827 p. 31, H. Brunn *Geschichte der griechischen Künstler* Stuttgart 1857 i. 235, H. Hitzig—H. Blumner on Paus. i. 19. 2). The ablest defence of this view is that put up by A. Trendelenburg in the *Jahrb. d. kais. deutsch. arch. Inst.* 1908 xxiii Arch. Anz. pp. 514—520 (*Am. Journ. Arch.* 1909 xiii. 494, A. de Ridder in the *Rev. Ét. Gr.* 1910 xxiii. 192, A. J. Reinach *ib.* p. 321), who cp. the herm from Pergamon inscribed in lettering of s. ii A.D. εἰδήσεις Ἀλκαμένεος | περικαλλῆς ἀγαλμα | Ερμῶν τὸν πρὸ πτελῶν· εἰσατο Περγάμος. γνῶθι πάντων (bibliography in Mendel *Cat. Sculpt. Constantinople* ii. 234 ff. no. 527 fig. and in C. Picard *La sculpture antique* Paris 1926 ii. 57). But a half-length herm of Aphrodite (Loukian. *imagg.* 6 implies arms and hands) dating from the fifth century would be hard to parallel (? cp. Clarac *Mus. de Sculpt.* pl. 634 B fig. 1386 C = Reinach *Rép. Stat.* i. 347 no. 4 a herm in the Villa Albani on which see J. J. Bernoulli *Aphrodite* Leipzig 1873 p. 7). Others have sought to recover the aspect of the lost statue from the Aphrodite of Melos (Sir C. Walston (Waldstein) *Alkamenes and the establishment of the classical type in Greek art* Cambridge 1926 p. 211 'I am inclined to think it not improbable that the sculptor of the Aphrodite of Melos was inspired by the Aphrodite in the Gardens of Alkamenes'), or with more probability from the type of Aphrodite leaning, sometimes on an archaistic efigy of herself (A. Milchhofer in the *Jahrb. d. kais. deutsch. arch. Inst.* 1892 vii. 208 n. 9, L. Reisch in the *Jahresh. d. oest. arch. Inst.* 1898 i. 77 f.: *e.g. Ant. Skulpt. Berlin* p. 226 f. no. 586 fig.), sometimes on a pillar with a tree in the background (H. Schrader *Phidias* Frankfurt am Main 1924 pp. 205—210 with fig. 189 = Svoronos *Ath. Nationalmus.* no. 1601 pl. 165, S. Wide in the *Ἐφ. Ἀρχ.* 1910 p. 52 no. 13, an inscribed votive relief from *Daphni* on the road between Athens and Eleusis), or again—and this is the most frequent contention—from the type best represented by the Aphrodite of Fréjus (?) (Mrs L. M. Mitchell *A History of Ancient Sculpture* London 1883 p. 320, S. Reinach *Manuel de philologie classique* Paris 1884 ii. 94, *id.* in the *Gazette des Beaux-Arts* 1896 ii. 326—328 = *id.* *Monuments nouveaux de l'art antique* Paris 1924 i. 258—260 ('Je pense que ce motif a été créé par Alcamène, repris par Praxitèle et repris de nouveau par Arcésilas'), A. Bulle *Der schöne Mensch im Altertum*² München und Leipzig 1912 pp. 263 ff., 682 f. pl. 124. Other examples of the type are collected and discussed by J. J. Bernoulli *Aphrodite* Leipzig 1873 pp. 86—98 ('Der Typus der ungegürteten, ihren

Equally persistent, and hardly more encouraging, have been the attempts made to discover representations of the *Arrhephoroi*. Many have identified them with the two stool-bearing girls on the eastern frieze of the Parthenon (*supra* ii. 113 f. pl. xlv. So J. Stuart—N. Revett *The Antiquities of Athens* London 1787 ii. 12 f. with ch. 1 pl. 24 ('The young figures are the two Arrephoræ, or Canephoræ,' etc.), C. O. Müller *Minervæ Poliadiæ sacra et aedem in arce Athenarum...* Göttingae 1820 p. 14 ('Puellae sunt *ersephoræ* ..., matrona sacerdos Poliadiæ'), E. Beulé *L'Acropole d'Athènes* Paris 1854 ii. 142 ('la grande prêtresse reçoit des deux vierges Errhéphores les objets mystérieux' etc.), E. Petersen *Die Kunst des Pheidias am Parthenon und zu Olympia* Berlin 1873 p. 304 f. ('Wo finden wir denn im athenischen Cultus überhaupt und speciell in demjenigen Athenas, an welchen hier jeder zu denken gehalten ist, halberwachsene Mädchen, wie die beiden Stuhlträgerinnen offenbar sind, die bei hohem Feste eine so bevorzugte Rolle spielen konnten? Es giebt keine ausser den Arrephoren. Auf diese aber passt alles,' etc.), Preller—Robert *Gr. Myth.* i. 211 n. o ('Die beiden Errhephoren sind vielleicht auf dem Ostfries des Parthenon dargestellt'). See further A. Michaelis *Der Parthenon* Leipzig 1871 p. 264). Others have seen them in the processional figures of the olive-tree pediment (T. Wiegand *Die archaische Poros-Architektur der Akropolis zu Athen* Cassel and Leipzig 1904 p. 197 ff. col. pl. 14, G. Dickins *Catalogue of the Acropolis Museum* Cambridge 1912 i. 69 ff. fig., E. Buschor 'Der Oelbaumgiebel' in the *Ath. Mitth.* 1922 xlvii. 81 ff. pl. 6. So J. E. Harrison *Primitive Athens as described by Thucydides* Cambridge 1906 p. 56 f. fig. 20 ('We think instinctively of the Arrephoroi'), E. Petersen *Die Burgtempel der Athenaze* Berlin 1907 p. 21 ff. fig. 2 (*ib.* p. 27 'die zwei gleich gekleideten, nicht gleich geschmückten Mädchen mögen wir Kanephoren nennen, oder aber wegen ihrer Kleinheit und unentwickelten Formen lieber Errephoren'). G. W. Elderkin *Problems in Periclean Buildings* Princeton 1912 p. 13 f. (agrees with Petersen). Others again have recognised them in the Caryatids of the Erechtheion (E. Beulé *L'Acropole d'Athènes* Paris 1854 ii. 254 ('Sont-ce les vierges errhéphores? Leurs têtes portent-elles le fardeau de l'architrave en réminiscence du fardeau mystérieux que leur confiait la grande prêtresse? Tout me le ferait croire,' etc.), G. W. Elderkin *Problems in Periclean Buildings* Princeton 1912 p. 14 ff. ('The interpretation of the Caryatids as Arrephoroi is confirmed by a scene (Fig. 5) on an archaic amphora' (sc. a Boeotian relief-vase from Thebes, now in a private English collection, published in the *Bull. Corr. Hell.* 1898 xxii. 458 ff. figs. 8—10 pls. 6 and 6 bis by A. de Ridder, who *ib.* p. 468 f. cp. 'les canéphores, et peut-être les arrhéphores')), H. N. Fowler in J. M. Paton *The Erechtheum* Cambridge, Massachusetts 1927 p. 235 n. o (non-committal)).

Personally, I suspect that the *Arrhephoroi* in attendance on Athena were an extremely ancient institution, dating back to 'Minoan' times and comparable with the two hand-maidens of the 'Minoan' goddess (Sir A. J. Evans in the *Journ. Hell. Stud.* 1925 xlv. 11—14 figs. 11—15).

A late red-figured *hydria* from Euboia (Collignon—Couve *Cat. Vases d'Athènes* p. 589 no. 1852, Harrison *Proleg. Gk. Rel.*² p. 635 fig. 170 (from a sketch by Mrs Hugh Stewart)) shows Eros watering slender flowers that spring from the ground. A female figure with bare breast (Aphrodite?) directs his efforts. On the left sits a young man with a *thyrsos*. On the right stands a young woman with a *tympanon*. Apparently Aphrodite and Eros are gardening with a Dionysiac *entourage*.

Differently conceived but somewhat similar in effect is the design found on a bronze medallion of Faustina Junior (*Brit. Mus. Cat. Medallions* p. 16 no. 2 pl. 24, 1 ('Venus-

Genetrix? in a garden') = Gnechi *Medagl. Rom.* ii. 40 no. 13 pl. 68. 1 ('Venere') = my fig. 75. The specimen has been retouched). Venus, half-draped, stands to the front, her right hand raised to hold a small tree, which rises from (behind?) a base. On the left of her two Cupids are playing, on the right four more, one of whom leans over the battlements of a wall or tower. Above it appear other trees. The scene recurs with some variations on a bronze medallion of Lucilla, daughter of Faustina Junior (Frohnner *M.d. emp. rom.* p. 95 f. fig. (=my fig. 76) ('Venus dans un jardin'), Gnechi *op. cit.* ii. 51 no. 11 pl. 76, 8 (=my fig. 77) Bologna ('Donna in un giardino')). A girl is added, filling her pitcher from a stream in the foreground. These medallions are probably time-serving attempts to identify first Faustina and then her daughter with Venus. Faustina at least was actually worshipped along with her husband M. Aurelius in the temple of Venus and the Dea Roma (Dion Cass. 71. 31 τῷ δὲ Μάρκῳ καὶ τῇ Φαυστινῇ ἐψηφίσατο ἡ βουλὴ ἐν τε τῷ Ἀφροδισίῳ τῷ τε Ῥωμαίῳ εἰκόνας ἀργυρᾶς ἀνατεθῆναι καὶ βωμὸν ἰδρυθῆναι, καὶ ἐν αὐτοῦ πάσας τὰς κόρας τὰς ἐν τῷ ἄστει γαμονμένας μετὰ τῶν νυμφίων θύειν), and had coins inscribed VENVS, VENVS FELIX, VENVS GENETRIX, VENVS VICTRIX or VENERI AVGVSTAE, VENERI FELICI, VENERI GENETRICI, VENERI VICTRICI (Rasche *Lex. Num.* iii. 921, Cohen *Monn. emp. rom.*² iii. 154 ff. nos. 226—283). Here are a few examples: fig. 78 from the *Vautier—Collignon Sale Catalogue* 1922 p. 52 no. 980 pl. 35, fig. 79 from the *Bement Sale Catalogue* 1924 iii. 59 no. 1066 pl. 39, fig. 80 from Gnechi *Medagl. Rom.* ii. 39 no. 8 pl. 67, 6, fig. 81 from the *Levis Sale Catalogue* 1925 p. 40 no. 632 pl. 26, fig. 82 from the *Bement Sale Catalogue* 1924 iii. 59 no. 1068 pl. 39, fig. 83 from the *Hirsch Sale Catalogue* 1908 p. 10 no. 117 pl. 7. Since coins of this sort are apt to reproduce previous art-types (e.g. fig. 78 recalls the Aphrodite of Fréjus (?), fig. 83 is an adaptation from the Aphrodite of Capua, and fig. 80 owes something even to the Zeus of Olympia), I incline to think that the

Eryx (figs. 86, 87)¹ was 'covered with dew and fresh grass'²—

medallions representing Venus in the Garden presuppose a Greek fresco of Aphrodite ἐν Κήποις. The trees, the river, the wall or tower with battlements would all suit the famous sanctuary beside the Ilissos.

² This striking expression occurs in the remarkable account of Aphrodite's precinct included by Ail. *de nat. an.* 10. 50 ἀνὰ πᾶν ἔτος καὶ ἡμέραν πᾶσαν θύουσι τῇ θεῇ καὶ οἱ ἐπιχώριοι καὶ οἱ ξένοι. καὶ ὁ μὲν βωμός ὑπὸ τῷ οὐρανῷ ὁ μέγιστός ἐστι, πολλῶν δὲ ἐπ' αὐτοῦ καθαγισμένων θυμάτων ὃ δὲ πανημέριος καὶ ἐς νύκτα ἐξάπτεται. ἕως δὲ ὑπολάμπει, καὶ ἐκεῖνος οὐκ ἀνθρακιαν, οὐ σποδόν. οὐχ ἡμικαύτων τρύφη δαλῶν ὑποφαίνει, ὁρόσου δὲ ἀνάπλεως ἐστὶ καὶ πῶς νεαρᾶς, ἥπερ οὖν ἀναφύεται ὅσαι νύκτες. τὰ γε μὴν ἱερεῖα ἐκάστης ἀγέλης αἰτόματα φοιτᾷ καὶ τῷ βωμῷ παρέστηκεν. ἀγὴι δὲ ἄρα αὐτὰ πρώτη μὲν ἡ θεός, εἶτα ἡ δυνάμεις τε καὶ ἡ τοῦ θύοντος βούλησις. κ.τ.λ. Ciaceri *Culti e miti nella storia dell' antica Sicilia* Catania 1911 p. 87 notes the beneficent influence of dew on Sicilian vegetation and adds: 'Nella divina rugiada si vedeva la protezione della dea; ed è forse degno di rilievo che sino ai nostri giorni nel popolo di Trapani si è serbata fede alla brezza notturna; onde si è creduto ch' essa scenda come benedizione del cielo sugli abiti e vestiti che si espongano all' aria aperta durante la notte⁽¹⁾ (1) Pitrè *Bibliot. delle trad. pop. sic.* XII (Palermo 1881) p. 261.'

That Aphrodite Ἐρυκίνη (*Inscr. Gr. Sic. It.* no. 281 Eryx [Κάρπιμος Ἀρίστωνος] [Ἀ]φροδίται Ἐρυκίν[αι], *Diod.* 4. 83, *Steph. Byz. s.v.* Ἐρυξ, cp. *Paus.* 8. 24. 6 and *Strab.* 272. Jessen in Pauly—Wissowa *Real-Enc.* vi. 562 ff.) was in some sense a goddess of vegetation appears also from the fact that on *litrai* of c. 413—400 B.C. she is seated with a dove on her hand and a tree behind her (*Brit. Mus. Cat. Coins Sicily* p. 62 f. nos. 10 f. and 12, G. F. Hill *Coins of Ancient Sicily* London 1903 p. 136 pl. 9, 10 (=my fig. 88), *Hunter Cat. Coins* i. 181 pl. 13, 8, *Weber Cat. Note too the frequency of floral ornaments, volutes, etc. on the various *litrai* (e.g. figs. 85, 91). The plant *luxvis*, 'rose-campion,' which flourished on Mt Eryx, was said to have sprung from the bath of Aphrodite after sleeping with Hephaistos (Amerias *ῥίζοτομικὸν ap.* *Athen.* 681 F: on Amerias see O. Hoffmann *Die Makedonen, ihre Sprache und ihr Volkstum* Göttingen 1906 p. 2 ff.).

The dove had a special significance in this cult and was in all probability viewed as an

embodiment of the goddess (F. Dümmler in Pauly—Wissowa *Real-Enc.* i. 2765)—witness Ail. *de nat. an.* 4. 2 ἐν Ἑρῳ τῆς Σικελίας ἐορτὴ ἐστίν, ἣν καλοῦσιν Ἀναγῶγια Ἑρκεῖνοι τε αὐτοὶ καὶ μέντοι καὶ ὅσοι ἐν τῇ Σικελίᾳ πάση. ἡ δὲ αἰτία, τὴν Ἀφροδίτῃν λέγουσιν ἐντεῦθεν ἐς Λιβύην ἀπαίρειν ἐν ταῖςδε ταῖς ἡμέραις. δοξάζουσι δὲ ἅρα ταῦτα ταύτῃ τεκμαίρονται. περιστέρων πλῆθὺς ἐστὶν ἐνταῦθα πάμπαν· οὐκοῦν αἱ μὲν οὐχ ὁρῶνται, λέγουσι δὲ Ἑρκεῖνοι τὴν θεὸν δορυφορούσας ἀπελθεῖν· ἀθύρματα γὰρ Ἀφροδίτης περιστέρως εἶναι ἄδουσι τε ἐκείνοι καὶ πεπιστεύκασιν πάντες ἄνθρωποι. διελθουσῶν δὲ ἡμερῶν ἐννέα μίαν μὲν διαπρεπὴ τὴν ὥραν ἐκ γε τοῦ πελάγους τοῦ κοιμίζοντος ἐκ τῆς Λιβύης ὁρᾶσθαι ἐσπετομένην, οὐχ οἷον κατὰ τὰς ἀγέλας πελειάδας τὰς λοιπὰς εἶναι, πορφύρᾳ δὲ, ὥσπερ οὖν τὴν Ἀφροδίτῃν ὁ Τίτιος ἡμῖν Ἀνακρέων ᾄδει, πορφύρεν πον λέγων (*frag.* 2 Bergk¹, 2 Edmonds, 2 Diehl). καὶ χρυσῷ δὲ εἰκασμένη φανείη ἂν, καὶ τοῦτο γε κατὰ τὴν Ὀμήρου θεὸν τὴν αὐτὴν, ἣν ἐκεῖνος ἀναμέλπει χρυσὴν (*Il.* 3. 64, 5. 427, 9. 389, 19. 282, 22. 470, 24. 699, *Od.* 4. 14, 8. 337, 342, 17. 37, 19. 54, *h. With Aphrodite was associated a youthful consort, presumably Eryx her son by the local king Boutas (Diod. 4. 23, 83, Hyg. *fab.* 260, Serv. *in Verg. Aen.* 1. 570, 5. 24, 412, Steph. Byz. *s.v.* Ἑρῷ, Myth. Vat. 1. 53, 2. 156, cp. schol. vet. Theokr. 15. 101) or by Poseidon (Apollod. 2. 5. 10, Dion Cass. *frag.* 4. 2 Bekker, Serv. *in Verg. Aen.* 5. 24, interp. Serv. *in Verg. Aen.* 1. 570, Myth. Vat. 1. 94, 1. 107, 2. 156, Tzetz. *in Lyk. Al.* 866, 958, 1232), rather than Aineias (Diod. 4. 83, Strab. 608, Cic. *in Terr.* 2. 4. 72, Verg. *Aen.* 5. 759 ff., Fest. p. 340 b 3 ff. Muller, p. 458, 31 ff. Lindsay, Hyg. *fab.* 260, cp. Serv. *in Verg. Aen.* 5. 760): see F. Dümmler *loc. cit.* A rare *litra* of c. 413—400 B.C. shows Aphrodite drawing towards herself a naked youth, whom I take to be Eryx (H. Riggauer in the *Zeits. hr. f. Num.* 1881 viii. 72 f. pl. 1. 2 'Sollten wir hier vielleicht Eryx zu erblicken haben oder haben wir hier den Nachklang einer fruheren mythologischen Entwicklungsphase des Eros?', Imhoof-Blumer *Monn.* 57. p. 17 pl. A. 19 'figure virile', Head *Hist. num.* 2 p. 138 'wingless Eros'. Fig. 90 is from a specimen in my collection). Another, of the same period, turns Eryx into Eros—an easy transformation (*Brit. Mus. Cat. Coins Sicily* p. 63 no. 13, *Weber Cat. Coins* 1. 275 no. 1311 pl. 50, Head *Hist. num.* 2 p. 138. Fig. 91 is from a specimen of mine); and this type is comparable with that of a unique tetradrachm inscribed ΙΡΥΚΑΙΙΒ retrograde (G. F. Hill *Coins of Ancient Sicily* London 1903 p. 136 pl. 9. 11 (= my fig. 92), Head *Hist. num.* 2 p. 138).

A further point of interest in the cult was its ancient service of hierodules (Strab. 272 οἰκεῖται δὲ καὶ ὁ Ἑρῷ λόφος ὑψηλός, ἱερὸν ἔχων Ἀφροδίτης τιμώμενον διαφερόντως, ἱεροδούλων γυναικῶν πλῆρες τὸ παλαιόν, ἃς ἀνεθεσαν κατ' εὐχὴν οἱ τ' ἐκ τῆς Σικελίας καὶ ἔξωθεν πολλοί· νυνὶ δ' ὥσπερ αὐτὴ ἡ κατοικία λειπανδρεῖ καὶ τὸ ἱερὸν (so the second hand in cod. B. ἡ τὸ ἱερὸν could. A. Koraeas marked the whole phrase as suspicious. H. L. Jones simply omits ἡ), καὶ τῶν ἱερῶν σωματίων ἐκλέοιπε τὸ πλῆθος) and their later equivalents (Diod. 4. 83, Cic. *in Q. Caecil. dicitur.* 55).

Lastly it should be observed that Eryx, who is described as king of the Elymroi (Apollod. 2. 5. 10, Dion Cass. *frag.* 4. 2 Bekker, Tzetz. *in Lyk. Al.* 1232) or Sikanoi (cp. Paus. 8. 24. 2) or at least of some part of Sicily (Diod. 4. 23, 83, Paus. 4. 36. 4,

a phrase that reminds us of Demeter *Chlōe*, Demeter the 'Grass,' at Athens¹.

Myth. Vat. 1. 94, 1. 107), not only founded the town and temple of Eryx (Diod. 4. 83, Myth. Vat. 2. 156), but was also buried on the mountain (Hyg. *fab.* 260, Serv. *in* Verg. *Aen.* 1. 570, Myth. Vat. 2. 156).

All these traits are consistent with the view (R. v. Scala in the *Historische Zeitschrift* 1912 cviii. 18, Lübker *Reallex.*⁸ p. 344) that Aphrodite Ἐρυκίνη was a mountain-mother of the 'Minoan' kind, who as such would have her sacred tree and doves and *phēdros*. In a long-established cult sundry features may well have been imported from alien sources. The service of hierodules is suggestive of oriental influence (H. Hepding in Pauly—Wissowa *Real-Enc.* viii. 1467, D. G. Hogarth in J. Hastings *Encyclopedia of Religion and Ethics* Edinburgh 1913 vi. 671 b—672 b), and many scholars have been content to regard this Aphrodite as a Hellenised form of the Phoenician Astarte (e.g. W. H. Roscher in his *Lex. Myth.* i. 396, T. G. Pinches in J. Hastings *op. cit.* 1908 i. 767 a, L. B. Paton *ib.* 1909 ii. 118 a, W. W. Baudissin *Adonis und Esmun* Leipzig 1911 pp. 18 f., 23 n. 1, 26, 38, 273); even Nilsson *Gr. Feste* p. 374 dismisses her as 'ganz semitisch.' But the hound on coins of Eryx should hardly be compared with the sacred dogs of Hephaistos (Hadran) on Mt Aitne (*supra* ii. 630): it is simply due to the dependence of Eryx on Segesta, whose city-badge was a similar hound (C. Hulsen in Pauly—Wissowa *Real-Enc.* vi. 603).

The tradition that the eponymous Eryx was defeated by Herakles (Hdt. 5. 43) in a wrestling-match for the kingdom (Paus. 3. 16. 4 f., 4. 36. 4), or for possession of the bull which had broken away from the cattle of Geryones (Apollod. 2. 5. 10, cp. Lyk. *Al.* 866 f.: see further K. Tümpel in Pauly—Wissowa *Real-Enc.* vi. 604 ff.), appears later in a slightly different form. Eryx is a wrestler or pentathlete, who challenges strangers and slays them till he is himself slain by Herakles (Tzet. *in* Lyk. *Al.* 866, 958). In any case this ranges him with Phorbas, Kyknos, Kerkyon, Antaios, Amykos, and other early kings (I have discussed the series in *Folk-Lore* 1904 xv. 376 ff.), whose primitive rule of succession is the starting-point of Sir J. G. Frazer's *Golden Bough*. It is not impossible that Eryx king of the Elymoi and Virbius the *rex Nemorensis* belonged to the same (? Ligurian: C. Hulsen in Pauly—Wissowa *Real-Enc.* v. 2467) stratum of the population of Italy.

¹ At the western end of the southern slope of the Akropolis at Athens there was in the time of Pausanias a joint-sanctuary of Ge Κουροτρόφος and Demeter Χλόη (Paus. 1. 22. 3 ἔστι δὲ καὶ Γῆς Κουροτρόφου καὶ Δήμητρος ἱερὸν Χλόης. τὰ δὲ ἐς τὰς ἐπωνυμίας ἔστιν αὐτῶν διδασχθῆναι τοῖς ἱερεῦσιν ἐλθόντα ἐς λόγους). Originally, however, the two cults had been distinct. The enclosure of Ge Κουροτρόφος was called the Κουροτρόφειον, as we know from three boundary-stones, one early (*Corp. inscr. Att.* iv. 1 no. 555 c [Κ]ουρο[τ]ρόφ[ειον]), the others later (S. A. Koumanoudes in *Ἀθήναιον* 1877 vi. 147 f.). Adjoining it was the shrine of Blaute (*Corp. inscr. Whether Athens, like Mykonos (*infra*), made a winter-offering to Demeter Χλόη, is not known.

The cult lasted into Roman times (P. Foucart in the *Bull. Corr. Hell.* 1889 xiii. 167 f. no. 4, published more fully by H. G. Lolling in the *Δελτ. A Delphic oracle of s. ii A.D. speaks of their precinct as the spot where the forefathers of the Athenians first grew corn (O. Kern ‘Demeter Chloë’ in the *Ath. This identifies it with the site of the Βουζύγιος ἄροτος (Plout. *fract. comicae* 42 Ἀθηναῖοι τρεῖς ἀρότους ἱεροὺς ἄγουσι πρῶτον ἐπὶ Σκίμφ, τοῦ παλαιστοτάτου τῶν σπόρων ὑπόμνημα· δεύτερον ἐν τῇ Παρία· τρίτον ὑπὸ πόλιν (so K. There are one or two indications that the same cult was practised elsewhere in Attike. At Eleusis a festival Χλοῖα was observed in s. ii B.C. (D. Philus in the *Ἐφ. Ἀρχ.* 1890 p. 125 ff. no. 60, 6 ff. = Michel *Recueil d’Inscr. gr.* no. 135, 6 ff. = Dittenberger *Syll. inscr. Perhaps we can go a step further. O. Gruppe¹ has conjectured with much probability that the Arrhephoria was performed on the night of the Diipolieia, that is, on the occasion of the last full moon in the Attic year. He recalls the Greek belief—a belief based upon accurate observation²—that the dew lies thickest on the night of a full moon³, and Alkman's statement that Herse the 'Dew' was

πάτριον ἦν, συνετέλεσεν δὲ καὶ τὴν τῶν | Καλαμαίων θυσίαν κ.τ.λ.). This accounts for Hesych. Χλοῖα (Meursius cj. Χλοῖα, A. Meineke cj. Χλόεια)· ἑορτὴ ἀπὸ τῶν κάλπων (Meursius and Meineke cjj. καρπῶν). Again, the sacrificial calendar from *Κουκουναρι* (*supra* p. 115) notes among the trieteric rites of Marathon that in Anthesterion a pregnant sow is sacrificed to Ἐλευσινία and another to Χλόη παρὰ τὰ Μειδύλου, i.e. Χλόη 'next door to Meidylos' (J. de Prot. *Leges Graecorum sacrae* Lipsiae 1896 *Fasti sacri* p. 46 ff. no. 26 B, 48 ff. Ἀνθεστηριῶνος· Ἐλευσινία ἕς κυοῦσα ΔΔ, | ιερῶσυνα |. Χλόη παρὰ τὰ Μειδύλου ἕς κυοῦσα | ΔΔ, ιερῶσυνα |, ἀλφίτων ἑκτεὺς ||||, σῖνο χ[ός.]). In Mykonos a calendar of c. 200 B.C. fixes Poseideon 12 as the mid-winter day when a fine white ram must be sacrificed to Poseidon Τεμενίτης, a white male lamb to Poseidon Φύκιος, and two fine sows, one of them pregnant, to Demeter Χλόη (J. de Prot. *Leges Graecorum sacrae* Lipsiae 1896 *Fasti sacri* p. 13 ff. no. 4, 11 ff.=Michel *Recueil d'Inscr. gr.* no. 714, 11 ff.=F. Bechtel in Collitz—Bechtel *Gr. Dial.-Inscr.* iii. 2. 577 ff. no. 5416, 11 ff.=Dittenberger *Syll. inscr. Gr.*³ no. 1024, 11 ff. τῇ αὐτῇ ἡμέρᾳ Δήμητρι Χλόη ἕς | δύο καλλιστεῖνουςαι, ἡ ἑτέρα ἐγκύμ[ων·] νῶτογ κόπτετα[ι] | τῆς ἐγκύμονος. τὰς ἕς β[ουλ]ῇ κ[ρινέ]τ[ω]· | μ[ε]τ[ρί]ωι ἀρχοντες | διδόντων ὀσφὺν καὶ κωλὴν τῆς ὑδὸς τῆς ἐτέρης. ἀλφίτω[ν] | δύο χοίνικας, σῖνον τρεῖς κοτῶ[α]ς). But the real interest of Demeter Χλόη lies, not so much in the details of her cult, as in the fact that her very name identifies the goddess with the verdure. Farnell *Cults of Gk. States* iii. 33 says of her worship: 'Its chief claim on our attention is that it seems to reveal a glimpse of the pre-anthropomorphic period when the natural object itself might be conceived as animate and divine, and the personal deity had not yet clearly emerged; thus such religious perceptions as "Demeter the Verdure" or "Zeus the Thunder" on the one hand, and Demeter the Verdure-giver or Zeus the Thunderer on the other, may be the products of widely different strata of religion.' The second stage is attested partly by the cult of Demeter Εὐχλοος at Kolonos (Soph. *O. C.* 1600 f. τῷ δ' Εὐχλόου Δήμητρος εἰς προσόψιον | πάγον μολοῦσαι with schol. *ad loc.* cited *supra*. On the topography of the site see Sir R. C. Jebb's ed. p. xxxi with map and Svoronos *Ath. Nationalmus.* pp. 389 f., 392, 402, 405 pls. 124 (photograph) and 125 (plan). The broken base of Pentelic marble believed by the uncritical K. S. Pittakis to record a dedication to Demeter Εὐχλόη (*Corp. inscr. Att.* iii. 1 no. 191) is now known to contain no such record (U. Köhler in *Corp. inscr. Att.* ii. 3 no. 1415). Her name should be struck out in Pauly—Wissowa *Real-Enc.* iii. 2347, vi. 884), partly by the poetic usage of such epithets as χλοόκαρπος (Orph. *h. Dem. Eleus.* 40. 5 χλοόκαρπε, cp. Orph. *h. Ge.* 26. 7 ἡδυπνόος χαίρονσα χλόαυς).

the daughter of Zeus by Selene the 'Moon¹.' Now Plutarch, commenting on the passage from Alkman, remarks that the meaning of the poet was as follows: Zeus, the air, under the influence of Selene, the moon, turned himself into dew². Plutarch's comment is a physical speculation of the usual sort³; but it suggests a possibility. It may be that the dew was regarded as the actual means whereby the sky-father impregnated the earth-mother. Rain was certainly so regarded⁴; and dew was held to be a gentler form of rain⁵. Homer says that, when Zeus embraced Hera on the summit of Ide, 'glittering dew-drops' fell from the golden cloud that encompassed them and earth put forth 'the dewy lotus-bloom⁶.' Pliny in plainer terms tells us that the planet Venus, called by others the star of Iuno or Isis or the Mother of the gods, makes the earth to conceive by means of generative dew and rouses the procreative powers of all living things⁷. Besides, it is a significant fact that *érsen*, *ársen*, *árrhen*, the Greek word for 'male,' is obviously related to *érse*, 'dew⁸.' Perhaps, then, when the Dew-bearers brought dew down the underground descent, they were simply conveying the sacred seed of Father Sky into the womb of Mother Earth.

And, if so, it may well be that in the 'something wrapt up⁹,

Where the texts are silent the monuments may be allowed to speak. A terra-cotta relief of the 'Melian' type, said to have been found in a grave beyond the Ilissos on the road to Halimous and now at Berlin² (fig. 93)³, shows the head and shoulders of Ge emerging from the ground. She presents the infant Erichthonios to his foster-mother Athena, who, wearing a helmet but no *aigis*, approaches from the left. Kekrops, with snaky tail, faces her on the right: he raises the forefinger of one hand in token of respect⁴ and with the other holds a spray of olive. Stylistic considerations would refer the relief to the first half of the fifth century, while the four olive-leaves in Athena's helmet suit some date after the fight at Marathon⁵. The

Be that as it may, vase-painters of the fifth century took this old art-type and amplified it by the addition of other interested spectators. A red-figured *hydria* from Chiusi (?), now in the British Museum (pl. xxii)³, makes a full-breasted Ge emerge waist-high from

After frequent inspection R. Zahn and Jacobsthal decided 'es endgültig für eine Fälschung zu erklären, allerdings für eine sehr intelligente und für die siebenziger Jahre recht gelungene und gelehrte.' She is confronted, not by Kekrops, but by Zeus, who, clad in a *himétion* of like pattern and wearing a wreath, stands with his right hand resting on his hip, his left holding the thunderbolt. Behind Athena, Nike hastens forward with a large fillet in her outstretched hands. Behind Zeus and leaning familiarly on his shoulder is a female figure in a long *chiton*, over whose head is inscribed the name Oinathe. The presence of this Dionysiac name² led E. Braun³, F. Wieseler⁴, C. Robert⁵, and Sir C. H. Smith⁶ to interpret the whole scene as the birth of Dionysos. But in this they were certainly wrong. The vase cannot be isolated from others of closely similar design, which beyond all question represent the birth of Erichthonios. And the name *Oinánthe*, accompanied as it is by the word *kalé*, is better explained by W. Klein⁷, W. Drexler⁸, and H. B. Walters⁹ as a *Lieblingsinschrift* of a not very unusual sort¹⁰. After all, Oinathe was a name occasionally borne by Attic women¹¹. This leaves the youthful

Zeus² himself is accommodated on the other side of the vase, where he sits on a handsome folding stool, clad in *chiton* and *himátion*. In his left hand he holds a lotiform sceptre; in his right, a metal *phiale*, which Nike standing before him has just filled. On the tendrils that spring from the handle-palmettes are poised four of the daintiest Erotes to be found in the whole range of Greek art. Their presence may be taken to indicate that obverse and reverse form a single scene and one which has the multiplication of young life for its ultimate meaning.

Hephaistos is definitely established in the room of Zeus on a red-figured *kylix* from Corneto, preserved in Berlin³. This magnificent vase (fig. 95), which has been attributed to 'the Kodros-painter⁴,' fortunately adds names to all the persons concerned. The external design shows again the familiar type of Ge presenting Erichthonios to Athena. Behind Athena stands a dignified, not to say Zeus-like, Hephaistos wearing a bay-wreath on his head and a *chlamys* over his shoulder: he holds a long staff in his right hand and rests his

¹ So most critics, including Panofka, Inghirami, Jahn, Muller—Wieseler, Hauser *loc. cit.* together with Welcker *Alt. Denkm.* iii. 422 n. 7, B. Sauer *Das sogenannte Theseion* Leipzig 1899 p. 58 f., etc. C. Lenormant *op. cit.* i. 276 sees 'Neptune frappant la terre avec son trident' (trident-head missing!). Gerhard *Auserl. Vasenb.* iii. 3 n. 2 hesitates between Hephaistos and Poseidon, but *ib.* p. 5 decides for Poseidon. A. Flasch in the *Ann. d. Inst.* 1877 xlix. 427 ff. is for Kekrops or Hephaistos, preferably the latter; C. Robert *Archaeologische Maerchen aus alter und neuer Zeit* Berlin 1886 p. 192 n. 2, for Kekrops. E. Braun in the *Ann. d. Inst.* 1841 xiii. 92 f., bent on recognising the birth of Dionysos (*supra* p. 183), is forced to interpret the standing god as Zeus.

² Almost all exponents from Inghirami *loc. cit.* onwards have identified the seated personage as Zeus. Yet Panofka *loc. cit.* says 'Neptune,' and C. Lenormant *op. cit.* i. 285, iii. 34 ff. 'Jupiter Polieus' or 'Zeus Eleuthérios' as a deity akin to 'Neptune Erichthée.' Jahn *loc. cit.* is content with 'ein bartiger Mann.' And Muller—Wieseler *loc. cit.* suggest 'Erichthonios als Herrscher und Richter des Landes, neben ihm die Gottin Dike' (!).

his tongs. A couple of little Victories, hovering in the air, offer wreaths to father and son; for it is as father of Erichthonios that Hephaistos has at length wholly dispossessed Zeus.

ii. Hephaistos and Athena.

So far we have seen reason to think that the Arrhephoria was an annual rite in which a couple of Dew-bearers conveyed the very seed of the sky-god down into the womb of the earth-goddess, and we have surmised that they brought up thence a new-born babe named Erichthonios. Moreover, a review of monuments known to represent the birth of Erichthonios¹ has made two points clear—that the group of Ge handing over the child to Athena was constant from first to last, and that Zeus as interested spectator was gradually ousted by Hephaistos. Vases distributed along the fifth century showed us in succession a Zeus of normal type, a Zeus-like personage probably to be called Hephaistos, a Zeus-like personage certainly called Hephaistos, and a Hephaistos of normal type.

How are these ritual and mythological *data* to be interpreted? I should infer (1) that the rite of the Arrhephoria as performed in the precinct (of Ge *Olympia*?²) near the Ilissos found apt expression in the Hellenic myth of Ge and Erichthonios, and (2) that in the course of the sixth and fifth centuries B.C. the Hellenic myth was forced (by popular pressure?³) to find room for the long-established persons of pre-Hellenic cult. Thus Ge the original mother must hand over her babe to Athena as foster-mother, while Zeus *Olympios* the natural consort of Ge *Olympia* is displaced by Hephaistos the primitive partner of Athena.

This reading of the story is of course in part conjectural, but it fits well with certain important facts in the history of Attic religion and it deserves to be weighed in relation to them.

¹ I have excluded from my survey the parallel, but later, series of vases and reliefs, which represent an Eleusinian (not Athenian) myth—the birth of the infant Ploutos, handed over by Ge to Demeter. On these see S. Reinach 'La naissance de Ploutos' in the *Rev. Arch.* 1900 i. 87—98 (= *id. Cultes, mythes et religions* Paris 1906 ii. 262—272), Harrison *Proleg. Gk. ² *Supra* p. 169 n. o.

³ The régime of Peisistratos and his successors did much to enhance the prestige of Athena (see e.g. C. T. Seltman *Athens: its History and Coinage before the Persian Invasion* Cambridge 1924 pp. 40 ff., 46 f., 61, 68, 94 and F. E. Adcock in *The Cambridge Ancient History* Cambridge 1926 iv. 63, 66 f.), and pride in the city-goddess would tend to make men jealous for the credit of her partner Hephaistos (*infra* pp. 200, 223, 236). The 'Theseion,' if that be his temple (*infra* p. 223 n. 6), was no unworthy sequel to the Parthenon.

the Snake-goddess (Athena ?) of late geometric art.

The Athenian Akropolis had from time immemorial been the home of Athena, a goddess comparable with, if not actually descended from, the snake-goddess of the early Cretans¹. Her

¹ This important fact was first firmly grasped and clearly enunciated by M. P. Nilsson *Die Anfänge der Göttin Athene* (Det Kgl. Danske Videnskabernes Selskab. Historisk-filologiske Meddelelser iv. 7) København 1921 pp. 1—20, *id.* *A History of Greek Religion* trans. F. J. Fielden Oxford 1925 pp. 26—28, *id.* *Min.-Myc. Rel.* pp. 417—431. I had already hinted at it in the *Class. Rev.* 1903 xvii. 410 n. 2. See also O. Weinreich in the *Archiv f. Rel.* 1925 xxiii. 61 f., C. Clemen *Religionsgeschichte Europas* Heidelberg 1926 i. 76 n. 2, 103, 231, H. J. Rose *A Handbook of Greek Mythology* London 1928 pp. 107, 128.

Others have stressed the connexion between Athena and the 'Minoan' or Mycenaean shield-goddess. So C. Blinkenberg 'Kretisk Seglring fra ældre mykenisk Tid' in the *Aarbøger for nordisk Oldkyndighed og Historie* 1920 pp. 308—322 fig. 1 f. and U. von Wilamowitz-Moellendorf 'Athena' in the *Sitzungsber. d. Akad. d. Wiss. Berlin* 1921 pp. 950—965. See too O. Kern *Die Religion der Griechen* Berlin 1926 i. 24.

E. Kalinka in the *Archiv f. Rel.* 1922 xxi. 31 f. regards Athena as 'eine jener vor-griechischen Muttergottheiten, die sowohl in Kleinasien wie in vielen Landschaften Griechenlands verehrt wurden.'

In this context we cannot ignore the goddess twice figured on a *stámnos* from Knossos found by H. G. G. Payne and published by S. Marinatos in the *Jahrb. d. Deutsch. Arch. Inst.* 1933 xlviii Arch. Anz. p. 310 fig. 19. My pl. xxv is from fresh photographs of the jar kindly taken for me by J. D. S. Pendlebury. This personage has spirals like snakes starting from her hips, uplifted hands, and a *pólos* on her head—'offenbar eine Göttin, und zwar eine missverständene Weiterbildung der spät- und submykenischen Schlangengöttinnen von Gurniā und Priniā.' She may be dated c. 700 B.C.

A kindred, but further developed, figure occurs on the remarkable terra-cotta *plaque* found by the American excavators of the *Agorá* at Athens and published by Dr T. L. Shear in *The Illustrated London News* for Sept. 3, 1932 p. 345 with a col. pl., Y. Béquignon in the *Bull. Corr. Hell.* 1933 lvii. 243 f. fig. 7. My pl. xxvi is from a photograph obtained for me from Dr Shear by E. J. P. Raven, who tells me (Jan. 30, 1934) that a full publication with a col. pl. is shortly to appear in *Hesperia*. The *plaque* (9½ x 5 ins., with two holes above for suspension) formed part of a dump near the base of the N. slope of the *Areios Pigos*, and was associated with other objects in terra-cotta—primitive figurines, gaily coloured horses with their riders, votive shields, etc.—also with 'late Geometric' vases and a 'Proto-Corinthian' *lékythos*. It has therefore been referred to the latter part of s. viii B.C. and regarded as a votive offering brought from the adjacent shrine of the Eumenides. It shows a goddess facing the spectator, with raised arms and spread hands (cp. *supra* ii. 536 fig. 406, c). Her head and neck are in relief; the rest of her is on the flat, painted in dull red and blue. She stands between two snakes, rendered in the same colours amid a vertical framework of lotos-flowers and rosettes. Dr Shear finds it hard to say whether this unique figure should be interpreted as a snake-goddess ('possibly a survival of the Minoan tradition into later times in Athens') or more definitely as 'one of the Furies.' Perhaps the spotted transverse garment worn across her chest is meant for an *aigis*. If so, she is a primitive pre-warlike Athena. After all, Athena *Γοργώπις* (Zwicker in Pauly—Wissowa *Real-Enc.* vii. 1658) or *Γοργώ* (K. Zeigler *ib.* 1641 f.) is near akin to the original *Γοργώ* or *Γοργών*. Cp. Palaiph. 31 (32) *καλοῦσι δὲ Κερναῖοι τὴν Ἀθηναίαν Γοργώ, ὥσπερ τὴν Ἀρτεμὺν Θράκες μὲν Βένδιον, Κρήτες δὲ Δίκτυναν* (*Δίκτυνναν* cod. x), *Δακεδαμόνιοι δὲ Οὐπιν*. Athena in due course was Christianised and appears on medieval leaden seals as *ΜΡ ΘΥ* (sc. *Μήτηρ Θεοῦ*) *Η ΑΘΗΝΑΙΑ ΓΟΡΓΟΕΠΗΚΟΟΣ* (*infra* § 9 (h) ii (a) *sub fin.*). The Panagia *Gorgoephekos* of modern Athens has a long and interesting pedigree.

snakes, her owl¹, her olive-tree², her relations to the priestly king Erechtheus³, in whose palace she had from the outset been housed⁴, are indefeasible proofs of her ancient lineage. Even in the Periclean age Pheidias' great statue of the Parthenos, with a snake at her side, snakes round her waist, a snaky *aigis* over her shoulders, and a pillar beneath her hand⁵, still perpetuated the essential traits of a 'Minoan' prototype⁶.

Another pre-Greek deity of the Akropolis was *Hēphaistos*, whose name⁷, equally unintelligible with that of Athena⁸, presumably

⁷ The various forms of the name "Ἡφαίστος" and the various etymologies proposed for it by scholars ancient and modern are listed by Gruppe *Cult. Myth. orient. Rel.* i. 105 with n. 9, *Gr. Myth. Rel.* pp. 1304 n. 2, 1305 n. 1 and by L. Malten in Pauly—Wissowa *Real-Enc.* viii. 340—342. The latter concludes: 'Eine Deutung des Namens zu geben, ist zur Zeit noch nicht möglich; in welcher Richtung sie zu suchen ist, lehrt die oben dargestellte Entwicklungsgeschichte des Gottes. Sie ergab zunächst, dass der Gott vorgriechisch ist; für vorgriechisch wird der Name H. jetzt auch von

Fick Vorgriech. Ortsn. 66 erklärt so wie der lemnische Mosychlos, an dem der Gott in früher Zeit festsetzt. Da H. bei den karisch-lykischen Völkern Kleinasien seinen Ursprung hat, muss die Deutung im Kreise dieser Sprachdialekte gesucht werden. Darf man von der Art des Kults aus einen vorläufigen Rückschluss wagen, so liegt es am nächsten, eine Hindeutung auf das Erdfeuer, die ursprüngliche Erscheinungsform des Gottes, auch in dem Namen zu suchen.' See further L. Malten 'Hephaistos' in the *Jahrb. d. klass. deutsch. arch. Inst.* 1912 xxvii. 232—264 with 12 figs.

R. Pettazzoni 'Philoktetes—Hephaistos' in the *Rivista di filologia e di istruzione classica* 1909 xxxvii. 170—189 (criticised by R. Wunsch in the *Archiv f. Rel.* 1911 xiv. 576 f.) holds that Philoktetes and Hephaistos were originally different forms of the same non-Hellenic deity (their identity had been already asserted by F. Marx 'Philoktet—Hephaistos' in the *Neue Jahrb. f. klass. Altertum* 1904 xiii. 673—685) and that the name of the former throws some light on the nature of the latter. Philoktetes was healed by Pyllos son of Hephaistos (Ptol. *Hephaist. ap. Phot. bibl.* p. 152 b 13 f. Bekker), and the priests of Hephaistos in Lemnos had curative powers (Eustath. in *Il.* p. 330. 12). Philoktetes, like Hephaistos, went limping. Philoktetes, like Hephaistos (*supra* i. 328 fig. 259), wore the *filos*. The pre-Hellenic god, who lies behind Philoktetes and Hephaistos, was equated by the Phoenicians with their Esmun-Kadmilos. The name Kadmilos covers a Semitic word for 'gold'—Kadmilos discovered the gold-mines of Mt Pangaion (Plin. *nat. hist.* 7. 197, Clem. *Al. Strom.* i. 16 p. 49, 6 ff. Stahlin, cp. Aristot. *frags.* 459 Rose; Strab. 680, Steph. Byz. s.v. Ἰλλυπία)—and the names Φιλοκτήτης and Χρῆση both point in the same direction. Thus Philoktetes = Hephaistos = Kadm(ilo)s, and we can understand the equivalence of Hephaistos and Chrysor (*supra* ii. 715. 1037). In fact, Kadmilos : Kabeiro

(*supra* ii. 314 n. o) = Philoktetes : Chryse = Hephaistos (Chrysor) : Aphrodite (χρυσή Gruppe *Gr. Myth. Rel.* p. 1367 n. 2).

A. Fick as a great philologist merits a more patient hearing. In his *Vorgriechische Ortsnamen* Göttingen 1905 p. 66 he quotes with approval Steph. Byz. s.v. Ἀήμιος... ἀπὸ τῆς μεγάλης λεγομένης θεοῦ, ἥν Ἀήμιόν φασιν· ταύτη δὲ καὶ παρθένους θύεσθαι and continues: 'Ganz fremdartig klingt auch Μόσυχλος... ob der Name des Gottes 'Ἀφαίστος griechisch ist, kann man stark bezweifeln, jedenfalls waren die grosse Göttin, der Feuergott und der Phallos (Hermes) die Hauptgottheiten der Tyrrhener.' In *Haltiden und Danubier in Griechenland* Göttingen 1909 p. 46 he returns to the charge: 'Hephaistos gehört durchweg den vorgriechischen Pelagonen—Pelasgern—Tyrsenern an. Mittelpunkte seines Dienstes sind Lemnos und Attika. Andere Namen des Gottes sind Palamaon und Palamedes, in Attika und Phokis heisst er Prometheus, in Boeotien als Wildfeuer Typhaon, dessen Kampf mit Zeus um die Weltherrschaft [*supra* ii. 448 n. 2, 731, 826] religionsgeschichtlich als Versuch der Verehrer des Feuergottes, diesen zum Allgott zu erheben, zu denken ist. Auch der Name Hephaistos ist wohl pelasgi-sch; gleichgeformt ist Geraistos, vielleicht der pelasgische Name des Wassergottes, der als Buhle der Demeter d. i. der Allmutter entschieden den Pelasgern Arkadiens angehört. Die Gottheiten der Pelasger waren also: Allmutter und Phallos, und die zwei elementaren Feuer- und Wassergötter, denen sich vielleicht Hermes als Luftgottheit zugesellt.'

* Attempts to explain the name, which appears in Ionic as Ἀθήνη Ἀθηναίη, in Aeolic and Doric as Ἀθάνα Ἀθαναία, in Attic as Ἀθηναία Ἀθηναία Ἀθηναῖα, are collected by Preller—Robert *Gr. Myth.* i. 185 f., F. Dümmler in Pauly—Wissowa *Real-Enc.* ii. 2007 f., Gruppe *Gr. Myth. Rel.* p. 1194 nn. 1—5.

The most interesting hypothesis so far advanced is that of another famous philologist P. Kretschmer. In *Glotta* 1921 xi. 282—284 he treats the name as Pelasgian or Tyrrhenian and relates it on the one hand to the place-name Ἀθανασσός Ἀθανασός Ἀθανασός Ἀττανασσός (Ἀτταν) in Phrygia with the characteristic suffix -ασσός (Sir W. M. Ramsay *The Historical Geography of Asia Minor* (Royal Geographical Society: Supplementary Papers iv) London 1890 p. 136 no. 26, *id.* *The Cities and Bishops of Phrygia* Oxford 1895 i. 241 ff., 249 ('Bishops of... Ruge in Pauly—Wissowa *Real-Enc.* ii. 2180), on the other hand to a group of Etruscan (?) words denoting a ritual vessel of terra cotta (Paul. ex Fest. p. 18, 11 Muller *Athanurium* est poculi fictilis genus, quo in sacrificiis utebantur sacerdotes Romani (W. M. Lindsay p. 17, 9 print *Athanurium* with cod. L. Th. Mommsen in the *Ephem. epigr.* 1899 viii. 254 n. 2 gives *athanulum*), G. Zangemeister in the *Ephem. epigr.* 1899 viii. 254 took *atalla* to be the diminutive of *atana*, *attana*, *attanus*)) and perhaps to ἄττανον an Asia Minor (?) word for 'pan' or 'pot' (Hesych. s.vv. ἄττανα, ἄττανιδες, ἄττανίτας from Hipponax *frag.* 36. 3 Bergk⁴, *frag.* 39. 9 Diehl). Kretschmer suggests that the pre-Greek *ἄθτανον = ἄττανον gave rise to Ἀθάνα Ἀθαναία as 'eine Topfergöttin,' the later Athena Ἐργάνη (Paus. i. 24. 3 πρώτοι μὲν γὰρ Ἀθηναῖν ἐπωνόμασαν Ἐργάνην sc. οἱ Ἀθηναῖοι). Further, he hints that the clay vessel from which the goddess got her name may well have been regarded 'als Fetisch und Symbol... Die Glosse *athanulus* ἀγίων ἱερῶς σκεῦος, κειμήλιον lässt doch fast an ein gralartiges heiliges Gefäss denken.'

Kretschmer's ingenious speculation could, I think, fairly claim the support of certain extant types of sacred or ritual vases: (a) *Gesichtsurnen* or 'face-urns' from the second city at Troy, c. 2500—2300 B.C. (H. Schliemann *Troy and its remains* London 1875 p. 34 f. nos. 10—13, *id.* *Ilios* London 1880 pp. 290—292 nos. 157—159, 339—345 nos. 227—229, 231—241 (of which 235 = my fig. 102), C. Schuchhardt *Schliemann's Excavations* trans. E. Sellers London 1891 p. 68 figs. 66—68 (= my figs. 103, 105, 101), Perrot—Chipiez *Hist. de l'Art* vi. 561 fig. 247, 807 fig. 376, 903 ff. figs. 454, 455, W. Dörpfeld *Troja und Ilios* Athen 1902 i. 255—257 pl. 33, 1—7 (of which 4 = my fig. 104), M. Hoernes *Urgeschichte der bildenden Kunst in Europa*³ Wien 1925 pp. 358—362 figs. 5—8, *Brit. Mus. Cat. Vases* i. 1. 12 no. A 68 pl. 2, E. Pottier *Vases antiques du Louvre* Paris 1897 p. 4 no. A 4 (1) pl. 5). These urns begin by being distinctly human in appearance. The upper part, or the lid, has a projecting nose, arched eyebrows, and round prominent eyes. Mouth, ears, and a peaked cap may also be added. Some specimens have the ears bored for metal earrings. Others indicate in relief a necklace and a transverse band across the chest, or make the head support a bowl and the hands a two-handled cup. The body is rounded and, as a rule, equipped with rudimentary arms, conical breasts, and a flat disk (navel? womb?) occasionally marked with a cross or swastika. Later the jars become less truly anthropomorphic: the peaked cap turns into a handle, the brow sinks to a straight line, the eyes dwindle into dots, the arms may be duplicated as a pair of spirals. Now H. Schliemann was certainly wrong, when in *Troy and its remains* p. 113 and *Ilios* p. 281 ff. he took such vases to represent Athena in the shape of an owl (θεὰ γλαυκῶπις Ἀθήνη, *infra* § 9 (h) ii (λ)). Similar face-urns, of the Early Iron Age, found in Pomerania, East and West Prussia, Posnania, Silesia, Poland (J. Schlemm *Wörterbuch zur Vorgeschichte* Berlin 1908 pp. 173—176 figs. a—i, H. Seger in M. Ebert *Reallexikon der Vorgeschichte* Berlin 1926 iv. 1. 295—304 pls. 110—122, A. Gotze *ib.* 1926 vi. 384 f. pl. 96 f.), Etruria (J. Martha *L'art étrusque* Paris 1889 p. 468 fig. 305, E. Pottier *Vases antiques du Louvre* Paris 1897 p. 33 no. 709 pl. 28, *Brit. Mus. Cat. Vases* i. 2. 250 f. nos. H 213 pl. 17, H 214 pl. 17, H 215, H 216 pl. 17), and Kypros (Perrot—Chipiez *Hist. de l'Art* iii. 695 f. figs. 503, 504, and col. pl. 4, J. L. Myres *The Metropolitan Museum of Art. Handbook of the Cesnola Collection of Antiquities from Cyprus* New York 1914 p. 104 no. 793 fig., p. 113 no. 931 fig.) are purely human in design. Their significance is probably apotropaic. The figure shown is the guardian, who protects the contents of the urn. At Troy this figure is always female. It is, then, very possibly to be identified with the city-goddess Athena, but not as γλαυκῶπις (M. Hoernes *Urgeschichte der bildenden Kunst in Europa*¹ Wien 1898 p. 175, *ib.*² Wien 1915 p. 362). A custom of this sort does not easily die out. A thousand years later those who dug the first shaft-grave at Mykenai put in a globular vase still decorated with a pair of outstanding breasts (A. Furtwangler—G. Löschke *Mykenische Thongefässe* Berlin 1879 p. 3 pl. 1, 1, Perrot—Chipiez *Hist. de l'Art* vi. 912 fig. 464).

(b) A vase from tomb xiii at Mochlos, which Sir A. J. Evans refers to the 'Early Minoan iii' period, c. 2400—2100 B.C. (R. B. Seager *Explorations in the Island of Mochlos* Boston—New York 1912 p. 64 figs. 32, 34, G. Karo—G. Maraghiannis *Antiquités Crétoises* Deuxième série Candie 1911 p. viii pl. 10, 6, Sir A. J. Evans *The Palace of Minos* London 1921 i. 115 fig. 84, O. Montelius *La Grèce préclassique* Stockholm 1924 i. 27 fig. 116 a, 116 b = my fig. 106). This remarkable vessel, painted with yellowish white on a dark ground, represents a female figure wearing a kind of turban and holding her breasts, which are pierced to serve as spouts. Both Seager and Evans infer that she is a primitive mother-goddess. It is but a step from this *Alma Mater* to some of the Cypriot vases noted above (e.g. Perrot—Chipiez *Hist. de l'Art* iii col. pl. 4 = my fig. 107), which being furnished with a single spout probably did duty as feeding-bottles for infants. A mother-goddess would be a wholly suitable type. A late Egyptian (?) specimen in my collection is no less appropriately topped by the head of young Horos (fig. 108. Height 4 inches).

(c) Tubular vessels from various cult-centres in Palestine, Crete, and Rhodes. At Beth-Shan (*Beisân*), the Hellenistic Nysa Skythopolis (*supra* p. 88 fig. 31), the excavations of the University of Pennsylvania Museum brought to light an earthenware cylinder, from one side of which projects a crudely modelled head wearing a crown of feathers. This

object, found in the Amenophis iii level (1411—1375 B.C.), seems to have been connected with the cult of the serpent-goddess Astoreth or Anaitis, who at Beth-Shan bore the Egyptianised name Antit: the head presumably represents the goddess herself (L. B. Holland in the *Am. Journ. Arch.* 1929 xxxiii. 198 f. fig. 10=my fig. 109). Somewhat later are the bottomless tubular stands from the same site published by A. Rowe in the *Museum Journal. University of Pennsylvania* 1926 pp. 296, 297, 299. I figure one which has two handles surmounted by birds in the round and windows in its sides penetrated by snakes in relief (G. Contenau *Manuel d'archéologie orientale* Paris 1931 ii. 1049 f. fig. 729 after S. A. Cook in the *Palestine Exploration Fund. Quarterly Statement for 1926* p. 30,

A. Rowe *ib.* 1927 p. 74, A. T. Olmstead *History of Palestine and Syria* New York—London 1931 p. 154 fig. 74). Professor S. A. Cook *The Religion of ancient Palestine in the light of Archaeology* London 1930 p. 98 comments: 'The name *Shān* (or *Shē'ān*) may be directly connected with *Shāhan* or *Sakhan*, the Semitic name of an old Sumerian serpent deity. Upon a bowl is depicted an undulating serpent; and a pottery model of a serpent has female breasts, and a cup below for collecting the milk.' Etc. The burial *pithoi* from Beth-Shan (c. 1200 B.C.), which have their upper part adorned with the mask of the dead man or woman and a pair of rudimentary arms (C. L. Fisher in the *Revue biblique internationale* 1923 xxxii. 435 f. fig. 9, P. Thomsen in Ebert *Reallex.* ii. 5 pl. 1, a, b), are hardly *ad rem*. A shrine of 'Middle Minoan' date (c. 2100—1580 B.C.) on one summit of Mt Korakies, a two-peaked hill at Koumasa in southern Crete, yielded four cylindrical clay vessels open at the bottom. Two of these have snaky handles formed of four loops vertically arranged on either side (S. Xanthoudides *The Vaulted Tombs of Mesará* trans. J. P. Droop Liverpool

1924 p. 50 pl. 33, of which nos. 5002 and 5005 = my figs. 111 and 112, G. Karo in D. H. Haas *Bilderatlas zur Religionsgeschichte* Leipzig—Erlangen 1925 vii p. viii fig. 52, Nilsson *Min.-Myc. Rel.* pp. 90 f. fig. 6, 271 f.). At Prinia in central Crete F. Halbherr in 1900 found two very similar vessels, one of which has an additional snake coiling upwards and encircling its mouth, together with a terra-cotta goddess emergent from a

cylindrical base and the fragmentary arms of another entwined with snakes—clearly the contents of a small 'Minoan' shrine (S. Wide in the *Ath. Mitth.* 1901 xxvi. 247—257 figs. 1—5 (of which 4 and 5 = my figs. 113 and 114) and pl. 12, Nilsson *Min.-Myc. Rel.* pp. 269 f., 271, 275, 385). Renewed excavations of the site by the Italians in 1906 led

to further finds—the head of a terra-cotta figure and another tube-shaped vessel with vertical loops or handles, a ridge resembling a snake, and oval holes or apertures in the sides. But the objects associated with the new finds belong to the archaic Greek period and point to a local survival of the ‘Minoan’ cult (L. Pernier in the *Bollettino d'arte* 1908 ii. 455 ff. fig. 11 cited by R. Zahn in K. F. Kinch *Fouilles de Vroulia (Rhodes)* Berlin 1914 p. 28 and by Nilsson *Min.-Myc. Rel.* p. 386). The shrine of the snake-goddess at Gournia in eastern Crete (*supra* ii. 538), believed to be of the ‘Late Minoan i’ period, c. 1580—1475 B.C., had five tubular vessels still *in situ*. One, of which the base only remained, stood on the low plastered tripod. Round it were ranged four others. Three of these, practically complete, supplement the snaky loops by an extra handle surmounted by ritual horns; one adds a disk above the horns, another a pair of snakes crossing under the handle, the third a symbol now missing—possibly a bird (Mrs B. E. Williams in H. Boyd Hawes, B. E. Williams, R. B. Seager, and E. H. Hall *Gournia, Vasiliki and other prehistoric sites on the Isthmus of Hierapetra, Crete* Philadelphia 1908 p. 47 f. pl. 11,

Haas *Bilderatlas zur Religionsgeschichte* Leipzig—Erlangen 1925 vii p. viii fig. 51, Nilsson *Min.-Myc. Rel.* pp. 74 ff. fig. 3 B, 267, 271). Lastly, a tubular vessel, found in Rhodes, probably at Kameiros, and now in the Antiquarium at Berlin (inv. no. 4563), is of roughly similar shape. It is 0.285 m high, and again has no bottom. A ribbed handle on either side is flanked by four bosses and two snakes in relief. Three of these snakes have tongues serrated like an oak-leaf; the fourth has a tongue small and pointed. The neck of the vessel is decorated with a number of birds, separately modelled and attached, several of which are missing. The light brown clay is painted rather carelessly with maeanders, zig-zags, etc. of dark brown glaze in the geometric style—an indication that here too we have a ‘Minoan’ usage surviving into post-‘Minoan’ times (R. Zahn ‘Kultgerat aus Rhodes’ in K. F. Kinch *Fouilles de Vroulia (Rhodes)* Berlin 1914 pp. 26—34 fig. 13 a, b, and c (= my fig. 118 a, b, and c), E. belongs to the same language as the place-name *Phaistós*¹. Now if—as we have argued²—the ‘Minoan’ earth-goddess (Rhea) had for consort a ‘Minoan’ sky-god (Kronos) armed with a double axe, it is tempting to guess that Hephaistos, whose double axe of bronze is mentioned by Pindar as a ‘holy axe’³ and is often figured on sixth-century vases⁴, was in the remote prehistoric past the veritable husband of Athena. On which showing Hephaistos and Athena

Religion Giessen 1913 p. 41 f. fig. 31 (inexact), Nilsson *Min.-Myc. Rel.* pp. 273, 386 f.). Bottomless vases are in the nature of funnels, and sometimes certainly, as in the Dipylon cemetery at Athens, conveyed liquid offerings through the earth to the dead below (*supra* ii. 1056). It is therefore reasonable to think that the tubular vessels used in the cult of the ‘Minoan’ snake-goddess served a similar purpose and prove her to have been *ab origine* an earth-mother (R. Zahn *loc. cit.* p. 34, Nilsson *Min.-Myc. Rel.* pp. 271 ff., 386 f.). However, Sir A. J. Evans *The Palace of Minos* London 1935 iv. 1 pp. xii, 138 ff., having found in a ‘Minoan’ house at Knossos three clay tubes with cups attached to their sides, thinks that these were receptacles for domestic snakes, derived from common drain-pipes. He offers the same explanation of all the ‘snake tubes’ mentioned above, comparing their loops with the looped variety of water-pipe. Ingenious, but far from convincing.

(d) Hellenistic relief-ware of Graeco-Egyptian style has sometimes by way of prophylactic (?) decoration an emblem or emblems of Athena. I figure three small vases in my collection, which are made of salmon-coloured unglazed (?) clay and were found at Ephesos. They exhibit the following designs: (1) on the one side a helmeted head of Athena, on the other a *Gorgóneion* of beautiful type (fig. 119. Height 3½ inches); (2) a *Gorgóneion* with dishevelled hair and a large six-rayed star beneath an inverted lotos-pattern round the rim (fig. 120. Height 1½ inch); (3) two snakes with crossed tails above a single larger snake encircling the lower part of the vase (fig. 121. Height 4⅓ inches).

It is perhaps not too hazardous to conjecture that Trojan *Gesichtsurnen* and the like point backwards to a primitive belief that earthen vessels should take the form of the earth-mother of whose very substance they were made. Be that as it may, in view of the varied types of these sacred or semi-sacred vases it is quite conceivable that—as Kretschmer supposed—Athena drew her name from a clay vessel used in her service, though I should prefer to conclude that the vessel drew its name from the goddess.

¹ I do not propose to treat *Ἡφαίστος* and *Φαίστος* as etymologically connected, though many years ago I toyed with the notion (*Class. Rev.* 1904 xviii. 85 n. 1). I now agree with Farnell *Cults of Gk. States* v. 390 n.2: ‘There is no *vraisemblance* in the supposition.’ Platon, who might be cited in its support, though a giant in philosophy, was but a dwarf in philology (Plat. *Crat.* 407 c EPM. τί δὲ δὴ τὸν Ἡφαίστον; πῇ λέγεις; ΣΩ. ἢ τὸν γενναῖον τὸν φάεος ἱστορία ἐρωτᾷς; EPM. ἔοικα. ΣΩ. οὐκοῦν οὗτος μὲν παντὶ δῆλος Φαίστος ὢν, τὸ ἦτα προσελκυσάμενος;). Nevertheless it remains probable that the language which produced the word *Φαίστος* produced also the word *Ἡφαίστος*.

would be but local equivalents of Kronos and Rhea¹. Some such assumption at least accounts for their persistent juxtaposition in classical times. Homer's cunning craftsman, who overlays gold on silver, is 'the man that Hephaistos and Pallas Athene have taught all manner of art, and full of grace are the works of his hand²'. The Homeric *Hymn to Hephaistos*³ opens on the same note:

Sing, tuneful Muse, Hephaistos and his craft,
Who with bright-eyed Athena taught mankind
All splendid work on earth, whereas of yore
Men dwelt like brute beasts in their mountain-dens.

Solon's⁴ description of the artificer owes something to these epic writers:

Taught by Athena and Hephaistos' skill
Another learns his trade and earns his meal.

Platon⁵ too with curious frequency insists on the partnership of Hephaistos and Athena.

Their association is further attested by mythology, art, and actual cult. If Hephaistos fashioned woman, Athena adorned her—a story as old as Hesiod⁶ and brilliantly illustrated by the Anesidora-cup (pl. xxvii)⁷.

¹ This squares with the fact that in Crete, where Kronos and Rhea bulked big, Hephaistos (Farnell *Cults of Gk. States* v. 389 and L. Furtwängler—Reichhold *Gr. Vasenmalerei* i. 283, followed by Hoppin *Red-fig. Vases* ii. 342 no. 22, attributes this *kýlix* to the 'Meister der Penthesileia-Schale'; Pfuhl *Malerei u. Zeichnung d. Gr.* ii. 530 f., to E. Buschor's 'Pferdemeister.' But J. D. Beazley *Attic red-figured Vases in American Museums* Cambridge Mass. 1918 p. 129 denies the attribution, and in his *Attische Vasenmaler des rotfigurigen Stils* Tübingen 1925 p. 261 no. 6 describes the vase as in the 'Art des Pistoxenosmalers.'

Found at Nola in 1828 or 1829, this great *kýlix* (height 5 inches: diameter 12½ inches) passed through the Hope and the Bale collections before being purchased in 1881 for the British Museum. The exterior is red-figured and shows scenes in the *palaistra* (?). The interior has black outlines on a white ground, with inner markings in brown. Anesidora's *chiton* and Hephaistos' *himation* are brown with details in purple and white. Athena has a *chiton* with a purple girdle, and a dark brown *aigis* with purple border and *Gorgoneion* in white. The head-dresses and the top of the hammer are moulded and gilt on a raised ground. Substantial parts of the design are missing. The heads of Anesidora and Athena together with the right arm of the latter have been added in pencil, while part of the former's *chiton* has been restored in water-colour. The names are ΑΘΕΝΑΑ, [Α]ΝΗΣΙΔΟΡΑ, ΗΕΦΑΙ[Ι]ΣΤΟΣ (P. Kretschmer *Die Griechischen Vasenschriften* Gütersloh 1894 p. 203 f. no. 187, correcting the *Corp. inscr. Gr.* iv no. 7416).

The moment represented is that described by Hes. *theog.* 573 ff. ζῶσε δὲ καὶ κόσμησε θεὰ γλαυκῶπις Ἀθήνη | ἀργυφὴν ἐσθῆτι... | ἀμφὶ δὲ οἱ στεφάνην χρυσέην κεφαλῇφιν ἔθηκε, | τὴν αὐτὸς ποίησε περικλυτὸς Ἀμφικτυΐης | ἀσκήσας παλάμῃσι, χαρίζομενος Δαί πατρί. And the composition as a whole is comparable with that of the Triptolemos-relief from Eleusis (Svoronos *Ath. 'Ανησιδώρα, like Πανδώρα, was an epithet of the earth-mother (Hesych. Hercher omits the second sentence (as a gloss?). From Ge it passed to her 'offshoot' (*supra* i. 396 f.) Demeter, who was likewise empowered γῆς καρπὸν ἀνῆσειν (*h. Dem.* 332). Thus in the Attic deme Phlya the cult of Ge called Μεγάλη Θεός was supplemented by that of Demeter Ἀνησιδώρα and by that of Kore Πρωτογένη (Paus. 1. 31. 4 cited *supra* ii. 251 n. 2 *plūs* ii. 1066). Demeter Ἀνησιδώρα was perhaps worshipped in Melite, another deme of the tribe Kekropis (Plout. *sympr.* 9. 14. 4 καὶ γὰρ ὑμῖν (*sc.* τοῖς Μελιτεῦσι) ἐστὶ Δημήτηρ Ἀνησιδώρα), and her appellative figures in the lists drawn up by the grammarians (Scholl—Studemund *anecd.* i. 270 Ἐπιθετα Δημήτρας...3 ἀνησιδώρας, 277 Αἱ τῆς Δημήτρος κλήσεις... ἀνησιδώρα, *cp.* 282 Κλήσεις Δημήτρος ὀνησιδώρα (*sic*)).

Starting from this fact archaeologists, in *primis* C. Robert (*Archaeologische Maerchen aus alter und neuer Zeit* Berlin 1886 p. 194 ff. pls. 4 and 5, 'Pandora' in *Hermes* 1914 xlix. 17—38 with 2 figs.), J. E. Harrison (*Myth. Mon. Anc. Ath.* p. 451 f., 'Delphika' in the *Journ. Hell. Stud.* 1899 xix. 232 ff. figs. 11, 12, *Proleg. Gk. Rel.*² p. 276 ff. figs. 67—71), and P. Gardner ('A New Pandora Vase' in the *Journ. Hell. Stud.* 1901 xxi. 1 ff. pl. 1), have gone far towards explaining the origin of the Anesidora-type. The story shapes itself as follows. The ancients seem to have regarded the earliest agricultural operations of the year as a kind of *evocatio*, by means of which the earth-powers were wakened from their winter's sleep and summoned to help the farmer in his work. When

the *ager Tarquiniensis* was being ploughed and the furrow was driven deep, up came on a sudden Tages, a boy in appearance but an old man in wisdom, scared the ploughman and delivered his auguries to the Etruscans (Cic. *de div.* 2. 50, Ov. *met.* 15. 553 ff.: see

Fig. 122.

further C. Pauli and W. Schultz in Roscher *Lex. Myth.* v. 3 ff.). Similarly in Greek belief, when the hard earth is broken up by men with mallets or mattocks,—and it must be remembered that the most primitive form of agriculture was *Hackbau* (E. Hahn in M. Ebert *Reallexikon der Vorgeschichte* Berlin 1926 v. 12 f. pl. 11)—up comes Mother Earth herself in answer to their summons. Her epiphany, though nowhere noted in literature, is given on a series of vases (C. Robert *Archaeologische Maerchen* pl. 5,

Fig. 124.

But the Anesidora-cup is not the only witness. The fact is that from the beginning of the fifth century¹ onwards classical art shows a well-marked tendency to bring together the craftsmen's god and the craftsmen's goddess. A fragmentary design from the outside of a red-figured *kylix* painted in the style of Euphronios (fig. 125)² has Hephaistos seated with a *phidale* in his right hand and a double axe or hammer in his left. By his side stands Athena with helmet, *aigis*, and spear. Her hair and bracelet, like his *phidale*, are in gilded relief, and suggest that this is no trivial occasion. Equally impressive is the eastern frieze of the Parthenon (*supra* ii pl. xlv), which again shows Hephaistos seated, but this time with Athena seated too. He turns towards her, as Hera towards Zeus, the pre-Hellenic exactly balancing the Hellenic pair. A broken relief from Epidauros, carved in Pentelic marble c. 400 B.C. and now preserved in the National Museum at Athens (fig. 126)³, has another masterly composition.

A, B, C). Of these I reproduce the earliest, a black-figured *lekythos* at Paris (De Ridder *Cat. Vases de la Bibl. Nat.* i. 197 f. no. 298, Lenormant—de Witte *Él. mon. céram.* i. 162 ff. pl. 52, Welcker *Alt. Denkm.* iii. 201 ff. pl. 15, 1, W. Frohner *Les Musées de France* Paris 1873 p. 72 (L) col. pl. 22 (= my fig. 122)), which shows the head and lifted hands of Ge rising from the ground in response to the hammerers, and the most elaborate, a red-figured *hydria* in the Louvre (W. Frohner *Choix de vases grecs inédits de la collection du Prince Napoléon* Paris 1867 p. 24 ff. pl. 6, *id.* *Les Musées de France* Paris 1873 p. 68 ff. col. pl. 21 = my fig. 123), which transforms the men with mallets into Silenoi with mattocks and makes Ge emerge from the broken soil as a great white head in three-quarter position, welcomed by a pair of hovering Erotes and a sudden growth of leaf and tendril. Such a scene could be easily re-interpreted as the making of a large female figure, cp. the title of Sophokles' Satyr-play *Πανδώρα ἡ σφυροκόποι* (Soph. *frag.* 441—445 Nauck², 482—486 Jebb). It was in fact modified to express the making of Pandora out of earth (Hes. *theog.* 571 γαίης, *o.d.* 61 γαῖαν ὅδε φέρειν, 70 ἐκ γαίης) or clay (Soph. *frag.* 441 Nauck², 482 Jebb καὶ πρῶτον ἀρχοῦ πηλὸν ὀργάζειν χερσίν, cp. Apollod. i. 7. 2 ἐπλασαν, Hyg. *fab.* 142 ex luto), as may be seen from a red-figured volute-*krater* at Oxford (P. Gardner in the *Journ. Hell. Stud.* 1901 xxi. 1 ff. pl. 1 (= my fig. 124), J. E. Harrison *Proleg. Gk. Rel.*² p. 280 f. fig. 71, C. Robert in *Hermes* 1914 xlix. 17 ff. fig.), on which Pandora emerges from the ground quite in the manner of Ge, and her maker Epimetheus—a somewhat cynical doublet of Prometheus (*supra* i. 329 n. 4)—still holds a large-sized mallet; the hovering Eros marks Pandora as Epimetheus' bride. All the figures named on this vase, Zeus, Hermes, Epimetheus, Pandora are Hellenic. The British Museum *kylix* (pl. xxvii) is of interest because it transfers the Hellenic myth to the pre-Hellenic deities Athena and Hephaistos. In the process Pandora, re-named Anesidora, becomes less like the emergent Ge, while the gilded hammer of Hephaistos is less reminiscent of the countryman's rude tool.

¹ L. Malten in Pauly—Wissowa *Real-Enc.* viii. 348 cites in this connexion a black-figured sherd from the Akropolis at Athens noted by W. Dörpfeld in the *Ath. Mitth.* 1888 xiii. 109 f. Hephaistos leaning on his staff presents a helmet to Athena, who stands before him in the pose of the Dresden 'Lemnia.' An archaistic relief from Greece now in the Jacobsen collection (fig. 127)¹ repeats the *motif* of Hephaistos presenting the helmet, but combines him awkwardly enough with an Athena in the 'Promachos'-attitude. A fresh turn is given to the kaleidoscope by the artist who designed a well-known *sarcophagus* in the Villa Albani². A procession of deities bringing gifts for the marriage of Peleus and Thetis is

1897 p. 289 ff. with fig., E. Reisch in the *Jahresh. d. oest. arch. Inst.* 1898 i. 79 ff. fig. 37 (= my fig. 126), B. Sauer *Das sogenannte Theseion* Leipzig 1899 p. 248 ff., E. Lowy in the text to *Einzelaufnahmen* v. 27 ff. no. 1256, Svoronos *Ath. Nationalmus.* p. 369 ff. no. 1423 pl. 68 with bibliography.

Furtwängler took this relief to represent the Athena *Lemnia* of Pheidias receiving a helmet from Hephaistos the natural protector of Athenian *klerouchoi* in Lemnos. To account for the relief having been found at Epidauros, he suggested that it may have decorated the base of a *stèle* bearing some decree of the said *klerouchoi*.

Reisch and Sauer regard the subject as reflecting the Hephaistos and Athena *Hephaistia* made by Alkamenes for the Hephaisteion (the so-called 'Theseion') at Athens. See further E. A. Gardner in the *Journ. Hell. Stud.* 1899 xix. 6 ff.

Lowy holds that the god is not Hephaistos at all, but a common type of Asklepios. He thinks that Athena, paying a friendly visit to Asklepios, here doffs her armour in token of the guest-friendship enjoyed by Athenians at Epidauros, while Asklepios extends his right hand towards her with a gesture of greeting (cp. an Attic relief of 398/7 B.C. published by P. Foucart in the *Bull. Corr. Hell.* 1878 ii. 37 ff. pl. 10, Collignon *Hist. de la Sculpt. gr.* ii. 145 fig. 71, E. Löwy in the text to *Einzelaufnahmen* v. 2 f. no. 1212). But the absence of a snake (unless indeed it was added in paint, which is just conceivable) tells heavily against the identification of the god as Asklepios (contrast e.g. Svoronos *Ath. Nationalmus.* no. 2985 pl. 197, 1); and his right hand was certainly touching the helmet, not greeting the goddess.

Svoronos, ingenious as ever, agrees with Lowy in naming the god Asklepios, but argues that Athena is offering him her helmet and shield. In this we are to see a symbolic allusion to the events of the year 338 B.C., when Philip after the victory of Chaironeia marched against Sparta at the head of an irresistible force. In the nick of time Asklepios came to the rescue from Epidauros (Isyll. F 65 f. Powell, E 60 f. Diehl τοῖς Ἀσκληπιδῶς <ῆ> λθε βοαθῶς ἐξ Ἐπιδαύρου | τιμῶν Ἡρακλέος γενεάν· ὅς φείδετο ἄρα Ζεὺς) and appeared to the boy Isyllos clad in golden armour (Isyll. F 68 f. Powell, E 63 f. Diehl τῶι τύγα ποστειχόντι συνάντησας σὺν ὀπλοῖσιν | λαμπρόμενος χρυσείοισ', Ἀσκληπιέ). Svoronos surmises that Athens sent arms to Sparta through the agency of Epidauros, and that this relief was set up in Epidauros to commemorate the fact as soon as the death of Alexander made an anti-Macedonian dedication possible. Accordingly he would date the relief c. 322 B.C., comparing a very similar relief of that year (*Ath. Nationalmus.* p. 246 f. no. 1331 pl. 36, 1). The whole hypothesis is clever, but frail.

winter¹. Apollonios of Acharnai, a writer on Athenian festivals, states that the rite was observed by all the craftsmen, especially the coppersmiths, of Athens. Soudas remarks that some called it the Athenaia, while others described it as a festival of the whole folk². It was, he adds, an ancient festival once celebrated by all the people, which had come to be viewed as an affair of the artisans only, since Hephaistos had wrought bronze in Attike. Phanodemos the Atticist even denied that Athena had any part or lot in it³. But here, as V. von Schoeffer⁴ points out, he must have been mistaken, for this was the day on which the priestesses with the *Arrhephóroi* began to weave Athena's *péplos*⁵. reason to doubt Soudas' statement that the festival itself was sometimes called the Athenaia¹. Indeed, a fragmentary inscription found on the Akropolis might be held to connect the goddess with the Chalkeia². On the whole we are justified in concluding that the festival was common to both deities, but that Hephaistos bulked bigger at it than Athena. *En revanche*, in the Erechtheion, where Athena *Polias* had the whole of the eastern chamber, Hephaistos was content with a mere altar³. The two obtained full and equal recognition in the Hephaisteion on the Market Hill⁴, at the foot of which the coppersmiths plied their trade⁵. A decree⁶ of the year 421/0 B.C. concerning the celebration of the Hephaistia mentions the sanctuary (?)⁷ 'of Hephaistos and Athenaia' and enacts 'that the Council' set up 'the altar for Hephaistos' and 'make his' statue (?)⁸.

statues and note that tin was bought for 'the floral ornament (*ánthemon*) beneath the shield.' Hence E. Reisch¹ concludes that the statues in question were two bronze effigies of Hephaistos and Athena. Further, since a famous statue of Hephaistos, standing and so draped as to minimise his lameness, is known to have been made for Athens by Alkamenes², and since Athena with her shield supported on a floral ornament is a type existing in several replicas³ which are held to reflect more or less closely the style of that great

to be called by the curious¹ appellation *Hephaistia*². In 343/2 B.C. Phanodemos son of Diyllos, jealous as ever for the credit of Hephaistos³, proposed a decree⁴ which directed that a certain 'statue be dedicated to Hephaistos and to Athena *Hephaistia*.' After this we hear no more of the temple-deities for a good five hundred years. But they were still there in Pausanias'⁵ time:

'Above the Kerameikos and the King's Portico as they term it is a temple of Hephaistos. Knowing the tale told about Erichthonios, I was not surprised to find that a statue of Athena stands beside the god; but observing that her statue has glaucous eyes I recognised the myth as Libyan. For the Libyans say that she is a daughter of Poseidon and the lake Tritonis and that therefore her eyes are glaucous like Poseidon's.'

A bronze statue might, as Reisch⁶ suggests, have had eyes inlaid with silver; more probably they were of precious stone⁷ or vitreous

¹ E. A. Gardner in the *Journ. Hell. Stud.* 1899 xix. 8 n. 1: 'It has been suggested to me by Mr G. F. Hill that Athena Hephaestia is a title very difficult to parallel in Greek mythology, if the name be derived directly from Hephaestus; such epithets are more commonly local in origin, and this one suggests Hephaestia in Lemnos, where there was a prominent cult of the goddess, attested by coins, and where she was associated in worship with Hephaestus. He further suggests that the famous Athena Lemnia of Phidias, whose association with Athenian cleruchs is a mere conjecture, was but another form of this Athena Hephaestia. In both alike the goddess was represented in her more peaceful aspect, as patroness of art and handicraft. The suggestion of a Lemnian association is peculiarly appropriate in a work attributed to Alcamenes, who was himself a Lemnian.'

enamel¹. One last allusion to Hephaistos and his partner is made two hundred and fifty years later by Saint Augustine². After detailing the story of Erichthonios, the reputed child of Hephaistos and Athena, he continues:

‘But it must be admitted that men of learning deny the charge and wholly exonerate their gods. They say this fanciful tale arose from the fact that in the temple at Athens, which is shared by Hephaistos and Athena, an exposed boy was found with a snake coiled about him. The snake signified that he would be famous. Accordingly, since the parents were unknown, his discovery in the joint temple led to him being called the son of Hephaistos and Athena. Yet,’ adds Augustine with a sudden flash of shrewdness, ‘it is the mythical fancy rather than the alleged fact that accounts for the child’s name’³.

There is little doubt that the myth of Erichthonios, whenever and wherever it originated, had as early as the fifth century B.C. become attached to the Hephaisteion. Variations on the type of Athena *Hephaistia* represent the goddess with a kindly maternal air, either bearing a basket from which a snake creeps over her bosom (fig. 139)⁴, or dandling the infant on her arm (fig. 140)⁵. The myth itself—a crude, not to say ugly, narrative—is told as follows by Apollodoros⁶:

‘Some state that he (*sc.* Erichthonios) was a son of Hephaistos and Atthis, daughter of Kranaos; others, that he was a son of Hephaistos and Athena on this wise. Athena came to Hephaistos, wanting him to make weapons. But he, being forsaken by Aphrodite, fell in love with Athena and began to pursue her. Thereupon she fled from him. And he, when he drew near to her with much

ado (for he was lame), attempted to consort with her. But she, being a chaste virgin, would not brook it, and he dropped his seed on the leg of the goddess. In disgust thereat she wiped off the seed with wool and flung it on the earth. So as she fled and the seed fell upon the earth Erichthonios was born.¹

This narrative, as appears from a scholion on the *Iliad*¹, was drawn from the *Hekale* of Kallimachos². Its far-fetched etymology is characteristic of the Alexandrine school. An older version, which involves a somewhat less fantastic *étymon*, is attributed by Eratosthenes³ to Euripides⁴, who certainly had leanings toward sophistic mythology⁵:

‘With regard to the birth of Erichthonios, Euripides tells the following tale. Hephaistos being in love with Athena was minded to unite with her. But she turned her back upon him and, choosing rather to keep her virginity, hid herself in a certain spot of Attike⁶, which they say was called after him *Hephaisteion*. He, thinking to master her by assault, was struck by her spear and let drop his desire, the seed falling on the earth. Therefrom, they say, was born a child, who for this reason was called Erichthonios.’

The three derivations of the name *Erichthonios*, which connected it successively with *éros* ‘love,’ *érion* ‘wool,’ and *éris* ‘strife,’ are of course all wrong⁷. But their very variety proves that they are not an essential element in the tale. It existed before them; for one of the scenes represented by Bathykles the Magnesians on the throne of Apollon at Amyklai is described by Pausanias as ‘Athena fleeing from Hephaistos, who is pursuing her⁸.’ Bathykles made the throne

perhaps in the middle of the sixth century B.C.¹, perhaps rather in its last quarter², and we have here either—as C. Robert³ suggested—the record of an ancient Ionic myth concerning Hephaistos' love for Athena or—as L. Malten⁴ contends—the first appearance of the Attic myth in which Erichthonios figured as the earthborn offspring of Hephaistos' frustrate desire. Bathykles' design certainly included Hephaistos and Athena; but it hardly justifies us in inferring the Erichthonios-sequel. Athena pursued by Hephaistos was a sixth-century *motif*, which seems for some time to have existed independently and later to have been supplemented by the episode of Erichthonios. Thus an early red-figured *amphora* from Bologna (fig. 141)⁵ has on the one side Athena pursued by Hephaistos, on the other a bearded male with a long sceptre—presumably Zeus. But Lucian describes a picture in which 'Hephaistos in love is pursuing Athena, she is fleeing from him, and

from his pursuit Erichthonios is born¹. Elsewhere he insists that the pantomime must be familiar with the whole range of Attic mythology—'all that is told of Athena, all that is told of Hephaistos and Erichthonios²,' etc. The attempt of Hephaistos on Athena might no doubt shock those who worshipped the Virgin goddess, and that sufficiently accounts for the evasive versions of Euripides³ and Kallimachos⁴. But mythological apologists had facile answers to all questionings. Athena had been given to Hephaistos but had vanished at the critical moment⁵. Athena was Hephaistos' reward for freeing Hera from the magic throne that he had made⁶. Athena was the price paid by Zeus to Hephaistos for his manufacture of the thunderbolt⁷, or for his services in cleaving the celestial head⁸.

Such explanations are the expiring efforts of the mythopoeic mind; but at least they imply that there was something to be explained. And that something was the startlingly blasphemous, but ancient, orthodox, and wholly irrepressible, conviction that Hephaistos was the mate of Athena.

Now the pairing of Hephaistos with Athena has often been regarded as a mere juxtaposition of two deities drawn together by their common patronage of the arts and crafts¹. And doubtless that community of interest did much to strengthen their union. But the root of the matter goes deeper. When we remember that the grouping together of these two occurs already in Homeric verse² and Hesiodic myth³, that it is attested by the ancient pandemic festival of the Chalkeia⁴, that it produced the Hephaisteion⁵, one of the noblest fifth-century buildings of Athens⁶, and finally that the cult-statues of Hephaistos and Athena *Hephaistia*, in all probability the work of Alkamenes⁷, were there worshipped side by side for more than half a millennium⁸, it becomes increasingly difficult to resist the impression that in the remote prehistoric past Hephaistos and Athena were simply husband and wife⁹.

¹ See e.g. Harrison *Myth. Mon. Anc. Ath.* p. 119 f., F. Dümmler in Pauly—Wissowa *Real-Enc.* ii. 1991, Farnell *Cults of Gk. States* v. 377 (a more cautious statement: 'his association in Attica with Athena, which may have been devised originally to connect some prominent tribe that worshipped him with the national religious polity, was regarded as the natural fellowship of the divinities of art').

My own opinion—if I may be allowed to state it with dogmatic brevity—is this. The Akropolis at Athens was originally called *Athéne*, a place-name comparable with the pre-Greek *Mykéne*, *Palléne*, *Mityléne*, *Priéne*, etc.¹ The old singular *Athéne*, thanks to its locative form **Athenai*, gave rise to the new plural *Athénai*, just as *Mykéne* came to be replaced by *Mykénai* or *Thébe* (*Thebaigenés*) by *Thébai*². The goddess was named *Athéne* like the rock, because at the outset she *was* the rock, a mountain-mother of the usual Anatolian sort. In classical times her motherhood, at first perhaps compatible with renewed virginity³, had passed into perpetual maidenhood. But the Elean women, tenacious of archaic beliefs⁴, when their land was bereft of men, prayed that they might conceive so soon as they met their husbands, and on their prayer being heard

Particular points are criticised by L. Grasberger *Studien zu den griechischen Ortsnamen* Würzburg 1888 p. 147 ff. and F. Solmsen in the *Zeitschrift für vergleichende Sprachforschung* 1893 xxxii. 521 n. 1, while A. Thumb in K. Brugmann *Griechische Grammatik*⁴ München 1913 p. 267 pronounces the whole contention 'sehr unsicher.' But the principle seems sound and is of wide application. Examples near at hand are *Coton* (W. W. Skeat *The Place-Names of Cambridgeshire* Cambridge 1901 p. 8: probably 'A. S. cotum, dative pl. of cot, a cottage...the prep. æt (at the) being understood') and *Newnham* (*id. ib.* p. 22 and J. ³ Hera recovered her virginity every year by bathing in the spring Kanathos near Nauplia (Paus. 2. 38. 2 with Sir J. G. Frazer and H. Hitzig—H. Blumner *ad loc.*). It was perhaps with the same intention that the Argive women once a year took the image of Athena and the shield of Diomedes (*Palládion*) to the river Inachos and washed them there (Kallim. *lavra. Pall.* 1 ff. with schol. on lines 1 and 37). On the Athenian Plynteria as implying a *τέπος γάμος* of Athena see the important discussion by E. Fehrle *Die kultische Keuschheit im Altertum* Giessen 1910 pp. 171—177. P. Saintyves *Les Vierges Mères et les Naissances Miraculeuses* Paris 1908 pp. 1—280 ignores the topic.

H. von Protz's *dictum* in the *Archiv f. Rel.* 1906 ix. 87 'Die Akropolis-Athena ist Meter, ihr Opferter eine trachtige Sau' is justified by an early (first quarter of 5. v. Walter *Beschreibung der Reliefs im Kleinen Akropolismuseum in Athen* Wien 1923 p. 34 f. no. 48, cp. p. 70 f. no. 120 (?) for sacrifice to an archaic Athena (helmet carved, crest painted). K. Lehmann-Hartleben 'Athena als Geburtsgöttin' in the *Archiv f. Rel.* 1926 xxiv. 19—28 fig. 1 (=my pl. xxviii)—an interesting article to which my attention was drawn by Mr A. D. Nock—concludes: 'Es handelt sich also offenbar um einen Bittgang für eine bevorstehende Geburt.' O. Weinreich *ib.* p. 28 acutely suggests that the 'foolish stories' told by Euhemeros and Varro with regard to the proverb *ὡς τὴν Ἀθηνᾶν, sus Minervam* (Fest. p. 310 b 18 ff. Müller, p. 408, 14 ff. Lindsay) in reality gave the *αἵτιον* for a pig-sacrifice to Athena.

In this connexion it may be noticed that Niket. Chon. 359 B p. 739 Bekker certainly of a colossal statue in the Forum of Constantine at Constantinople—a statue almost certainly to be identified with the Bronze Athena of Pheidias (W. Gurlitt 'Die grosse eherne Athena des Pheidias' in *Analecta Graeciensia* Graz 1893 pp. 101—121. *E contra* S. Reinach in the *Rev. Ét. Gr.* 1907 xx. 399—417)—εἶχε δὲ κατὰ τοῖς στέρνοις ὀρθότιτρον ὃν ποικίλον αἰγιδῶδες ἐπένδυμα. Athena is ὀρθότιτρος in many archaising reliefs and vase-paintings (e.g. *supra* pl. xxviii, E. Schmidt *Archaische Kunst in Griechenland und Rom* München 1922 pl. 8, 1—3, pl. 9, 3, *Mon. d. reminiscent of a 'Minoan' mother-goddess. Indeed, when Alexander the Great struck his magnificent gold coins (figs. 142, 143)¹ showing the head of Athena with a coiled snake on its helmet, we may detect a last unconscious echo of the Cretan goddess with a snake twined about her head-dress. What the name *Athéne* actually meant, we do not know and it is idle to guess. But if any reliance may be placed on Kretschmer's ingenious comparisons², the word was Pelasgian or Tyrsenian and probably hailed from Asia Minor.

Herodotos¹, quoting Hekataios², tells how the Pelasgians, who had built the wall round the Akropolis at Athens, on being driven out by the Athenians went and settled in Lemnos. And Thoukydides³ in his description of the Chalcidian peninsula Akte says: 'Most of the inhabitants are Pelasgians, belonging to the Tyrsenians who once dwelt in Lemnos and Athens, together with Bisaltai, Krestones, and Edones.' I agree, therefore, with L. R. Farnell⁴ who in 1909 expressed himself as follows: 'It is a reasonable hypothesis...that the presence and prominence of Hephaistos in Attica and Lemnos is due to the settlement of a Pelasgic population in those localities.' A. Fick⁵ in the same year had independently reached the same conclusion: 'Hephaistos from first to last belongs to the pre-Greek Pelagonian-Pelasgian-Tyrsenians. Centres of his cult are Lemnos and Attike....His name *Héphaistos* too is certainly Pelasgian.' Further, I accept the common view that Hephaistos was essentially a fire-god. When Agamemnon and the Greek leaders sacrificed an ox to Zeus, Homer⁶ relates how—

Piercing the entrails with spits they held them over Hephaistos.

This is no late rhetorical trope⁷ or academic allegory⁸, but an early animistic usage⁹. It meets us again rather unexpectedly in Aris-

totle's¹ treatise on meteorology. The philosopher compares thunder to 'the crackle heard in the flame, which some call Hephaistos laughing, others Hestia, others again their threatening.' Hephaistos, then, was ordinary fire, the fire that burns and crackles on the hearth. He was also the jet of flaming gas that leaps like a fountain from the rocky vent. For not only did such jets give rise to the Lycian place-names Hephaistion, Hephaistia, or the Mountains of Hephaistos², but the lambent flame was worshipped as the very god. L. Malten³ justly lays stress on the well-informed words of Maximus Tyrius⁴: 'For the Lycians Olympos sends up fire, not like that of Aitne, but peaceful and mild; and this fire is at once the place and the object of their cult.' It must not, however, be forgotten that earthly fire was commonly conceived as stolen or fallen from 'heaven'⁵. Hesiod, Aischylos, and others speak of Prometheus' theft⁶. Homer tells how Hephaistos, flung from heaven by Zeus because he had dared to help Hera, fell on Lemnos and was there tended by the Sinties⁷, or how after his fall (due to the unkindness of his mother who wanted to conceal her lame offspring) he was hidden for nine years in a hollow cave by Eurynome and Thetis⁸. The descent of Hephaistos on Lemnos gave curative

properties to the soil. Dioskorides¹ of Anazarbos, a contemporary of the elder Pliny, states that Lemnian earth was obtained from a tunnel in a marshy spot, mixed with goat's blood, moulded, stamped with the image of a goat, and hence called the goat's seal. It was drunk in wine as an antidote to poisons, and it countered the bites of poisonous creatures. Certain persons used it also in religious rites. And it was good for dysentery. Galen visited the island twice (162 and 166 A.D.²) to test the accuracy of Dioskorides' remarks³. On the second occasion he reached the hill near the town of Hephaistias and observes⁴ that its burnt colour and barren nature⁵ account for the myth of Hephaistos' fall. He found the priestess scattering wheat and barley on the ground, and performing

sundry other rites, after which she filled a whole waggon with the earth, took it to the town, and made it into the famous Lemnian seals¹. He asked if there was anything in the tradition that the blood of he-goats or she-goats had been first mixed with the earth, but was laughed at by those who heard him. One of them, a prominent citizen of Hephaistias, furnished him with a treatise setting forth all the virtues of Lemnian earth, and said that he himself used it in cases of wounds, snake-bites, bites of savage beasts, poisonous drugs, etc. So Galen, much impressed, got 20,000 of the seals and did not scruple to try them². Elsewhere³ he complains that dangerous imitations of the real seals were put on the market. Philostratos⁴ of Lemnos (c. 235 A.D.) informs us that Philoktetes, when left on the island, was promptly healed by means of Lemnian earth, a sovereign remedy for madness, hemorrhage, and the bite of the water-snake. F. W. Hasluck⁵ has traced the further fortunes of this specific from the pharmacopœia of Paulos the Aeginetan⁶ through medieval⁷ to modern times. C. Fredrich⁸ in his valuable

I may add that the well-stocked medical cabinet of J. F. Hephaistos with the earth-goddess Lemnos¹(fig. 152)², consummated

¹ Steph. Byz. *s.v.* Λήμνος (cited *supra* p. 191 n. o) asserts—perhaps on the authority of Hekataios (H. Diels in *Hermes* 1887 xxii. 442, Gruppe *Gr. Myth. Rel.* p. 225 n. 15)—that maidens used to be sacrificed to this μεγάλη θεός. Since Aristophanes in his *Lemnīai frag.* 8 (*Frag. com. Gr.* ii. 1100 Meineke) *ap. Phot. lex. s.v. μεγάλην θεόν*, cp. Hesych. *s.v. μεγάλη θεός*, uses precisely the same phrase of the Thracian Bendis, who is often Hellenised as Artemis (*e.g. supra* ii. 115, 501), it seems highly probable that the Lemnian goddess was in historic times regarded as a form of Artemis and that goats had come to be substituted for her girl-victims. This at least would account for the persistent tradition of goat's blood mixed with Lemnian earth and for the goat as the sacred seal of the local Artemis.

Moreover, an exact parallel may be found in the story of Embaros who, after promising to sacrifice his daughter to Artemis Μουνυχία, substituted a she-goat clad in the daughter's garments (*supra* i. 711 n. 9). This is indeed more than a mere parallel. Since Embaros was the reputed founder of the sanctuary of Artemis Μουνυχία (Pausanias the lexicographer *ap. Eustath. in Il.* p. 331, 25 ff. ὁ δ' αὐτὸς Πανσανίας ἱστορεῖ καὶ τινα Ἐμβαρον ἐπὶ εὐχῇ σοφίσασθαι. ἰδρύσατο γάρ, φησι, Μουνυχίας Ἀρτέμιδος ἱερὸν ἄρκτου δὲ γενομένης ἐν αὐτῷ καὶ ὑπὸ Ἀθηναίων ἀναιρεθείσης, λοιμὸς ἐπεγένετο, οὗ ἀπαλλαγὴν ὁ θεὸς ἐχρησµόδησεν, εἰ τις τὴν θυγατέρα θύσει τῇ Ἀρτέμει, Βάρος δὲ ἡ Ἐμβαρος ὑποσχόμενος οὕτω ποιήσει ἐπὶ τῷ τὴν ἱερωσύνην τὸ γένος αὐτοῦ διὰ βίον ἔχειν, διακοσμήσας τὴν θυγατέρα, αὐτὴν μὲν ἀπέκρινεν ἐν τῷ ἁδίνῳ, αἶγα δὲ ἐσθῆτι κοσμήσας ὡς τὴν θυγατέρα ἔθυσεν. θόεν εἰς παροιμίαν, φησί, περίεστη Ἐμβαρος εἰ, τούτεστι νονεχῆς, φρόνιμος), who stood in the closest relation

to the Thracian Bendis (*supra* ii. 115), it seems likely that he came from the Thracian area. And, if so, his name *Embaros* may well be the would-be Greek form taken by a name really akin to *Imbros*. A mountain in Kilikia Tracheia was called *Imbarus* (Plin. *nat. hist.* 5. 93), and A. Fick *Vorgriechische Ortsnamen* Gottingen 1905 p. 55 à propos of Imbrasos writes: "Ιμβρ- ist ein echt karisches Namenwort, wie schon G. Meyer in the *Beiträge zur Kunde der indogermanischen Sprachen* 1886 x. 193, comparing however *imber*, *δμβρος*, etc.] erkannte, und [P.] Kretschmer *Einleitung in die Geschichte der Griechischen Sprache* Gottingen 1896 p.] 358 [f.] weiter belegt; wir entnehmen daher 'Ιμβρος Gebirg und Kastell in Karien, die Insel Imbros, 'Ιμβραμος der karische Hermes und die karischen Personennamen 'Ιμβρασσις, 'Ιμβρασις und 'Ιμβράρηδος. Auch in lykischen Personen-, doch nicht Ortsnamen weist Kr. a. a. o. das Element 'Ιμβρ- nach."

The further parallel between the sacrifice of Embaros' daughter (bear killed, girl condemned, goat substituted) and that of Iphigeneia (girl condemned, deer or bear (schol. Aristoph. *Lys.* 645, *et. mag.* p. 748, 2 f.) or bull (*et. mag.* p. 748, 3 f.) substituted) is of course obvious.

Be that as it may, we have in Lemnos ample evidence of the belief that the fire which leaps up from the ground had erstwhile leapt down from the sky. Nor in Lemnos only. For what else but this popular conception underlay the fiery cycle of Herakleitos², in which 'the way up and down is one and the same'³? The Stoics, influenced as usual by Herakleitos⁴, identified Zeus with a single great continuous fire, which transformed itself into all the vast variety of the visible world⁵. In a special sense Zeus was equated with fire in heaven⁶, Hephaistos with fire on earth⁷; and the myth which told

method of allegorical conjecture had come curiously near to divining the original significance of Hephaistos.

Hephaistos and Athena—if I am right—were at first the sky-father and the mountain-mother of a Pelasgian or Tyrsenian race, which had its prehistoric home in Asia Minor. And in the rude tale of their attempted union I should detect a popular survival of their old Asiatic myth. The earliest allusion to it is *à propos* of a sixth-century craftsman from Magnesia on the Maiandros¹. That may be accident. But it can hardly be accidental that the closest parallels to the myth are found on Mount Agdos in Galatia² and among the peasants of the Caucasus³. All the evidence, linguistic, religious, mythological, really points in one direction—towards Asia Minor as the cradle of both deities alike.

The worship of Hephaistos and Athena, proper to the Pelasgian or Tyrsenian population of Athens, was complicated by that of other gods and goddesses as soon as Hellenic settlers entered Attike. An influx of Aeolians, who had swarmed off from Thessaly and settled on the north bank of the Ilissos⁴ (let us say, with Periphas as their king⁵), brought with them from Mount Olympos the cult of Zeus *Olympios* and Ge *Olympia*. With Ge *Olympia* was in all probability connected the rite of the *Arrhephoria* and the mythical birth of Erichthonios⁶. These purely Hellenic powers never quite dispossessed their Pelasgian predecessors, who in the sixth and fifth centuries recovered something of their former prestige thanks to the Panathenaic policy inaugurated by Peisistratos⁷. Hence the gradual intrusion of Athena and Hephaistos into representations of a myth, which was strictly concerned with Ge as fructified by the fertilising dew of Zeus⁸. Erichthonios, instead of being the child of Zeus by Ge, is the child of Hephaistos by Ge⁹ or.

more often, of Hephaistos by Athena. But to the last an occasional poet describes him as his father's 'dew'.¹

(b) The Daughters of Kekrops.

The three daughters of Kekrops were Aglauros, Pandrosos, and Herse. All of them alike bore names suggestive of the dew. *Aglauros* denotes 'the Sparkling One'²; *Pandrosos*, 'the All-bedewed'; *Hérse*, quite simply 'the Dew'.³

The oldest accessible version of their myth is that given, perhaps as early as s. v B.C.⁴, by Amelesagoras in his *Atthis*⁵:

¹ Kallim. *Hekale frag.* 1. 2, 2 f. Μαιρ ἀλλὰ ἐ Παιλλὰς | τῆς μὲν ἔσω δηναι(δ)ν ἀφῆ δρ[ό]σον 'Ηφαίστοιο, | κ.τ.λ., Nonn. *Dion.* 41. 63 f. οὐ τύπον ἀγριον εἶχον 'Ερεχθέος (by confusion with Erichthonios: *supra* p. 181 n. 2), δν τέκε Γαίης | ἀδλακι νυμφεύσας γαμήην 'Ηφαιστος ἐέσσην.

² The simplest and most satisfactory derivation of *Aglauros* is from *aglaós* (**aglaós* for **aga-glaós*: see Prellwitz *Etym. Wörterb. d. Gr. Spr.* 2 p. 4) and the common suffix -*ros*. Nik. *ther.* 62 uses *aglauros*, 'sparkling,' as an epithet of rivers, and *id.* 441 as an epithet of a snake.

H. Usener *Gotternamen* Bonn 1896 p. 136 f. inferred from the masculine ending that *Aglauros* was a compound of *ag(a)l-* (*agállēu*, *agallma*) and *aúra*: 'eine gottin heiterer luft, hellen himmels,' cp. *Aglaia*. A. Fick in the *Beiträge zur Kunde der indogermanischen Sprachen* 1901 xxvi. 112 similarly derives *Aglauros* from *aglaós* + *aúra* (taking *aglauros* *πάνδροσος ἔρση* to have been a dactylic line or half-line, 'die bei heiterer luft alles betraufelnde... bethauung'). E. Maass 'Aglaurion' in the *Atth. Mitth.* 1910 xxxv. 337—341 does the same, but holds that *aúra* (connected with *áhr*) was an old word for 'water' (hence *ánauros* 'mountain-torrent,' Hesych. *ἐπαύρους* τοὺς χειμάρρους ποταμούς, Hes. *theog.* 353 Πληξαύρη τε Γαλαξαύρη τ' as Nereids, and perhaps *aglauros* 'abundant, affluent'), which came to mean 'moist, cool air' and so 'breeze.' On this showing *Aglauros* would be a water-nymph (cp. *Il.* 2. 307 *aglaón* ὕδωρ, Hom. *ep.* 4. 7 *aglaón*... ὕδωρ) and *Aglaúrium* a *Nymphaeum*.

Mommsen *Feste d. Stadt Athen* p. 7 n. 3 thinks that *Aglauros* may refer to the dew ('blinkende Tauperlen'), but proposes no etymology.

In any case *Aglauros*, not *Agraulos*, is the inscriptional form (K. Meisterhans *Grammatik der attischen Inschriften* Berlin 1900 p. 83 n. 712). Both are found in literary texts (J. Toepffer in Pauly—Wissowa *Real-Enc.* i. 826). *Agraulos* seems to have been taken by popular etymology from an epithet of Pan, to whose flute the Dew-sisters danced (Gruppe *Gr. Myth. Rel.* pp. 1196 n. 3 *sub fin.*, 1394 n. 4).

'Amelesagoras of Athens, author of the *Atthis*, asserts that no crow flies to the Akropolis and that nobody can claim to have seen one so doing¹. He adds a mythical explanation. He states that, when Athena was given to Hephaistos, she lay down with him and vanished². Hephaistos fell to earth and spent his seed. The earth afterwards produced Erichthonios, whom Athena nurtured and shut up in a basket and entrusted to the daughters of Kekrops—Agraulos, Pandrosos, and Herse—charging them not to open the basket until she returned. She then went to Pellene³ and fetched a mountain to serve as a bulwark in front of the Akropolis. The daughters of Kekrops, two of them, Agraulos and Pandrosos, opened the basket and saw two snakes coiled round Erichthonios. As Athena was carrying the mountain, which is now called Lykabettos, a crow—he states—met her and said "Erichthonios is exposed." She on hearing it threw down the mountain where it now is, and told the crow as bearer of evil tidings that never thereafter would it be lawful for it to go to the Akropolis.³

Some modern travellers accept as true the statement that crows avoid the top of the Akropolis (R. Chandler *Travels in Greece* Oxford 1776 p. 54 'Crows, as I have often observed, fly about the sides of the rock, without ascending to the height of the top'). But such avoidance cannot be 'due simply to the height of the hill' (D'Arcy W. Thompson *A Glossary of Greek Birds* Oxford 1895 p. 99). Rather, the site is too rocky to furnish the crows' accustomed food. Besides, it is still tenanted by plenty of owls (on the war of owls v. crows see Aristot. *hist. an.* 9. 1. 609 a 8 ff., Antigon. *hist. mir.* 57 (62), Plout. *de invidia et odio* 4, Ail. *de nat. an.* 3. 9. 5. 48, Soud. *s.v.* ἄλλο γλαῦς, ἄλλο κορώνη φθέγγεται, Zenob. 1. 69, Diogenian. 2. 16, *eiusd. cod. ³ Pellene, an ancient city of Achaia. 'stands on a hill which rises at the summit into a sharp point. The top is precipitous and therefore uninhabited' (Paus. 7. 27. 1. But see Sir J. G. Frazer *ad loc.*). 'At the entrance into the city is a temple of Athena built of native stone. The image is of ivory and gold: they say that it was made by Pheidias before he made the images of Athena in the Akropolis of Athens and at Plataiai. The people of Pellene also say that there is an *adyton* of Athena running down deep into the earth under the pedestal of the image, and that the air from this *adyton* is damp, and therefore good for the ivory' (*id.* 7. 27. 2). The statue is shown on imperial bronze coins of Pellene (Imhoof-Blumer and P. Gardner *Num. Comm. Paus.* ii. 91 f. pl. S. 10, Frazer *Pausanias* iv. 183 f. fig. 25, H. Hitzig—H. Yale University Press 1929 pp. 161, 173).

Amelesagoras' mention of Pellene is borne out by Kallim. *Heale frag.* 1. 2, 11 Mair *Πελληνην ἐφίκανε* Ἀχαιίδα. But Kallim. *frag.* 19 Schneider *op. cit.* mag. p. 160, 30 f.

Euripides, who likewise mentions the two snakes placed by Athena as guards over Erichthonios¹, further hints at the fate of the maidens: having opened the ark they must needs perish and stain the rocky cliff with their blood². Apollodoros³ is more explicit:

'Athena, wishing to make him (*sc.* Erichthonios) immortal, reared him in secret without the knowledge of the other gods. She laid him in a basket and entrusted it to Pandrosos, daughter of Kekrops, forbidding her to open the basket. But Pandrosos' sisters out of curiosity opened it and saw a snake coiled beside the babe. Then, as some say, they were destroyed by the snake itself, or, as others declare, by reason of Athena's anger they were driven mad and flung themselves down from the Akropolis.'

According to Hyginus⁴, the sisters maddened by Athena hurled

ἡ μὲν ἀεργάζουσα μέγα τρύφος Ὑψιζώρον | ἄστυρον εἰσανέβαιν'—points rather to Pallene, the promontory of Chalkidike (Plin. *nat. hist.* 4. 36 oppida Pallene, Phlegra. qua in regione montes Hypsizorus, etc.), and this suits better the position of Lykabettos (N.E. of the Akropolis). See further Mommsen *Feste d. Stadt Athen* p. 498 n. 1. Pellene→Akte (?) →Akropolis and Pallene→Lykabettos→Akropolis were alternative versions of the myth.

themselves from the citadel at Athens, while the snake fled for refuge to the shield of Athena and was reared by the goddess. But the same author elsewhere¹ informs us that the maidens, when maddened by Athena, hurled themselves into the sea. The tale was popular, and later writers repeat it with other unimportant variations². Under the empire the versions degenerate till Fulgentius³ (c. 500 A.D.) makes the fateful basket entrusted 'to two sisters, Aglauros and Pandora'! Even Ovid⁴, following some Hellenistic source (Nikandros?)⁵, and himself followed by a prose compiler misnamed Lactantius Placidus⁶, rewrites the whole narrative in absurd romantic vein.

Miss J. E. Harrison⁷ in an ingenious but hardly convincing passage claimed that the story of the Kekropides was invented to account for the ritual of the Arrhephoria. It may indeed have been an aetiological myth; for the Athenians are said to have performed mysterious rites for Agrauros and Pandrosos, who had sinned in opening the chest⁸. But it was the Kallynteria and the Plynteria

The same alternative versions were given in the case of Aigeus' suicide (K. Wernicke in Pauly—Wissowa *Real-Enc.* 1. 954, Gruppe *Gr. Myth. Rel.* p. 31 n. 13). The attempt to harmonise them was a failure (Nikokrates *frag.* 2 (*Frag. hist. Gr.* 1v. 466 Muller) *ap. schol. Ap. rather than the Arrhephoria that were connected by the ancients with the life and death of Agraulos¹ or Aglauros². And naturally so; for the Kallynteria fell on the nineteenth, the Plynteria probably on the twenty-fifth of Thargelion, and modern meteorological records taken in the Botanical Garden at Athens show that heavy dews begin to fail in May, are lacking throughout June, July, and August, and begin to return in September³. In mythological parlance, *Aglauros*, 'the Sparkling One,' dies. Her death was associated with the Plynteria, a very ill-omened day in Thargelion (May—June). Three weeks later, in the middle of Skirophorion (June—July), when the dew was rarer still, it became necessary to fertilise Mother Earth, not only with white clay (*skíros*) used as a manure, but also by means of a ceremonial dew-bearing. This was done in the Arrhephoria, as we have already seen.

Closer investigation⁴ makes it probable that Aglauros, Pandrosos, and Herse were not originally a triad of sisters. Of the three, Aglauros appears to have been the eldest and most venerable. Euripides speaks of them all as 'the Aglaurid maidens'⁵ or, again,

Pauly—Wissowa *Real-Enc.* i. 828 identifies these τελετὰς καὶ μυστήρια with the ὄργια... ἀπόρρητα performed by the Praxiergidai at the Plynteria (Plout. v. *Alk.* 34).

as 'the three daughters of Agrauros (Aglauros?)'¹, and later writers state that their mother Agrauros or Agraulis² had for sire Aktaios³ or Aktaion⁴. But this duplication or distortion of her name is, of course, a mere genealogist's device. In unsophisticated times there was but one Aglauros, she whose precinct lay beneath the steep northern side of the Akropolis⁵. Here the Athenian youths assembled to swear that they would fight till death on behalf of their country⁶. This solemn oath took a curious and unexpected form. The young soldiers swore that they would regard wheat, barley, the vine, and the olive as the boundaries of Attike, deeming their own all the tamed and fruitful earth⁷. The emphasis thus placed on earth as 'fruitful' (*karpophóros*) recalls the rock-cut inscription of Ge *Karpophóros* still legible on the summit of the Akropolis⁸. It is, indeed, probable that Aglauros herself was, to begin with, none other than the earth-goddess 'Sparkling'⁹ with the dew which enabled her to bring forth in their season corn and oil and wine. And on these things human life depended. Demeter *Kourotrophos*, 'Who rears the young,' was worshipped, and rightly worshipped, in the precinct of Aglauros¹⁰.

'to Athena *Políās* and to the *Kourotrophos* and to Pandrosos¹. It is reasonable to infer that Pandrosos, like Aglauros², was only another name for Ge³. *Kourotrophos* too was, at Athens, an epithet of the same goddess⁴. Ge *Kourotrophos* was worshipped near the western approach to the Akropolis⁵, and Soudas⁶ dwells on the importance of her cult:

'They say that Erichthonios was the first to sacrifice to her on the Akropolis and to build her an altar, in gratitude for Earth having reared him. He also made it customary that those who sacrificed to any god should sacrifice first to her⁷.

Details are of interest. When a cow was sacrificed to Athena, a sheep was first sacrificed to Pandrosos⁸ or, as others would have it,

to Pandora, this preliminary sacrifice being known as *epiboion*¹. Pandrosos had a circular garment called *podónychon*² or *podónychos*³. Her priestess⁴, according to Pollux⁵, wore the same sacred attire. But Photios⁶ and Soudas⁷ are apparently alluding to the same vestment when they state that the *protónion* is a small *himátion* worn by the priestess and from her transferred to the man slaying the victim. They add that it was named *protónion* because Pandrosos, or Pandora, with her sisters was the first (*próte*) to make woollen raiment for men. The etymology, as usual, is naught, but the rite of the transferred garment is of value as providing a parallel to the custom implied by the *péplos*-scene on the eastern frieze of the Parthenon⁸.

The case of Herse is different. She is definitely a personification of the Dew, and as such must be comparatively late. Hence, though Athenian youths swore by Agraulos⁹, who indeed heads their list of witnessing deities¹⁰, and though Athenian women might swear either by Agraulos¹¹ or, less frequently, by Pandrosos¹², nobody swore by Herse¹³. Nor had she, unless we can credit an unsupported statement of Ovid¹⁴, any sanctuary set apart for her. Again, Athena—

originally an earth-goddess¹ or mountain-mother²—absorbed into her all-prevailing cult the worship of both Aglauros and Pandrosos, and was occasionally called Athena *Aglauros*³ and Athena *Pándrosos*⁴; but she never came to be equated with Herse. We may, then, subscribe to Usener's opinion that Herse is later than Pandrosos, Pandrosos than Aglauros, the three names being progressively clearer expressions for a single religious idea⁵.

Aglauros⁶ and Pandrosos⁷, if not Herse also, were—we have seen—intimately associated with a goddess dubbed *Kourotrophos*. What better guardians could Athena have found for the infant Erichthonios? Perhaps they fed him, shut up in the basket, on dew⁸.

Some support for this surmise might be found in the myth that the Muses fed Komatas, shut up in a chest, on honey⁹, or in the tale of Meliteus, son of Zeus by the nymph Othreis, who through fear of Hera was exposed in a wood, but was there fed and fattened by bees¹⁰. For honey, as W. H. Roscher¹¹ has well shown, was held by most Greeks and Romans to be a sort of dew, which fell from the sky on trees and flowers and was thence collected by the bees.

Another case of confinement and dew-diet is that of Tithonos. Herse, some said, became by Hermes the mother of Kephalos¹². Kephalos, they added, was carried off by Eos, the 'Dawn,' to Syria

quorum tu, Pandrose, dextrum, | Aglauros laevum, medium possederat Herse. *Supra* p. 240 Ovid's three *thalami* may be derived from the internal arrangement of the Erechtheion, modified to suit Roman readers familiar with the Etruscan temple of Iupiter *Capitolinus*.

⁸ It is on record that Herse, Pandrosos, and Aglauros had a popular festival called *Deipnophoria*, at which a dinner was served for them with much pomp in accordance with a mystic tale (*supra* p. 240 n. 8); and it is known that certain *Deipnophoroi* occupied a seat in the theatre adjoining that of the *Kourotrophos* worshipped in the sanctuary of Aglauros (*supra* p. 242 n. 10). But of the nurture supplied by the Kekropides to their *kouros* nothing explicit is said.

¹² Apollod. 3. 14. 3. Hermes' union with Herse is hardly older than the Hellenistic age (*supra* p. 240 nn. 4 and 5). In Hyg. *fab.* 160 he becomes the father of Kephalos by Kreousa, daughter of Erechtheus. Other pedigrees are noted by A. Rapp in Roscher *Lex. Myth.* II. 1089 ff. and F. and there begat Tithonos the father of Phaethon¹. Some such sequence of mythical events must have been known to the painter of the red-figured *kylix* from Corneto, now at Berlin (*supra* p. 186 fig. 95); for, whereas on the outside of the cup Herse witnesses the birth of Erichthonios, on the inside Heos is carrying off Kephalos. Be that as it may, we are concerned with the fortunes of Tithonos. The Homeric *Hymn to Aphrodite* (s. vi (?) B.C.²) says that, when Tithonos despite his Zeus-given immortality began to get gray-headed, Eos refrained from union with him, but tended him in her halls with food and ambrosia (*i.e.* honey) and, as downright old age crept upon him till he could not stir, shut him up in a chamber (*thálamos*), where his voice flows on unceasingly³. The poet is hinting, discreetly enough, at a tale that later writers tell with more directness. When Tithonos grew so old that he rolled himself round in a wool-

basket or a basket-cradle (*líknon*) and slept like a baby (fig. 153)⁴, the goddess transformed him into a cicada (*téttix*)⁵. Confusion

¹ Apollod. 3. 14. 3. But the parentage of Tithonos is variously given. He is also described as the son of Laomedon (*Il.* 20. 237) by Strymo (schol. A.B.D. *Il.* 11. 1, Tzetz. *in Lyk. Al.* 18) or Trymo (schol. V. *Il.* 20. 237) or Rhoio (schol. and Tzetz. *in Lyk. Al.* 18).

between the *líknōn* and the *kérnos*¹, which figured in similar rites², may account for the late tradition that the couch of Eos and Tithonos was on Kerne³, an island off the west coast of Libye or, as mythographers and poets declared, at the ends of the habitable earth⁴. Two points appear to justify the comparison of Tithonos with Erichthonios. We have seen⁵ that Athena, wishing to make Erichthonios immortal, kept him as an infant in a basket (pl. xxix and fig. 154)⁶. Similarly Eos, bent on making Tithonos not only deathless but ageless, tended him like a babe in a basket⁷. Again, we

have conjectured that the Dew-sisters fed the infant Erichthonios on dew¹. So with Tithonos. Eos fed him on ambrosia, that is honey², a species of heavenly dew³. Moreover she changed him into a cicala⁴, and that little creature was popularly believed to subsist on dew⁵. The transformation was apt, for the cicala, once more like Erichthonios the 'very child of the Ground'⁶, was notoriously earth-born⁷ and the traditional badge of an autochthonous Ionian people⁸ (figs. 158—161)⁹. It may even be surmised that Tithonos

The name *κερκώπη* applied to a small species of *tettix* (Stephanus *Thes. Gr. Ling.* iv. 1476 A—B) is noteworthy on account of its possible relation to *Κέκροψ* (cp. P. Kretschmer in *Glotta* 1913 iv. 309).

⁹ Various views have been taken in modern times with regard to the precise nature of these *tettiges*:

(1) W. Helbig in the *Bull. d. Inst.* 1874 pp. 61—63, *id.* 'Über die goldenen Cicaden der alten Athener' in *Commentationes philologiae in honorem Theodori Mommseni* Berolini 1877 pp. 616—626, *id.* in the *Rhein. Mus.* 1879 xxxiv. 484—487, *id.* *Das homerische Epos aus den Denkmälern erläutert* Leipzig 1884 p. 169 f. *ib.*² Leipzig 1887 p. 246 put forward the view that they were gold spirals wound round the hair. F. Studniczka 'Krobylos und Tettiges' in the *Jahrb. d. kais. deutsch. arch. Inst.* 1896 xi. 248—291, combining Helbig's hypothesis with that of A. Conze 'Krobylos' in the *Mem. d. Inst.* 1865 ii. 408—420, maintained that *tettiges* were gold spirals wound round the back-hair (*krobylos*) to keep it in position. This view was advocated also by H. Lechat in the *Rev. Ét. Gr.* 1897 x. 342—344, *id.* 'Χρῦσοι τέττιγες' in the *Revue des études anciennes* 1899 pp. 19—22, who noted that such metallic spirals in the hair might produce a sound reminiscent of the cicada, and by A. Boulanger in Daremberg—Saglio *Dict. Ant.* v. 164.

Similarly L. Kjellberg 'Zur *τῑττιγοφορία* der alten Athener' in *Eranos* 1909 ix. 164—175 explained the *tittiges* as threads of thin bronze or gold twined in the hair and rustling like an Aeolian harp in the wind. W. Bremer in Pauly—Wissowa *Real-Enc.* vii. 2124 concludes that they were thin gold leaves sewn on to a fillet or soldered on to a metal band.

Fig. 156.

Fig. 157.

(2) F. Hauser 'Tettix' in the *Jahresh. d. oest. arch. Inst.* 1906 ix. 75—130 would identify the *tittix* with the *stlengis*, a gold diadem covering the front hair (*krobyslos*). This hypothesis roused much controversy. An attack by E. Petersen *ib.* 1906 ix Beiblatt pp. 77—86 elicited a reply by Hauser 'Tettix II' *ib.* 1907 x Beiblatt pp. 9—32, and a renewed attack by Petersen in the *Rhein. Mus.* 1907 lxii. 540 ff. called forth a further reply by Hauser 'Tettix III' in the *Jahresh. d. oest. arch. Inst.* 1908 xi Beiblatt pp. 87—96. Another opponent of Hauser was W. Bremer *Die Haartracht des Mannes in archaisch-griechischer Zeit* Giessen 1911 p. 60 ff., *id.* in Pauly—Wissowa *Real-Enc.* vii. 2121 ff. The reader is inclined to quote 'Katy-did, Katy-didn't,' etc.

(3) Meantime the old view that the *tittiges* really were golden cicadas can claim the support of much archaeological evidence. H. Schliemann *Mycene* London 1878 p. 176 nos. 259, 260 (= my fig. 155) illustrated two out of 'ten golden grasshoppers with chains' from the third shaft-grave: these he took to be 'ornaments of the breast or hair'; Stais *Coll. Mycénienne: Athènes* p. 20 nos. 77, 78 calls them, with less likelihood, 'des jouets d'enfants.' Sir A. J. Evans, however, in the *Journ. Hell. Stud.* 1925 xlv. 55 with fig. 52, 4 points out that these pendants are 'intended for chrysalises' and compares a better-marked chrysalis-bead of gold (*ib.* fig. 47 = my fig. 156) found by A. J. B. Wace in a chamber-tomb (no. 518 of the Kalkani cemetery) at Mykenai (A. J. B. Wace in *The Times Literary Supplement* for Oct. 26, 1922 p. 684, *id.* in *The Illustrated London News* for Feb. 24, 1923 p. 300 fig. 4, *id.* 'Chamber Tombs at Mycenae' in *Archaeologia* 1932 lxxxii. 87 no. 76, 194 pl. 38). L. Stephani in the *Compte-rendu St. Pét.* 1877 p. 28 ff. Atlas pl. 2, 15 (= my fig. 157; scale c. $\frac{3}{8}$, F. Hauser in the *Jahresh. d. oest. arch. Inst.* 1906 ix. 89 f. fig. 30) published a small gold pendant representing the larva of a cicada, which was found in the fourth barrow of the 'Seven Brothers' group near Temrjuk on the Sea of Azov, a tomb dating from s. v B.C. (E. H. Minns *Scythians and Greeks* Cambridge 1913 p. 210, M. Rostovtzeff *Iranians & Greeks in South Russia* Oxford

1922 p. 53 f.). F. Studniczka in the *Jahrb. d. kais. deutsch. arch. Inst.* 1896 xi. 282 n. 201 cites another from the *Bull. Sardo* iii. 21, cp. P. Wolters in the *Arch. Zeit.* 1884 xlii. 7 n. 12.

A more satisfactory *téttix* in the form of a gold brooch (length $\cdot 016^m$) came from the earliest Artemision at Ephesos (D. G. Hogarth *Excavations at Ephesus* London 1908 p. 98 pl. 4, 33 and pl. 3, 3 (= my fig. 158: scale $\frac{1}{2}$)). Another *téttix*-brooch of gold was found by A. N. Skias in a cave of Pan and the Nymphs, known as *Lychnospelia*, on Mt Parnes at the depth of half a metre below the surface (A. N. Skias in the *Παρτ. ἀρχ. ἐτ.* 1900 p. 40, 'Funde' in the *Ath. Mitth.* 1900 xxv. 456, R. C. Bosanquet in the *Journ. Hell. Stud.* 1901 xxi. 350, and finally K. Rhomaïos in the 'Εφ. Ἀρχ. 1906 pp. 89—96 fig. 1 (= my fig. 159: scale $\frac{1}{2}$)). The pin has a ring at one end and originally worked on a metal axis between two other rings attached to the upper part of the

insect's body. The other, pointed, end of the pin was caught by the hook on the lower part of the body. The axis having dropped out or been broken, the owner, lest he should lose the little gold pin, had twisted it up as best he could through the other two rings. A couple of *téttiges* in gold foil, sent by Count Peroffsky in 1852, were figured in the *Antiquités du Bosphore cimmérien* St.-Petersbourg 1854 i. 155, iii pl. 22, 20 (= my fig. 160: scale $\frac{1}{2}$) and 21 (= my fig. 161: scale $\frac{1}{2}$), *ib.* ed. S. Reinach Paris 1892 p. 69 pl. 22, 20 and 21, cp. L. Stephani in the *Mélanges greco-romains tirés du Bulletin historico-philologique de l'Académie Impériale des Sciences de St.-Petersbourg* St.-Petersbourg 1855 ii. 215, *id.* in the *Compte-rendu St. Pét.* 1870 p. 54 n. 2, E. Beulé *Fouilles et découvertes, résumées et discutées en vue de l'histoire de l'art* Paris 1873 ii. 411, V. Duruy *Histoire des Romains* Paris 1883 vi. 413 fig. (of no. 20), T. Schreiber in the *Ath. Mitth.* 1883 viii. 272, F. Studniczka in the *Jahrb. d. kais. deutsch. arch. Inst.* 1896 xi. 282 fig. 13 (of no. 20). *Fibulae* of late Roman and early mediaeval date found in Hungary again represent the

cicala, though with less approximation to nature (F. Studniczka in the *Jahrb. d. kais. deutsch. arch. Inst.* 1896 xi. 283 f. fig. 15 (= my fig. 162)).

On the whole it may be concluded that the *tettix* of Thouk. i. 6 was a golden *fibula* shaped like a cicala, that being the traditional, perhaps the tribal, badge of Ionian *autochthones*.

We are not, therefore, surprised to find that the *tettix* occurs as a private badge on tetradrachms of Athens with two monograms struck c. 229—197 B.C. (*Hunter Cat. Coins*

A creature with such a record behind it would serve as an excellent amulet to keep off mischief (L. Stephani in the *Compte-rendu St. Pé.* 1860 p. 91, 1864 p. 130 f., 1865 p. 84, 1869 p. 130, 1877 pp. 28—31, 91, 1880 p. 99 f.). Two engraved chalcedonies of early Roman date at Berlin show cicalas equipped with shield, sword, lance, etc. (Furtwangler *Geschnitt. Steine Berlin* p. 239 nos. 6524 and 6523 pl. 45, *id. Ant. Gemmen* i pl. 29, 41 (= my fig. 167) and 43 (= my fig. 168), ii. 144). Prophylactic virtue probably attached to the terra-cotta models of the *téttix*, of which sundry specimens are extant. One from Tanagra, in our national collection, has its upper side coloured black, with markings in

red, on a white slip (*Brit. Mus. Cat. Terracottas* p. 83 no. B 72 fig. 17 = my fig. 169 (scale $\frac{1}{2}$), O. Keller *Die antike Tierwelt* Leipzig 1913 ii. 404 fig. 125). Another, in my possession, is a child's rattle and by means of a pellet within makes a noise more or less resembling that of its original (fig. 170: scale $\frac{1}{2}$). was *ab origine* a personification of the cicada¹, and that he bore a name which was primarily onomatopoeic². In any case Tithonos

¹ The personification of the cicada is by no means an unexampled effort of the imagination. The Laconian town Tainaros was called 'the seat of Tettix' because it had been founded by Tettix the Cretan (Hesych. s.v. *Τέττιγος ἐδρανόν*). When the Naxian Kalondas, surnamed Korax, had killed Archilochos in battle, he was bidden by the Pythian priestess to go to 'the dwelling of Tettix' and appease the soul of Archilochos. 'The dwelling of Tettix' meant Tainaros because Tettix the Cretan had come thither with his ships, founded a town, and dwelt beside the *psychopompeion* (Plout. *de ser. num. vind.* 17, cp. Ail. *frag.* 80 Hercher *ap.* Soud. s.v. *Ἀρχιλόχος*). O. Hofer in Roscher *Lex. Myth.* v. 402 rightly infers from Archil. *frag.* 143 Bergk⁴ *ap.* Loukian. *pseudolog.* 1 *τέττιγα τοῦ πεπεοῦ σινείησας* that the poet had spoken of himself as a *tettix*, and this lends the needed point to the anecdote.

A folk-tale from Naxos says that the cicada (ὁ τζιτζίκας), the ant, the bee, and the spider were brothers and sisters. Their mother lay dying and bade them all come to receive her blessing. The bee alone came. So her mother wished that she might make wax for the saints and honey for men. The rest were cursed. The spider should spin all night and unravel her web by day. The ant should drudge the year through and eat but a single grain. The cicada should chirp, chirp till he burst (N. G. Polites *Παραδόσεις* Athens 1904 i. 194 no. 352, ii. 943, O. Dahnhardt *Natursagen* Leipzig and Berlin 1910 iii. 468). In northern Greece the cicada is held in greater honour—witness G. F. Abbott *Macedonian Folklore* Cambridge 1903 p. 60: 'The farmers of Macedonia out of the newly ground corn make a large thin cake, which they take to the village fountain or well. They sprinkle it with water and then distribute it among the bystanders, who in return wish them "a happy year." This cake is called "Grasshopper-Cake" (τζιτζηρόκληκο), and is supposed to be a kind of offering to their favourite insect. The following rhymes express the insect's satisfaction at the sacrifice: 'Λωνίσετε, θερίσετε κῆ'μένα κλίκι κάνετε, | Καὶ ρίξετε το'ς τῇ βρύσῃ νὰ πάω νὰ το πάρω, | Νὰ κάτσω νὰ το φάω μαζί μὲ τὰ παιδία μου, | Νὰ πέσω νὰ πεθάνω'. [² A. Δ. Γουσίου, "Ἡ κατὰ τὸ Πάγγαιον Χώρα," p. 47] "Thresh and mow and make a cake for me. | Throw it into the fount that I may go and fetch it, | And sit and eat it with my children, | And then lay me down and die."

A popular Tuscan song tells how the grasshopper (*grillo*) married the ant. After the wedding he became first a greengrocer and then an innkeeper, but finally went bankrupt, beat his wife, and died in misery (A. de Gubernatis *Zoological Mythology* London 1872 ii. 48 f.).

See further B. Laufer *Insect Musicians and Cricket Champions of China* (*Anthropology Leaflet* 22) Chicago 1927 (reviewed in *Folk-Lore* 1928 xxxix. 112: 'A champion cricket is looked on as the incarnation of a great warrior or hero of the past, and fetches the price of a good horse. If he has won many victories, his burial will be in a small silver coffin, for good luck, and in the neighbourhood of his grave excellent fighting crickets are expected to be found in the following year').

The main objection to my view is that the evidence directly connecting Tithonos with the cicada is not older than s. v B.C. See, however, *h. Aphr.* 236 ff. and *infra* n. 2.

² Names for the cicada regularly involve a reduplicated *t* or *k* together with an *i*-sound (O. Keller *Die antike Tierwelt* Leipzig 1913 ii. 406). So with the ancient Greek *τέττιξ*, *τεττιγόμιον*, *τιτιγόμιον* (L. Dindorf in Stephanus *Thes. Gr. Ling.* vii. 2091 A—D), *κίξιος* (Hesych. *κίξιος*· *τέττιξ*), *κίκους* (Hesych. *κίκους*· ὁ νέος *τέττιξ*). It is just possible that in *h. Aphr.* 237 f. τοῦ δ' ἧ τοι φωνὴ βέλ' ἀσπετος, οὐδέ τι κίκυς | ἐσθ', οἷη πάρος ἔσκεν ἐνὶ γραμπτοῖσι μέλ'εσσιν the choice of the word *κίκυς* was determined by a reminiscence of *κίκους*. Neither Welcker *Gr. Gotterl.* i. 686 (A. Rapp in Roscher *Lex. Myth.* i. 1263) nor J. Schmidt in Roscher *Lex. Myth.* v. 1025 is convincing), the modern Greek *τζιτζίκας* or *τζιτζήσας*, *τζιτζίκας*, and the Latin *cicada* with its derivatives (G. Korting *Lateinisch-romanisches Wörterbuch* Paderborn 1901 p. 238 notes Italian *cicada*, *cigala*, Lombard *figada*, Provençal *cigala*, French *cigale*, Spanish *cigarra*, *chicharra*, Portuguese *cigarra*, etc.

Fig. 171.

Fig. 172.

Fig. 173.

and adds: 'Nach gewöhnlicher Annahme soll die Benennung der "Cigarre" (span. *ptg. cigarro*, ital. *sigarro*, frz. *cigare m.*) auf span. *cigarra* zurückgehen, wegen einer gewissen Ähnlichkeit des Tabakröllchens mit der Cicade, sei es in Gestalt oder in Farbe.' Cp. E. Weekley *An Etymological Dictionary of Modern English* London 1921 p. 303). But these imitative formations are apt also to have an *in-sound*, as in the modern Greek *ταύριζκας*, *ταύριζκας*, *ταύριζκας* (Prellwitz *Etym. Wörterb. d. Gr. Spr.*² p. 458), the Macedonian-Roumanian *chinčalđ* (Korting *loc. cit.*), and the Latin verb *fritinnire* (Suet. *frag.* p. 252, 2 Reifferscheid *cicadum fritinnire* (*fritinnire* cod. V. *fretinnire* alii codd.), F. Buecheler—A. Riese *Anthologia Latina*² Lipsiae 1906 i. 2. 248 no. 762. 35 et cuculi cuculant et rauca cicada fritinit), late Latin *frintinnire* (Ducange *Gloss. med. et inf. Lat. s.vv.* 'baulare,' 'frintinnire').

The same variation meets us in the case of the hero, whose name *Τιθωνός*, *Tithonús* appears in Etruscan as *Tinθun* or *Tinθn* (C. Pauli in Roscher *Lex. Myth.* v. 971 f., J. Schmidt *ib.* v. 1021, 1029). A mirror from Chiusi (?), published by E. Gerhard in the *Arch. Zeit.* 1852 x *Anz.* p. 160, *ib.* 1857 xv. *Anz.* p. 71*, *id.* *Etr. Spiegel* iv. 22 f. pl. 290 (=my fig. 171), E. Hubner in the *Bull. d. Inst.* 1857 p. 165, H. Brunn *ib.* 1859 p. 109, A. Fabretti *Corpus inscriptionum Italicarum* Aug. Taurinorum 1867 p. ccxviii no. 2513 *bir.* shows *Tinθun* and *Θesan* as a pair of lovers flanked by *Memnun* (Memnon) on the right and *La[s]a* (W. Deecke in Roscher *Lex. Myth.* ii. 1903) on the left. Another, owned and published by Gerhard *Etr. Spiegel* iii. 217 f. pl. 232 (=my fig. 172), Fabretti *op. cit.* p. ccxvii no. 2506, has a similar scene in which *Tinθn* (S. Bugge in W. Deecke *Etruskische Forschungen und Studien* Stuttgart 1883 iv. 34 notes that Deecke read *tinθn*), and A. Furtwangler *itinθn* (adding 'der erste Strich kann allerdings auch zu der Randeinfassung der Inschrift gehört haben')) is embraced by *Evan* (Gerhard read *Efan* (= *Evan*), comparing *Efas* (= *Evas*) as the name of Memnon in *Etr. Spiegel* iii. 218 f. pl. 235, 1. C. Friederichs *Kleinere Kunst und Industrie im Alterthum* Düsseldorf 1871 p. 60 no. 70, W. Helbig in the *Bull. d. Inst.* 1878 p. 84 f., and S. Bugge *loc. cit.* p. 35 ff. accept *Evan*, on which goddess see W. Deecke in Roscher *Lex. Myth.* i. 1440, E. Samter in Pauly—Wissowa *Real-Enc.* vi. 838 f. W. P. Corssen *Ueber die Sprache der Etrusker* Leipzig 1874 i. 260, 820 and W. Deecke in K. O. Müller *Die Etrusker* Stuttgart 1877 i². 481 propose [*Θesan*]; but there is no trace of an initial *θ* with *Tvami* (Gerhard read *Tjami* (= *Tvami*) or *Tsami*, Fabretti *Tiam*; Bugge *loc. cit.* p. 34 f. hazards *tjasi* for **Φθίσσιος*, i.e. Achilles) standing on the right and *Θethis* seated on the left.

There is some reason to think that the Etruscan *Tinθun* is still remembered by the peasants of north Italy. C. G. Leland *Etruscan Roman Remains in Popular Tradition* London 1892 p. 122 states that the Romagnoli regard *Tituno* or *Tit'uno* as 'the spirit of thunder,' and *ib.* p. 215 asserts that, when it hails, people invoke *Tituno* or *Tignia*. If his information be reliable (*supra* ii. 421 n. o), it is possible to suppose that the *-un* of *Tinθun* led to confusion with the Etruscan *Tinia*. Be that as it may, *Tinia*, like *Tinθun*, is grouped with *Θesan* and *Θethis* on a mirror now in the Vatican (E. Braun in the *Bull. d. Inst.* 1837 pp. 73—80, *Mus. Etr. Gregor.* i pl. 31, 1, Gerhard *Etr. Spiegel* iv. 5. 44 pl. 396 (=my fig. 173), Fabretti *op. cit.* p. ccxv no. 2477), which presumably represents Zeus supplicated by Heos and Thetis (*supra* ii. 734, 753 n. 3 (3)). Leland *op. cit.* pp. 75—78 claims that *Θesan* too has survived as *Tesana*, 'the Spirit of the Dawn,' and quotes a popular poem in which she appears as a dream to a sleeping *contadino* and promises to help him when he is weary.

More ingenious, but also more speculative, are the suggestions of S. Bugge *Das Verhältnis der Etrusker zu den Indogermanen und der vorgricchischen Bevölkerung Kleasiens und Griechenlands* ed. A. Torp Strassburg 1909 p. 229 ff.:—*Τιθωνός* was a pre-Greek Anatolian name, borne e.g. by a brother of Priam (*Il.* 20. 237). A cuneiform tablet found at Eyuk in Kappadokia mentions a town *Tintunia*, perhaps to be located in Armenia rather than in Asia Minor (E. Chantre *Recherches archéologiques dans l'Asie occidentale. Mission en Cappadoce 1893—1894* Paris 1898 p. 45 ff. no. 1, 10 *Ti-in-tu-u-ni-ni*). With this agrees the form *tinθun*, which the Etruscans may have brought with them from their early home in Asia Minor. *Tintunia* (for **Tinthōnia*) is to *tinθun* as *Ἀπολλωνία*

had by Eos a son Memnon; and here too the dew-connexion reappears. When Memnon was slain by Achilles, his mother Eos wept for him, and in the morning dew-drops we still see her tears¹.

Aglauros, Pandrosos, and Herse were alike associated with Zeus. Their mother was the daughter of Aktaios²; and *Aktaïos* is a cult-epithet of Zeus³. Possibly Zeus *Aktaïos*, Zeus 'of the Point,' was at one time worshipped on the high ground of Akte overlooking the harbours of the Peiraieus⁴. More probably he drew his title from Akte, the old name for the whole promontory of Attike⁵, which indeed represents an earlier Aktike⁶. Pandrosos, again, stood in close relation to Zeus. In the Pandroseion was his altar⁷; and, though we must not with O. Gruppe⁸ assume the existence of a Zeus *Pándrosos*, yet we may feel sure that here Zeus the sky-father,

to Ἀπόλλων. On this showing *tinthun* was the god or godlike hero of Hittite-speaking Cappadocians. Memnon as son of Tithonos implies that Tithonos was known in Anatolia. Tithonos founded Sousa on the Choaspes (Strab. 728, Diod. 2. 22, cp. Hdt. 5. 53, 7. 151, Paus. 4. 31. 5) and was worshipped as a god by the Susians (Soud. s.v. Σούσιοι: ὄνομα ἔθνους. τὸν νεκρὸν καύσαντες οἱ Σούσιοι τὰ ὀστέα κομίζουσι τῷ πατρὶ Τιθωνῷ). Further, Tithonos was a personification of the day (*et. mag.* p. 758, 27 f. Τιθωνός, ἡ ἡμέρα· παρὰ τὸ τιθασὸς τὸ σημαῖνον τὸ ἡμέρος [Etymology at its worst! A. B. C.]). Now it seems that the Etruscan stem *tin-* denoted both the 'day' and the 'daylight-god' *tinia* or *tina*, the equivalent of Zeus or Iupiter (S. Bugge *op. cit.* p. 190 f.). Accordingly, Τιθωνός presupposes an Anatolian form in which *in* before *θ* became a nasal *ι* (f). The Etruscan inscription on the wrappings of the Agram mummy speaks of the Dawn of the Day-god (G. Herbig in C. Pauli *Corpus Inscriptionum Etruscarum* Lipsiae 1919—1921 Suppl. i (liber linteus Zagrabienensis) col. v, 19 *thesan-tins* with pl. 5: see further C. Pauli in Roscher *Lex. Myth.* v. 676 f.). This makes it certain that *tinthun* associated with *thesan*, the Dawn (*supra* fig. 171), involves the syllable *tin-* 'day.' The termination *-thun* is of doubtful origin, but may be a combination of *θ* the enclitic article with the suffix *-un* (cp. *-ωνο-* of Τιθωνός). The schol. A. L. II. 11. 1 equates Τιθωνός with Τίταν and both with Apollon. 'Τίταν [sic] scheint mir ebenfalls vorgriechischen Ursprungs und auf dieselbe Grundwurzel wie Τιθωνός zurückzugehen.' C. Pauli in Roscher *Lex. Myth.* v. 971 f. is likewise inclined to accept an original connexion between *Tinthun*, **Tinthōn*, Τιθωνός, *Tituno* on the one hand and *Tinia*, *Tignia* on the other. But the whole edifice is a house of cards.

who distilled the fructifying dew¹, had as his consort Pandrosos the earth-mother 'All-bedewed.' Lastly, Herse was for Alkman the very daughter of Zeus².

(c) Zeus *Érrhos*, *Ersaïos*, *Ikmaïos*, *Íkmios*, *Áphrios*.

In view of the foregoing sections we are not surprised to find that Zeus had sundry titles characterising him as the god of dew, moisture, and the like.

It seems probable that *Érrhos*, an obscure name for Zeus quoted by Hesychios³ from some unknown source, meant simply the 'Dew.' Zeus, as Plutarch⁴ put it, turned himself into dew. If so, his appellation will be connected with those of the Athenian *Errhephóros*⁵, the Lesbian *Ersóphoros*⁶, and the Attic Apollon *Érsos*⁷. Another

¹ Even the honey-dew (*supra* p. 246) came from Zeus. When in summertime a cold night was followed by a hot day, and consequently trees and plants were found to be coated with a sweet exudation (*δρυσόμελι*, *ἀερόμελι*), Greek farmers exclaimed: *ὁ Ζεὺς ἔβρεξε μέλι* (Galen. *περὶ τροφῶν δυνάμεως* 3. 39 (vi. 739 Kühn)). ⁷ About an hour's walk to the north-east of *Vari* (Anagyrous), some 290^m above the sea, near the top of one of Hymettos' southern spurs—a height known formerly as *Kapsála* but now as *Spélaion*—is a very remarkable cave, first thoroughly explored in 1901 by members of the American School at Athens. The best map of the neighbourhood is in E. Curtius and J. A. Kaupert *Karten von Attika* Berlin 1904 Blatt 8 (*Vari*) with Text by A. Milchhofer Berlin 1889 iii. 16 f. The official reports of the excavation were published by C. H. Weller in the *Amer. Journ. Arch.* 1903 vii. 263—288 (description) with pl. 1 (plan) = my fig. 174, pl. 2 (sections) = my figs. 175, 176, and figs. 1—10. M. E. Dunham *ib.* 289—300 (a score of inscriptions), Miss I. C. E. Bassett *ib.* 338—349 (lamps) with pls. 12—14 and figs. 1—5. The cave consists of an outer and an inner grotto, the former with a series of interesting rock-carvings and -cuttings, the latter dimly lit and containing a cold spring of water said to be '*καθαριστικό*.' The excavators failed to find any prehistoric remains. The evidence pointed to two periods of more or less continuous resort, c. 600—c. 150 B.C. and c. 300—c. 400 A.D. Inscriptions prove that during the earlier period the cave was devoted to the worship of the Nymphs, Pan, Charis, and Apollon *Érsos* or *Hérsos*. Lamps etc. show that during the later period it was adapted for Christian usage.

We are concerned only with the shrine of Apollon, which is hewn out of the rock at the spot marked *ε* on the plan (fig. 174). This shrine was arranged in two levels, each divided into halves by a low partition. The floor of the upper niche has a couple of D-shaped cavities (for libations or votive gifts? Cp. *supra* i. 140). The lower divisions lack such receptacles, but may have had fitted into them a pair of similarly concave stones. Two little holes on the left of the upper level, with corresponding holes on the right, perhaps imply pillars supporting a roof as a protection against the drip of water, which is here constant. Small fluted columns—two fragments were found—may or may not have been the pillars in question. Legible till lately was the rock-cut inscription

Inscriptions found elsewhere in the cave describe him as Archedamios of Thera (*ib.* no. 786 [Ἀ]ρχέδαμος | [h]ο Θεραῖος), who being possessed by the Nymphs was bidden to adorn their grotto (*ib.* no. 788 Ἀρχέδημος ὁ Θηραῖος ὁ νυμφόληπτος φραδαῖσι Νυμφῶν τ' ἀντρον ἐξηργάζατο=Couigny *Anth. The date of Archedemos is uncertain. C. H. Weller places him *c.* 400 B.C. But his vagaries of dialect, lettering, and metre seem to me to indicate a much later (Hadrianic?) period, when archaisms were in fashion.

In addition to the deities already mentioned there was the seated goddess, whose rock-cut effigy and *omphalos* are still to be seen at the point marked β on the plan (fig. 174. title of kindred origin preserved by Hesychios¹ is perhaps *Ersaíos*, Zeus 'of the Dew.'

Keos was once so well watered that, like certain others of the Kyklades², it was known as *Hydroússa*³. Hither came Aristaíos, one

(= my fig. 178), C. H. Weller in the *Am. Journ. Arch.* 1903 vii. 267 ff. fig. 4 photo) and is variously interpreted as Isis (R. Chandler *Travels in Greece* Oxford 1776 p. 150 'Isis, the Egyptian Ceres,' J. C. Hobhouse (Lord Broughton) *A Journey through Albania*² London 1813 i. 403 'supposed to represent Isis, the Egyptian Ceres,' E. Dodwell *A Classical and Topographical Tour through Greece* London 1819 i. 553 'probably a statue of Isis') or Demeter (L. Ross *Reisen des Königs Otto und der Königin Amalia in Griechenland* Halle 1848 ii. 76 'vielleicht einer Demeter') or Kybele (A. Milchhofer in the *Ath. Mitth.* 1880 v. 217 'offenbar...Kybele,' L. Bloch in Roscher *Lex. Myth.* iii. 531. This would agree with the lion's head carved in the rock at ξ on the plan (fig. 174). See also A. Rapp in Roscher *Lex. Myth.* ii. 1642, 1644) or Rhea (A. Milchhofer in E. Curtius and J. A. Kaupert *Karten von Attika* Berlin 1889 Text iii. 16 'Rhea?').

On the whole I conclude that the seated divinity is an earth-goddess, very possibly Ge herself, who here as at Delphoi (*supra* ii. 169 ff., 231, 239, 1216, cp. ii. 258 pl. xvi) had her *omphalos*. Further it would appear that deeper in the cavern, just where there was a perpetual drip of water, the Greeks established the cult of Apollon *Ērsos* or *Hērsos*, the 'Dew'-god,—Apollon, rather than Zeus, in deference to the *omphalos*. C. Wordsworth *Athens and Attica* London 1836 p. 198, *ib.*³ London 1855 p. 170, was not very wide of the mark when he wrote: 'Ersus...appears to have been venerated here, as the beneficent power to whose influence—shed like dew (ἔρση) upon the earth,—all rural produce in its infant state, the tender blade, the opening blossom, and the young firstling, were alike indebted for their preservation and increase.' More succinctly let us say that down here, in the dark womb of mother earth, Apollon *Ērsos* with his gentle moisture impregnates Ge for the benefit of mankind. And, if so, then the cave at Vari furnishes a noteworthy parallel to the *Ersephoria* (*supra* p. 165 ff.) at the underground descent (of Ge *Olympia?* *supra* p. 188) beside the Ilissos.

Finally, if—as seems probable—the cave at Vari was the actual spot on Mt Hymettos to which the infant Platon was taken by his parents for a sacrifice to the rustic powers (Ail. *var. hist.* 10. 21 *ὅτι τὸν Πλάτωνα ἡ Περικτιόνη ἔφερον ἐν ταῖς ἀγκάλαις· θύοντος δὲ τοῦ Ἀρίστωνος ἐν Ὑμητῷ ταῖς Μούσαις ἢ ταῖς Νύμφαις, οἱ μὲν πρὸς τὴν ἱεροουργίαν ἦσαν, ἡ δὲ κατέκλινε Πλάτωνα ἐν ταῖς πλησίον μυρρίναις δασείαις οὔσαις καὶ πυκναῖς. καθεύδοντι δὲ ἑσμός μελιτῶν ἐν τοῖς χεῖλεσιν αὐτοῦ καθίσασαι ὑπὸν, τὴν τοῦ Πλάτωνος εὐγλωττίαν μαρτυρόμεναι ἐντεῦθεν, Olympiod. *z.* *Plat.* p. 1, 14 ff. ¹ Hesych. 'Εργαῖος· ἀέριος Ζεὺς (cp. *supra* i. 30, ii. 351 n. o, 808 n. o (o)). A. Meineke's *cf.* 'Ερσαῖος is commonly approved and squares with Hesych. *έρσαία*...*δροσώδη* and *έρσαιή*· *δροσώδης*. If this is right, Nonnos had the sanction of cult-usage, when he made Semele dream of herself as a fruit-tree in a garden 'Drenched by the nurturing dew of Kronos' son' (*Dion.* 7. 146 *νιφόμενον Κρονίωτος ἀειψύτοισιν ἑρσαῖς*).

of the great culture-heroes of Greece, who learnt the care of sheep and oxen from the Nymphs and of bees from the Brisai. But drought befell the island, for the Etesian Winds failed and plants and animals suffered¹. At this point the narrative as told by Herakleides of Pontos, the pupil of Aristotle², breaks off abruptly. It is continued by Apollonios of Rhodes³. Aristaios by his wisdom averted disaster. Gathering together the Parrhasian folk of Lykaon's lineage (presumably Arcadian settlers in Keos⁴), he made a great altar for Zeus *Ikmaïos*, Lord 'of the Damp'⁵, and sacrificed on the mountains both to the star Seirios and to Zeus son of Kronos. Thereupon Zeus sent the Etesian Winds to blow for forty days and cool the earth. Hence the Cean custom that priests offer burnt-

⁴ A. Pridik *De Cei insulae rebus* Dorpati Livonorum 1892 pp. 19—21 would discredit this notion of an Arcadian settlement in Keos ('Quod veteres scriptores Aristaeum aut cum Parrhasiis ex Arcadia venisse aut postea in Arcadiam se contulisse narrant, collegerunt nimirum ex Aristaei Jovisque cultu et Ceis et Arcadibus communi'). F. Hiller von Gaertringen in Pauly—Wissowa *Real-Enc.* ii. 853 is less sceptical ('Indessen hat eine Wanderung von Arkadern nach Keos an sich nichts Unwahrscheinliches; auch an der ionischen Wanderung nahmen nach Herodt. sacrifice before the rising of the dog-star. The poet's allusion to Arkadia and Lykaon suggests that the altar of Zeus *Ikmaîos* resembled that of Zeus *Lykaîos* on the summit of Mount Lykaion¹. We do not, however, hear that in Keos, as in Arkadia² and Elis³, a starving populace, when famine stared them in the face, resorted to the desperate expedient of human sacrifice. Milder methods had come into vogue. The priest of Zeus *Lykaîos* made rain-magic with an oak-branch⁴. And Aristaios, after sacrificing a bull, poured a libation of honey on the altar of Zeus *Ikmaîos*⁵—a libation thoroughly appropriate to the god that sent refreshing dew⁶.

Aristaios, then, was famous as a culture-hero. But admittedly⁷ he was more than that. As early as 474 B.C. Pindar⁸ identifies him with Zeus *Aristaios* or with Apollon *Agreûs* and *Nómios*—high gods of field and fold. Cheiron, foretelling to Apollon the destiny of Kyrene's son, says that Hermes shall receive him from his mother and bring him to the fair-throned Horai and to Gaia:

And they shall set the babe upon their knees,
And nectar and ambrosia take, and these
Upon his lips let fall,
So make him once for all
A power that shall endure—
Zeus and Apollon pure,
A present help to men upon their way,
Of flocks a guardian sure,
Agreûs and *Nómios* named of some to-day,
Of others *Aristaios*, as they pray.

⁸ Pind. *Pyth.* 9. 112 ff. (quoted *supra* i. 372 n. 8).

Pindar appears to be weaving together a warp and a woof of diverse origin. The one tradition, which we may call Boeotian since it was found in Hesiod, equated Aristaïos with the pastoral Apollon¹. The other, which is rather Arcadian, identified him with Zeus². This is the version accepted by Kallimachos when, wishing to ascribe a noble pedigree to Akontios of Keos, he makes him descended 'from the priests of Zeus *Aristaïos Ikmiōs*'.³ Later writers repeat, with less precision, this twofold claim to divinity⁴. We are left wondering whether Aristaïos was a god who had faded into a hero, or a mortal who had put on immortality.

And here we must take into account an attractive hypothesis advanced by L. R. Farnell⁵, who observes that *Aristaios* means 'sprung from *Ariste*' and that *Ariste* was an appellative of Artemis⁶: 'His

name implies a powerful goddess and her son. Are we transported back once again to the domain of Cretan religion, with its great goddess and youthful companion-god? Artemis certainly bulked big in Keos. She had a sanctuary at Ioulis, as we gather not only from the myth of Ktesylla¹ but also from extant inscriptions². Her head appears on bronze coins of the town struck in s. iii B.C.³ And her name at least is perpetuated by that of Saint Artemidos, the Cean protector of ailing children⁴. If, then, we may assume that in Keos, as at Athens, Artemis was *Ariste*, it is possible to plead that *Aristaios* was a theophoric name⁵ attached to her *páredros*⁶—possible, but precarious.

On the whole, I am disposed to see in Aristaios another example of those early kings of Greece (Agamemnon, Amphiaraos, Trophonios, Asklepios, etc.), who bore the title of the sky-god because they were regarded as his human embodiment⁷. Hyginus—was it only a lucky

¹ Ant. Lib. i (after Nikandros *ἐρεποιούμενα* book 3) Hermochares of Athens saw Ktesylla, daughter to Alkidamas of Ioulis, as she danced round the altar of Apollon at Karthaia on the occasion of the Pythian festival. Falling in love with her, he inscribed an apple and let it drop in the precinct of Artemis. Ktesylla picked it up and read thereon a vow to marry Hermochares of Athens. Thereupon, moved by modesty and anger, she flung the apple away. When Hermochares pressed his suit, Ktesylla's father consented and, laying hold of the bay-tree, swore by Apollon to that effect. But after the Pythia Alkidamas forgot his oath and gave his daughter to another. The wedding was at hand, and the girl was already offering her sacrifice in the precinct of Artemis, when Hermochares indignant at losing his bride burst in. Ktesylla was smitten with love for him and, helped by her nurse, eloped with him by night to Athens, and there married him. Fate ordained, however, that she should die in childbed, because her father had broken his word. When she was being carried out to burial, a dove flew up from the bier and the body of Ktesylla vanished. Hermochares consulted the oracle about it and was bidden to found at Ioulis a sanctuary of [Aphrodite (*secl.* J. G. Schneider)] *Ktesylla*. The Ceans still worship her—the men of Ioulis calling her Aphrodite *Ktesylla*, the rest Ktesylla *Hekairge*.

Diodoros, probably drawing upon Timaios² (c. 346—c. 250 B.C.), is aware that he left descendants in Keos, and states that in Sardinia he begat two sons called Charmos and Kallikarpos³. The well-omened⁴ jingling names are suggestive of a Dioscuric pair. Finally, Aristaios, identified by the poets with Zeus⁵, appears as a Zeus-like head, bearded and often laureate, on Hellenistic coins of Keos (figs. 179—182)⁶ and of the

In this connexion a word must be added on a Thessalian cult about which we are very imperfectly informed. Three out of the four tetrarchies of Thessaly recognised a month *Áphrios*⁴, which belonged to the second half of the year⁵ but cannot as yet be more nearly defined. B. Keil⁶, K. Tümpel⁷, and J. W. Kubitschek⁸ held that its name implied the worship of Aphreia⁹, a clipped form of the Thessalian Aphrodite. But N. I. Giannopoulos has done good service by publishing a couple of inscriptions from Pherai, which afford a

Mordtmann in the *Ath. Mitth.* 1881 vi. 260 ff. beginning Ἀρφεῖς νῆπι τερεῖ[μ]ένον ἱερὸν ἄστν | ἀρχαίων ἱδρυμα κ.τ.λ. Kaibel *Epigr. Gr.* no. 1034 printed the poem from Franz' copy, but omitted the opening word as an obvious error. Later, in *Hermes* 1884 xix. 261, he suggested that Ἀρφεῖς might be a stone-cutter's slip for Ἀρφεῖς in the sense of Ἀφρογενείας. Lastly B. Keil *ib.* 1885 xx. 630 supported Kaibel's suggestion by noting the month Ἀφριος, which according to him implied a Thessalian Ἀφρία to match the Thracian Ἀφρεία.

more likely explanation. Both are engraved on marble *stelai* topped by a small pediment. The first to be found read ΔΙΑΦΡΙΟΥ, which Giannopoulos¹ shrewdly interpreted as a dedication (in dialect²) 'to Zeus *Áphrios*.' Various scholars shook sapient heads over this new-fangled epithet³. But all doubts as to its authenticity were dissipated when Giannopoulos produced a second inscription from the same town, containing the god's name in full—ΔΙΑΦΡΙΟΥ, 'to Zeus *Áphrios*'⁴.

It remains to determine the sense of *Áphrios*, and that is no easy task. Indeed, we are reduced to pure conjecture. I should assume derivation from the Greek *aphrós*, 'foam.' Significance might attach to bubbles on the local spring⁵, froth on the river, foam on the sea, and any or all of these things might be attributed to the action of the sky-god. An Indian story tells how Indra—the thunder-god who

By means of the Surā-liquor Namuḳi, the Asura, carried off Indra's (source of) strength, the essence of food, the Soma-drink. He (Indra) hasted up to the Aṣvins and Sarasvatī, crying, "I have sworn to Namuḳi, saying, "I will slay thee neither by day nor by night, neither with staff nor with bow, neither with the palm of my hand nor with the fist, neither with the dry nor with the moist!" and yet has he taken these things from me: seek ye to bring me back these things!" 2. They spake, "Let us have a share therein, and we will bring them back to thee."—"These things (shall be) in common to us," he said, "bring them back, then!" 3. The Aṣvins and Sarasvatī then poured out foam of water (to serve) as a thunderbolt, saying, "It is neither dry nor moist"; and, when the night was clearing up, and the sun had not yet risen, Indra, thinking, "It is neither by day nor by night," therewith struck off the head of Namuḳi, the Asura. 4. Wherefore it has been said by the Rishi (Rig-veda S. viii, 14, 13 [cited *infra*]), "With foam of water, Indra, didst thou sever the head of Namuḳi, when thou wert subduing all thine enemies." Now, Namuḳi is evil: having thus, indeed, slain that evil, his hateful enemy, Indra wrested from him his energy, or vital power.'

W. H. D. Rouse 'Baldur Story' in *The Folk-Lore Journal* 1889 vii. 61 notes the *Taittirya Bṛāhmaṇa* 1. 7. 1. 7 ('He moulded this foam of the waters: that, you know, is neither dry nor wet. It was dawn, the sun had not risen: that, you know, is neither day nor night. He cut off his head with the foam of the water in this world').

M. Bloomfield in the *Journal of the American Oriental Society* 1893 xv. 155 ff. collects other allusions: 'At Rāmāyaṇa iii. 30. 28 (Bomb.; iii. 35. 94 Gorresio) we read:—"Khara fell down slain...as Vṛtra was slain by the thunderbolt, as Namuci by the foam." At Mahābh. ix. 2436: "...the lord Vāsava, perceiving a fog, cut off his (Namuci's) head with the foam of the waters." Nilakanṭha in his commentary on Mahābh. i. 7306 ff. (Calc.: i. 197. 31 Bomb.) says: "...just as when Namuci was to be slain (Indra's) thunderbolt entered into the foam of the waters"..." (*A variation of this story at Mahābh. v. 318—330 tells how the great Ṛṣis had promised Vṛtra that they would not slay him with anything dry or wet, with a stone or wood, with a knife or arrow, neither by day nor by night. This promise was kept until at dawn one day Indra saw "foam in the sea similar to a mountain"; this along with his thunderbolt he threw upon Vṛtra; Viṣṇu entered the foam and slew Vṛtra...). Mahidhara at VS. x. 33 says: "the Aṣvins and Sarasvatī gave to Indra a thunderbolt in the form of water-foam. With that Indra cut the head of Namuci." And at xix. 71: "...with the foam of water did you take off the head of the Asura Namuci." Sāyaṇa at RV. viii. 14. 13: "Indra...cut off his head at the junction of day and night, with foam, which is different from dry and wet. This purport is set forth in this verse: O Indra, with the foam of the waters, turned into a bolt, did you take off the head of the Asura Namuci." The Bṛāhmaṇas are more explicit. At MS. iv. 3. 4 we have: "...having spread a fog at sunrise, he cut off his head with the foam of the waters."... The Pañc. Br. xii. 6. 8 has: "...he cut off his head at dawn before the sun had risen with the foam of the waters. For at dawn before the sun has risen: that is neither night nor day; and foam of the waters: that is neither wet nor dry."

Sir James Frazer¹, who cites the tale as a parallel to the myth of Balder, adds: 'The foam of the sea is just such an object as a savage might choose to put his life in, because it occupies that sort of intermediate or nondescript position between earth and sky or sea and sky in which primitive man sees safety. It is therefore not surprising that the foam of the river should be the token of a clan in India².'

The Greeks apparently looked upon foam as one manifestation of the sky-god's seed, and thus in a manner akin to dew or rain. Nonnos³ states that Hephaistos, when enamoured of Athena,

Shot forth the hot and self-spined foam of love.

The same poet elsewhere⁴ tells how a dolphin once carried Aphrodite to Kypros,

What time the gendering dew of Ouranos,
Down-streaming with his manhood's gore, gave shape
To the foam of childbed and brought forth the Paphian.

The Orphic Rhapsodies⁵ used similar language in narrating the birth of Aphrodite from the foam that arose when the seed of Zeus fell into the sea. Both incidents of course involve the naive derivation of *Aphrodite* from *aphrós*⁶. But the idea of seminal foam is as

Bloomfield *ib.* further contends that this legend of Indra and Namuki gave rise to a class of magical practices in which demons were routed by means of river-foam, called 'river-lead,' or some surrogate such as lead, iron-filings, and even the head of a lizard. ⁶ Modern adherents of this time-honoured view include the following:

(1) L. Meyer *Vergleichende Grammatik der Griechischen und Lateinischen Sprache* Berlin 1884 i. 2. 641 'Αφρο-δῖ-τη ("die im Schaum leuchtende (?)"). *ib.* 990 'Αφρο-δῖ-τη (eigentlich "im Schaum glanzend" oder "im Gewolk glanzend"?), *id. Handb. d. gr. Etym.* i. 160 f. from ἀφρός 'foam' + a participial form of the root *dī* 'to shine' (cp. Sanskrit *su-dīti*), "'im Schaume glanzend.'" So also H. Hirt *Der indogermanische Ablaut* Strassburg 1900 p. 99 § 364 'idg. *dejā* "scheinen"...'Αφροδῖτη'. I pursued the same will-o'-the-wisp in the *Class. Rev.* 1903 xvii. 177.

(2) L. v. Schroeder *Griechische Gotter und Heroen* Berlin 1887 i. 7 f. assumes an Indo-European **abhradītā* or **abhradīti* from Sanskrit *abhrā* 'cloud' (ἀφρός) + the root

di 'to hasten' (*δίου, δεισθαι*, etc.) "im Gewölk sich bewegend, im Gewölk dahineilend oder fliegend."

(3) P. Kretschmer *Die Griechischen Vaseninschriften* Gutersloh 1894 p. 156 n. 1 'Aφροδίτη enthält in seinem ersten Teil unzweifelhaft *ἀφρός*, in seinem zweiten wahrscheinlich **ὄδῆ*, das sich zu *ὄδῆ* verhält wie *ταμίη* zu *ταμίης*, *id.* in the *Zeitschrift für vergleichende Sprachforschung* 1895 xxxiii. 267 'Aφρο-ὄδῆ "Auf dem schäume dahinwandelnd." So F. Dümmler in Pauly-Wissowa *Real-Enc.* i. 2773 "auf dem Schaum hinwandelnd," O. Kern *Die Religion der Griechen* Berlin 1926 i. 206 "die auf dem Schaume wandelnde" ('Sehr anschaulich dazu E. Oberhummer, *Die Insel Cypern* I, S. 108 ff.).

(4) Gruppe *Gr. Myth. Rel.* p. 1348 n. 2 suggests 'Aφρο-δῆ from *ἀφρός* + **δίω* (*διαίνω, διερός*) 'wetted with foam,' cp. *Anacreont.* 53. 30 ff. Bergk⁴ *χαροπῆς ὅτ' ἐκ θαλάσσης | δεδρωσμένην Κυθήρην | ἐλόχευσε πόντος ἀφρῶ*, Himer. *or.* 1. 20 *ἐτι τὸν ἀφρὸν μετὰ τὴν θάλασσαν ἐξ ἄκρων πλοκάμων στάζουσιν*.

Others treat the name as non-Greek (e.g. A. Fick *Die Griechischen Personennamen*² Göttingen 1894 p. 439 'Der Name 'Aφροδίτη ist wohl kaum griechisch' etc.) and advocate a variety of Semitic etymologies (listed by K. Tümpel in the *Jahrb. f. class. Philol.* Suppl. 1880 xi. 680 f. and Gruppe *op. cit.* p. 1348 n. 3). A couple will serve as examples, or at least as warnings:

(1) E. Roth *Geschichte unserer abendländischen Philosophie* Mannheim 1846 i. 263 with n. 452 and L. Preller *Griechische Mythologie*² Berlin 1860 i. 263 note the Semitic *aphrodeth*, 'dove' (Aramaic פִּרְיָה, Phoenician with article (*sic*) פִּרְיָה). This is to some extent approved by K. Tümpel *loc. cit.* and by E. H. Meyer in the *Gott. gel. Anz.* 1888 p. 138. See further W. Muss-Arnolt *A Concise Dictionary of the Assyrian Language* Berlin 1905 ii. 827 s.v. 'purīdu,' 'a bird,' C. Bezold *Babylonisch-assyrisches Glossar* Heidelberg 1926 p. 226 s.v. 'purīdu, puriddu, pirīdu,' 'e. Vogel,' W. Gesenius *Hebräisches und aramaisches Handwörterbuch über das alte Testament*¹⁶ rev. F. Buhl Leipzig 1915 p. 657 s.v. פִּרְיָה [pered] (derived from *parad* 'to flee'—ass. *parādu* probably 'to flee,' *purīdu* 'leg' [properly 'goer']—in Hebrew = 'mule'), J. Levy *Neuhebraisches und chaldaisches Wörterbuch* Leipzig 1889 iv. 101 s.v. פִּרְיָה f. [pəridhah] (arab. فَرِيدٌ [farid] syn. mit פִּרְיָה [peredh] 'ein Stück von dem Taubenpaar, das (nach Lev. i. 14 fg.) geopfert werden soll, einzelne Taube.' But all this fails to justify the initial 'A- of 'Aφροδίτη.

(2) F. Hommel 'Aphrodite-Astarte' in the *Jahrb. f. class. Philol.* 1882 xxviii. 176 contends that 'Aφροδίτη is a direct loan-word from the Phoenician form *Ashtōreth*: 'das *sh* dieses wortes (wie auch seiner babylonischen nichtsemitischen urform *Ishtar*) wurde dem folgenden *t* in der aussprache möglichst angeglichen, so dasz dieselbe eher *Ahtōreth* als *Ashtōreth* lautete; das wird unwiderleglich bewiesen durch die form *Ahtar* bei den Sudarabern, welche...die Astarte von Babylonien entlehnten. auf diese aussprache des *sh* in *Ashtōreth* wie engl. *th* nun gründet sich meine identification: bekannt ist, dasz in etymologisch verwandten, um so mehr aber in lehnwörtern, ursprüngliches *θ* (sprich wie engl. *th*) durch *f*, in alter zeit wohl auch *ph* (griech. *φ*) ersetzt wurde² ('wer mir entgegen dasz *φ* in alterster zeit noch nicht den laut *f* gehabt habe, den verweise ich darauf, dasz aus *Ahtōreth*—die Griechen hatten ja überhaupt kein *f*—schon des anklangs an *ἀφρός* halber ganz ungezwungen *Aphrōtēth* werden konnte, ja musste. für fremdes *f* war der nachstliegende griechische laut eben nur *φ*); vgl. nur russisch *Fedor* aus griechisch *Θεόδωρος*. die Griechen hörten nun *Ashtōreth* wie *Aphrōtēth*, was mit einer bei lehnwörtern so überaus häufigen metathesis umgestellt wurde zu *Aphrōtēth*—'Aφροδίτη.' *Id. Aufsätze und Abhandlungen arabistisch-semitologischen Inhalts* München 1892 i. 34 n. 1 'Auch die Griechen horten ja *Ashtoret* (vgl. *Ishtāritu* neben *Ishar* und zur Lange *Namtāru* aus *Namtār*) als *Ahtoret*, da sie (vgl. russ. *Marfa* aus *Martha*) *Aphtoret* und weiter *Aphrotet* ('Aφροδίτη) draus machten.' *Id. Ethnologie und Geographie des alten Orients* München 1926 p. 1040 adheres to his view 'Aφροδίτη aus *Attoret* (Astarte, Mittelform *Afrotet*)' and cites in support H. Grimme in *Glotta* 1925 xiv. 18 with n. 1. See also Schrader *Reallex.*² i. 168, who cp. as a doubtful parallel *γέφυρα* = a Semitic *gēšār*.

old as Hesiod¹, reappears in fifth-century science², and quite conceivably accounts for the existence of *Áphrios* as an appellative of Zeus.

On the whole, I incline to accept Hommel's hypothesis that 'Αφροδίτη (F. Blass in Collitz—Bechtel *Gr. Dial.-Inscr.* iii. 2. 239 ff. no. 4952 A, 27 'Αφρο(δ)ίταν = Dittenberger *Syll. inscr. Gr.*³ no. 527 a, 27 'Αφροδίταν in an oath from Dreros in eastern Crete, c. 220 B.C., quoted *supra* i. 729 n. 2) really was a Greek attempt to pronounce *Ástōreth* and at the same time to make sense of a foreign name by assimilating the first part of it to *άφρός*. G. Meyer *Griechische Grammatik*³ Leipzig 1896 p. 246 n. 1 summarises the process: 'F. HOMMEL...nimmt die Entwicklung *Ástōreth* **Áθlōreth* (sudarab. *Áθlar*) **Ástōreth* und daraus mit Metathesis im Anklang an *άφρός* *Áphrōteth* an.'

Late chroniclers, by way of providing an eponym for the Africans, personified the Hesiodic *άφρός* and put together the following pedigree:

That, however, is guesswork, and other guesses are almost equally permissible. For instance, philologists have shown that *aphrós* is related both to *ómbros*, 'rain,' and to *néphos*, *nephéle*, 'cloud'.¹ We might, therefore, without deserting the Greek area, conjecture that Zeus *Aphrios* was originally a Thessalian rain-god or cloud-god. Further evidence is much to be desired.

Some twenty minutes west of Pherai (*Velesino*), on the right bank of a small torrent known as *Michali-Revma*², A. S. Arvanitopoulos located a large and important cult-centre. Since 1919 he has been at work, helped latterly by Y. Béquignon and P. Collart of the French School, uncovering the area and determining its history.³ No fewer than six successive epochs are involved. The site was already occupied in neolithic times—witness numerous sherds and a marble idol. Then came a 'Mycenaean' sanctuary⁴, evidenced

The widespread beliefs attaching to 'cuckoo'-pit are not unworthy of attention. The name is popularly given to a mass of froth concealing the *larvae* of certain insects. One of the main genera of the *cercopidae* or frog-hoppers is labelled *aphrophora*, and one of its species is *aphrophora spumaria* (R. Lydekker *The Royal Natural History* London 1896 vi. 195 f. with figs.). J. Grimm *Teutonic Mythology* trans. J. S. Stallybrass London 1883 ii. 682 says: 'The froth on willows, caused by the cicada spumaria, we call *kukuks-speichel*, Swiss *guggerspeu*, Eng. *cuckoo-spit*, *-spittle*, Dan. *giogespyt*, but in some cases witch's spittle, Norweg. *troid-kiaringspye*.' by terra-cotta figures and vase-fragments. Next, a necropolis of the 'geometric' period. Over a score of graves, rectangular in shape, built of and covered with large stone slabs¹, were but poorly furnished; they contained a few vases, small bronzes, and iron weapons. The cist-graves had, however, been left undisturbed by later builders. Immediately above them was placed the Hellenic temple, or rather a sequence of three Hellenic temples. The first, which appears to have been constructed, in part at least, of timber², dated from *s.* vii B.C., to judge from the fragment of an early Doric capital. To it belonged a mass of votive offerings in bronze, silver, gold, ivory, and other materials³. These had been deposited in two *bóthroi* or *favissae*, one about 11.50^m to the south, the other to the west of the temple: the contents of the latter were thrown in with the earth as filling for a retaining-wall of the next temple. The offerings included many bronze animals (horses, cocks, geese. etc.), a bronze handle in the form of a griffin's head, the bronze statuette of a warrior⁴; gold and silver ornaments of 'orientalising' date; an Egyptian head of good style, scarabs with bogus hieroglyphs; terra-cotta figurines of *kórai* seated or standing, some being fragments of almost life-sized figures, sundry types of *koúroi*, statuettes of sick or deformed persons, several *ex-voto* effigies of hands and feet; carved ivory seals and couchant beasts recalling those from Sparta⁵. The second temple, built *c.* 550—500 B.C. and burnt *c.* 400 B.C., is represented by many architectural remains found underneath the south-east corner of its successor. Here were four Doric columns in *póros* with fragments of archaic Doric capitals and frieze-blocks in the same material, showing traces of painted stucco—all used as foundations of the latest edifice⁶. Within the temple was the base of a bronze statue, inscribed in lettering of 450—400 B.C. '[? Strongyl]ion made me?'. Parts of a female statue in marble were also found, half life-sized and of good fifth-century work⁸. The third temple was erected in the first quarter of *s.* iv B.C.

and in its turn destroyed by fire c. 200 B.C. It was approximately 26.50^m long by 16.82^m broad. On the east side the stylobate is preserved, with the two lower steps of white local marble. The building itself was a hexastyle peripteral temple of the Doric order. Its columns, of *pôros* coated with stucco, carried an entablature of which portions have come to light. Among them may be noted a marble metope with the relief of a lion killing a bull¹; also various fragments of the cornice with carved and painted decoration². To the east of the temple are the foundations of six structures differing in date: one at least of these seems to have been a *naîskos*, the rest bases or altars of rectangular plan, built of *pôros* in massive blocks. The finds comprise many pedestals and fragments of statues, bronze *phialai* for libation, and broken vases ranging as late as s. iii or s. ii B.C. Of greater moment are the inscriptions. There are ten bronze plaques preserving the terms of twenty-five laws or proxeny-decrees. There is the fragment of a decree in the Thessalian dialect. And there are other records of interest³. For instance, five large and five small pieces of inscribed *stilai*, which include a fresh dedication to the Thessalian goddess *Enhodia*⁴. Finally, in post-classical times the temple-area was used as a Christian cemetery.

It would seem, then, that from the neolithic age down to our own era the spot was in some sense holy ground. It is not, however, quite obvious what deity or deities were here worshipped by the Greeks. On the one hand, the prevalence of female terra-cotta figurines in the archaic period points to the possibility that the sanctuary was then devoted to a female divinity⁵. On the other hand, A. S. Arvanitopoulos, on the strength of certain inscriptions actually found at some distance from the temple, believes that it was the cult-centre of Zeus *Thaülíos*. Perhaps it may be suggested that at Pherai, as at Larissa⁶, the cult of Zeus was associated with that

of *Enhodía*¹, whose head indeed appears on the coinage of the town (fig. 190)². Her ritual—if we can trust a tale told by Polyainos³—might require the sacrifice of a choice bull with gilded horns, fillets, and blue gold-spangled draperies.

Zeus *Thaülíos* undoubtedly had a cult at Pherai. A votive *stéle* of marble, found there by Arvanitopoulos⁴, has a small pediment

⁷ *Id. ib.* p. 136 reports that he found on this hill ('auf dem Hügel der Fatihmoschee an der Apidanosquelle') prehistoric sherds and one of geometric date. He conjectures that it was the site of Phthia, the town of the Myrmidones.

rocky surface of the hill-top has been so worked as to leave out-standing sundry breast-shaped knobs, meant presumably to fit into corresponding hollows on the under side of votive bases. One such patch of tooled rock at the north-eastern edge of the summit exhibits a carefully incised dedication

ΔΙΘΑΥΛΙΩΙ 'To Zeus *Thaüllos*'

by certain 'kinsfolk of Parmeniskos¹.' The hill (fig. 192) is crowned by an old Turkish mosque², founded—so it is said—centuries ago on the site of an older church. The minaret fell and could not be set up again till a cross was fixed on its highest point. So here the Turks must needs reverence the cross! This mosque is built of ancient materials: many statue-bases, architectural blocks, and a very early Doric capital of *pôros* are still to be seen in its walls. A trial excavation west of the mosque proved unproductive. But the inhabitants aver that here inscriptions and marble statuettes and numerous coins have come to light. Again, in the quarter of Pharsalos known as *Koloklompas*³ N. I. Giannopoulos⁴ found an altar inscribed in lettering which dates from the latter part of *s.* iv B.C.:

ΔΙΟΣ ΘΑΥΛΙΟΥ 'Of Zeus *Thaüllos*.'

The appellative has been traced further afield⁵. Hesychios gives *Thaïmos* (?) or *Thaïlos* as a title of the Macedonian Ares⁶, and *Thaïlia* as the name of a festival held by Kteatos⁷ and the Dorians⁷. Lastly, the clan *Thaulonídai* at Athens had an eponymous ancestor *Thaïlon*, who figures in a myth relating to the cult of Zeus *Polieüs*⁸. It looks as though *Thaïlos*, *Thaüllos*, *Thaïlon* had been in early days a divine epithet used by more than one Greek community.

The allusion to Kteatos (? the son of Molione (*supra* ii. 1015 n. 8)) is not found elsewhere, and perhaps postulates εἰσαχθεῖσα.

⁸ *Infra* § 9 (h) ii (δ).

With regard to its original meaning nothing is known. Conjectures have been advanced by W. Tomaschek¹, F. Hiller von Gaertringen², F. Bechtel³, and F. Solmsen⁴. But none of these is convincing. I venture therefore to add to their number the suggestion that *Thaülíos* denotes 'god of the Dew,' being in fact a word akin to the German *Tau*, the Dutch *dauw*, and the English *dew*⁵.

¹ W. Tomaschek in the *Sitzungsber. d. kais. Akad. d. Wiss. in Wien* Phil.-hist. Classe 1894 cxxx Abh. ii. 55 (from the root *thv-*, 'stürmen').

² F. Hiller von Gaertringen in *Hermes* 1911 xlv. 156 considers the possibility of connexion with *θάλλω*, *θαλλός*, *Θαύσια*, but rightly observes that the *av* of *Θαύλιος*, *Θαύλων* is quite incompatible with the *ā:ā* of *τέθαλα: θάλλεθω*.

³ *Id. ib.* cites a suggestion of F. Bechtel: 'Nur als einen Einfall will es Bechtel gelten lassen, dass *Θαύλων* den Toter bedeute: *θau-*, zu combiniren mit germanischem *dau* im gotischen *dauþs*, ahd. *tōt*, nhd. *tot*. Dann würde *Θαύλων* dasselbe wie *βουφόνος*, *Θαύλια* = *βουφόνια* sein, und Zeus *Θαύλιος* der Gott, dem die *Βουφόνια* gelten. Sachlich dürfte hiergegen nichts einzuwenden sein; das Verschwinden des Wortstammes im taglichen Sprachgebrauche der Griechen wäre ein Beweis für das hohe Alter der religiösen Sitte und Vorstellung.'

⁴ F. Solmsen 'Zeus Thaulios' in *Hermes* 1911 xlv. 286—291 criticises Bechtel's view: 'So verführerisch die Deutung erscheint, so erheben sich doch gegen sie lautliche Bedenken von gotischer Seite her. Neben *dauþs* "tot" *dauþus* "Tod" nämlich steht hier *diuans* "sterblich." Dessen *-iū-* geht auf *-ey-* zurück, also muss das *-au-* von *dauþs* *dauþus* alteres *-ou-* fortsetzen, und damit lässt sich das *-av-* von *Θαύλιος* usw. schlechterdings nicht vereinigen.' Solmsen further propounds a conjecture of his own: 'Θαυλ- kann sich Laut für Laut mit *-δανλ-* decken, dem zweiten Bestandteil des lydischen, genauer lydisch-phrygischen Namens *Κανδαύλας*. Über das eigentliche Wesen dieser Figur belehrt uns der bekannte Hipponaxvers *Ἐρμῆ κνύαρχα* [*εἰς κνύαρχα*], *Μηριονιστὶ Κανδαύλα*' (Hipponax *frag.* 1 Bergk⁴, 4 Diehl, 45 Knox). On this showing *Θαύλων* would denote 'Throttler' ('Würger'), *Θαύλια* 'the Throttling-festival' ('Wurfefest'), and *Θαύλιος* the god served with such rites. Sacrifice effected by, or at least accompanied with, strangulation appears to have been an early institution: Solmsen adduces the bull-dragging for Poseidon *Ἐλικώνιος* (*Il.* 20. 403 f. cited *supra* i. 506 n. 1), the bull-hanging for Athena at Ilion (*supra* i. 533 fig. 406), the slaughter of a bull for Poseidon at intervals of five and six years alternately, on the top of a pillar made of 'mountain-bronze' (? brass) and inscribed with the laws, by the natives of Atlantis (Plat. *Critias* 119 C—E), and the yearly hanging of a young kid for Aspalis Amelete Hekaerge in the precinct of Artemis at Melite in Phthia (Ant. Lib. 13 after Nikandros *ἐπερωδόμενα* 2). Analogous cases are mentioned by W. Robertson Smith *Lectures on the Religion of the Semites*³ London 1927 p. 343 n. 3. But, unfortunately for Solmsen's view, Thaulon is expressly said to have slain his ox with an axe (*infra* § 9 (h) ii (δ)).

If it be objected that the Macedonian Ares *Θαύλος* (*supra* p. 282) can hardly have been a dew-god, we must remember that at Athens an early myth made Ares the husband of Agrauios the dew-sister (Hellanik. *frag.* 69 (*Frag. hist. Gr.* i. 54 Muller) = *frag.* 38 (*Frag. gr. Hist.* i. 119 Jacoby) *ap.* Soud. s.v. *Ἀρειος πάγος* = *et. mag.* p. 139, 14 ff. = Bekker *anecd.* i. 444, 8 ff., cp. It is by no means certain that Ares was *ab origine* only a war-god, and Makedonia is the sort of place in which we might expect to find traces of wider functions.

§ 9. *Zeus and the Rain.*

(a) Rain-magic.

i. Rain-magic in modern Greece.

Rain-making by means of magic, with some admixture of prayer, is practised even nowadays in the less frequented parts of Greece. Mr J. C. Lawson¹ tells us that in Thera (*Santorini*) he found the local rain-maker high busy with her spells:

'I chanced one day upon a very old woman squatting on the extreme edge of the cliff above the great flooded crater which, though too deep for anchorage, serves the main town of the island as harbour—a place more fascinating in its hideousness than any I have seen. Wondering at her dangerous position, I asked her what she was doing; and she replied simply enough that she was making rain. It was two years since any had fallen, and as she had the reputation of being a witch of unusual powers and had procured rain in previous droughts, she had been approached by several of the islanders who were anxious for their vineyards. Moreover she had been prepaid for her work—a fact which spoke most eloquently for the general belief in her; for the Greek is slow enough (as doubtless she knew) to pay for what he has got, and never prepays what he is not sure of getting. True, her profession had its risks, she said; for on one occasion, the only time that her spells had failed, some of her disappointed clients whose money she had not returned tried to burn her house over her one night while she slept. But business was business. Did I want some rain too? To ensure her good will and further conversation, I invested a trifle, and tried to catch the mumbled incantations which followed on my behalf. Of these however beyond a frequent invocation of the Virgin (*Παναγία μου*) and a few words about water and rain I could catch nothing; but I must acknowledge that her charms were effectual, for before we parted the thunder was already rolling in the distance, and the rain which I had bought spoilt largely the rest of my stay in the island. The incantations being finished, she became more confidential. She would not of course let a stranger know the exact formula which she employed: that would mar its efficacy: she vouchsafed to me however with all humility the information that it was not by her own virtue that she caused the rain, but through knowing "the god above and the god below" (*τὸν ἄνω θεὸν καὶ τὸν κάτω θεόν*). The latter indeed had long since given up watering the land: he had caused shakings of the earth and turned even the sea-water red. The god above also had once rained ashes² when she asked for water, but generally he gave her rain, sometimes even in summer-time.'

The names of Zeus and Poseidon have long since passed into oblivion³. But, in view of this remarkable confession, who shall say that their memory does not in some sense linger yet?

¹ J. C. Lawson *Modern Greek Folklore and Ancient Greek Religion* Cambridge 1910 p. 49 f. *Supra* ii. 829.

² In the drying-up of the springs and in the rain of ashes Mr Lawson sees an allusion to the great eruptions of 1866, which were graphically described to him by the old crone.

³ *Supra* i. 165.

Better known is the rain-magic of northern Greece and the Balkans. In times of prolonged drought a girl is dressed up in flowers and, with a troop of children at her heels, is sent round to all the wells and springs of the district. At every halting-place she is drenched with water by her comrades, who sing this invocation¹:

Perperià, all fresh bedewed,
 Freshen all the neighbourhood;
 By the woods, on the highway,
 As thou goest, to God now pray:
 O my God, upon the plain,
 Send thou us a still, small rain;
 That the fields may fruitful be,
 And vines in blossom we may see;
 That the grain be full and sound,
 And wealthy grow the folks around;
 Wheat and barley
 Ripen early,
 Maize and cotton now take root;
 Rye and rice and currant shoot;
 Gladness be in gardens all;
 For the drought may fresh dew fall;
 Water, water, by the pail;
 Grain in heaps beneath the flail;
 Bushels grow from every ear;
 Each vine-stem a burden bear.
 Out with drought and poverty,
 Dew and blessings would we see.

At Shatista in south-west Makedonia the song is alliterative²:

Perperuna perambulates
 And to God prays:
 'My God, send a rain,
 A right royal rain,
 That as many (as are the) ears of corn in the fields,
 So many stems (may spring) on the vines,' etc.

Similarly on the island of Imbros a girl dressed up with leaves and

flowers goes round the village and at every house is drenched with water, while her comrades sing¹:

The Walker walks her ways
And God the Lord she prays.
God, send the rain
On us again,
That strong the corn may grow
And strong the laddies too.

The name *Perpería* has many variations. At Kataphygi it has been corrupted into *Pipería*, 'Pepper-tree'²:

Piperia, dew-collecting piperia, etc.

In Zagorion, a district of Epeiros, it has become *Papparoúna*, 'Garden-poppy,' and the chief actor in the ceremony must be largely dressed in poppies³. Other forms used by the Greeks are *Perperína*⁴, *Perperítsa*⁵, *Purperoúna*⁶, *Purpirouna*⁷. In Bulgaria we hear of *Preperuga* or *Peperuga*⁸; in Wallachia, of *Papeluga*⁹ or *Papaluga*¹⁰:

Papaluga, climb into heaven,
Open its doors,
Send down rain from above,
That well the rye may grow.

E. Gerard¹¹ gives the following account of *Papaluga*:

'When the land is suffering from protracted and obstinate droughts, the Roumanian not unfrequently ascribes the evil to the Tziganes [*sc.* gypsies], who by occult means procure the dry weather in order to favour their own trade of brick-making. In such cases, when the necessary rain has not been produced by soundly beating the guilty Tziganes, the peasants sometimes resort to the *Papaluga*, or Rain-maiden. This is done by stripping a young Tzigane girl quite naked, and dressing her up with garlands of flowers and leaves, which entirely cover her, leaving only the head visible. Thus adorned, the *Papaluga* is conducted round the village to the sound of music, each person hastening to pour water

over her as she passes. The part of the Papaluga may also be enacted by Roumanian maidens, when there is no particular reason to suspect the Tziganes of being concerned in the drought. The custom of the Rain-maiden is also to be found in Servia, and I believe in Croatia.'

Sir James Frazer¹ notes:

'In Roumania the rain-maker is called Paparuda or Babaruda. She is a gypsy girl, who goes naked except for a short skirt of dwarf elder (*Sambucus ebulus*) or of corn and vines. Thus scantily attired the girls go in procession from house to house, singing for rain, and are drenched by the people with buckets of water. The ceremony regularly takes place all over Roumania on the third Tuesday after Easter, but it may be repeated at any time of drought during the summer.'

In Dalmatia those who take part in the procession are called *Prporushe* and their leader *Pripats*² or *Prpats*³. The origin of the word *Perperia* has been much discussed. It is often derived from a Slavonic root meaning 'to flutter' and taken to denote a 'butterfly'⁴. Butterflies were believed to spring from dew-drops⁵, and this would suit the opening words of the rain-song: 'Perperia, all fresh bedewed,' etc.⁶ But a butterfly, even if we identify it with the soul⁷, has no essential connexion with the present form of rain-magic. More probable by far is Mr J. C. Lawson's⁸ contention that *perperia* (for *periporeia*) began by meaning any 'procession round' the village, then acquired the special force of 'procession in time of drought,'

Etc.

and lastly became the title of the leader in that procession. The Macedonian *Perperotína*¹ and the Imbrian *Porpatéra*² are both expressly said to 'go their round.'

Another Bulgarian name for the chief performer is *Djuldjul*, corresponding with the Serbian *Dodola*³. The Serbian usage is as follows. A girl called the *Dodola* is stripped naked, but so wrapped up in grass, herbs, and flowers that nothing of her can be seen, not even her face. Escorted by other girls, she then passes from house to house. Before each house her comrades form a ring. She stands in the middle and dances alone. Out comes the goodwife and empties a bucket of water over her. But still she keeps dancing and whirling, while her companions sing⁴:

To God doth our Doda call,	oy Dodo oy Dodo le!
That dewy rain may fall,	oy Dodo oy Dodo le!
And drench the diggers all,	oy Dodo oy Dodo le!
The workers great and small,	oy Dodo oy Dodo le!
Even those in house and stall,	oy Dodo oy Dodo le!

Sometimes they sing, not a prayer for rain, but a rain-charm of a simple order⁵:

We go through the village,
The clouds go across the sky;
We go faster,
Faster go the clouds;
They have overtaken us
And wetted the corn and the vine.

Or:

We go through the village,
The clouds go across the sky;
From the clouds fell a ring,—
Our leader seized it.

At Melenik in Makedonia, where the surrounding rustics speak Bulgarian, the corypheus is saluted as *Ntountoulé*⁶:

Hail, hail, Dudulé,
(Bring us) both maize and wheat,
Hail, hail, etc.

It should be added that, whereas in Serbia and Bulgaria the principal part in this performance is always assigned to a girl, in

Makedonia and Dalmatia it is given to a boy or a young unmarried man¹. The name *Dodola* is unfortunately of unknown origin².

As to the significance of the rites here noticed, W. Mannhardt³ held that the leaf-clad girl personifies vegetation, and his lead is followed by Sir J. G. Frazer⁴ and Mr J. C. Lawson⁵. W. R. S. Ralston⁶, however, regarded her as representing the earth, and so do B. Schmidt⁷ and G. F. Abbott⁸. The two lines of explanation are not widely divergent; indeed, they practically coincide. For in Greek lands the corn-mother seems to have been but a differentiated form of the earth-mother⁹. Accepting Ralston's interpretation, I think it not improbable that the girl clad in greenery, who is supposed to catch a ring falling from the clouds¹⁰, really plays the part of the Earth married to the Sky amid a mock shower of fructifying rain¹¹. Be that as it may, this at least is clear, that the drenching of the maiden with water is intended as a rain-charm, potent enough according to the principles of imitative magic, and that the company

² For guesses see J. S. Stallybrass in J. Grimm *op. cit.* ii. 594 n. 2 ('Slav. dozhd is rain, and zhd represents either gil or dd; if this be the root, dodo-la may be a dimin.'), W. R. S. Ralston *op. cit.* p. 229 ('The name of Dodola is by some philologists derived from *doit* = to give milk, Dodola being looked upon as a bountiful mother, a type of teeming nature. Others connect it with Did-Lado, from the Lithuanian *Didis* = great, and Lado, the Slavonic Genius of the spring').

I risk yet another suggestion—Hellenic, not Slavonic. F. Bechtel in the *Nachr. d. kon. Gesellsch. d. Wiss. Göttingen* Phil.-hist. Classe 1890 pp. 29—31 and in his recent work *Die griechischen Dialekte* Berlin 1921 i. 64 has established the fact that the Aeolic name for Demeter was Δω-μάρη, with a clipped form Δως (first restored by J. G. J. Hermann in *h. Dem.* 122 for δὲς ἐμοί γ' ὄρου' ἐστὶ of cod. M.). R. Meister *Die griechischen Dialekte* Göttingen 1882 i. 75 had already cited in this connexion the place-names Δώριον πεδίων and Δωδώνη. O. Hoffmann *Die Griechischen Dialekte* Göttingen 1893 ii. 374 f. concludes that the North Achaeans in general originally worshipped the goddess under the title Δωμάρη. On this showing Dodona was the town of Δωδώνη, a reduplicated *Δώ, cp. Sim(m)ias of Rhodes (c. 300 B.C.) *ap. Steph. Byz.* s.v. Δωδώνη. Συμψλας ὁ Πόδιος 'Ζητὸς ἔδος Κρονίδαο μάκαρ' ὑπεδέξατο Δωδώνη. The same reduplication might, I conceive, account for the Serbian *Dodo*, *Dodola*, etc.

of maidens moving through the village is in like manner what it definitely claims to be—a cloud-charm¹.

Similar in character, but more obviously suggestive of a wedding, is the May-day ceremonial of the *Kledona*. Miss M. Hamilton² (Mrs G. Dickins) says of it:

‘In Thessaly in the district of Karankunia³ the day is dedicated to the blessing of the wells and springs, and the festival is called the *Kledona*⁴, which means *omens*. Little girls go round singing in bands of five during the early morning, the smallest being dressed as a bride. Two carry a water-vessel, and the other two are bridesmaids. From the vineyards they take twigs, and drop these into the vessel along with tokens from the youths and maidens of the place. Then they visit all the wells and pour in half of the water, afterwards refilling the vessel, while they sing a petition for blessing on the waters and crops.’

I am indebted to Professor A. J. B. Wace for the following description of the rite as performed by the Vlachs at Midsummer:

‘In the summer of 1910, while travelling in South-west Macedonia, I had the opportunity of seeing how the girls of the Vlach (Macedo-Roumanian) village of Sămărină celebrated the festival of the Nativity of St. John the Baptist on 24th June (O.S.) with the custom of the *klidhone*⁵ (sing. *klidhona*) and other

This again reminds us of the odd quivering movement kept up by the Australian rain-maker, who, in his disguise of white down, may perhaps represent a cloud¹ (‘See above, pp. 260 *sq.* This perpetual turning or whirling movement is required of the actors in other European ceremonies of a superstitious character. The usual ceremony in Greece is called *klidona*, which is worked by the *νερό άμύλητο*—speechless water. A water-vessel is filled at the spring and carried to the house by some maiden without speaking. Into it are thrown tokens of all kinds, which are drawn out next morning, and from them each forms his conclusions as to future fortunes. Usually it is merely a case of marriage-questionings on the part of the village girls.’ Etc.

⁵ Prof. Wace appends a brief bibliography including L. M. J. Garnett—J. S. Stuart-Glenzie *The Women of Turkey and their Folk-lore* The Christian Women London 1890 p. 20 (‘The procession of the *Perperuda* is also an institution among the Vlach women...The third Thursday after Easter is the day chosen for this propitiation of the Water Deities.’ ‘The ceremony of the *Klithona*, observed by the Greeks on St. John’s Eve, is also performed by the Vlach youths and maidens under the same name, but with

observances. On the eve of the festival (the evening of June 23rd O.S.) the girls collected in bands and went about the village singing songs from conduit head to conduit head, putting water in the crock containing the *klidhona* and pouring it out again. Finally, at the last conduit visited, the water is left in. The *klidhona* are trinkets, one contributed by each girl and tied up a with flower or sprig of basil or some other herb, so that each can easily recognise her own again, and are placed in an earthenware crock. The trinkets remain in the water over night; and the next day after church the bands of girls collect together again and go about the village with one of their number dressed up as a bride called *Romană*, singing songs as before and with the crock containing the *klidhona*. In the evening about sunset they go to a retired spot just outside the village, and joining hands and singing suitable songs pour away the water and take out the *klidhona*

one by one. They tell fortunes by the condition of the trinkets: for instance, if one has gone yellow, the omen is good; if black, the omen is bad. It seems possible that the dressing up of a girl as a bride and the visiting of the conduits is connected with a rain-charm¹. This is in brief the custom at Sâmbărină; but it was difficult

to get any detailed information as the girls, especially the older ones, are shy, and only the smaller girls go through their observances in the light of day. The others prefer the screen of night, which shelters them from the prying eyes of the boys.'

G. F. Abbott¹ points out that this picturesque custom, which is now little more than a pastime, had once a serious purpose. Behind the water-jar with its sprigs of basil and talk of sweethearts lies the old-world endeavour to bring about fertility. The hydromancy presupposes rain-magic; and the little girl in her bridal veil, who goes the round of the conduits, is—if I am not much mistaken—the playful and unconscious representative of Mother Earth herself.

Another group of festivals that imply rain-magic is characterised by much mutual drenching of the celebrants with water, salt or fresh. For instance, off the coast of Lykia lies Megiste (*Kastellorizo*), an island destitute of springs and exposed to serious droughts. Miss M. Hamilton² (Mrs G. Dickins) has given a graphic account of the way in which its inhabitants keep the festival of Saint Elias (July 20):

'St Elias is considered lord of rain, and at the time of his festival in July a great amount of reciprocal drenching takes place. For many days before the feast the children throw each other clothed into the sea, and get drenched head to foot: they go round the roads calling aloud τ' α' 'Αία, making the saint's name their cry, and drag along everyone whom they find dry. This they do with the impunity which comes from ecclesiastical support. On the feast-day no one can go dry through the streets, and sponge-fishers even drag people from their houses to the sea. The whole village is drenched as if with rain.'

Miss Hamilton³ justly compares the chief celebration in Kypros:

'At Pentecost the seaports, such as Larnaka and Lemesso, are frequented by large assemblies of country people. Every one bathes in the sea, where they call it the Holy Shore ('Αγίος Γιάλος). Then they take little boats and sail near to the shore all day long, amusing themselves with music and such pleasantries as mutual drenchings. It is unlucky not to get wet on this day, and they have the custom of sprinkling water all over their houses also. In inland districts they go to rivers and springs, and bathe and splash each other. The festival is officially called the Deluge (*Karaklavomós*), but in common talk the islanders speak of it as the festival of Aphrodite, for they cherish the memory of the goddess of Paphos.'

Dr J. Rendel Harris¹ has drawn attention to analogous rain-charms practised throughout Armenia and Syria:

'Amongst the Armenian people it is the custom, on a particular day in the year, to throw water over one another. The day of this exercise is the Feast of the Transfiguration, and the festival itself is called by the name of Vartavar. Although in its modern form the custom of water-throwing is little more than a sport of boys, the evidence is abundant that the throwing of water was originally a religious exercise, and that it goes back to very early times. Its religious character is attested by the fact that in the Armenian Churches there is an aspersion of the people by the priests on the Transfiguration festival; while the boys are throwing water out of doors the priests are throwing water indoors....The custom can be verified all over Armenia; we found it at Moush, at Pirvan, at Egin, at Harpoot, at Ourfa, and practically in every place where we made enquiry ... we were told that at Sivas, Erzeroum, and some other places, it was the custom to let a pigeon fly, *in remembrance of Noah*². This is not done at Egin, nor could we verify it in other places visited. At Aintab we found that they not only threw water over one another, but that they made a special point of throwing water upon the graves....Upon enquiry from the Jacobite Syrians as to whether they had a Vartavar like the Armenians, the reply was in the affirmative, only they differed from the Armenians in keeping the custom upon the Feast of Pentecost instead of the Transfiguration....The more intelligent amongst the Armenians said that they thought the custom had come down to them from the worship of Anahid, which preceded their conversion to Christianity.'

Dr Rendel Harris³ further notes that at any time of drought the Armenians may have recourse to the primitive practice of making a puppet and immersing it in water:

'At Egin, when rain is wanted, the boys take two sticks in the form of a cross, and with the addition of some old clothes and a cap they make a rain-dolly. This figure they carry round the town, and the people from the roofs of the houses throw water on it. They call the dolly the "Chi-chi Mama," which they interpret to mean "the drenched mother." As they carry the dolly about

Hamilton *Greek Saints and Their Festivals* Edinburgh and London 1910 p. 121. *Vartavar*, *pace* Rendel Harris, is certainly derived from the Armenian *vart*, 'rose,' and must be regarded as a survival of the ancient Rosalia (P. ² F. Macler in J. Hastings *Encyclopædia of Religion and Ethics* Edinburgh 1908 i. 804 b: 'The festival of the Transfiguration (*Vardavar*) is called the Festival of Roses, after an old heathen festival which was celebrated on the same day. On the day preceding this festival, the commemoration of the Tabernacle of the Jews is held. On that day people sprinkle each other with water when they meet in the streets; and in certain provinces of Armenia pigeons are set free, either in recollection of the Deluge, or as a symbol of Astlik, the Armenian Venus.'

Was the famous type of Noah in the ark on coins of the Phrygian Apameia Kibotos (literature *supra* ii. 610 n. 9) occasioned by a local festival of this sort?

they ask, "What does Chi-chi mother want?" The reply is, "She wants wheat, *boulgour*" (cracked wheat), &c. "She wants wheat in her bins, she wants bread on her bread-hooks, and she wants rain from God." The boys take up contributions at the rich houses. At Ourfa the children, in times of drought, make a rain-bride, which they call Chinché-gelin. They say this means in Turkish "shovel-bride." They carry the bride about and say, "What does Chinché-gelin want?" "She wishes mercy from God; she wants offerings of lambs and rams." And the crowd responds, "Give, my God, give rain, give a flood." The rain-bride is then thrown into the water. At Harpoot they make a man-doll and call it "Allah-potik." I cannot find out the meaning of the last half of this name. The doll is carried about with the question, "What does Allah-potik want?" "He wants rain from God; he wants bread from the cupboard; he wants meat from dish; he wants *boulgour* from bins; salt from the salt-cellar; money from the purse." Then they all cry out, "Give, my God, rain, a flood." At Trebizond, as we were told, they make a rain-dolly. The children dress it up as a bride and veil its face. They ask money from the people. I was unable to find out whether the dolly was thrown into the sea, which is what one would expect from parallel cases.

Professor R. M. Dawkins¹ and Miss M. Hamilton² (Mrs G. Dickens) have shown that the universal Greek custom of immersing the cross and blessing the waters at Epiphany is not merely an ecclesiastical commemoration of Christ's baptism in the Jordan but also a popular rain-charm of the usual mimetic kind. Professor Dawkins³ observes:

'At Epiphany a priest goes in procession to a spring, river, cistern, or to the sea, and immerses a cross three times. At the same time a white dove is released. The cross is fetched out by a man who dives for it.'

Miss Hamilton⁴ records numerous local varieties of the custom. A few samples will suffice:

'At Athens an imposing procession goes from the church of St. Dionysios to the large reservoir on the slope of Lykabettos, and the bishop there performs a ceremony similar to that at the Piræus. Some of the city churches, too, celebrate the Blessing of the Waters, either within their walls or outside on an erected shrine. The seaports and island towns have great celebrations. At Syra, the chief commercial island, an urn of water is first blessed in the church, and then a procession marches down to the harbour, where all the boats and steamers are waiting. After the ceremony is finished, the ships are free to sail away. At Nauplia also the ceremony is interesting, and it differs in a few respects from the preceding. The archbishop in full regalia proceeds to the harbour, and amid a great assembly throws in the wooden cross, to which no ribbon is attached. The local fishermen, as divers, are stripped ready to find it, and a struggle

ensues among them. When the cross is successfully found, all the surrounding people are sprinkled with the water. The successful diver has the right of visiting all the houses of the town to levy a contribution on that day. He may gain a large sum of money thereby, and sometimes companies are formed on the agreement that all the members shall share in the profits of the successful one. This commercial spirit prevails at Phaleron also.

The village of Lytochoro¹ in Thessaly gives an elaborate and curious version of this ceremony. The name of *Sichna* is given to the festival, on account of the tall standards used. Each church of the district possesses one of these *Sichna* with a gilt cross at the top, and on the Eve of Epiphany they are conveyed to the two central churches of the town. During the vigil which is held all wait for midnight, when the heavens are believed to open and the Holy Spirit descends upon the head of Christ. Then at dawn they leave the churches, taking the ikons of the saints and the flags and standards, and go to the river Lakkon to baptise the cross and bless the water. The priests line up on the banks, and round about are half-naked divers as at Nauplia. On the rising ground stand the citizens. At sunrise a song is sung calling on St. John to baptise the Christ Child, and a priest prays. Then three times the tall standards are bent and dipped in the water, and three times they are raised in the air, in imitation, it is said, of the trees by the Jordan banks. It is a common belief that all trees on Epiphany Eve bow down in adoration of Christ...

To continue the *Sichna*. The cross itself is cast into the river, and the divers struggle for it. The successful diver returns to town and gathers up contributions from the houses. All drink of the holy water, and after general blessings they march back in procession to the two churches, where Benediction is held. Next day the *Sichna* are restored for another year to their respective churches.

In Samos² Epiphany is celebrated in the following way. All the women send on Epiphany morning a vessel full of water to the church, and the priest blesses the water. The same day a servant is sent into the fields with this blessed vessel to sprinkle the ground and the trees, singing meanwhile the song of Christ's baptism.

An Epiphany song from Imbros connects the Jordan water used for baptism with the rain which blesses the earth³:

'There came the day of lights and baptisms. There came great rejoicings and our Lord. Down to the river Jordan went [*leg.* Down by the river Jordan was sitting] our Lady the Panagia. She took water and washed herself, and with a gold kerchief dried herself, with the Gospels in her arms and the censer in

her hands, and she called on St. John: "St. John, Lord and Forerunner, thou art mighty; thou savest and goest before to baptise the young Christ." "Wait for the dawn that I may go up into Heaven, and may throw down refreshment on the earth, that our Lord with our Lady may be refreshed, that the springs and waters may be refreshed, that the flocks may prosper and the idols fall."⁷

Even more explicit is another song from the neighbourhood of Mount Olympos, which represents the baptism in Jordan as accompanied by a deluge of rain¹:

'At the river Jordan, the holy place, the Lord is baptised and saves the whole world. And a dove came down, white and feathery, and with its wings opened; it sent rain down on the Lord, and again it rained and rained on our Lady, and again it rained and rained on its wings.'

ii. Rain-magic in ancient Greece.

No description of a ceremony exactly resembling the rites of modern Greece has come down to us from classical times. But points of similarity are not wanting. Thus we have seen reason to conjecture that the early Greek rain-maker, probably clad in a sheep-skin to copy the fleecy clouds, worked his magic on the nearest hill². Some such ritual was, we thought, presupposed by the Homeric epithet *nephelegeréta*³ and by the Aristophanic chorus of Cloud-maidens⁴, if not also by the Orphic hymn that bade the Clouds send showers to fertilise Mother Earth⁵.

Usage, no doubt, differed from place to place. In Rhodes the Telchines are said to have been charlatans who by their magical arts could produce at will clouds, rain, hail, and snow. Unfortunately no details of their procedure are on record⁶.

At Krannon in Thessaly drought was cured by the shaking of

a bronze car and the recital of a prayer for rain. Coins of the town show this car, always with an *amphora* or a fluted bowl resting upon it, and often with a raven or two perched on its wheels¹.

At Eleusis the first formal act of the yearly festival was the proclamation, on Boedromion 16², 'To the sea, initiates³!' On hearing this, the assembled multitude hurried down to bathe in the nearest salt water. Passing through a gate, which adjoined the Dionysion⁴ in the south of the town and is possibly to be identified with the Itonian Gate⁵, they made their way to two lagoons called the *Rheitoi*, sacred to Demeter and Kore respectively⁶. More than one notorious incident was connected with their wholesale immersion. It was said⁷ that Phryne, who habitually wore a clinging *chiton* and scorned to use the public baths, nevertheless at the Eleusinia and at the Poseidonia laid aside all her garments, loosened her hair, and stepped into the sea before the whole concourse of people—a sight which inspired Apelles to paint his Aphrodite *Anadyomene*⁸. Again, it was remembered that in 339 B.C., when the initiates had gone down to purify themselves in the sea, a shark carried off one—some said two—of their number⁹. This curious happening, whether fact or figment, seems to have provoked imitation. For we are told¹⁰ that on another occasion, when an initiate was washing a pig in the harbour of Kantharos at the Peiraieus, a shark seized and bit off the lower half of his body. The Eleusinian bathe has been commonly regarded as a rite of purification¹¹, and as such

compared with Christian baptism¹. Other views, however, might be defended. G. Glotz has shown that to be plunged in the sea was a not infrequent form of popular ordeal². Mrs A. Strong and Miss N. Jolliffe have much to say on 'Apotheosis by Water³.' But in any case the resemblance of the ancient to the modern custom of a communal dip makes it probable that the opening rite at Eleusis, which came 'at the end of the long drought of summer and before the first rains of autumn⁴,' served the purpose of a powerful rain-charm.

Again, on the closing day of the mysteries, Boedromion 23⁵, two top-shaped bowls of terra cotta known as the *plemochôai* or 'flood-pourers' were first filled and then turned upside down, one towards the east, the other towards the west, with the addition of a mystic formula⁶. Since Kritias or Euripides in his *Perithous*⁷ described these *plemochôai* as emptied into a cleft in the ground, it may fairly be suspected that at Eleusis as at Athens⁸ an attempt was made to fertilise Mother Earth by means of an obvious rain-charm. What the mystic formula was, we do not know. Possibly it consisted in the enigmatic saying *kôux, ômpax*, the meaning of which is still to seek⁹.

But there is more definite evidence than this of a rain-ritual at Eleusis. Hippolytos¹ (c. 235 A.D.) mentions 'the great unspeakable mystery of the Eleusinians *kye kye*, that is "rain—conceive." And Proklos² (438³ A.D.) states that 'at the Eleusinian rites they looked up to the Sky and shouted *kye*, "rain," then down to the Earth and added *kye*, "conceive." The words have at once the directness of primitive thought and the jingle of primitive magic⁴. Dr L. R. Farnell⁵ is right when he comments:

'This genuine ore of an old religious stratum sparkles all the more for being found in a waste deposit of neo-Platonic metaphysic. The formula savours of a very primitive liturgy that closely resembled the famous Dodonaean invocation to Zeus the sky-god and mother-earth; and it belongs to that part of the Eleusinian ritual "quod ad frumentum attinet"⁶.'

For, if the culminating act of the mysteries was the exhibition to the initiates of a corn-ear reaped in silence⁷, we can well believe that rain-magic was essential to the performance.

from Hesychios' gloss that *κόγξ, ὄμπαξ* or the like was a purely onomatopoeic phrase—'splish, splash!'—meant to imitate the sound of falling rain-drops. This might fitly terminate the naive rain-magic of the 'flood-pourers.'

F. M. Cornford's '*Κόγξον πάξ*, "Sound the conch—enough"' (Harrison *Proleg. Gk. Rel.*² p. 161 n. 2) is open to Lobeck's objection: 'quid ab Hierophantae persona magis alienum esse potest, quam hoc ludicrum vocabulum Pax? quod non minore audientium risu exceptum fuisset, quam si hodie aliquis sacrae cathedrae orator pro eo quod in fine concionis pronunciari solet Amen, diceret Basta!'

⁷ Hipp. *ref. haeres.* 5. 8 p. 162 Duncker—Schneidewin (cited *supra* ii. 295 n. 2). Farnell *op. cit.* iii. 183 n. a takes the phrase ἐν σωπῇ to go with the words before it, not with those after it, but admits that its position in the sentence is against him and can only plead that 'Hippolytus is not careful of the order of his words.' The same view had long

ago been expressed by C. Lenormant in the *Mémoires de l'Académie des Inscriptions* 1861 xxiv. 1. 374 f., who was followed by S. Reinach in *L'Anthropologie* 1903 xiv. 356 f. ('l'épi de blé, présenté en silence à la foule assemblée'), Frazer *Golden Bough*³: The Magic Art ii. 139 n. 1 (ἐπιδεικνύτες τοῖς ἐποπτεύουσι τὸ μέγα καὶ θαυμαστὸν καὶ τελεῖστατον ἐποπτικὸν ἐκεῖ μυστήριον ἐν σιωπῇ, τεθερισμένον στάχυν (so punctuated by Duncker—Schneidewin)), P. Foucart *Les mystères d'Éleusis* Paris 1914 p. 434 ('Cette explication me paraît beaucoup plus satisfaisante, et je n'aurais pas hésité à l'adopter s'il ne fallait admettre dans la phrase de saint Hippolyte une construction fautive. Après tout, mieux vaudrait s'y résigner, si l'on y gagnait une interprétation plus conforme au mode d'enseignement qui fut en usage dans l'initiation'). S. Reinach, however, in the *Rev. Ét. Gr.* 1906 xix. 344 n. 1 pointed out that 'le silence est très souvent nécessaire à l'accomplissement de rites comme celui de couper une plante sacrée': accordingly in his *Cultes, mythes et religions* Paris 1906 ii p. xi he renders 'l'épi de blé, moissonné en silence.' Classical scholars in general have concurred in this opinion, e.g. Harrison *Proleg. Gr. Rel.*² p. 549 'an ear of grain reaped in silence,' M. P. Nilsson *A History of Greek Religion* trans. F. J. Fielden Oxford 1925 p. 108 'the reaping of a few ears in silence,' J. M. Edmonds *Lyra Graeca* London 1927 iii. 517 'an ear of corn reaped in silence.'

With regard to the significance of the rite, we are ill informed and widely diverse hypotheses have been propounded:

(1) The context in Hippolytos asserts that the Athenians in their Eleusinian usage were following the lead of the Phrygians, who spoke of God as 'a green ear reaped' (*supra* ii. 295 n. 2 χλοερὸν στάχυν τεθερισμένον). The allusion is to a Naassene hymn describing Attis in very similar terms (*supra* ii. 296 n. 4 χλοερὸν στάχυν ἀμνήντα, cp. Firm. Mat. 3. 2 amare terram volunt (sc. Phryges) fruges, Attin vero hoc ipsum volunt esse quod ex frugibus nascitur, poenam autem quam sustinuit hoc volunt esse, quod falce messor maturis frugibus facit: mortem ipsius dicunt, quod semina collecta conduntur, vitam rursus, quod iacta semina annuis vicibus reconduntur (C. Halm cj. renascuntur. K. W. A. Reifferscheid cj. redituntur. C. Bursian cj. reidicantur)). But Attis never had any footing at Eleusis; and Hippolytos' attempt to find an Eleusinian counterpart of him ends in a sentence probably defective and certainly obscure (Hippol. *ref. haeres.* 5. 8 p. 162 f. Duncker—Schneidewin ὁ δὲ στάχιν οὗτός ἐστι καὶ παρὰ Ἀθηναίους ὁ παρὰ τοῦ ἀχαρκτηρίστου φωστῆρ τέλειος μέγας, καθάπερ αὐτός ὁ ἱεροφαντής, οὐκ ἀποκεκομμένος μὲν, ὡς ὁ Ἄττις, εἰνούχισμένος δὲ διὰ κωνείου καὶ πᾶσαν παρητημένους τὴν σαρκικὴν γένεσιν, νεκρὸς ἐν Ἐλευσίνι ὑπὸ πολλῇ πυρὶ τελῶν τὰ μεγάλα καὶ ἄρρητα μυστήρια βοᾷ καὶ κέκραγε λέγων· 'ἱερὸν ἔτεκε πότνια κοῦρον Βριμὼ Βριμόν.' τοιτέστιν ἰσχυρὰ ἰσχυρόν).

(2) According to F. B. Jevons, the corn-ear exhibited at Eleusis implies a corn-totem in the remote past. 'Originally every ear of corn was sacred to the tribe which took corn for its totem. Then some one particular ear or sheaf of ripe corn was selected to represent the Corn-Spirit, and was preserved until the following year, in order that the worshippers might not be deprived during the winter of the presence and protection of their totem. The corn thus preserved served at first unintentionally as seed, and suggested the practice of sowing; and even when a larger and proper stock of seed-corn was laid in, the one particular sheaf was still regarded as the Corn-Mother, which, like the Peruvian Mother of the Maize, determined by her supernatural power the kind and quantity of the following harvest. In Eleusis this sheaf was dressed up as an old woman (*supra* i. 397 n. 4), and was preserved from harvest to seed-time in the house of the head-man of the village originally, and in later times in a temple. This sheaf was probably highly taboo, and not allowed to be touched or even seen except on certain occasions.... This manifestation of the Corn-Goddess afforded not merely a visible hope and tangible promise that the sowing of the seed should be followed by a harvest of ripe corn, but in itself constituted a direct communion with the deity...' (F. B. Jevons *An Introduction to the History of Religion*² London 1902 p. 364 ff.). 'When, then, we find that in later times an ear of corn was exhibited, we may fairly infer that it was an ear of corn which was exhibited in the primitive agricultural rites, and that it was originally the embodiment of the Corn-Goddess' (*id. ib.*² p. 381). Cp. S. Reinach *Cultes, mythes et religions* Paris 1906 p. xi

'Recourant aux textes, nous y trouvons une trace certaine non seulement du culte, mais de l'adoration et de l'exaltation (au sens chrétien) de l'épi de blé.'

(3) Elsewhere Reinach treats the corn-ear as the offspring of a priest and a priestess, representing Zeus and Demeter, whose union ensured the fertility of the soil by means of sympathetic magic (S. Reinach in the *Rev. Ét. Gr.* 1906 xix. 344 'Cet épi que montre l'hierophante représente, à mon avis, le produit du mariage du prêtre et de la prêtresse qui constitue un des actes mystiques les plus importants du rituel; le prêtre et la prêtresse, dans cet épisode, figurent le dieu céleste et la déesse chthonienne—en langage mythologique, Zeus et Déméter—dont l'union assure la fécondité des champs'). A very similar account of the rite is given by Harrison *Proleg. Gk. Rel.*² p. 548 ff. and Frazer *Golden Bough*³: The Magic Art ii. 138 ff., who further equate the corn with the child Brimos. Now the union of Zeus and Demeter, impersonated by the hierophant and the priestess, is certainly attested by several late authorities (Tertull. *ad nat.* 2. 7 cur rapitur sacerdos Cereris, si non tale Ceres passa est? (J. Topffer *Attische Genealogie* Berlin 1889 p. 94 n. 4 thinks that here Demeter is not to be distinguished from her daughter), Clem. Al. *prototr.* 2. 15. 1 ff. p. 13, 2 ff. Stahlin (cited *supra* i. 392 n. 5), Arnob. *adv. nat.* 5. 20 f., 37 (cited *supra* i. 393 n. o), Asterios bishop of Amaseia (dated c. 330—c. 410 A.D. by W. Christ *Geschichte der griechischen Literatur*^b München 1924 ii. 2. 1429) *hom. 10 encomium in sanctos martyres* (vl. 324 B Migne) οὐ κεφάλαιον τῆς σῆς θρησκείας τὰ ἐν Ἐλευσίνι μυστήρια καὶ δῆμος Ἀττικὸς καὶ ἡ Ἑλλὰς πᾶσα συναίρει, ἵνα τελέσῃ ματαιότητα; οὐκ ἐκεῖ τὸ καταβάσιον τὸ σκοτεινὸν καὶ αἱ σερμαὶ τοῦ ἱεροφάντου πρὸς τὴν ἱέρειαν συννυχία μόνου πρὸς μόνην; οὐχ αἱ λαμπάδες σβέννυνται, καὶ ὁ πολὺς καὶ ἀναρίθμητος δῆμος τὴν σωτηρίαν αὐτῶν εἶναι νομίζουσι τὰ ἐν τῷ σκότῳ παρὰ τῶν δύο πραττόμενα; schol. Plat. *Gorg.* 497 c p. 913 a 37 ff. ἐτελεῖτο δὲ ταῦτα καὶ Διοῖ καὶ Κόρῃ, ὅτι ταύτην μὲν Ἰλούτων ἀρπάξει, Διοῖ δὲ μίγειν Ζεὺς ἐν οἷς πολλὰ μὲν ἐπράττετο αἰσχρά, ἐλέγετο δὲ κ.τ.λ., Psellos *τίνα περὶ δαιμόνων δοξάζουσιν Ἕλληνες*: p. 39 f. (cited *supra* ii. 132 n. 2)). It is probable that in early days this union was a real one, the hierophant having actual intercourse with the priestess, but that later it became merely symbolic, the hierophant using an application of hemlock as an antaphrodisiac (Hippol. *ref. haeres.* 5. 8 p. 164 Duncker—Schneidewin cited *supra* p. 300 n. o (1), with the remarks of Frazer *Golden Bough*³: The Magic Art ii. 139 n. 1). But though the ceremonial marriage of the hierophant (Zeus) with the priestess (Demeter) has some claim to be regarded as fact, yet it must be admitted that not one of the ancient writers called in evidence describes the offspring of this marriage as an ear of corn. At most we can say that in the Sabazian myth Zeus became by Deo Brimos or Demeter the parent of Pherephatta or Kore (*supra* i. 392 ff.). It might also be maintained—the hypothesis is not extravagant—that Kore was at Eleusis represented by a bunch of wheat-ears, possibly arranged in the form of a corn-daughter or harvest-maiden (*supra* i. 397 n. 4 pl. xxviii).

(4) F. M. Cornford 'The ἈΤΤΑΡΧΑΙ and the Eleusinian Mysteries' in *Essays and Studies presented to William Ridgeway* Cambridge 1913 pp. 153—166 likewise identifies the τεθερισμένον στάχυν with Kore. His argument may be briefly resumed as follows. The ἀταρχαί or 'first-fruits,' sent by the Greek states to Eleusis, were in accordance with ancestral custom stored in underground granaries (P. Foucart in the *Bull. Corr. Hell.* 1880 iv. 225 ff. line 10 ff. pl. 15 = *Corp. inscr. Att.* iv. 1. 2 no. 27 b, 10 ff. = Michel *Recueil d'Inscr. gr.* no. 71, 10 ff. = Roberts—Gardner *Gk. (an Athenian decree of c. 423/2 B.C. found at Eleusis) οἰκοδομέσαι δὲ σιρὸς τρὲς Ἐλευσίνι κατὰ τὰ πάτρια λόπο ἂν δοκῇ τοῖς ἱεροποιοῖς καὶ τοῖ ἀρχ[ι]τέκτονι ἐπιτέδειον εἶναι ἀπὸ τοῦ ἀργυρίου τοῦ τοῖν θεοῖν. τῶν δὲ κα[τὰ] τὸν ἐνθαινοῦ ἐμβάλλεν ἡὸν ἂν παραλάβοι παρὰ τὸν δεμάρχ[ον], | ἀπαρχεσθαι δὲ καὶ τοὺς χονυμμάχους κατὰ ταῦτά. Such a granary might be called μέγαρον (Hesych. s.v. μέγαρον, Phot. *lex. s.v.* μάγαρον, Eustath. in *Od.* p. 1387, 17 ff.) or φρέαρ (*h. Dem.* 99 Παρθενίῳ φρέατι, Paus. i. 39. 1 φρέαρ. "Ἀνθιον καλούμενον, i. 38. 6 φρέαρ...καλούμενον Καλλίχορον (cp. *h. Dem.* 272), [which, however, were wells for water. A.B.C.]. The purpose of the custom was 'to put these specimens of grain that was to be used for seed into fertilising contact with the sacred store' (p. 163). In the autumn, at the Eleusinia.

the *ἀπαρχαί* were taken up from the subterranean store-house. The best part of them, made into a *pelanos*, was offered in sacrifice, the rest would be sold (the Athenian decree already quoted continues 36 ff. *θέεν δὲ ἀπὸ μὲν τὸ πελανὸ καθότι ἂν Εὐμολπίδαι [έχσῃε] [γῶ]νται, τρίττοιαν δὲ βόαρχον χρυσόκερον τοῖν θεοῖν ἑκα[τέρ] [αι ἀ]πὸ τὸν κριθὼν καὶ τὸν πυρῶν καὶ τοῖ Τριπτολέμοι καὶ τοῖ [θε]οῖ καὶ τῷ θεῷ καὶ τοῖ Εὐβόλοι ἱερεῖον ἑκάστοι τέλειον καὶ | τῷ Ἀθηνᾶιαι βὼν χρυσόκερον· τὰς δὲ ἄλλας κριθὰς καὶ πυρὸς ἀπὸδομένους τὸς ἱεροποῖος μετὰ τῆς βολῆς ἀναθέματα ἀνατιθέναι τοῖν θεοῖν, ποιησαμένους ἅπ' τ' ἂν τοι δέμοι τοῖ Ἀθηνᾶιον δοκέι, καὶ ἐπιγράψεν τοῖς ἀναθέμασιν, ὅτι ἀπὸ τὸ καρπὸ τῆς ἀπαρχῆς ἀνεθέθε, καὶ ἑλλένον τὸν ἀπαρχόμενον)—presumably not to be eaten, but to be mixed with the grain for sowing. The *ἀπαρχαί* thus became veritable 'starting-points' of the *κύκλος γενέσεως*. All this was aptly expressed in mythological parlance. Kore is carried off and wedded to Plouton in his underground abode. 'She re-emerges as the potential mother of the new crop' (p. 163). And 'When we are told that the final revelation to the Eleusinian epoptae was a *στάχυς τεθερισμένος*,...is it possible that we may see in this *στάχυς* the epiphany of Kore herself as represented by the *ἀπαρχαί*?' (p. 162). Lastly, the 'redistribution of the *ἀπαρχαί*...is reflected in the myth of Triptolemos, charged by Demeter with the dispersal of the seed-corn to all the civilised world' (p. 164).*

(5) Count Goblet d'Alviella *Eleusinia* Paris 1903 pp. 71—73 holds that the nature of the deities worshipped at Eleusis facilitated the coming of higher hopes for a future life. Demeter received into her bosom both the sown corn and the buried dead. She would extend her protection not only to the former but also to the latter—witness their name *Δημήτρεϊ* (Plout. *de fac. in orb. lun.* 28 καὶ τοὺς νεκροὺς Ἀθηναῖοι Δημητρείους ὠνόμαζον τὸ παλαιόν). Kore too, the very personification of the sown corn, descended every autumn into the underworld only to come up again in the springtime young and fresh as ever. Thus the grain was taken as a fit emblem of human existence, and in Attika was sown on graves (Cic. *de legg.* 2. 63 nam et Athenis iam ille mos a Cecrope, ut aiunt, permansit, ocus terra humandi: quam cum proximi iniecerant, obductaque terra erat, frugibus obserebatur, ut sinus et gremium quasi matris mortuo tribueretur, solum autem frugibus expiatum ut vivis redderetur). Similarly in Egypt Osiris or the Osirised dead was assimilated to wheat or barley germinating in the earth when watered from above. Indeed it seems likely that in s. ix—viii B.C. such Egyptian beliefs found their way to Eleusis, lending point and precision to the hopes already inspired by the Greek agrarian cult. 'Le rite final de l'épopée, c'est-à-dire la présentation de l'épi de blé, moissonné en silence, que l'hierophante exhibait aux néophytes comme le dernier mot des Mystères, ne constituait, sans doute, à l'origine, qu'un rite agricole; il n'y avait rien à y changer pour en faire un symbole de palingénésie humaine' (p. 72).

(6) P. Foucart, the father of this Egyptising hypothesis, in his final work on the subject *Les mystères d'Eleusis* Paris 1914 p. 432 ff. would identify the cut corn, not with Kore, but with Dionysos, who had of old been associated with Demeter (Plout. *quaest. de Arati signis frag.* 7. 1 Dubner ap. schol. Arat. *phain.* 1068 διὸ καὶ οἱ παλαιοὶ τὸν Διόνυσον τῇ Δημήτρᾳ συγκαθιέρωσαν, αἰνιττόμενοι τὸ γόνιμον τῆς ὑγρότητας) and at Eleusis played Theos to her Thea (but see, for other possibilities, O. Hofer in Roscher *Lex. Myth.* v. 536—539. A.B.C.), he being the Greek equivalent of Osiris as she of Isis (P. Foucart *op. cit.* p. 90 ff.). On this showing the presentation of the corn-ears to the Eleusinian mystics was a rite derived from Egypt, where harvesters were wont to set up the first ears reaped, beating their breasts before the sheaf and calling aloud upon Isis (Diocl. 1. 14 μαρτύριον δὲ φέρονσι τῆς εὐρέσεως τῶν εἰρημένων καρπῶν τὸ τηρούμενον παρ' αὐτοῖς ἐξ ἀρχαίων νόμιμον· ἔτι γὰρ καὶ νῦν κατὰ τὸν θερισμὸν τοῖς πρώτοις ἀμνηθέντας στάχυν θέντας τοὺς ἀνθρώπους κύπτειν πλῆσιον τοῦ δράματος καὶ τὴν Ἰσιν ἀνακαλεῖσθαι, καὶ τοῦτο πράττειν τιμὴν ἀπονέμοντας τῇ θεῷ τῶν εὐρημένων κατὰ τὸν ἐξ ἀρχῆς τῆς εὐρέσεως καρόν. cf. Rusch in Pauly—Wissowa *Real-Enc.* xiv. 1048 ff.). Foucart pursues the theme of corn as an emblem of Osiris, and draws attention to the curious 'Osiris beds' found in 1905 by the late Theodore Davis, in a tomb dating from the reign of Amenhotep iii (1412—1376 B.C., according to H. R. Hall), and now preserved in the Museum at Cairo (T. M. Davis *The Tomb of Louisa and Toutyou* London 1907 p. 45, J. E. Quibell *Tomb of Ynaa and Thuiu* Le Caire 1908 p. 35 no. 51022 pl. 16, p. 36 no. 51023). Quibell says of no. 51022: 'This object consists of a wooden frame, on which was laid a papyrus mat: over this was stretched a double cover of coarse cloth, stitched down the side: on this a bed of clay was placed, of the shape of the body of Osiris, and in it barley planted. When the plants had grown to a height of about 0 m. 15 cent. a doubled cloth was laid over them and the whole was lapped round with a series of strips of cloth'; etc. My fig. 195 is from a fresh photograph. Similarly in 1898—1899 V. Loret found in the tomb of Maherpra, fan-bearer under Hatshepsut (reign 1501—1479 B.C., according to H. R. Hall), a frame of cedar-wood, on which is stretched a thick mat of reeds covered by three layers of linen. On the linen is drawn in black ink the profile of Osiris (1.42^m high). The contour is filled in with a mixture of earth, barley-grains, and a gummy fluid. The grains had sprouted to a length of 6—8 centimetres (G. Daressy *Fouilles de la vallée des Rois* Le Caire 1902 p. 25 f. no. 24061 pl. 7 = my fig. 194, A. Wiedemann 'Osiris végétant' in *Le Muséon* Nouvelle série 1903 iv. 111—123, H. Haas *Bilderatlas zur Religionsgeschichte* Leipzig—Erlangen 1924 ii—iv p. vii fig. 115). Again, in the 'Innermost Treasury' of the tomb of Tut-ankh-Amen (1360—1350 B.C., according to H. R. Hall) the late Earl of Carnarvon and Howard Carter discovered 'a mock figure representing the regermination of Osiris' (H. Carter *The Tomb of Tut-ankh-Amen* London 1933 iii. 39, 61 pl. 64, A and B). Carter says: 'This object... comprises a wooden frame moulded in the form of that god, hollowed out, lined with linen, filled with silt from the Nile bed, and planted with corn.... This was moistened; the grain germinated, and the inanimate form became green and living; thus symbolizing the resurrection of Osiris and of the deceased. This life-size effigy was completely wrapped in linen winding-sheets and bandaged in the like manner as a mummy.' Foucart further notes that in the Saitic period an Osiris-figure made of Nile-mud and filled with corn-grains was occasionally placed between the legs of the mummy: the sprouting of the corn would typify the resurrection of the god (A. Erman *Die ägyptische Religion* Berlin 1905 p. 188, *id.* *A Handbook of Egyptian Religion* trans. A. S. Griffith London 1907 p. 187).

(7) This aspect of Osiris-worship has been more fully exploited by Sir James Frazer and Prof. A. Moret. Frazer *Golden Bough*³; Adonis Attis Osiris⁴ ii. 89 ff. describes *inter alia* the decoration of a chamber dedicated to Osiris in the Ptolemaic temple of Isis at Philai (cp. *supra* ii. 773 n. o): 'Here we see the dead body of Osiris with stalks of corn springing from it, while a priest waters the stalks from a pitcher which he holds in his hand. The accompanying inscription sets forth that "this is the form of him whom one may not name, Osiris of the mysteries, who springs from the returning water."' (Champollion Le jeune *Monuments de l'Égypte et de la Nubie* Paris 1835 i. 6 pl. 90 south wall of the hall of Osiris (second and third registers = my fig. 196), Lanzone *Diction. di Mitol. Egiz.* p. 705 f. pl. 261, 31 f., E. A. Wallis Budge *Osiris and the Egyptian Resurrection* London—New York 1911 i. 58 fig., A. Moret *Kings and Gods of Egypt* New York—London 1912 p. 84 ff. fig. 7 f. pl. 11, *id.* in J. Hastings *Encyclopedia of Religion and Ethics* Edinburgh 1917 ix. 75b, *id.* *Le Nil et la civilisation égyptienne* Paris 1926 p. 104 fig. 23, H. Haas *op. cit.* p. vii fig. 155). Frazer *op. cit.* ii. 89 n. 2 adds: 'Similarly in a papyrus of the Louvre (No. 3377) Osiris is represented swathed as a mummy and lying on his back, while stalks of corn sprout from his body' (Lanzone *op. cit.* p. 801 f. pl. 303, 2 (= my fig. 197)). A. Moret *La mise à mort du dieu en Égypte* Paris 1927 deals in detail with 'La passion d'Osiris, dieu agraire' (p. 17 ff.), 'Rites de la moisson' (p. 19 ff.: illustrations of Diod. i. 14; evolution of the Osirian fetish *stat*,

'that which is drawn along,' later *mert* 'bride' or *mert statz*, from a portable granary (?), 'Les larmes d'Isis et la crue' (p. 31 f.), 'Rites des semailles' (p. 32 ff.), 'Fécondation de la terre par des statues' (p. 35 ff.), with an appendix 'Sur le culte particulier de la gerbe en Égypte' (p. 54 ff.: corn-maidens in ancient and modern Egypt, after Miss W. S. Blackman 'Some occurrences of the Corn-arûseh in ancient Egyptian tomb paintings' in the *Journal of Egyptian Archaeology* 1922 viii. 235 ff.). Now Frazer *op. cit.* ii. 89 f. expressly compares the corn-stalks that represent the resurrection of Osiris on Egyptian monuments with the reaped ear of corn exhibited to the worshippers at Eleusis. But he nowhere makes the mistake of supposing, as Foucart did, that the latter custom was derived from the former. They were analogous rites, that is all.

(8) Thus the way is left clear for the conclusion enunciated years ago by Dr L. R. Farnell. All the evidence, he says, goes to prove that among the sacred things reverentially displayed at Eleusis there was a corn-token. 'And,' he continues, 'it may have also served as a token of man's birth and re-birth, not under the strain of symbolic interpretation, but in accordance with the naive and primitive belief in the unity of man's life with the vegetative world' (Farnell *Cults of Gk. States* iii. 184). *N.B.* the occasional use of *καλάμη* in the sense of 'old, withered body' (*Od.* 14. 214 f., *Aristot. rhet.* 3. 10. 1410 b 13 ff., *Anth. Pal.* 11. 36. 5 f. (Philippos), Cougny *Anth. Pal. Append.* 6. 250. 3 ff. = *oracl. ap. Polyain.* 6. 53, Loukian. *Alex.* 5).

In this connexion special interest attaches to two finds from the west of the classical area and to one literary record in the east.

An Apulian *amphora*, formerly in the Barone collection, then in the Museo Campana, and now at Petrograd (Stephani *Vasensamm.* *St. Petersburg* i. 241 ff. no. 428), has the following designs: *A* (i) Zeus, with Hermes as charioteer, in a car drawn by four horses, and Dionysos (wrongly restored) in a car drawn by two panthers or lynxes, enter the Gigantomachy, led by a Fury between them. (ii) Within a *herôion*, surrounded by conventional figures bearing garlands and gifts, are seen five stalks of bearded wheat. *B* (i) A young warrior is wreathed by Nike between two of his companions. (ii) A domestic scene of man, woman, and maid—perhaps the homecoming of the successful warrior. The vase has been published and discussed by G. Minervini *Monumenti antichi inediti posseduti da Raffaele Barone Napoli* 1852 i. 99 ff. (mystical interpretation) pls. 21 and 22, 1—5 (= my pl. xxx), F. Lenormant in the *Gaz. Arch.* 1879 v. 31 ff. with 2 figs. (follows Minervini), *id.* in Daremberg—Saglio *Dict. Ant.* i. 1066 fig. 1308 ('Adoration des épis à Éleusis'), Farnell *Cults of Gk. The point to notice is that, in the lower register of the obverse, the *herôion* instead of containing the customary representation of the dead (H. B. Walters *History of*

Three gold ears of barley found in a grave near Syracuse
and now in the Loeb collection at Murnau

See Pl. 307 n. o.

The Eleusinian formula *hýe kýe* occurs in an extended version on the inner surface of three curved terra-cotta blocks, which together made up a well-mouth outside the Dipylon gate at Athens¹. This

Ancient Pottery London 1905 i. 476 f. fig. 106, ii. 128) substitutes a small crop of wheat. Cp. an Apulian *hydria* in the British Museum (*Brit. Mus. Cat. Vases* iv. 175 no. F 353) on which the *herion* contains a large acanthus-plant in lieu of a *stèle*, and an Apulian *kratér* formerly in the Coghill collection (J. Millingen *Peintures antiques de vases grecs de la collection de Sir John Coghill Bart* Rome 1817 p. 42 f. pls. 49 and 51, 2, Reinach *Rép. Vases* ii. 17, 1 and 18, 2) on which the *herion* has within it nothing but a bay-branch.

In a grave near Syracuse was found (c. 1900) a veritable triumph of the goldsmith's art, which I am able here to re-publish (pl. xxxi), thanks to the kind offices of Dr A. H. Lloyd. It has already been figured by S. P. Noe *The Coinage of Metapontum* (*Numismatic Notes and Monographs* No. 32) New York 1927 p. 9 and, more adequately, by P. Wolters 'Die goldenen Ähren' in the *Festschrift für James Loeb* München 1930 pp. 111—129 pl. 16 and figs. 1—15, *id.* 'Gestalt und Sinn der Ähre in antiker Kunst' in *Die Antike* 1930 vi. 284—301 pl. 1 and figs. 1—10, who refers it to the fourth or third century B.C. The jewel itself, now in the Loeb Collection at Murnau, consists of three superb ears growing on a single stalk. Wolters, accepting the opinion of Prof. G. Gentner, says: 'Dargestellt sind Weizenähren; wahrscheinlich die des Binkel- oder Igel-Weizens, Triticum compactum...Heutigen Tags werden noch verschiedene Varietäten in Sizilien gebaut. Möglich wäre allerdings auch, dass ein besonders kurzähriger Hartweizen vorlag, von dem hauptsächlich die Varietät Triticum durum affine, ebenfalls in Sizilien gebaut wird; sie ist vermutlich identisch mit dem πρύος τριμηναιός Theophrastus und heisst im heutigen Sizilien Timilia oder Tremilia.' Sir R. H. Biffen, however, has informed me (Jan. 14, 1930) that these gold ears are barley, not bearded wheat, and certainly not a cross between the two. He notes that some details in the arrangement of the shields at the base of the ear are not true to nature. And he adds that the ears represented on Greek coins are regularly, not wheat, but barley (e.g. the *hordeum hexastichon* on coins of Metapontum (F. Imhoof-Blumer and O. Keller *Tier- und Pflanzenbilder auf Münzen und Gemmen des klassischen Altertums* Leipzig 1889 p. 54 pl. 9, 1, p. 56 pl. 9, 24, p. 58 pl. 9, 35)). In any case we are at once reminded of the 'golden harvest' sent by the Metapontines to Delphoi (Strab. 264 οὗς οἴτως ἀπὸ γεωργίας ἐντυχῆσαι φασιν ὥστε θέρος χρυσοῦν ἐν Δελφοῖς ἀναθεῖναι). This, though very different in intention, must have been very similar in technique.

Finally, it is not, I think, irrelevant to compare a well-known incident in the Gospel narrative. When certain Greeks, proselytes of the gate attending a Jewish festival, came to Philip of Bethsaida saying 'Sir, we would see Jesus,' Philip sought out Andrew and together with him told Jesus. Thereupon Jesus made answer: 'The hour is come, that the Son of man should be glorified. Verily, verily, I say unto you. Except a grain of wheat fall into the earth and die, it abideth by itself alone; but if it die, it beareth much fruit' (John 12. 20 ff.). The Master here hints at his own impending Passion as the supreme example of the law that Life must be reached through Death. That much is certain. But, in view of the fact that the fourth Gospel was written primarily for Greek readers, it is further probable that these profound words were meant to convey some message specially appropriate to the Greeks. And, if so, it is at least possible that the symbolism employed aimed at recalling the great lesson taught by the hierophant to the mystics of Eleusis.

deeply incised inscription reads:

ὁ Πάν, ὁ Μήν, χαίρετε Νύμφαι καλαί. ὕε, κύε, ὑπέρχυνε¹.

Pan, Men, and ye fair Nymphs, all hail!—

Rain! Conceive, conceive abundantly!

The association of Men with Pan and the Nymphs is noteworthy. The same triad appears on a votive relief of Pentelic (?) marble found in or near Athens (fig. 198)², which might almost serve as an illustra-

Fig. 198.

¹ A mistake for ὑπέρχυνε. H. Guntert, however, in his interesting treatise *Über Reimwortbildungen im arischen und altgriechischen* Heidelberg 1914 p. 217 f. holds that ὑπέρχυνε was a new formation from χέω on the analogy of ὕε κύε and under the influence of κέχεται, χυτός, etc. In any case we can hardly infer, with F. Lenormant, that this word formed part of the original Eleusinian formula.

tion of our text. For it arranges the divinities in the same order—Men in the centre between Pan on the left and a sample Nymph on the right. Pan and the Nymphs are natural protectors of grottoes, springs, and the like. Men is present partly because he was assimilated to Hermes¹, partly because in his own character of moon-god² he would be responsible for the dew³, which in Attike meant so much to the cultivator of the thirsty ground. We may take it, then, that the owner of this particular well sought to ensure his water-supply by a silent and undemonstrative invocation of appropriate deities, coupled with the old magical cry 'Rain! Conceive, conceive abundantly!'

That cry was addressed to the divine Sky above and to the divine Earth below. No names were used, but it is probable that these powers had long been anthropomorphic. I should venture to identify them with the nameless Theos and Thea of Eleusinian inscriptions⁴, who elsewhere emerge into clearer light and more

The dead man, here represented as a chthonian Zeus (cp. Zeus *Epitēleios Philios supra* i. 1162 f. fig. 970), holds *rhytón* and bowl. His consort, the chthonian goddess, has apparently a *hypothymis* or garland for the neck. Beside them are seated the Eleusinian deities Demeter (sceptre) and Persephone (wreath with leaves added in paint, pair of torches burning). specific function as Zeus and Ge. Eubouleus was *ab origine* an appellation of the former¹, Demeter and Persephone a bifurcation of the latter².

Other evidence of rain-magic in Attike is of very doubtful value, though it may be granted that in a district notoriously 'light-soiled'³ the rain-maker must sometimes have been in request.

Svoronos p. 495 adds that the fourth line may have started with καὶ Τριπτολέμωι, for which there would be space above the head of Kleo. (c) D. Philios in the *Ath. Mitth.* 1905 xxx. 186: [Λακρατείδης Σωστράτου Ἰκαριεύς ἱερεὺς Θεοῦ καὶ Θεᾶς καὶ Εὐβουλέως] [ς] καὶ τῶν [συμβύμων] του [. θεῶν τῶν ἑαυτοῦ ἐνερ]γετῶν ὑπὲρ ἑαυτοῦ καὶ τῶν ὕων Σωστράτου καὶ Διονυσίου καὶ τῆς [γυναικὸς] Διονυσί[ας τῆς (filiation, deme, e.g. Κλείου Ἰκαριέως) θυ]γατρὸς χαριστήριον Δήμητρι καὶ Κόρηι καὶ Θεῶι καὶ Θεᾷ καὶ Εὐβουλεί | ἀνέθηκεν. The centre of the relief is occupied by an assemblage of the Eleusinian powers. Theos (Θεός), in the guise of Zeus, is seated, sceptre in hand, on a throne, the arm of which rests on a small Sphinx. Thea (Θεά), a maternal figure, lifting the back fold of her *péplos*, stands at his side. Further to the left, Plouton (Πλούτων) leans on a sceptre and looks toward the group of Kore and Demeter. The former stands, holding a pair of torches. The latter sits, with a veil over her head. Her left hand holds a sceptre; her right, a bunch of coin-ears. These she presents to Triptolemos (Τριπτόλεμος), who receives them as he sits on his serpent-car. In the background is seen the dedicator (Λακρατείδης Σωστράτου Ἰκαριεύς). The remaining persons are harder to identify. Those who take them to be divine regard the long-haired youth on the right as Eubouleus bearing a vine-branch in one hand, a torch in the other, the female behind Demeter as a personification of Eleusis (so O. Kern in the *Ath. Mitth.* 1892 xvii. 127, R. Heberdey *loc. cit.* p. 116), and the boy carrying myrtles in front of her as Iakchos (A. N. Skias in the *Εφ. Ἀρχ.* 1901 p. 34) or Ploutos (R. Heberdey *loc. cit.* p. 116). But, in view of the fact that Eubouleus (see D. Philios in the *Ath. Mitth.* 1905 xxx. 188 ff.)—not to mention Ploutos—is sufficiently represented by Plouton, there is more to be said for the view (J. N. Svoronos, D. Philios) that the flanking figures are purely human and belong to the family of Lakrateides—Sotratos with vine-branch and torch on the right, Dionysia and her son Dionysios with myrtles on the left.

Miss J. E. Harrison's¹ recognition of a rain-making scene on a 'Dipylon' jug from Athens (fig. 201)², though plausible, is far from certain³. And little importance can be attached to Marinós' statement that Proklos was an adept in Chaldean charms, who by spinning his *éynx* aright caused a downpour and so freed Attike from drought⁴.

Lastly, the lapidary tradition perpetuated a belief (originating when and where?) that polished green quartz or 'plasma,' if worn during religious rites, would conciliate the gods and ensure a good shower on the thirsty fields⁵. A stone resembling water might well cause water to fall.

³ *Supra* i. 512 n. o. I was there inclined to accept Miss Harrison's hypothesis. But it is undeniably frail. The alleged rattles are perhaps not rattles at all; and, if they are, they may represent thunder rather than rain (C. Clemen in the *Archiv f. Rel.* 1914 xvii. 157 f.). The shield need not be on the altar; and, if it is, the scene may be one of *Palládion*-worship, or even of mere hoplolatry (cp. *supra* ii. 544 ff.).

314 Rain-magic in the cult of Zeus

iii. Rain-magic in the cult of Zeus.

Primitive rain-magic was in Greece commonly taken up into the cult of Zeus. The epic appellative *nephelegeréta* implies that already in the second millennium B.C. Zeus was conceived as a rain-making magician¹. And a like inference may be drawn from his constant epithet *aigíochos*². Indeed, in more than one passage of the *Iliad* we can detect a literary reminiscence of the weather-maker's devices: for instance, in Agamemnon's ominous words—

The day shall come when holy Ilios,
Priam, and Priam's folk (stout spearman he),
Shall be destroyed, and Zeus the son of Kronos,
Seated on high, dwelling in light divine,
Shall shake his darkling *aigís* at them all,
Wroth for this guile³.—

or, later, in the poet's description of the fighting over Patroklos—

Then Kronos' son caught up his tasselled *aigís*,
Gleaming, and hid Mount Ide under cloud,
Lightened and thundered and made quake the ground⁴.

Clearly, to shake the *aigís* is to cause a storm—a thoroughly magical procedure.

If it may be assumed that such poetic phraseology was founded on cult-usage, the actual rain-maker was probably the priest of Zeus impersonating his god. It is tempting to interpret in that sense a curious statement in the *Aeneid*. Virgil, concerned to derive Roman antiquities from Greece, is hinting apparently at a supposed connexion between the *Arx* and the *Arcades*⁵, when he makes Evander say to Aeneas *à propos* of the wooded Capitol—

This grove, this hill with leafy top some god—
We know not who⁶—inhabits. My Arcadians
Believe that they have seen the very Jove
Oft shake the darkling *aegís* in his hand
And call the rain-clouds⁷.

Virgil may, of course, be drawing upon sources no longer accessible to us. And presumably he was familiar with the fact that in Arkadia the priest of Zeus *Lykaïos* regularly made rain for his neighbours¹. Pausanias, speaking of the spring Hagno on Mount Lykaion², says:

‘If there is a long drought, and the seeds in the earth and the trees are withering, the priest of Lycæan Zeus looks to the water and prays; and having prayed and offered the sacrifices enjoined by custom, he lets down an oak branch to the surface of the spring, but not deep into it; and the water being stirred, there rises a mist-like vapour, and in a little the vapour becomes a cloud, and gathering other clouds to itself it causes rain to fall on the land of Arcadia³.’

It would seem then that on Mount Lykaion the magical practice was preceded by a prayer, which—as M. H. Morgan⁴ has observed—

incertum est, habitat deus; Arcades ipsum | credunt se vidisse Iovem, cum saepe nigram | aegida concuteret dextra nimbosque cieret.’ Serv. *ad loc.* ‘ipsum credunt se vidisse Iovem’ in hoc scilicet nemore. sane ad illud adludit quod primi dicuntur Iovi templa [et rem divinam] fecisse—[Aeacus enim primus in Arcadia templum Iovi constituisse dicitur]—nec enim longe sunt a Iove Olympico: unde eos dicit Iovem vidisse, et quod ipsi sunt *προσέληνοι*, ut [ait] Statius ‘Arcades astris lunaque priores’ (Stat. *Theb.* 4. 275): licet dicat Sallustius Cretenses primos invenisse religionem, unde apud eos natus fingitur Iuppiter (Sall. *hist.* 3. 60 Dietsch, 63 Kritz. But H. Last in *The Cambridge Ancient History* Cambridge 1928 vii. 364 f. and H. J. Rose *A Handbook of Greek Mythology* London 1928 p. 311 rightly recognise that the whole story of Evander on Italian soil is a piece of pseudo-mythology based on misleading etymologies (*Palatinus* = *Pallanteion*, *Lupercalia* = *Lykaia*, etc.).

¹ *Supra* i. 65, 76 f., 87.

² On the identification of this spring see Frazer *Pausanias* iv. 383 and Bolte in Pauly—Wissowa *Real-Enc.* vii. 2210. It is now known as *Kopres*—a name given to small stone, or more often wooden, troughs, through one of which the water at present runs. The inhabitants of the district declare that here there was once a regular river (*περὶ ποτάμι*), but that, when the son of Hellenopoula was drowned in it, they dammed it up with twelve woolly fleeces and twelve caldrons, each caldron having forty handles. When in 1903 K. Kourouniotes was digging beside the spring, they believed that the water would burst out again. He found near by the ruins of a large ancient cistern (Εφ. Ἀρχ. 1904 p. 152). Perhaps we have here a lingering belief in the water-magic of the sacred spring.

⁴ M. H. Morgan ‘Greek and Roman Rain-Gods and Rain-Charms’ in the *Transactions and Proceedings of the American Philological Association* 1901 xxxii. 95: ‘The prayer, though offered by the priest of Zeus, was obviously offered not to Zeus, but to Hagno, the nymph of the spring (*προσευξάμενος ἐς τὸ ὕδωρ*). The sacrifice (*καὶ θύσας*) may have been offered to Zeus, but Pausanias gives us no information on this point.’

When Diotima as priestess of Zeus *Lykaïos* (*supra* ii. 1167) postponed the plague at Athens for a decade by means of prayer (schol. Aristeid. p. 468, 15 ff. Dindorf ἡ δὲ Διοτίμα ἱέρεια γέγονε τοῦ Λυκαίου Διὸς τοῦ ἐν Ἀρκαδίᾳ. αὐτὴ δέ, μελλούσης τῆς νόσου, ἧς Θουκυδίδης μὲμνηται, ἐπισκήπτειν τοῖς Ἀθηναίοις, εὐχαμένη ἐκώλυσε αὐτὴν εἰσελθεῖν (so cod. 316 Rain-magic in the cult of Zeus

was apparently directed to that old-world sanctity, the sacred spring.

Similarly in Thessaly magic was eked out by prayer. When the men of Krannon in time of drought shook their bronze car, they likewise 'prayed the god for rain¹'. And 'the god' concerned was almost certainly Zeus.

Other cults that gave the sanction of religion to the rites of rain-magic were the worship of Zeus *Aktaïos* on Mount Pelion in Thessaly and the worship of Zeus *Polieüs* on the Akropolis at Athens. The ritual of the former presupposed a procession of rain-makers clad in sheep-skins by way of copying the clouds¹. The ritual of the latter included the significant action of the *Hydrophóroi*, who poured water over axe and knife at the Dipolieia².

The vitality of such usages is amazing. I conclude with an instructive example noted by Sir A. J. Evans³ in the Balkans:

'Ibrahimovce itself is a small Bulgarian village, but it contains a monument of antiquity, interesting in itself, and of greater interest in its connexion with a local cult which has at least all the superficial appearance of being a direct inheritance from Roman times. Lying on its back on the village green was a large block, which proved on examination to be a Roman altar, erected to Jupiter Optimus Maximus, by an Aedile of a Colonia, of which we learn no more than that its name began with CO..., who was also Duumvir of the Colony of Scupi.

'To my astonishment, I learnt that this monument of Roman municipal piety towards the "cloud-compeller" is still the object of an extraordinary local cult. I was informed by one of the inhabitants that in time of drought the whole of the villagers, both Christian and Mahometan, with a local Bey at their head, go together to the stone, and, having restored it to its upright position, pour libations of wine over the top, praying the while for rain. The language of the villagers is at present a Slavonic dialect, and the name of Jove was as unknown to them as the inscription on the stone was unintelligible. Nevertheless, it was difficult not to believe that in this remote Illyrian nook some local tradition of the cult of Jupiter Pluvius had survived all historic changes.'

(b) Prayers to Zeus for rain.

Marcus Aurelius has preserved the Athenian equivalent of our prayer 'In the time of Dearth and Famine.' It runs as follows:

Rain, rain, dear Zeus,
On Athens' tilth and Athens' plains⁴.

Alkiphron, a later contemporary of Lucian², pens a graphic little sketch of an Attic village distressed by lack of rain. His description takes the form of a letter from Thalliskos to Petraios:

'The drought is now on. Not a cloud above the horizon. What we want is a real downpour; for the absolute dryness of the soil shows the fields to be suffering from thirst. It would seem that our sacrifices to the Rain-god have been addressed in vain to deaf ears. And yet all the inhabitants of our village fairly vied with each other in their offerings. We contributed, according to our ability or our abundance, one man a ram, another a he-goat, a third a boar. The poor man brought a cake, the poorer still a pinch of frankincense. Nobody could manage a bull, since we who occupy the thin-soiled part of Attike are not well off for cattle. However, the money we spent has done us no good. It looks as

though Zeus has turned his attention to foreigners and is neglecting the folk at home¹.

Of course the god that could send the rain was also the god that could stop the rain. An epigram by Asklepiades of Samos (s. iii B.C.) tells how a lover, wet to the skin at his loved one's door, appealed to Zeus for a cessation of the deluge².

'the shower of Zeus'¹, 'water from Zeus'², etc. there is good evidence to prove that the Greeks of the historical period regarded rain as essentially connected with this god. Philosophers and grammarians even made a misguided attempt to derive his name in its dialect form *Deús*³ from the verb *deúein*, 'to moisten,' because he moistened the ground with his rain or gave living creatures the dampness without which none could live⁴.

The notion that the name of Zeus implies moisture has been revived in modern times. I possess the abstract of a paper written by Prof. T. G. Fucker of Melbourne and dated June 3, 1912, but not—so far as I know—published, in which the following propositions were advanced. Religion begins with the obtaining of food and drink. Where there is insufficient moisture, there is not enough to eat. Hence the earliest religious efforts of Mediterranean man aimed at rain-making, or rather water-getting. His *numini* were practically all concerned with human maintenance—the Earth-mother and her cognates with the food-supply, the rest with the water-supply. **Dyeus* in particular was the 'Moistener,' the 'Wetter,' not the 'Shiner' [*supra* i. 1 ff., 14 ff., 776], cp. *diēros* 'wet,' *di-aiōw* 'I moisten.' Thus *Παν-δίων* is the equivalent of *Πάν-δροςος*; the festivals *Δία*, *Πάνδια*, *Διάσια*, *Διπόδια* all involved rain-making ceremonies (as did the Ἑστῆρια, from **h₂stēr* = **h₂d-tēr*, 'rain-maker,' in spite of Athen. 95 f—96 A ὅτι δ' ὄντως Ἀφροδίτη ἐς θέεται μαρτυρεῖ Καλλιμάχος (*frag.* 100^b no. 1 Schneider) ἢ Ζηνόδοτος ἐν ἱστορικοῖς ὑπομνήμασι (*frag.* 2 (*frag. gr. Various cult-epithets of Zeus are cited in support of this interpretation, not only Ὁμβριος, Ἑτίσιος, Ἰκαῖος, but also Νάσιος (cp. *nāua* [*supra* i. 369 n. 2. ii. 351 n. o. 869 n. o]). *Πανομφαῖος* ('of the Voice' [*supra* ii. 1097 n. 2, 1211], but originally 'of the Rain.' The composite root **enebh-* has for Ablaut-grades **neh-*, **omh-*, **mēh-* in *néphos*, *ōmphaḗlos*, *āphros*. The *ōmphaḗlos* was a 'rain-gathering' stone, cp. *ōmpros*), Ὀλύμπιος (**Olumpos* meant

But, though rain was always referred to Zeus¹, its exact relationship to him was variously conceived.

'Cloud-collector,' so that *νεφεληγερέτα Ζεύς* in a sense *was* the mountain—just as the Mexican rain-god Tlaloc was also Mt Popocatepetl. The My-ian flute-player Olympos [P. Weizsacker in Roscher *Lex. Myth.* iii. 860 ff.] whistled for the wind. A Cretan Olympos was 'teacher' of Zeus [Ptol. Hephaist. *ap. Phot. bibl. p.* 147 b 38 f. Bekker] in control of the rain-power. On this showing τὰ Ὀλύμπια would be ceremonies of cloud-gathering), *Μαιμάκτης* (not 'Raging' [Plout. *de cohob. ira* 9 διὸ καὶ τῶν θεῶν τὸν βασιλέα Μελίχιον, Ἀθηναῖοι δὲ Μαιμάκτην, οἶμαι, καλοῦσι· τὸ δὲ κολαστικὸν ἐρινυῶδες καὶ δαιμονικόν, οὐ θεῖον δὲ οὐδὲ Ὀλύμπιον, Harpokr. *s.v.* Μαιμακτηριῶν· ὠνόμασται δὲ ἀπὸ Διὸς Μαιμάκτον. H. W. Stoll in Roscher *Lex. Myth.* ii. 2242 f. notes that the 'Raging' god might be appeased (Hesych. *Μαιμάκτης· Μελίχιος, Καθάρσιος*) and cp. *Corp. inscr. Att.* iii. 1 no. 77, 12 ff. cited *supra* i. 176 n. 2], but 'Giving Increase.' The root **maḥ-* meant 'enlargement' (μακρός), 'increase,' 'benefit,' 'blessing' (μάκαρες θεοί=δωτήρες ἐάων, cp. *macte esto*). The reduplication is of a common type (δαυδάλλω etc.). Zeus *Μαιμάκτης* was probably developed from human **μαιμακτῆρες*, whose rain-making rites **μαιμακτῆρια* gave their name to the month *Μαιμακτηριῶν*. With this **maḥ-* goes *φαρμακοί* for **φαρσ-μακ-οί*, 'promoters of bearing (or produce),' cp. *Φερεφόνεια*. The by-form **maḥh* is found in *μηχανή* [Zeus *Μηχανεύς*: *supra* ii. 1144 n. 2, *infra* § 9 (h) i], *Μαῖος* the month of increase, Iupiter *Maivs* [Macrob. *Sat.* i. 12. 17 sunt qui hunc mensem ad nostros fastos a Tusculanis transisse commemorant, apud quos nunc quoque vocatur deus Maivs qui est Iuppiter, a magnitudine scilicet ac maiestate dictus. See further Link in Pauly—Wissowa *Real-Enc.* xiv. 613 f., etc.), *Φαλακρός* (Zeus *Φαλακρός* [*supra* ii. 875 n. 2, 1226] or rather *Φάλακρος* was god 'of the Swelling Tips' on plants, fruit-trees, oaks, and beeches. The compound *φαλ- + ἄκρος* has for its first element the *φαλ-* (**bhal-* **bhl-*) of *φάλης*, *φαλλός* (the 'growth-making,' a magic instrument), etc., as in the case of Hermes *Φαλάνθοις* [*Corp. inscr. Att.* ii. 3 no. 1606 Λυσικλῆς Ναυκλέους | 'Ε]ρμεί Φαλανθεὶ ἀνέθηκεν, where however the god's epithet may be *Φαλανθεύς*, an ethnic from Mt Phalanthon in Arkadia: see O. Hofer in Roscher *Lex. Myth.* iii. 2237], who makes the flower or bloom of things to grow, cp. Hesych. *Ἐριφύλλον* (A. Meineke cj. *Ἐριφύλλον*)· τὸν Ἀπόλλωνα καὶ τὸν Ἑρμῆ), *Λαφύστιος* (If this title of Zeus [*supra* ii. 899 n. 1, 904 n. 1] had anything to do with *λαφύσσειν*, 'to devour,' it meant 'who enables men to gorge,' not 'who gorges himself'; but the connexion is somewhat doubtful). It is contended also that *Νίκη* (later *Νείκη* [but this is merely a Byzantine mis-spelling]), the attribute of Zeus, meant 'Bearing' or 'Winning'—originally what the season 'brings' or 'bears' for you, what you 'win' or 'carry off' in the way of produce,—being thus in form akin to *ἐνείκα* [Boissacq *Dict. étym. de la Langue Gr.* p. 251 notes that the root *nek-* had reduced forms *ēk-* and *nek-*, cp. Walde *Lat. etym. Wörterb.* p. 506 f. *s.v.* 'nanciscor'] and in sense comparable with *Fors*, *Fortuna* (*fēro*) [*supra* i. 272].

Prof. Tucker's reading of Greek religion is simple and so far attractive. But the etymologies on which he relies vary in value from the certain (e.g. *Ὀμβριος*) or highly probable (e.g. *Νάιος*) to the highly improbable (e.g. *ὀμφαλός*) or impossible (e.g. *Ὀλυμπος*), and I doubt whether any tenable position can be constructed out of such miscellaneous materials.

H. van Herwerden *Lexicon Graecum supplementum et dialecticum*² Lugduni Batavorum 1910 p. 628 says rightly 'ζῆνιον (= δῖον, i.e. ὄμβριον) ὕδωρ,' but would have done better to print 'Ζῆνιον ὕδωρ' with a capital letter as Dr H. Stuart Jones prints it in the latest edition of Liddell and Scott. The choice of the new form Ζῆνιον in preference to the older and better-established δῖον [*supra* i. 3 f.] probably implies the usual attempt to connect Ζεὺς, Ζῆνα, etc. with ζῆν [*supra* i. 11 n. 5, 28 n. 8, ii. 259 n. 0, 855 n. 2]. Rain as the seminal fluid of the sky-god was indeed *arua zizui* (M. Ninck *Die Bedeutung des Wassers im Kult und Leben der Alten* Leipzig 1921 p. 25 ff. See also S. Eitrem *Opferritus und Voropfer der Griechen und Römer* [*Udenskapselskapets Skrifter*, II. Hist.-Filos. Klasse 1914 No. 1] Kristiania 1915 p. 115). Ζῆνιον ὕδωρ would have the further merit of rounding off fitly a hexameter verse.

that the Kouretes sprang from a heavy rain-shower¹ is paralleled by the anonymous statement that they sprang from the tears of Zeus². And Herakleitos the Stoic (s. i A.D.³) interprets the blood-rain sent by Zeus in the *Iliad*⁴ to portend the death of Sarpedon⁵ as the tears, not indeed of Zeus, but of the *aithér*⁶—which amounts to the same thing⁷.

Artists of Roman date represent rain as falling in large goutts or drops from the hand of Zeus. A bronze coin of Ephesos, issued by Antoninus Pius, shows Zeus enthroned on Mount Koressos, with a thunderbolt held in his left hand and a shower descending from his right upon the recumbent figure of Mount Peion⁸. dependent on the account given by Cassius Dio (c. 210—222 A.D.), or—to speak more strictly—on an abridged version of it made by the monk Ioannes Xiphilinos of Trapezous for the Byzantine emperor Michael vii Parapinakes (1071—1078 A.D.). The epitome¹ reads:

‘So Marcus subdued the Marcomani and the Iazyges after many hard struggles and dangers. A great war against the people called the Quadi also fell to his lot and it was his good fortune to win an unexpected victory, or rather it was vouchsafed him by Heaven. For when the Romans were in peril in the course of the battle, the divine power saved them in a most unexpected manner. The Quadi had surrounded them at a spot favourable for their purpose and the Romans were fighting valiantly with their shields locked together; then the barbarians ceased fighting, expecting to capture them easily as the result of the heat and their thirst. So they posted guards all about and hemmed them in to prevent their getting water anywhere; for the barbarians were far superior in numbers. The Romans, accordingly, were in a terrible plight from fatigue, wounds, the heat of the sun, and thirst, and so could neither fight nor retreat, but were standing in the line and at their several posts, scorched by the heat, when suddenly many clouds gathered and a mighty rain, not without divine interposition, burst upon them. Indeed, there is a story to the effect that Arnuphis, an Egyptian magician, who was a companion of Marcus, had invoked by means of enchantments various deities and in particular Mercury, the god of the air, and by this means attracted the rain².

[This is what Dio says about the matter, but he is apparently in error, whether intentionally or otherwise; and yet I am inclined to believe his error was chiefly intentional. It surely must be so, for he was not ignorant of the division of soldiers that bore the special name of the “Thundering” Legion,—indeed he mentions it in the list along with the others³,—a title which was given

The reference is to 55. 23 καὶ τὸ δωδέκατον τὸ ἐν Καπαδοκίᾳ τὸ κεραυνοφόρον. But neither κεραυνοφόρον, ‘bearing a thunderbolt,’ nor κεραυνοβόλον, ‘hurling a thunderbolt,’ is a correct rendering of the Latin epithet leg. xii *fulminata* (E. Rittinger in Pauly—Wissowa *Real-Enc.* xii. 1710), which must mean either ‘struck by a thunderbolt’ (*Thes. Ling. Lat.* vi. 1533, 10 ff.) or ‘hurled like a thunderbolt, quick as a thunderbolt’ (*ib.* p. 1531, 48 ff.). The latter interpretation, which is commonly assumed as correct (cp. *Rufin. hist. eccl.* 5. 5. 4 legionem.. vocitatum... fulmineam, anon. *notitia dignitatum in partibus orientis* 38. 14 (ed. O. Seeck Berolini 1876) praefectus legionis duodecimae fulmineae (*fulmine* codd. C. V. *fulminae* codd. P. Vollmer’s note *ad loc.* The former is in accord with the normal usage of *fulminatus*, and presupposes that on some definite occasion the legion was literally struck by lightning—a manifest token of divine favour (*supra* ii. 8 ff., 22 ff., 33 ff.).

it for no other reason (for no other is reported) than because of the incident that occurred in this very war¹. It was precisely this incident that saved the Romans on this occasion and brought destruction upon the barbarians, and not Arnuphis, the magician; for Marcus is not reported to have taken pleasure in the company of magicians or in witchcraft. Now the incident I have reference to is this: Marcus had a division of soldiers (the Romans call a division a legion) from Melitene; and these people are all worshippers of Christ. Now it is stated that in this battle, when Marcus found himself at a loss what to do in the circumstances and feared for his whole army, the prefect approached him and told him that those who are called Christians can accomplish anything whatever by their prayers and that in the army there chanced to be a whole division of this sect. Marcus on hearing this appealed to them to pray to their God; and when they had prayed, their God immediately gave ear and smote the enemy with a thunderbolt and comforted the Romans with a shower of rain. Marcus was greatly astonished at this and not only honoured the Christians by an official decree but also named the legion the "Thundering" Legion. It is also reported that there is a letter of Marcus extant on the subject. But the Greeks, though they know that the division was called the "Thundering" Legion and themselves bear witness to the fact, nevertheless make no statement whatever about the reason for its name.

Dio goes on to say that] when the rain poured down, at first all turned their faces upwards and received the water in their mouths; then some held out their shields and some their helmets to catch it, and they not only took deep draughts themselves but also gave their horses to drink. And when the barbarians now charged upon them, they drank and fought at the same time; and some, becoming wounded, actually gulped down the blood that flowed into their helmets, along with the water. So intent, indeed, were most of them on drinking that they would have suffered severely from the enemy's onset, had not a violent hail-storm and numerous thunderbolts fallen upon the ranks of the foe. Thus in one and the same place one might have beheld water and fire descending from the sky simultaneously; so that while those on the one side were being drenched and drinking, the others were being consumed by fire and dying; and while the fire, on the one hand, did not touch the Romans, but, if it fell anywhere among them, was immediately extinguished, the shower, on the other hand, did the barbarians no good, but, like so much oil, actually fed the flames that were consuming them, and they had to search for water even while being drenched with rain. Some wounded themselves in order to quench the fire with their blood, and others rushed over to the side of the Romans, convinced that they alone had the saving water; in any case Marcus took pity on them. He was now saluted *imperator* by the soldiers, for the seventh time; and although he was not wont to accept any such honour before the senate voted it, nevertheless this time he took it as a gift from Heaven, and he sent a despatch to the senate.'

This passage together with other ancient allusions to the same event has in modern times given rise to a lively, not to say acrimonious, controversy². The upshot of the matter appears to be as

¹ In reality the name goes back to the time of Augustus (see D. Vaglieri in Ruggiero *Dizion. eptigr.* iii. 335, E. Ritterling in Pauly-Wissowa *Real-Enc.* xii. 1710).

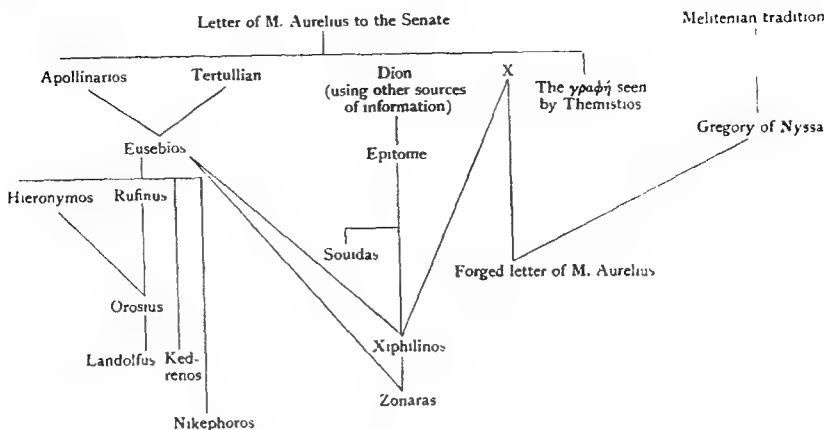

follows. A certain historic happening lent itself to two different interpretations, the one Christian, the other pagan, in character. The kernel of fact was the rescue of the Roman army from dire straits by means of a timely rain-storm, which on the one hand refreshed the fainting legionaries and on the other did serious damage to the enemy. The dramatic escape of his troops was expressly mentioned by the emperor in a letter to the senate and was by him attributed

² I subjoin a *précis* of the positions taken up by the various disputants:

E. Petersen 'Das Wunder an der Columna M. Aurelii' in the *Rom. Mitth.* 1894 ix. 78—89 collects and criticises most of the evidence for the alleged miracle. He cites as literary sources Apollinarius *ap.* Euseb. *hist. eccl.* 5. 5. 4, Tertull. *apol.* 5, *ad Scap.* 4, Dion Cass. 71. 8—10 (including Xiphilinos, who is followed by Zonar. *epit. hist.* 12. 2 and Kedren. *hist. comp.* 250 C—D (i. 439 Bekker)), Iul. Capit. *v. M. Ant. philos.* 24. 4, Euseb. *chron.* p. 172 Schoene (= *Chron. Pasch.* 260 D—261 A (i. 486 f. Dindorf) and *vers. Armen.* ann. Abr. 2188), Themist. *or.* 15 p. 191 B, Oros. 7. 15. 7—11, Claud. *de VI cons. Honor.* 339 ff., and a forged letter of M. Aurelius (printed as an appendix to Iust. Mart. (ed.³ J. C. T. Otto Ienae 1876 i. 1. 246 ff.). Recent texts by A. Harnack in the *Sitzungsber. d. Akad. d. Wiss. Berlin* 1894 p. 878 ff. and by J. Geffcken in the *Neue Jahrb. f. klass. Altertum* 1899 iii. 253—269). Dion's account (helpful rain, renewed fight, hail and thunderbolts destroying the foe) is distinguished from the Christian version, in which (1) lightning plays as big a part as rain, (2) both being due to the prayers of Christians in the Twelfth Legion, (3) hence called *κεραυνοβόλος*; (4) a letter of M. Aurelius recognises these services of the Christians and (5) prohibits their persecution. Since Apollinarius gives (2) and (3), but not (4) and (5), and since the *legio fulminata* had already acquired its name under Augustus, it is clear that Aurelius' letter either never existed or existed only as a Christian forgery. Granted, however, that (4) and (5) are an addition to the story, we have yet to reckon with (1)+(2)+(3) as an independent version. Dion and Themistios are in general agreement, though the latter makes the emperor Antoninus Pius, not M. Aurelius, and says that he had seen the incident represented in a *γραφή* (Themist. *loc. cit.* *καὶ εἶδον ἐγὼ ἐν γραφῇ εἰκόνα τοῦ ἔργου. τὸν μὲν αὐτοκράτορα προσειχόμενον ἐν τῇ φάλαγγι, τοὺς στρατιώτας δὲ τὰ κράνη τῷ ὀμβρῷ ὑποτιθέντας καὶ ἐμπιπλαμένους τοῦ νάματος τοῦ θεοσδότου*). Now this *γραφή* may well have been the extant column of M. Aurelius. In short, it appears that both Dion and Themistios are describing the column, but describing it wrongly. The Romans were not catching the rain in order to drink it, but using their shields as umbrellas in the attempt to protect themselves against it. The winged god, hovering like a cloud, is a simple personification of Rain, comparable with Ovid's Notus (*infra* p. 333) and not at once suggestive of any figure in Greek or Roman mythology. The Christians, accepting him as a mere personification, would further note the cruciform shield-signs of the legionaries and misinterpret the attitude of the barbarians, kneeling to prevent the Romans from crossing the river, as that of Christians at prayer. Finally, in the adjacent scene of enemy-defences fired by a thunderbolt they would see the punitive lightning and its effect upon the foe.

A. Harnack 'Die Quelle der Berichte über das Regenwunder im Feldzuge Marc Aurel's gegen die Quaden' in the *Sitzungsber. d. Akad. d. Wiss. Berlin* 1894 pp. 835—882 adds to the list of sources Landolfus Sagax *hist. Rom.* 8. 144 p. 314 Droysen (in the *Monumenta Germaniae historica. Auctores antiquissimi. Tomus II Berolini* 1879)=*hist. miscell.* 10. 16 p. 217 Eyssenhardt, who c. 1000 A.D. copied out Orosius; Nikephoros Kallistos Xanthopoulos *hist. eccl.* 4. 12 (cxlv. 1004 B ff. Migne), who writing early in s. xiv is, like Kedrenos, indirectly dependent on Eusebios (K. Krumbacher *Geschichte der byzantinischen Literatur*² München 1897 p. 291); Soud. s.v. *Ἀπρονύς*, who in part at least follows Dion; and—of more importance—*oracl. Sib.* 12. 187 ff. Geffcken, a passage composed c. 250 A.D., and Greg. Nyss. *or. in xl mart.* 2 (xlv. 757 c ff. Migne),

who seems to be preserving a Cappadocian oral tradition of the same event. Accordingly Harnack constructs the following *stemma*:

Apollinarios, who was bishop of Hierapolis in Phrygia and probably wrote only one or two years after the event, Tertullian, who composed his *apologeticus* in 197 A.D., and Dion, an exact contemporary of Tertullian, are independent of each other, but all three go back to a genuine letter of the emperor to the Senate—a document used by the author of the extant forged letter. Tertullian implies that this genuine letter, perhaps ironically, spoke of the prayers of the Christian soldiers as having brought down the rain (*apol. 5* at nos e contrario edimus protectorem, si litterae M. Aureli gravissimi imperatoris requirantur, quibus illam Germanicam sitim Christianorum forte militum precationibus impetrato imbro discussam contestatur). Christians of the east soon quoted the letter, putting their own construction upon it, and Dion half-polemically retorts with the story of the mage Arnouphis. Later writers refer to the prayers of the emperor himself. Petersen's hypothesis of the scene on the column as misconceived both by pagans and by Christians is unacceptable ('die Überlieferung, wie sie Apollinarius, Tertullian und Dio bieten, kann nicht auf die bildliche Darstellung zurückgeführt werden'). We are forced to admit the historicity of the thirst which brought the Roman army into dire straits, the sudden relief effected by a rain-storm, the prayers of the Twelfth Legion, the Christianity of part of that Legion, the letter of the emperor, and its mention of the prayers of the Twelfth Legion.

L. Duchesne 'Le miracle de la Légion Fulminante' in the *Bulletin critique* 1894 xv. 476 and P. H. Grisar 'Il prodigio della legio fulminata e la Colonna di Marco Aurelio' in *La Civiltà Cattolica* 1895 i. 202 ff. are in substantial agreement with Harnack.

A. von Domaszewski 'Das Regenwunder der Marc Aurel-Säule' in the *Rhein. Mus.* 1894 xlv. 612—619 would completely discredit the Christian tradition. He holds with Petersen that the column shows, not the rescue of the Roman army from death by thirst, but the bursting of a thunderstorm. He notes that the column places this storm at the beginning of the war, whereas the Christian tradition places its marvel at the close; and that all the legions had the lightning on their shields and the eagle on their standards simply as a symbol of Iupiter *Optimus Maximus*, protector of the army. He contends that Apollinarius was no contemporary of M. Aurelius, but as late as not was Eusebios himself (!); that during the war with the Marcomanni the *legio XII fulminata* was stationed in Melitene to guard the crossing of the Euphrates; and that, to judge from sepulchral inscriptions of s. iii, no Christians would have been likely to enlist voluntarily in the Roman army. Finally, he accepts Petersen's conclusions with regard to the origin of the whole legend.

K. Weizsäcker *Einleitung zu der akad. Preisverteilung*, Tübingen 6. Nov. 1894 also

agrees with Petersen. Dion Cass. 71. 10 was in part a Christian forgery by Xiphilinos. Had the emperor's letter really ascribed the miracle to the prayers of Christians, the sequel would have been very different. The figment was but a Christian anticipation of final victory.

A. von Domaszewski 'Die Chronologie des bellum Germanicum et Sarmaticum 166—175 n. Chr.' in the *Neue Heidelberger Jahrbücher* 1895 v. 123 returns to the charge.... 'Dies ist das Kriegsjahr 171, und in dieses Jahr fällt das Regenwunder. Ein echter Bericht darüber ist bei Dio erhalten 71, 8. Er ist an falsche Stelle ins Jahr 174 gerückt, um der sicher christlichen Interpolation des Capitels 71, 10 willen.' *Ib.* n. 2 'Von Kampf oder Abwehr ist keine Rede, so wenig bei Dio 71, 8. Es betet niemand. Der Wolkenbruch ist ein Naturereignis. Der Regengott ist Notus, genau wie Ovid ihn schildert' [*sic*].

Th. Mommsen 'Das Regenwunder der Marcus-Saule' in *Hermes* 1895 xxx. 90—106 steers a mid course between Skylla and Charybdis. The alleged marvel is neither pure fiction (Petersen and Domaszewski) nor absolute fact (Harnack). Domaszewski's chronology is wrong: the miraculous rain must be dated in the summer of 174, not 171. Equally wrong is Domaszewski's assumption that Dion Cass. 71. 10 is a Christian interpolation. The imperial letter cited by Tertullian was genuine and did actually tell—though without Dion's extravagant rhetoric—how a great thunderstorm saved the Romans, man and beast, when they were perishing of thirst, and did much damage to their foes. This reliable literary tradition agrees well enough with the scene represented on the column. The lightning is there omitted because the principal agent was the rain, and the rain appears as a divine figure intervening to rescue the Roman host ('Die Darstellung des Regengottes ist eine so eigenartige und so ungewöhnliche, dass der Bildhauer unzweifelhaft damit die officiële Auffassung des Vorganges, den Regen *παρὰ θεοῦ* hat zur Anschauung bringen wollen. Wenn die Blitze vermisst werden, von denen der Kaiserbrief wahrscheinlich auch sprach, so ist die Ursache einfach die, dass, wenn als leitende Gottheit der Jupiter fulminator dargestellt worden wäre, der Regen zur Nebensache werden musste und das Wunder seine Sonderart eingebusst hätte'). The emperor attributed his victory to God (Dion Cass. 71. 10 *ὡς καὶ παρὰ θεοῦ λαμβάνων*, Euseb. *chron.* p. 172 Schoene = *Chron. Pasch.* 261 A §i. 487 Dindorf) *ὁμῶς ἐκ τοῦ θεοῦ ἐγένετο*, not to a specific god, and made no mention of Christian prayers. Later writers particularised according to their own beliefs. Pagans would naturally think of magic (Lamprid. *v. Aut. Hellogab.* 9. 1 per Chaldaeos et magos) and suggested Arnouphis (Dion Cass. 71. 8 f., Soud. *s.v.* "Ἀρνουφίς) or Iulianus (Soud. *s.v.* "Ἀρνουφίς, "Ιουλιανός (i. 2. 1007, 14 ff. Bernhardt)). Christians of course thought otherwise. Tertullian supposes an answer to the prayers of Christian soldiers (*apol.* 5 *Christianorum forte militum precationibus impetrato imbri*). Apollinaris was really an early writer (not a mere invention of Eusebios, as Domaszewski would have it), but one of little credibility—witness his blunder about the origin of the name *κεραυνοβόλος* (Euseb. *hist. eccl.* 5. 5. 4: *supra* p. 325 n. 3, p. 326 n. 1).

E. Petersen resumes the fight with a second article, 'Blitz- und Regenwunder an der Marcus-Saule' in the *Rhein. Mus.* 1895 l. 453—474, adding three photographic cuts. He now admits that he was mistaken in regarding the Christian tradition with all its five points (*supra* p. 327 n. 2) as having arisen merely from a misunderstanding of the column. He does not deny the existence of an imperial letter, but treats the one cited by Christian authors as a forgery ('Nur den Brief, auf welchen sich die christlichen Autoren, besser *sofern* sie sich darauf beziehen, habe ich für gefälscht erklärt'). He launches a sharp attack against both the method and the results of Harnack's investigation, and he certainly scores some successes. For instance, according to Euseb. *chron.* p. 172 Schoene *vers. Armen.* ann. Abr. 2188 and Hieron. *in* Euseb. ann. Abr. 2189 M. Aurelius was not present in person at the rain-storm, but only his legate Pertinax, and this is borne out by the evidence of the columnar relief. Petersen goes on to give a more exact description of the scenes on the column. He shows that the Romans were represented first as suffering from drought, then as drinking, and later still as trying to protect themselves against the storm, while their foes were overwhelmed by the flood. The notion that the enemy was

simultaneously struck by lightning was prompted by another incident, recorded by Iul. Capit. *v. M. Ant. philos.* 24. 4 and portrayed on the column, the destruction of a wooden tower by a thunderbolt. Euseb. *hist. eccl.* 5. 5. 2 spoke of a single flash (*σκηπτός*) before the rain, as does Xiphilinos *ap.* Dion Cass. 71. 9 (*κεραυνός*). But Dion Cass. 71. 10 already turns this into numerous flashes (*κεραυνοὶ οὐκ ὀλίγοι*) with the downpour. And Greg. Nyss. *or. in xl mart.* 2 (xlvī. 760 A—B Migne) has both *βροντὰς ἐξαίστους*. καὶ *δοτραπὰς φλογώδεις* and also *τῶν σκηπτῶν τὴν συνέχειαν* amid a deluge of rain. Tertullian, the Sibylline oracle, and Themistios mention the rain only, thereby preserving the true tradition. Themistios' *γραφή* may have been the extant column, but was probably some more accessible representation now lost.

Next appeared the great official publication E. Petersen—A. von Domaszewski—G. Calderini *Die Marcus-Säule auf Piazza Colonna in Rom* München 1896 with text and two vols. of 128 photographic pls. (*supra* ii. 106 n. 1). In the text Petersen sketches the history of the column (pp. 1—20), Mommsen traces the course of the war against the Marcomanni (pp. 21—28), Calderini deals with the architecture of the column (pp. 29—38), Petersen describes its sculpture (pp. 39—104), and von Domaszewski—still differing from Mommsen in regard to chronology—discusses the historical and geographical aspects of the relief (pp. 105—125). On pls. 17, B + 18, A the enemy's siege-tower, struck by a thunderbolt, collapses, while the emperor looks on at the fallen foe. On pls. 22, A, B + 23, A (= my pl. xxxii) the Romans, advancing in the formation known as *agmen quadratum*, are overtaken by the rain-storm. The cattle in their midst are thrown into confusion: one ox has fallen, another springs over it. A soldier in the uppermost row raises hand and eyes to heaven; and next moment down comes the rain. Another soldier, behind the artillery-wagon (*carroballista*), is giving his horse a drink. We gather that here it is a case of heat and thirst rather than of hostile attack, and that the rain is helping the Romans. It does not, for artistic reasons, reach those in the foreground; and most of those in the top tier are raising their shields to serve as umbrellas (nos. 22, 23), not buckets. But one man at least (no. 20) is drinking the rain. Then comes the personification of the storm, a bearded pathetic face recalling that of Neilos in the Vatican. From his hair and beard, from his outstretched wings and arms, as in Ovid's conception of Notus (*met.* 1. 264 ff.), the rain is streaming, to the detriment not of the Romans but of the enemy. In the mountain-gorges we see horses struggling with the flood—a flood not actually shown—or collapsing in it, while barbarians great (no. 40) and small (nos. 38, 41) lie dead and weapons are swept into a heap. On pls. 20, B + 21, A one of the soldiers (no. 6) has his helmet decorated with a griffin in relief, from which detail von Domaszewski (p. 112 f. with fig.) infers the presence of the *legio XV Apollinaris*, a Cappadocian legion. The inference is brave. However that may be, the treatment of the whole episode is realistic. We must certainly conclude that the Roman army was parched with thirst and relieved by a sudden downpour, which proved too much for the foe.

J. Geffcken 'Das Regenwunder im Quadenlande' in the *Neue Jahrb. f. klass. Altertum* 1899 iii. 253—269 begins by passing in review the previous disputants in this 'antik-moderne Streitfrage' (pp. 253—258) and ends by reconstructing the probable course of events (pp. 258—269). M. Aurelius himself witnessed the 'Blitzwunder,' his general the 'Regenwunder.' The emperor wrote to the Senate a straightforward unrhettorical letter, in which he made no mention of Christians. Apollinaris was the source of Euseb. *hist. eccl.* 5. 5. 1—4 (apart from one Eusebian gloss *διὰ πίστεως ἐξ ἐκείνου καὶ εἰς θεῶπο συνεστῶσης*). He gave a wrong explanation of the *legio fulminata*, but a right account of the single lightning-flash followed by the rain. An antichristian ripost attributed both flash and rainfall to the prayers of the emperor (Iul. Capit. *v. M. Ant. philos.* 24. 4 fulmen de caelo precibus suis contra hostium machinamentum extor-it uis pluvia impetrata, cum siti laborarent, *orac.* Sib. 12. 196 ff. to divine interposition¹. Later tradition went further and busied itself over an attempt to discover whose prayers had been thus signally answered. Christians asserted that it was the prayers of converts from Melitene belonging to the 'Thundering' Legion². Pagans retorted that it was the prayer of the emperor himself, whose piety was well-pleasing to the 'Thunderer',³ or else the

and portents (Dion Cass. 72. 23: W. Christ *Geschichte der griechischen Literatur*⁶ München 1924 ii. 2. 796 n. 11), referred the rain to the magic arts of Arnouphis. Christians retorted with the assertion that the emperor had prayed, yes, but had prayed in vain. If it be asked where this statement is made, Geffcken points us to the forged letter in which M. Aurelius says ἐξέτασας οὖν ἐμαιντὸν καὶ τὸ πλῆθος τὸ ἐμὸν πρὸς τὸ μέγεθος τῶν βαρβάρων καὶ πολεμίων κατέδραμον εἰς τὸ θεοῖς εὐχέσθαι πατρίοις· ἀμελούμενος δὲ ὑπ' αὐτῶν καὶ τὴν στενοχωρίαν μου θεωρήσας τῆς δυνάμεως παρεκάλεσα τοὺς παρ' ἡμῶν λεγόμενους Χριστιανούς, κ.τ.λ. This document, sometimes dated as late as s. xii A.D., belongs to a much earlier period: it perhaps emanated from Asia Minor at the beginning of s. iv ('Auf Kleinasien deutete Mommsen hin, hier mag es, Galerius' Edikt benutzend, in der bosen Zeit entstanden sein, als Licinius mit neuer Verfolgung drohte, als das Schicksal der 40 Legionare den christlichen Osten erregte, als Konstantin die Gebete der Geistlichkeit für sich in Anspruch nahm—ein letztes Stück Apologie angesichts der letzten grossen Gefahr')—a hypothesis consistent with its diction and structure, not to mention an apparent allusion to its contents in Rufin. *hist. eccl.* 5. 5 tradunt historiae cum siti eius (sc. M. Aurelii) periclitaretur exercitus aestuantem et quaerentem quid facto opus esset, reperisse in legione quadam milites Christianos. Euseb. *chron.* p. 172 Schoene (= *Chron. Pasch.* 260 D—261 A (i. 486 f. Dindorf) and *vers. Armen. ann. Abr.* 2188) followed S. Iulius Africanus rather than Apollinaris: hence his omission of the story as to the name *legio fulminata*. Gregory of Nyssa too omitted that story, but believed that the soldiers came from Melitene. His account (*or. in xl mart.* 2 (xlv. 757 C ff. Migne)) was not, as Harnack claimed, a local tradition, but a rhetorical and in part ridiculous amplification of Dion's description. The pagans too could exaggerate. Themistios, Gregory's contemporary, professes to quote the very words of the imperial prayer (*or.* 15 p. 191 B ἀνασχών τῷ χεῖρι ὁ βασιλεὺς πρὸς τὸν οὐρανόν, ταύτην, ἔφη, τῇ χειρὶ προὔτρεψάμην σε καὶ ἱκέτευσα τὸν ζωῆς δοτήρα, ἧ ζωὴν οὐκ ἀφελόμην, *cp. or.* 34. 21). Claudian, the last of the heathen to tell the tale, after describing the storm in a crescendo of high-falutin' phrases (*de VI cons. Honor.* 342 ff. laus ibi nulla ducum; nam flammeus imber in hostem | decedit; hunc dorso trepidum fumante ferebat | ambustus sonipes [!]; hic tabescente solutus | subsedit galea liquefactaque fulgure cuspis | canduit [! !] et subitis fluxere vaporibus enses [! !]) attributes these remarkable effects either to Chaldaean magic or, preferably, to Marcus' blameless life—a conclusion more improving than impressive.

In fairness to British scholarship it should be added that, long before the start of this continental controversy, a full list of the sources had been got together and critical notes appended by H. Fynes Clinton *Fasti Romani* Oxford 1850 ii. 23 ff.

The appellative *Ἀέριος* is not elsewhere used of Hermes; but it might easily be attached to him in his capacity of *ψυχοπομπός*, since it was common Pythagorean doctrine that the *aēr* was full of souls (Diog. Laert. 8. 32 εἶναι τε πάντα τὸν ἀέρα ψυχῶν ἐμπλεῶν καὶ ταύτας δαίμονας τε καὶ ἥρωας ὀνομάζεσθαι. ... εἰς τε τοίτους γίνεσθαι τοῖς τε καθαρμοῖς καὶ ἀποτροπιασμοῖς μαντικῇν τε πᾶσαν καὶ κληδόνας καὶ τὰ ὅμοια, Philon *de gigantibus* 2 οὗς ἄλλοι φιλόσοφοι δαίμονας, ἀγγέλους Μωϋσῆς εἰθων ὀνομάζειν· ψυχὰι δὲ εἰσι κατὰ τὸν ἀέρα πετόμεναι). And a passage in the late Platonic *epinomis* shows how readily such daemonic powers might be associated with Hermes (*epinomis.* 984 D—E μετὰ δὲ τούτους καὶ ὑπὸ τοῖς ἐξῆς δαίμονας, ἀέριον δὲ (D. F. Ast *cj.* ἀέριον τι) γένος, ἔχον ἔδραν τρίτην καὶ μέσην. τῆς ἐρημνείας αἰτίον, εὐχαῖς τιμᾶν μάλα χρεῶν χάριν τῆς εὐφύμοι διαπορείας).

In this connexion we may venture to compare Eph. 2. 2 κατὰ τὸν αἰῶνα τοῦ κόσμου τούτου, κατὰ τὸν ἀρχοντα τῆς ἐξουσίας τοῦ ἀέρος, τοῦ πνεύματος τοῦ νῦν ἐνεργοῦντος ἐν τοῖς υἱοῖς τῆς ἀπειθείας and 6. 12 πρὸς τὰς ἀρχάς, πρὸς τὰς ἐξουσίας, πρὸς τοὺς κοσμοκράτορας τοῦ σκότους τούτου, πρὸς τὰ πνευματικά τῆς πονηρίας ἐν τοῖς ἐπουρανίοις with the wording of a fourth-century invocation of Hermes: Ἑρμῇ κοσμοκράτωρ, ἐγκάρδιε, κύκλε σελήνης, | στρουγύλε καὶ τετράγωνε, λόγων ἀρχηγέτα γλώσσης, | πειθοδικαῖόνινε, χλαμυδρόφορε, πτηνοπέδιλε, αἰθέριον ὄρμον εἰλίσσων ὑπὸ τάρταρα γαίης, πνεύματος ἡρίοχε, κ.τ.λ. (F. G. Kenyon *Greek Papyri in the British Museum* London 1893 i. 78 no. 46, 401 ff. = K. Preisendanz *Papyri Graecae magicae* Leipzig—Berlin 1928 i. 194 f. no. 5, 401 ff., cp. A. The same hymn in a third-century papyrus reads παντοκράτωρ instead of κοσμοκράτωρ (Kenyon *op. cit.* i. 105 no. 121, 668 ff. = Preisendanz ii. 30 no. 7, 668 ff.). Ephesos had long been a hot-bed of magic (*supra* ii. 410 n. o. Ἐφέσια γράμματα).

Arnouphis. We should rather suppose that the sculptor was endeavouring to personify and portray the actual rain-storm. Details of his new artistic type were presumably borrowed from Ovid's¹ description of the South Wind as a winged figure with water streaming from his beard and pinions. But the face is that of Jupiter, and in view of the close parallelism between the column of Marcus Aurelius and the column of Trajan², which in a like position had placed Jupiter fulminant³, we are practically compelled to identify this novel personage with Jupiter *Pluvius*⁴.

Rain, then, was conceived sometimes as the child of Zeus, sometimes as the tears of Zeus, sometimes as water falling from the hand of Zeus—a conception which the Romans shared with the Greeks. One other image is notorious. Aristophanes in a line already cited⁵ spoke of rain as the water of Zeus passed through a sieve.

Fig. 209.

W. Scott *Hermetica* Oxford 1924 i. 32 n. 1, with Frontispiece, describes a sectile pavement at the west end of the Duomo in Siena, which shows *Hermes Mercurius Trismegistus* | *contemporaneus Moysi*. Hermes is here an elderly man with long hair and beard. He wears a high pointed hat or mitre and hands an open book to a turbaned Egyptian (?) in the presence of a hooded Italian (?). But we have no reason to think that the Hermes invoked by Arnouphis would have been represented as a winged deity with rain dropping from his pinions. 'Gnostic' amulets, e.g. fig. 209 from a specimen in my collection (material, bloodstone: scale $\frac{2}{3}$), give variations of the usual type.

¹ *Ov. met.* i. 264 ff. madidis Notus evolat alis, | terribilen picea tectus caligine voltum, | barba gravis nimbis; canis fluit unda capillis; | fronte sedent nebulae; rorant pennaque sinusque. | utque manu late (*lata* cod. ^{e1}) pendentia nubila pressit, | fit fragor: hinc (*et* codd. A. e. l.) densi funduntur ab aethere nimbi. The rain-god of the column bears so close a resemblance to Ovid's Notus that A. von Domaszewski did not hesitate to call him by that name (*supra* p. 329 n. o). The source of *met.* i. 244—312 is unknown (W. Vollgraff *Nikander und Ovid* Groningen 1909 i. 104).

⁴ This is in fact the common identification (e.g. W. Ramsay in Smith *Dict. Biogr. Myth.* i. 441, Reinach *Rép. Reliefs* i. 300. no. 23 f.).

⁵ Aristoph. *nub.* 373 καίτοι πρότερον τὸν Δι' ἀληθῶς ἔμην διὰ κοσκίνου οὐρεῖν (*supra* ii. 2).

The line in question is put into the mouth of Strepsiades, an old-fashioned and simple-minded peasant, and must not be discounted as a mere Aristophanic jest. At most Aristophanes has combined two separate notions current among the lower classes in his day.

That rain was explained as Zeus making water is likely enough. Not only is this homely notion common to the unsophisticated folk of Asia¹ and Europe² in general, but it survives

Holmberg in *The Mythology of all Races: Finno-Ugric, Siberian* Boston 1927 p. 444 states, on the authority of N. P. Pnpuzov, that 'Both the Yakuts and Burnats call the rainbow also "the urine of the she-fox."'

I. Goldziher *Mythology among the Hebrews and its historical development* trans. R. Martineau London 1877 p. 73 f. 'The clearest evidence of a worship of the rainy sky and the storm among the Arabs is furnished by the name *Kuzah*, to which storms and rainbows were attributed [*ib.* pp. 169, 423] ... But it is probable that this name *Kuzah* is derived from the signification "mingere," which belongs to the corresponding verb (used specially of beasts), and that it is due to a mythological conception of the Rain.' R. Eisler in *Philologus* 1909 lxxviii. 132 n. o and in his *Weltenmantel und Himmelszelt* München 1910 ii. 385 n. o, accepting this derivation, would connect *Kuzah* with the Idumean god *Kófe* [*Joseph. ant. Steuernagel in Pauly-Wissowa *Real-Enc.* xi. 1555], the Syrian Zeus *Kaios* [*supra* ii. 906 n. 3, 981 n. 1, 985 n. 1], and a variety of place-names. The same ingenious scholar in *Philologus* 1909 lxxviii. 131 n. 60 writes of the Arabian god *Hobal*: 'M. E. ist er vor allem als Derivat der $\sqrt{\text{bala}}$ *jabūlu*, = "pissen," ubertr. Etc., etc.

² W. Mannhardt *Roggenwolf und Roggenhund* Danzig 1865 (ed. 2 1866) p. 10 has collected instances from Germany and France. Thus in the Oberpfalz, when it rains for long together, people say 'Nu pissen sie da oben all wieder' (F. X. von Schonwerth *Aus der Oberpfalz. Sitten und Sagen* Augsburg 1859 iii. 20). In the Tirol St Medardus, since his festival on June 8 often brings rain, is called 'Heulrunzei' (I. V. Zingerle *Sitten, Brauche und Meinungen des Tiroler Volkes*² Innsbruck 1871 p. 157 no. 1336). In Picardy too 'Saint Médard est un grand pissard' (O. Freiherr von Reinsberg-Düringsfeld *Das Wetter*

among the modern Greeks in particular, at least in out-of-the-way places¹.

The mention of the sieve also points to a popular conception², which appears to have left its traces on more than one language of the Indo-European family³. It can indeed be exactly paralleled from modern phraseology. The Greeks still say 'It's drenching with the sieve'⁴ or 'God is drenching with the sieve,'⁵ and use the proverb 'God's sieve has big holes.'⁶ In the district of Parnassos it is believed that Borrás, the north wind, possesses a sieve with which he prepares and sifts the hail. Notos, the south wind, has skin bottles, which he

im *Sprichwort* Leipzig 1864 p. 141). At Cologne, if it rains on July 13, 'Margriht hat en de Nosz gepess.' Elsewhere on the Rhine, if it rains on June 10, 'Margarete piss in die Nüsse.' In the former case the rain will last four weeks; in the latter, a fortnight, and will spoil the nuts (*Id. ib.* pp. 146, 154). So in the Mark district, if it rains on June 22, 'Sunte Magdalena pissen in de Nuete' (J. F. L. Woeste *Volksüberlieferungen in der Grafschaft Mark Iserlohn* 1848 p. 61).

¹ B. Schmidt *Das Volksleben der Neugriechen* Leipzig 1871 i. 31 illustrates Aristoph. *nub.* 373 by certain locutions heard at Arachova near Delphoi. When it rains, people there say *κατουράει ὁ θεός*. When it rains hard or continuously, they say *τσούρ, τσούρ, τσούρ* (*onomatop.*), *κατουρώντας ὁ θεός μᾶς σάψει* (= *ἐσάψει*, 'er hat uns faulen gemacht,' d. h. ganz eingeweicht). Even more remarkable is the parallel adduced by N. G. Politis *Δημῶδεις μετεωρολογικοὶ μῦθοι* (extract from *Παρνασσός*) Athens 1880 p. 20: 'Ἐπὶ συνεχοῦς καὶ ἀδιαλείπτου βροχῆς οἱ χυδαῖότεροι λέγουσιν ἀστεῖζόμενοι "κατουράει ὁ θεός" ἐν Ἀραχώβῃ μάλιστα προστιθέασιν "μὲ τὸ κόσκινον"' (¹N. Ἑλλ. ἀρ. 35). 'Ἐν Μεσσηνίᾳ ὁ τοιοῦτος καιρὸς καλεῖται "Κατουρλιάς" καὶ ἀλλαχοῦ "Κατουρλῆς."

² F. L. W. Schwartz *Der Ursprung der Mythologie* Berlin 1860 p. 7 first drew attention to this.

³ O. Schrader in J. Hastings *Encyclopedia of Religion and Ethics* Edinburgh 1909 ii. 40: 'In Greece the phrase *Zeὺς ὕει* is used for "it rains," which, when traced back to an older stage of the language, can only mean "The father (heaven) presses grapes" (Skr. *sunōmi* "I press," *sōma*, "the pressed," "the soma drink"). It is also customary to charm the rain by an offering of honey, where the rain which drops on the trees and branches is likened to honey. Exactly corresponding to these ideas we find in India the belief that by letting the soma, which itself is called a son of the rain-god Parjanya, drip through the strainer, rain is enticed to fall. Thus the very fact that the man "presses" the juice on the earth, incites or rather compels the god in heaven to "press," i.e. to cause the rain to fall (cf. [E. Windisch in the *Festgruss an Rudolf von Roth zum Doktor-Jubiläum 24. August 1893* Stuttgart 1893 p. 140 f., H. Oldenberg *La religion du Vêda* Paris 1903 p. 392, Gruppe *Gr. Myth. Rel.* p. 819]).' *Id.* in Schrader *Reallex.* ii. 227. 'Eine mythologische Vorstellung hegt vielleicht dem griech. *ὑει*, *ὑετός* zugrunde (vgl. tochar. A. Wz. *su-*, *swās* "regnen," *swase* "Regen," B. *suwam* "es regnet", *swese* "Regen." Sie gehören zu scrt. *su-*, *sunōmi* "keltern," spez. den Soma (scrt. *sōma*, vgl. auch ahd. *sou*, lit. *sýwas* "Saft", scrt. *savā* "Kelterung"). Das homerische *Zeὺς ὕει* kann daher ursprünglich nur bedeuten haben: "der Himmel keltert", indem die Erzeugung des Regens auf gleiche Stufe wie die Auskelterung des idg. Rauschtranks (Mets, .) gestellt wurde, eine Vorstellung, die in dem Verhältnis zwischen Soma und Regen dem vedischen Altertum noch durchaus lebendig ist.' Etc.

flings through the clouds into the sea, fills with water, carries up to the sky, and empties in turn on the earth through sieves of varying size. His finest sieve produces a drizzle, his ordinary sieve rain, his wide-meshed sieve heavy rain, while his skin bottles poured out all at once cause a regular deluge¹. The interval between ancient and modern times may be bridged by a passage from Michael Psellos, who states that in his day (s. xi A.D.) most people ignorantly supposed rain to be water strained by God through a sieve-like sky². In view of this long-lived superstition it is probable that a primitive Greek rain-charm consisted in pouring water through a sieve³. And that may well have been one reason for the use of a sieve⁴ in divination (*koskinomanteia*)⁵. In any case the matter calls for

¹ The essential facts are indicated by Gruppe *Gr. Myth.* Rel. p. 831 f.

Several Christian saints have a sieve as their attribute. M. and W. Drake *Saints and their Emblems* London 1916 p. 215 connect it with St Benedict (March 21), St Amalberga (July 10), and St Hippolytus (Aug. 13). Greater detail will be found in C. Cahier *Caractéristiques des saints dans l'art populaire* Paris 1867 i. 276 ('Crible, tamis, etc.'): 'SAINT BENOÎ DE NORCIA...Près de lui un crible brisé. Saint Grégoire le Grand raconte que sa nourrice ayant emprunté un crible en terre cuite, et l'ayant brisé par mégarde, l'enfant rétablit cet instrument dans son intégrité première. Les hymnes et proses en l'honneur du saint ne manquent guère de rappeler ce premier miracle d'un homme qui en fit tant d'autres...' *Id. ib.*: 'SAINTE AMALBERGE, vierge; 10 juillet, v. 772 ...On lui met parfois en main un tamis⁴ [A.A. SS. Jul. iii. 80], où je crois bien pouvoir signaler un simple rébus; car elle possédait la terre seigneuriale de Tensche sur l'Escaut, dont le nom est en latin *Tamisia*, et *Tamise* en français. Sur cette espèce d'armes parlantes, qui d'ailleurs ne disaient pas grand'chose à la population flamande de l'endroit, on aura construit plus tard l'historiette que voici: Les gens de Tensche (*Tamise*) se plaignaient à la sainte d'être réduits à une seule fontaine, laquelle se trouvait au milieu d'un champ, dont le propriétaire leur créait toutes sortes d'embarras. Pour terminer une bonne fois les contestations, Amalberge se rendit à la fontaine, armée d'un tamis qu'elle rempli d'eau, puis transportant le contenu dans un lieu plus accessible, elle y renversa l'eau qu'elle avait apportée de la sorte. En ce nouvel endroit s'établit une source qui donnait plus d'eau que l'ancienne, mais l'autre tarit immédiatement. On dit que cette fontaine est celle qui se voit aujourd'hui près d'une petite chapelle dédiée à sainte Amalberge, et qui est visitée par beaucoup de pèlerins à cause des guérisons qu'elle procure' [f. custom for three hundred and sixty priests to empty Nile-water day by day into a holed *pithos*: presumably one priest was told off for the task every day in the year. Diodoros' statement was almost certainly transcribed from Hekataios of Teos or Abdera, whose account of Egypt was composed under priestly influence in the time of Ptolemy I Soter (323—285 B.C.).¹ It would seem, then, that early in the Hellenistic age the Egyptians, rightly or wrongly, claimed to be keeping up a religious custom strictly comparable with the mythical water-carrying of the Danaides².

Alongside of this Egyptian rite we may place a story, which can be traced back to the fourth century A.D.³ and connected with the

³ Rufin. *hist. eccl.* 2. 26 iam vero Canopi quis enumeret superstitiosa flagitia? ubi praetextu sacerdotalium litterarum—ita etenim appellant antiquas Aegyptiorum litteras—magicae artis erat paene publica schola. quem locum velut fontem quendam atque originem daemonum in tantum venerabantur pagani, ut multo ibi maior celebritas quam apud Alexandriam haberetur. sed de huius quoque monstri errore, cuiusmodi originem tradant, absurdum non erit paucis exponere: ferunt aliquando Chaldaeos ignem deum suum circumferentes cum omnium provinciarum diis habuisse conflictum, quo scilicet qui vicisset, hic esse deus ab omnibus crederetur. reliquarum provinciarum dii aeris aut auri argentei aut ligni vel lapidis vel ex quacumque materia constabant, quae per ignem procul dubio corrumperebatur. ex quo fiebat, ut ignis locis omnibus obtineret. haec cum audisset Canopi sacerdos, callidum quiddam excogitavit. hydriae fieri solent in Aegypti partibus fictiles undique crebris et minutis admodum foraminibus patulae, quibus turbida aqua desudans defaecatur ac purior redditur. harum ille unam cera foraminibus obturatis desuper etiam variis coloribus pictam, aqua repletam statuit ut deum. et excisum veteris simulacri, quod Menelai gubernatoris ferebatur, caput desuper positum diligenter aptavit. adsunt post haec Chaldaei, itur in conflictum, circa hydriam ignis accenditur, cera, qua foramina fuerant obturata, resolvitur, sudante hydria ignis exstinguitur. sacerdotis fraude Canopus Chaldaeorum victor ostenditur. unde ipsum Canopi simulacrum pedibus perexiguus adtracto collo et quasi suggillato, ventre tumido in modum hydriae cum dorso aequaliter tereti formatur et ex hac persuasione velut deus victor omnium colebatur. sed fecerit haec fortasse aliquando Chaldaeis, nunc vero adventante sacerdote Dei Theophilo nullus profuit sudor nec ceris fias obiecta subvenit: vastata sunt omnia et ad solum deducta.

Rufinus' narrative is repeated in Greek by Soud. s.v. Κανώπιος· ὁ ἐν Αἰγύπτῳ ποτέ. ὡς λόγος, Χαλδαῖοι τὸν ἴδιον θεόν, ὅπερ (ὅσπερ cod. town of Kanobos or Canopus near the most westerly mouth of the Nile¹. The Chaldaeans—we are told—endeavoured to prove that their god, Fire, was superior to all other gods by subjecting cult-images of bronze, silver, wood, stone, etc. to the action of fire and pointing triumphantly to the result. They were, however, outwitted by the priest of Kanopos. He took a terra-cotta strainer, such as were used by the Egyptians for clarifying muddy water, that is to say a *hydria* with many small holes in it, stuffed these holes with wax, painted the surface of the jar with various figures, filled it with water, and set it up as a god. He completed his work by cutting off the head of an old image, regarded as the helmsman of Menelaos², and fixing the same carefully on the top of his jar. The upshot of these preparations was that, when the Chaldaecans came and kindled a fire round the *hydria*, the wax melted, the jar appeared to sweat,

and the water issuing forth from the holes put out the fire of the unbelievers! Hence the figure of Kanopos has tiny feet, a thin neck, a body swollen like that of a *hydria*, and a rounded back.

This curious narrative can be illustrated by certain amulets of

ἀγάλματι. παρεγένοντο μετὰ ταῦτα οἱ Χαλδαῖοι ἀνήφθη τὸ πῦρ, καὶ ὁ κηρὸς δι' οὐ αἱ τρήσεις ἐτύγχανον πεφραγμένοι διελύνετο. τῆς δὲ ὑδρίας ἰδρώσεως καὶ τὸ ὕδωρ διὰ τῶν τρήσεων ἐκβαλλούσης, ἐσβέννυτο τὸ πῦρ. οὕτω τε τῇ πανουργίᾳ τοῦ ἱερέως ὁ Κανώπος (Κανώπου τοῦ cod. E.) τῶν Χαλδαίων νικητῆς ἀνεδείχθη· καὶ ἀπὸ τότε λοιπὸν ὡς θεὸς ἐτιμᾶτο.

The same tale, compressed, recurs in Kedren. *hist. comp.* 325 C (l. 570 Bekker) ἰστέον ὅτι Χαλδαῖοι τὸ πῦρ ὡς πάντων ἀναιρετικὸν σέβονται, καὶ πάντας τοὺς (T. ³ During the last twenty years the pentagram or pentalpha has been the subject of much fruitful investigation. F. Hommel in R. Eisler *Weltenmantel und Himmelszelt* Munchen 1910 i. 304 n. 5 shows that the old Babylonian ideogram AR [F. Hommel *Ethnologie und Geographie des alten Orients* Munchen 1926 p. 1021 'besser ar zu umschreiben'] or UB meaning 'steps of heaven' (UB = *tubkati*) or 'space' (P. Jensen *Die Kosmologie der Babylonier* Strassburg 1890 p. 165 ff., J. Hehn in the *Leipziger semitische Studien* 1907 ii. 5. 7) is represented in a fragmentary archaic votive inscription on the relief of a lion couchant (V. Scheil in the *Délégation en Perse: Mémoires* Paris 1900 ii. 66

'Texte du Lion,' line 16) by the pentagram  and on the obelisk of Manistusu (sign no. 115 in Scheil's list) by a pentagram with open top .

Hommel further points out that already in the Gudea inscriptions we find the ideogram consisting of five *cunei* , whose recumbent form  must have given rise to the old Babylonian UB .

F. X. Kugler in *Klio* 1911 vi. 489 f.:  (5) ist Ideogramm für *nādu* "erheben, verherrlichen," *nā'īdu* "erhaben, hehr," *tan'attu* "Erhabenheit, Majestät." Die 5 ist in erster Linie das Symbol der überirdischen, göttlichen Würde und Vollkommenheit, der gloria divina; erst an zweiter Stelle bezeichnet sie die königliche Majestät. Es ist sehr wahrscheinlich, dass diese Bedeutung der 5 sich von den 5 Planeten ableitet, zumal dieselben nach babylonischer Ansicht über der Fixsternsphäre ihre Bahnen gehen und die vorzüglichsten Verkündiger des göttlichen Willens sind (Diodor, II, 30...). Wie 5, so bedeutet auch das Ideogramm UB: *nā'īdu, tanattu*, drückt also gleichfalls den Begriff

"Erhabenheit" aus. Und merkwürdigerweise ist die archaische Form von UB:  dem pythagoreischen Pentagramm ganz ähnlich. Ausserdem bezeichnet UB auch *tupku, kibratu*, ursprünglich = kosmischer Raum (vgl. *ub-da tab-tab-ba* "vier Himmelsgegenden"). Dies alles legt den Gedanken nahe, dass die kosmische Zahl 5 des Pythagoraer mit der babylonischen Auffassung der 5 nahe verwandt ist.

The legend has been acutely taken to be Shelemau, and identified with the Shelemlah of Neh. xiii. 13¹. (1So Albright, *J. P. O. S.*, vi. 100 sq.) The Pentagram is also used as a potter's mark². The so-called 'Canopic jars' of Egypt, surmounted by the heads of the four children of Horus.

- (1) A typical set (A. E. Rieu, *Life in Ancient Egypt*, London 1894, p. 326).
- (2) A set in veined alabaster, now at Queens' College, Cambridge.

S. 170, 345 n. 1

The nearest parallel to the effigy of Kanopos is to be found, not in the so-called 'Canopic jars' used to contain the *viscera* of the deceased and commonly topped by the heads of the four children of Horos¹, but in certain remarkable *simulacra*, which may be seen

the salt water of the sea, which as the river sank forced its way up the river-bed. Thus the old conflict between Osiris and Set was interpreted at Kanopos as a struggle between the river-water and the sea-water. When the priests of Kanopos found fresh water streaming into their holy vessel, they celebrated with joy the finding of Osiris. Weber seeks support for his reconstruction in Plout. *de Is. et Os.* 39 (Typhon's drought attacks and masters the moisture that generates and nurtures the Nile. Typhon's ally is the Queen of the Anthiopes, i.e. south winds that master the etesian winds, which were driving the clouds towards Anthiopia and so bringing rain to increase the Nile. Typhon and his ally send a weakened and lowered river to the sea—a fact represented by the enclosure of Osiris in his coffin. This happens in the month Athyr, when the nights grow longer and daylight declines. The priests then drape a gilded cow in a black *himation* of fine linen—the cow representing Isis or the earth—and exhibit it for four days from the 17th of the month [=Nov. 13—16: see Frazer *Golden Bough*²; Adonis Attis Osiris³ n. 84]. But on the 19th they go down by night to the sea, and the drapers (*στολισταί*) and priests bring out the sacred ark (*κίστη*) containing a golden casket (*κιβώριον*), into which they pour drinkable water. A shout is raised by the people present, who cry that Osiris has been found! Then they mix fruitful soil with the water (*τὴν κάππιμον* (Xylander and others *εἴη. γῆν κάππιμον*) *φυρῶσι τῷ ὕδατι*), add costly spices and incense, and mould a little moon-shaped image (*μηννοειδὲς ἀγαλμάριον*), which they clothe and adorn, thereby indicating their belief that these deities are essentially earth and water)

¹ E. A. Wallis Budge *The Mummy* Cambridge 1893 pp. 194—201 states that four such jars were regularly employed by the Egyptians to contain the principal intestines of the dead. They were dedicated respectively to the man-headed Mesthā or Amset, the dog-headed Hāpi, the jackal-headed Tuamātef, and the hawk-headed Qebhehennuf. These four gods of the dead are described as the children of Horos or the children of Osiris and themselves stood under the protection of four goddesses, i.e. Isis, Nephthys, Neith, and Selket or Serquet. G. Elliot Smith—W. R. Dawson *Egyptian Mummies* London 1924 pp. 144—147 ('The Canopic Jars') point out that down to the end of the eighteenth dynasty the jars had human heads, but that later they were made to resemble the four children of Horos (human, hawk, jackal, ape), the liver being protected by Imsety, the stomach by Duamutef, the lungs by Hapy, and the intestines by Qebheh-sneuf. A. Erman *Life in Ancient Egypt* trans. H. M. Tirard London 1894 p. 317 describes and *ib.* p. 306 figures (= my pl. xxxiii. 1) a typical set of the four jars. Pl. xxxiii. 2 is from a set, made of alabaster, in my possession. See also H. R. Hall in J. Hastings *Encyclopædia of Religion and Ethics* Edinburgh 1911 iv. 459^b, A. H. Gardiner *The Tomb of Amen-m-het* London 1915 p. 113. In no case is there any justification for the current term 'Canopic.'

Forrer *Reallex.* p. 392, without citing his authority, says that such jars served 'zur Aufbewahrung des Nilwassers und der Mumienentgeweide.' In this connexion note Aristot. *or.* 48. 362 (n. 485 Dindorf) *μοῖροι δὲ ὧν ἴσμεν Αἰγύπτιοι κεράμια ὕδατος ὥσπερ ἄλλοι οἶνον πιμπλάσσι, καὶ ἔχονσι τριῶν καὶ τεττάρων ἐτῶν ἔνδον καὶ ἔτι πλειόνων καὶ τῷ χρόνῳ σεμνύνουσιν, ὥσπερ ἡμεῖς τὸν οἶνον. ἥ καὶ τοῦτον φήσκει τις αἴτιον εἶναι ὅτι ἐξ οὐβρων ἀΐζεται;* In view of the fact that corpses or parts of corpses, e.g. the head, are frequently denuded with water as a ram-charm (Frazer *Golden Bough*², The Magic Art i. 284 ff., J. Rendel Harris in *Folk-Lore* 1904 xv. 431 ('At Ourfa we were told that in dry seasons they dig up the body of a recently buried Jew, abstract the head and throw it into the Pool of Abraham')), it is presumably possible that ordinary intestine-jars may on occasion have been used for the same purpose; but evidence is lacking.

on the imperial coinage of Alexandria (figs. 220—232). R. S. Poole¹ said of them:

'The Canopi represent Osiris and Isis, Osiris being probably Sarapis. The Canopus of Osiris is of two forms, (1) draped and wearing the atef-crown, which consisted of the crown of Upper Egypt, between two plumes, above the ram's horns [fig. 220²]; and (2) adorned with figures and wearing the crown with disk and plumes above the ram's horns with uraei [figs. 221³, 222, 224⁴, 223⁵]. The Canopus of Isis is draped, with a uraeus in front of the body of the vase, and wears the headdress of cow's horns and lunar disk [fig. 225⁶]. These types cannot as yet be further discriminated. The two headdresses of Osiris are indiscriminately used by the ancient Egyptians, and therefore we cannot assign them to particular forms. No doubt in Alexandrian usage they designated such forms, or they would not occur together in one coin-type [figs. 226⁷, 227⁸, 228, 229⁹, 230¹⁰, 232¹¹].'

These joint representations show the two 'Canopi' of Osiris set on a couple of cushions and facing us upon a garlanded base

The 'Canopic' shape might be given to a variety of gods and goddesses. J. G. Milne in the *Journ. Hell. Stud.* 1901 xxi. 286—290 published a lime-stone *stèle* in the Ghizeh Museum (no. 9267), which on each of its four faces had a sunk panel with relief, flanked by a verse quotation, below the panel a row of 'Canopic' figures, and lower again a metrical inscription: (a) A helmeted bust with a circular shield and crossed spears, beneath it, flanked by *Il.* 5. 31, then from right to left 'Canopi' of Osiris, Horus, Isis, Nephtys (?), and the lines *εἰμὲν μὲν ἐξ ἱερῆς στρατιῆς ὅπλοισιν ἀρωγὴς* | *Καίσαρος ἐν πολέμοις ἦδ' Ἀχαιοὺς* | *θεράπων* | *πολλὰ δ' ἐν εὐσεβέσσιν θεῶν ἔργοις μεμόγηκα* | *σώματι καὶ τίμῳ, γήραος οὐκ ἀλέγων* | *οἷνεκ' ἔπαυ[ή]σαντες ἐπ' εὐτάκτοιο [βίου]* | *[νοῦ]ν τε σοφοροσινῆν τ' ἀσπὶ ἐπεκλείσαν*. (b) A helmeted bust with a sea-horse beneath it, flanked by *Od.* 9. 248, then 'Canopi' of Thoth, Amon, Mut, and in lieu of an epigram *Il.* 15. 187—191 (c) A helmeted bust with an eagle on a thunderbolt beneath it, flanked by *Il.* 2. 412, then 'Canopi' of some missing deity, Shu, Tefnut, Hathor, and the lines *εἰς Καῖσαρ, ἑλέγας αἰτοκράτωρ, εἰς κοίρανος ἔστω*, | *εἰς βασιλεὺς, ὃ ἔδωκε Κρόνου παῖς ἀγκιλομήτης* (i.e. an adaptation of *Il.* 2. 204 f. On such formulae see E. Petersen *ΕΙΣ ΘΕΟΣ* Göttingen 1926 *passim*) | *Ζήνα μέγαν Κρονίδην ὑψίστην ἀργικέ[ραν]ον*, | *[...] σμα προφρον[...]* | *[...] πον ἐνν[...]* | *[...] αινεφιδ[...]* | *[...] ηνα[...]* (i.e. τῷ δ' ἅμα προφρονέως γε βαρίκλυτον Ἐννοσίγαιον | *σὺν τε καὶ αινεφέλεια προσέφην Ἀἰὼν ἀδάμαστον*) (d) A helmeted bust (?) with a doubtful creature beneath it, flanked by lettering now lost, then 'Canopi' of Ra, Atum, Nut, and the lines *Ἄγιος Ἰστιάει κατ' ἔτος δις δῆμον ἅπαντα Πανὺς ὁρροσινόμοιο κατ' εἰλαπ[ί]δας Φοῖβοιο*. *ἄνδρε δὲ ἄρχοντας καλέων κατὰ ἔθνος ἕκαστον* | *τοῖ τ' ἔθνοισ ἱερῆς ἐω[θε] χροῶν τε συνέργ[ουσι]* | *εἰς ἐκατὸν δις πα[ν]τὸς ὁμῶς λιλάβαντος [αγ[γ]λ[η]ν*. The *stèle* dates from the end of s. 1 B.C. and comes from Alexandria. F. Ll. Griffith suggests that the underlying idea is probably astrological: thus, the opposite sides (4) and (2) are headed by Ra and Thoth for Sun and Moon (1) has Osiris, possibly for the planet Jupiter, and the lost figure in the front of (3) may have been Geb, the planet Saturn. To each of these leaders were then added his usual associates in Egyptian religious tradition.

The numismatic 'Canopi' of Osiris resemble the legendary effigy of Kanopos more closely than do the ordinary 'Canopic' jars, and that in two respects. For one thing, there can be no doubt that the Osirian 'Canopi' were definitely worshipped as deities. For

another, they were not only surmounted by a human head, but also decorated with various figures. It is even possible that the series of dots seen on the Osiris-'Canopi' (figs. 224, 228, etc.) were holes stuffed with wax like those of Kanopos himself.

A further possibility is deserving of mention. Since Nile-water was in effect the equivalent of snow and rain, the Nile was popularly regarded as in some sort a copy of the sky³. Parmenon of Byzantion⁴ (s. iii B.C.) ventured to equate the river-god with the sky-god, when he penned a choliambic address to—

'Nile, Zeus of the Egyptians.

A coin of Alexandria already figured (*supra* i. 361 fig. 277) equips Zeus with the cornu copiae of Neilos.

At Silsilis (*Djebel Selseleh*), on the right bank of the Nile in Upper Egypt, a *stèle* was found bearing an inscription flanked by two reliefs—on one side a sacred tree, on the other a bull and a young man holding a torch or stick in his left hand¹. This was 'the salutation of Leonidas the helmsman to Neilos Zeus called *Nephôtes* the Greatest' and is dated in the year 106 7 A.D.² Now *Nephôtes*, as A. H. Sayce³ pointed out, is a Grecised form of the Egyptian *Neb-pet*, 'Lord of Heaven.' There was, moreover, a long-standing belief that the Nile was a celestial river⁴, and sundry mythographers identified it as such with Eridanos or Okeanos⁵. Kanobos the helmsman gave his name to a star⁶ appearing low down beneath this constellation⁷. It is therefore quite conceivable that the rounded body of Kanopos was treated as a *quasi*-sky, and that the figures with which it was adorned were those of stars or constellations. Support for the conjecture is not far to seek.

If Kanobos was thus identified with Osiris, his wife Theonoe⁸ or Eumenouthis⁹ seems to have been equated with Isis. In this connexion a small Nolan *amphora* once belonging to the Museo Vivencio must be taken into account. An old drawing here reproduced (fig. 233)¹⁰ shows the two sides of the vase as one continuous

its cover shaped like the head of Isis. It is decorated with two stars—a feature in which it is not unique³; for Isis was the 'Queen of Heaven' and wore a robe glittering with stars⁴. It is surrounded by rosettes and circles, the meaning of which is doubtful. The object lying on the ground between the Isis-jar and the worshipper is (if we may put faith in Angelini's drawing) probably not a spiked crown⁵, but cult furniture of some sort. It might conceivably be the

mountain-emblem of *HA*, one of the most ancient gods of the Delta, whose priest purified the king at his coronation with the 'waters of all-satisfying life'.¹ But I incline to think that rosettes, circles, and *quasi*-crown are merely loaves and cakes set out before the goddess. In any case the Egyptian scene balances the Greek scene; for Isis too was an earth-power²—indeed Plutarch says that the Egyptians spoke of the earth, when flooded and fructified by the Nile, as 'the body of Isis'.³ That a Greek potter should thus combine home ritual with foreign ritual is certainly exceptional⁴, but not altogether surprising. If an early Ionic *hydría* could represent the sacrifice of Bousiris with some approach to Egyptian *vraisemblance*⁵, a late local Italian (? Oscan) *amphora* may well have reflected the growing familiarity of the Greek world with the observances of the Delta. In after days Egyptian spells came to be much valued in Greek lands⁶. But this vase has a special interest as affording the earliest extant Greek or *quasi*-Greek representation of a 'Canopic' divinity.

The Vivenzio vase, after being drawn by Angelini in 1798, disappeared from view. But thirty years later Raoul Rochette published an *amphora* of remarkably similar aspect (fig. 234)⁷—so similar in fact that it must be the self-same vase—and this in 1865

The men wear loin-cloths only: two cloaks are hung in the background. Leafy sprays are visible to left and right of the pillar-like figure. Hackl argues that this figure cannot be a herm (no arm-stumps, no *phallós*), nor yet a Dionysos *Periklitos* (tree-stem or pillar usually clothed, Dionysos-mask above adorned with vines), but must be the mummy of some Greek, who dying in the Delta was embalmed and lamented by his friends in Egyptian fashion (*προσκύνησις*, loin-cloths)—possibly as a divinised Osiris-Dionysos.

passed from the Pourtalès collection¹ to a permanent home in the British Museum². It is a red-figured *amphora* of late, coarse style, and is officially stated to have come from the Basilicata in South Italy. Its design is identical with that of the Vivenzio vase, apart from the fact that the decorative details about the 'Canopus' (stars, rosettes, circles, 'crown') are now missing. Mr H. B. Walters, however, who kindly examined the vase afresh on my behalf, reports as follows (May 15, 1911):

'F 147. R.-Rochette's publication seems to be fairly adequate and accurate. I should like to know if there is any record of the history of this vase before it came into the Pourtalès collection, where it evidently was about 1825—1830.

Fig. 234.

It must surely be the same as the Vivenzio vase though Miss H[arrison] has n't realised the fact. As to the stars and circles I can only suppose they were restorations which were subsequently removed. I had no knowledge of the Vivenzio publication when the Catalogue was made.

P.S. Since writing the above I have again carefully examined F 147, and find the marks as given by Miss H[arrison] *are all there*, but *very faintly engraved in the varnish*. I doubt if they are original. There is also a crown on the other side of the vase, not given in the drawing. Any way this proves its identity with our vase.'

Finally Mr F. N. Pryce has furnished me with recent photographs of the four figures (pl. xxxiv), on which the faint markings have been added in white paint.

The use of holed vessels as a rain-charm agrees well with what we know of Libyan beliefs concerning the sky. According to Herodotos, the Libyans who planted the followers of Battos beside the fountain of Apollon at Kyrene addressed them in these words: 'Men of Hellas, here it is fitting for you to dwell, for here the sky is bored through¹.' My friend and colleague the late Dr A. Wright pointed out that this description furnishes us with an answer to the conundrum propounded by Virgil's Damoetas:

Say in what lands—and he my great Apollo—
There is a hole in heaven three ells across².

Eustathios takes Herodotos' words to mean that the sky resembled a reservoir, which though sound elsewhere was holed over Libye and so dropped abundant rain to the advantage of Libyan vegetation³. It would seem then that the Libyans thus naively accounted for the torrential rain, which in point of fact commonly falls at Kyrene during the rainy season from the middle of November onwards⁴. It is also noteworthy that, according to Theophrastos, the wood near Kyrene sprang up as the result of a heavy pitchy rain, and that *silphion* had been produced for the first time from

ii. The holed vessel in Greece.

The custom of pouring water into a holed *pithos* or *hydria* by way of a rain-charm has left traces of itself, not only in the rites and myths of northern Egypt, but also in those of Greece. Nor is this to be wondered at, if—as I incline to surmise—the said custom belonged to a race, which at an early date occupied both regions, the Graeco-Libyans or Libyo-Greeks postulated by Sir W. M. Flinders Petrie⁴. It is even permissible to use less general terms and to refer the practice to a particular tribe, the *Daināu* or *Danauna*, who along with other maritime allies are known to have attacked the kingdom of Rameses iii at a date shortly after 1200 B.C.⁵ For there can be little or no doubt that this tribe has been correctly identified with the Danaoi⁶ of Homer; and they in turn cannot be separated from their eponym Danaos⁷, or his daughters the Danaides, whose water-carrying furnishes the best parallel to the alleged ritual of Akanthos in Lower Egypt⁸.

The latter *loc. cit.* p. 83 n. 1 is tempted 'to see some connection, in name at least, between the Danuna and Dan. Perhaps Danite sea-farers [Judges 5. 17] were in the service of the Philistines and migrated with them,—the tribe disappears in later Hebrew history,—or possibly one section of the Philistines occupied territory that had belonged to Dan, and so were called Danuna.' Such speculations are rash, though far less so than those of the Abbé E. Fourmont concerning 'the emigrant tribe of Dan' (discreetly abbreviated in the *Transactions of the Third International Congress for the History of Religions* Oxford 1908 ii. 183, cp. the same writer in the *Revue d'histoire et de mythologie* vii no. 39 pp. 313–318).

(a) Water-carrying in the myth of the Danaïdes.

The story of the Danaïdes is told as follows by Apollodoros¹. Danaos and Aigyptos were twin-brothers. Belos, their father, settled Danaos in Libye, Aigyptos in Arabia. Aigyptos, however, conquered the Melampodes and named their land Egypt after himself. The two brothers had, by various wives, a numerous progeny—Danaos fifty daughters, Aigyptos fifty sons. They became rival claimants to the throne; and Danaos, fearing the sons of Aigyptos, at Athena's instigation put his daughters on board a ship², which he devised for the purpose, and fled. He touched at Rhodes, where he set up the image of Athena *Lindia*³. Thence he came to Argos, and Gelanor the Argive king abdicated in his favour⁴. < Having thus become master of the country, he named the inhabitants *Danaoi* after himself⁵. > The country was then suffering from a drought; for Poseidon had dried up its springs, being wroth with Inachos for

⁴ On the succession of Danaos to Gelanor see Paus. 2. 16. 1 and the interesting omen in Paus. 2. 19. 3 f. (wolf kills bull = Danaos deposes Gelanor, and founds sanctuary of Apollon Ἀλκίος). Plout. 7. *Pyrih.* 32 locates the omen near Pyramia in Thyreatis, and speaks of Gelanor as driven out by a στάσις. Interp. Serv. in Verg. *Aen.* 4. 377 makes Apollon give an oracle to Danaos 'ut profectus ubi invenisset taurum et lupum inter se pugnantes, spectaret exitum pugnae, et si taurus vicisset, Neptuno templum construeret; si vero lupus, Apollini delubrum sacralet. sed cum Danaus lupum videret vicisse, Apollini Lycio templum dedit.' This famous encounter is commemorated on a late autonomous bronze coin of Argos, which has *obv.* the forepart of a wolf to the right, *rev.* ΗΡΑΚΛΕΙ[Τ]ΟΥ the forepart of a bull to the right. This is usually described as 'running' (P. Gardner) or 'charging' (S. W. Green), but may rather be moribund (*Brit. Mus. Cat. Coins Peloponnesus* p. 147 pl. 28, 9 (= my fig. 235), *M. Clean Cat. Coins* ii. 460 pl. 232, 31, *Head Hist. num.*² p. 440).

⁵ These words were added to the text of Apollodoros by B. Aegius in the *editio princeps* of 1555 from the concluding sentence of schol. A. D. *Il.* 1. 42 αὐτὸς δὲ κρατήσας τῆς χώρας ἀφ' ἑαυτοῦ τοὺς ἐνοικοῦντας Δαναοὺς ὠνόμασεν. ἱστορεῖ Ἀπολλόδωρος ἐν β'.

declaring that the land belonged to Hera¹. Danaos therefore sent his daughters to seek for water. One of them, Amymone by name, while going on this errand, shot at a stag, but hit a sleeping Satyr, and was saved from his embraces by the appearance of Poseidon. To him she yielded; and he showed her the springs at Lerna. Meantime the sons of Aigyptos came to Argos, demanding the restoration of peace and a marriage with their fifty cousins. Danaos, who distrusted these professions and bore a grudge on account of his exile, agreed to the proposals and distributed the damsels by lot. The names of grooms and brides are duly recorded². Danaos made the wedding-feast, but secretly supplied his daughters with daggers. They, when their bridegrooms fell asleep, slew them all, with a sole exception—that of Hypermnestra, who saved Lynkeus for respecting her virginity³ and was for that reason imprisoned by Danaos. The rest of his daughters buried the heads of their bridegrooms at Lerna and performed funeral rites over the bodies in front of the city⁴. They were purified themselves, at the bidding of Zeus, by Athena and Hermes. Danaos subsequently bestowed Hypermnestra upon Lynkeus, and offered his other daughters as prizes in a gymnastic contest⁵.

The tale thus told is long and clearly composite. It is not difficult to pick out certain parts of it and to bracket them as being mythical accretions or embellishments of no central significance. The explanation of the Argive drought as due to Inachos' partisanship of Hera was hardly an original feature, at least of this story⁶. The incident of Amymone, the Satyr, and Poseidon is an obvious

³ So also schol. *Il.* 4. 171, schol. Pind. *Nem.* 10. 10. But schol. Eur. *Hec.* 886 *μία δὲ μόνη τούτων ἢ Ὑπερμνήστρα ἐφείσατο τοῦ Λυγλέως, ἀπὸ τῆς μίξεως διάθεσιν ἐσχηκία πρὸς αὐτὸν* assigns a love-motive, which—as C. Bonnet in *Harvard Studies in Classical Philology* 1902 xiii. 132 points out—is as old as Aisch. *P.v.* 865 f. *μία δὲ παῖδων ἰσχυρὸς θέλξει τὸ μὴ | κτείνειν σύνευνον*, κ.τ.λ. and is further supported by the pleading of Αἰθροδίτη in Aisch. *Danaides* [*frag.* 44 Nauck² *ap.* Athen. 600 A—B].

⁴ Others agree that Danaos deposited the heads of the Aigyptiadae in Lerna (Zenob. 4. 86, Apostol. 10. 57, Arsen. *πρωτ.* p. 334, Hesych. s.v. *Λέρνη καλῶν*, Phot. *α. α. α. α. Λέρνη θεατῶν*, Soud. s.v. *Λέρνη θεατῶν*). But, according to Paus. 2. 24. 2, the sons of Aigyptos were murdered at Lerna, and their wives cut off the heads to show their father that the deed was done. The headless trunks remained at Lerna, but the heads were buried in a tomb on the left of the road leading up to the Argive *ἀκρόπολις*.

⁵ So too Pind. *Pyth.* 9. 112 ff. with scholl. *ad loc.*, Paus. 3. 12. 2. Hyg. *fab.* 170 makes Lynkeus, after Danaos' death, present Abas, who had been the first to inform him of it, with the shield dedicated by Danaos to Hera. Lynkeus then consecrated the games held *quinto quoque anno* and known as *ἀσπὶς ἐν Ἀργεῖ*. The Danaïdes after their father's decease married Argive husbands.

⁶ Its proper setting is given by Paus. 2. 15. 5.

excrement¹. The catalogue of one hundred names reads like a didactic (Hesiodic?) addition². And the suitors' race was not the only method of rounding off the tale³.

But, *subtractis subtrahendis*, the residue of the myth has been handled in more ways than one. F. G. Welcker⁴ took the Danaïdes to be the fifty weeks of the year—an opinion that remained his own. K. Schwenck⁵ had suggested that they were the fifty moons which composed the cycle of the Olympian festival; and this notion, since with a little ingenuity it could be made to fit the case of other fifties⁶, especially the fifty daughters of Endymion and Selene, and even the fifty daughters of Thestios, found considerable favour and is still hardly extinct⁷. Symbolism of another sort, topographical rather than chronological, appears in the picturesque but highly improbable view of L. Preller⁸. Making the most of a few particular cases—Amymon, Physadeia⁹, Polydora¹⁰—he argued that all the Danaïdes were fountain-nymphs of the Argolid. The Aigyptiadaï, descendants of the mighty Aigypotos (that is, of the Nile), could then be explained as torrents and rivers, which in winter rushed headlong

² They are interestingly discussed in Preller—Robert *Gr. Myth.* ii. 267 f. C. Robert argues that the list preserved by Apollodoros goes back to an epic source, probably to Hesiod (hence the epic character of the names, their epic prosody, often their Ionic dialect, and their suitability to hexameter verse. Peculiarly Hesiodic is their use of alliteration and even rhyme), but that the list given by Hyg. *fab.* 170. which has only 22 or perhaps 23 names in common with Apollodoros, is derived from some prose author (hence such names as *Themistadora*, *Demarchus*, *Demophile*, *Pamphilus*).

³ C. Bonner in *Harvard Studies in Classical Philology* 1902 xiii. 162 f. shows that the suitors' race (Pind., Paus., Apollod.) and the Danaïdes' punishment in the Underworld (Hyg., etc.) 'belong to distinct traditions which are not easy to reconcile.' *Id. ib.* p. 133 holds that the latter version squares with that of schol. Eur. *Her.* 886 (perhaps cp. *Ov. her.* 14. 115—118), in which Lynkeus avenges his brothers by slaying Danaos and all the Danaïdes except Hypermestra.

358 Water-carrying and the Danaïdes

like importunate suitors, but in summer sank low or were dried up altogether, their head-waters cut off by the local nymphs. Thus decapitated they were buried in the Lernaean marsh, where alone moisture yet lingered. Preller's explanation, accepted as sound by Bernhard¹, N. Wecklein², O. Waser³, etc. and described as 'Ein geistvoller Erklärungsvorschlag' by C. Robert⁴, is of course open to serious objections, which have been forcibly put by C. Bonner⁵ and G. A. Megas⁶. Nor is the case materially strengthened, if, with V. Henry⁷, we pronounce the Danaïdes to have been rain-goddesses.

These attempts at explanation, however ingenious, must be discarded. There is more to be said for the folk-tale comparisons made by L. Laistner and C. Bonner. Laistner⁸, who regarded the race of the Argive suitors as the most important feature of the myth and combined it with the endless labour of the Danaïdes, took the whole story to exemplify the following mythical formula: 'A water-carrying field fairy is freed from an enchantment by a man who, in order to accomplish her deliverance, has to perform some feat involving bravery, strength, or endurance, as well as mortal danger in case of failure⁹.' The Danaïdes are enchanted maidens, nymphs of the rain or the dew. The endless water-carrying is the magic spell. The sons of Aigýptos fail to free them, and lose their own lives in consequence. Now Laistner's comparison is not only forced and far-fetched, but—as C. Bonner¹⁰ points out—definitely vitiated by taking for the original core of the myth two different and alternative endings to it!

⁵ C. Bonner in *Harvard Studies in Classical Philology* 1902 xiii. 146 n. notes that 'the use of κεφαλή, meaning *source*, is very scantily attested' (Hdt. 4. 91. 1; Strab. 377. Latin *caput* and Modern Greek κεφαλάρη are quoted in support); that Paus. 2. 24. 2 gives, apparently as a genuine Argive myth, a very different account of the occupation *capra* p. 356 n. 4); that the alleged invention of wells by Danaos or his daughters does not prove the latter to have been spring-spirits; that the numeral fifty is not necessarily an indication of a nymph-like nature, but rather suggestive of a folk-tale family; that the river of Egypt, though known to Homer as Αἰγύπτος, is already Νεῖλος in Hes. *theog.* 338; etc.

Nevertheless Laistner deserves credit for suggesting¹ that the incident of Lynkeus being saved by his bride was borrowed from some other folk-tale such as an Icelandic version² of the *Hop o' my Thumb* formula³. Acting on this hint, C. Bonner⁴ went further and reached the conclusion that the whole episode of the Danaïdes murdering the Aigyptiadaï was comparable with a folk-tale still current in Greece⁵ and in many other parts of Europe from the Caucasus to the Pyrenees: 'A band of brothers lose their way in a forest, and take refuge in the hut or cavern of an ogre or witch. The youths pass the night with the daughters of their host. The youngest and shrewdest of the brothers suspects that treachery is intended, and by a trick, such as an exchange of head-dress or a shifting of positions⁶, causes the ogre to cut off the heads of his own daughters. Thus the youths escape⁷'. Sundry variants of the folk-tale assimilate it more closely to the Greek myth, for instance the Icelandic version mentioned above⁸ in which a captive maiden warns the visitors of their danger, or again a Milanese version⁹ in which the father of the youths is their companion and himself suggests the stratagem. Nevertheless it is distinctly unfortunate for Bonner's hypothesis that in the folk-tale all the brothers escape and all the sisters are killed, whereas in the myth all the brothers but one are killed and all the sisters escape¹⁰.

The foregoing criticisms must not be taken to imply that both Preller and Bonner were wholly off the track. The former at least saw that the Danaïdes had some essential connexion with water. And the latter maintained with success that their myth bore much

resemblance to a folk-tale¹. But I do not think that either Preller or Bonner sufficiently realised the complexity of the story. Symbolists on the one hand and folklorists on the other largely ignored its legendary, not to say historical, basis. This factor of legend was indeed suspected in 1893 by W. Schwartz², who urged that the myth of the Danaïdes, like that of the Argonauts³, was a mariner's or merchant's epos⁴. But suspicion became virtual certainty, when it was perceived that the Danaoi of Homer were none other than the *Danānu* or *Danauna* of Egyptian records⁵. And the ground thus won was still further consolidated by L. B. Holland in 1928⁶.

¹ J. Vurtheim *Aischylos' Schutzfliehende* Amsterdam 1928 p. 17 prefers to speak of it as a Pelasgian saga: 'Das Sagenmotiv kennt die beiden streitenden Brüder; der eine hat Söhne, der andere ebenso viele Töchter. Eine Ehe wurde den Hader beendet haben, aber die Schönen mochten ihre Vettern nicht. Auch die Zahl fünfzig ist in der Sage gegeben: Priamos' Haus kannte sie. Dann folgt der Mord, und hier denkt man gleich an *ἔργα Ἀλκμῆα*. Auch die lemnischen Weiber töteten ihre Männer (Herod. VI, 139 [138]); auch hier geschah es auf pelasgischem Gebiete; auch hier war eine, die den Mord nicht verübte und eine Ausnahme bildete. Diese Jungfrau—Hypsipyle—wurde schuldig erklärt, wie in Argos Hypermetra. Fast möchte man von einem pelasgischen Sagenmotiv reden; denn bringen nicht lemnische Pelasgen mit eigener Hand die athenischen Frauen um, bei denen sie bereits Kinder gezeugt hatten (Herod. VI, 139 [138])?' It may be conjectured that the Lemnian myth has been partially assimilated to the Argive. The resemblance of the two was already remarked by F. G. Welcker *Die Aischylianische Trilogie, Prometheus* Darmstadt 1824 p. 594 f.

⁴ O. Waser in Pauly—Wissowa *Real-Enc.* vi. 2089 aptly quotes E. Meyer *Forschungen zur alten Geschichte* Halle a.S. 1892 i. 79. The context runs: 'Wir sind, und mit Recht, gewohnt, die "hesiodische" Poesie als unmittelbare Vorgängerin der Logographen zu betrachten; aber die Danaiden stehen den letzteren mindestens ebenso nahe—wie sie denn auch durch das starke Hervortreten des genealogischen Elements mit Hesiod sich eng berühren—und zeigen, dass auch die "homerische" Poesie der allgemeinen Strömung Rechnung getragen hat. Das Interesse an Ländern und Völkern, an der Erweiterung der geographischen Kenntnisse, an Urgeschichte und Wanderungen bildet den Inhalt der Danaiden wie der Schriftsteller des Hekateos; ihm verdankt das Epos die grosse Wirkung, die es nicht formell aber durch seinen Inhalt erzielt hat. Gleich zu Anfang boten die Schicksale der Io die Gelegenheit dazu. Io konnte von Argos nach Ägypten nur auf dem Landwege gekommen sein, musste also so ziemlich die ganze im siebenten Jahrhundert den Hellenen bekannte Welt (mit Ausnahme Italiens) durchwandern haben. So konnte das Epos gewissermassen einen Abriss der Geographie geben.'

⁶ L. B. Holland 'The Danaoi' in *Harvard Studies in Classical Philology* 1928 xxxix. 59—92.

Epic tradition, which not improbably rested on Argive folk-memory, associated Danaos and his daughters with the discovery of a water-supply. This trait, and it alone, is involved in our earliest reference to their myth. The *Iliad* speaks of Argos as *polydipsion*, 'very thirsty'¹, and Euripides calls it *dipsian...chthóna*, a 'thirsty land'². Both phrases presumably allude to the fact that the streams Inachos (*Panitzá*) and Charadros (*Yerías*), which traverse the Argive plain, run dry for the greater part of the year³, so that there is need to make up for their lack of water by means of irrigation. But ancient critics, finding Argos well-watered and fertile, were perplexed by the Homeric epithet⁴. Eustathios⁵ finally offers us a choice of explanations: 'Either because the Greeks thirsted for it⁶; or because the myth says that it was once ill-watered but afterwards became well-watered, when Poseidon caused the springs at Lerna to burst forth through his love for Amymone, the namesake of the Amymonian Waters⁷ at Argos; or it may be on account of the Danaides, who came from Egypt and taught the digging of wells, as Hesiod⁸ observes—

Waterless Argos Danaos made well-watered.'

Strabon⁹, without naming the author, cites another version of the line, in which the 'Danaan maids' take the place of Danaos:

Waterless Argos Danaai made well-watered.

It appears, then, that a Hesiodic line mentioned Danaos as the cause

of Argos' fertility, while a variant and perhaps later¹ reading spoke of the 'Danaan maids' rather than Danaos himself.

It is not unreasonable to contend that this ancient tradition was, in the main, true. Immigrants from Egypt—let us say the *Danauna*—came by sea *viâ* Rhodes and settled at Argos. They called themselves *Danaoi*—a name which would be appropriate to desert-dwellers if, as Herakleides of Kyme² asserted, it really meant the 'Dry' or 'Parched ones.' But etymology is capable of a *volte-face*, and modern scholars have maintained that *Danaoi* should rather be connected with the Sanskrit *dānu* meaning 'fluidity, dampness, drops³.' Be that as it may, Gelanor the reigning king of Argos was, owing to

¹ W. Schwartz in the *Jahrb. f. class. It might be added that *Danaai*, though a metrical necessity, is a somewhat unsatisfactory substitute for *Danaïdes*.

I would suggest confusion with δηναιός, 'ancient,' in its Doric form δαναός (Aisch. *Eum.* 845, 879).

³ V. Henry in the *Rev. Et. Gr.* 1892 v. 284 ff. Cp. H. Usener *Göttingen Bonn* 1896 p. 206. 'Unter den bezeichnungen, welche die hymnen des Rigveda für den von Indra bekämpften demon anwenden, erscheint auch *Dānu*, theils mit *Vṛtra* oder *Ahi* zusammenge-setzt, theils für sich, und in patronymischer fortbildung *Dānavas*. Einmal wird *Dānavā* sichtlich identificiert mit *Vṛtra*. Die mehrzahl *Dānavas* kommt im Rigveda noch nicht vor, wohl aber zweimal im Atharvaveda, und hier bereits gleichbedeutend mit den Asuren, der allgemeinen bezeichnung der bösen dāmonen. Diesem plur. *Dānavas* entsprechen die gr. *Δαναοί* auf das vollkommenste, ausgenommen die quantität der ersten silbe. Aber derselbe übergang zur kurze hat sich im sanskrit vollzogen: schon im Śatapathabrāhmaṇa wird das grundwort *dānu*, obwohl der hochton auf dies in vocal nicht, mit *ā* angewandt, und so bei späteren durchweg. Noch begreiflicher ist die bezeichnung in der fortgebildeten form *Dānavas* als wirkung des vorgehobenen hochtons. Man versteht jetzt das gebet des alten Chryses *τίσειαν Δαναοὶ ἔμα δᾶκρυα* (A 421). On the *Dānavas*, see further H. Jacobi in J. Hastings *Encyclopedia of Religion and Ethics* Edinburgh 1909 ii. 809^a, *id. ib.* 1911 iv. 390^a—392^a. A. A. Macdonell *ib.* 1921 xii. 610. As to *Dānu*, *id. Indic Mythology* Strassburg 1897 p. 158 says: 'Vṛtra's mother is called *Dānu* and is compared with a cow (I, 32). This name seems to be identical with the word *dānu*, which is several times used as a neuter meaning "stream" and once as a feminine to designate the waters of heaven. The same term is applied as a masculine, apparently in the sense of a metronymic, to *Vṛtra* or the dragon (2, 12: 4, 30), as well as to the demon *Auṣṇavābha* (2, 11), and to seven demons slain by Indra (10, 120). The regular metronymic *Dānava* is used five times to designate a demon combated by Indra and doubtless identical with *Vṛtra*. Indra cast down the wiles of the wily *Dānava* (2, 11), he struck down the snorting *Dānava* (5, 29), to release the waters (5, 32). *Infra* p. 366 n. 4.

a season of drought¹, forced to abdicate; and the chief of the newcomers took his place. Why? Because he or his women-folk succeeded in getting water and so saved the Argive crops.

L. B. Holland² has argued with much cogency that this dynastic change corresponded with the transition from shaft-graves to *tholos*-tombs. The shaft-graves, on his showing, belonged to the Achaioi, the *tholos*-tombs to the Danaoi. He even ventures upon an approximate dating of the events³:

'The marble chronicle from Paros, compiled in Athens in the third century B.C., probably from older official Athenian documents,...specifically states that the penteconter of Danaus arrived in the year 1510—1509 B.C.⁴ Archaeology shows that the change from the "shaft-grave" to the "tholos-tomb" dynasty at Mycenae occurred about 1500 or a little earlier, and that the great fortification walls, with the Lion Gate and the existing court and megaron of the palace there, were all built about 1400⁵. Since these dates agree so perfectly with the traditional dates for the coming of the Danaans and the "founding" of Mycenae by Perseus⁶, is it not reasonable to accept the traditions as substantially historical?'

The people who dug the rectangular shaft-graves (the Achaioi?) dug also rectangular wells. Two such were found by A. J. B. Wace⁷ cut in the soft rock at Mykenai, one by the north-western angle of the 'Warrior Vase House,' the other below its eastern wall: neither of them can be more recent than the beginning of the 'Late Helladic iii' period. But the people who constructed the far more elaborate *tholos*-tombs (the Danaoi?) may fairly be credited with the introduction of tholoid reservoirs or wells, whether carved out of the native rock like the bottle-shaped cisterns of later date to be seen on the site of Melite at Athens⁸, or lined with concentric courses of masonry like the beautifully built and still serviceable Fountain of

¹ This is not actually stated in our sources (*supra* p. 355), but is implied by the sequel (Apollod. 2. 1. 4).

² L. B. Holland 'The Danaoi' in *Harvard Studies in Classical Philology* 1928 xxxix. 74 f.: 'Collating these literary traditions with the archaeological evidence at Mycenae, we should naturally equate the rulers of the fifteenth to the twelfth centuries, the tholos-tomb kings, with the *Danaoi*; the earlier shaft-grave dynasty would then be *Achaioi*, whose tribal ancestors first occupied the land at the beginning of the Middle Helladic period, "long before human memory" to classical Greeks; and the still earlier inhabitants, the Aegean people of Early Helladic days, might be the Pelasgians whose scattered remnants still persisted in historic times.'

Bourina in Kos¹. The underground chamber of bronze in which Akrisios king of Argos imprisoned his daughter² has been aptly compared by W. Helbig³ and others⁴ with the bronze-decorated *thóloi* of the Argolid. And, in view of the connexion presumed to exist between such *thóloi* and the Danaoi, the name of Akrisios' daughter, Danaë, is significant.

F. Chabas⁵ the Egyptologist half a century since proposed to equate the *Daanaon*, not with the Danaoi, but with the Daunioi; and this equation, though it has not attracted much notice in recent times⁶, raises further questions of considerable interest. To begin with, it seems possible that the Daunioi were nothing but a branch of the Danaoi, which crossed over from northern Greece to southern Italy. According to Festus⁷, Daunus was an Illyrian chief, who quitted his own land and settled in Apulia. His *provenance* suggests that **Danŭ-aoi*, a name with true Illyrian suffix⁸, became by legitimate compensatory lengthening **Daun-aoi*, whence *Dainioi*, its

normal form in Greek writers. Had Virgil tradition behind him, when he made Danae found Ardea¹, the capital of Turnus the son of Daunus²? *Danaë*—*Daunus* may be more than a mere assonance. But, if the Daunioi were really akin to the Danaoi, we might look to find the former like the latter associated with the irrigation of a waterless region. In point of fact the Roman poets do emphasise the arid character of Daunia. Horace³ speaks of it as the land

Where Daunus, scant of water, ruled
The rustic tribes.

And Ovid⁴ mentions

the parched fields
Of Iapygian Daunus.

That the Daunioi, like the Danaoi, constructed *thólos*-tombs is a possible, though precarious, inference from a few lines in Lykophron⁵. This writer of prophetic rigmarole sets out to tell how the Daunioi shall bury alive certain Actolian envoys, sent to recover the *quondam* possessions of Diomedes⁶:

Within a darksome grave that savage folk
Shall hide them, living yet, in the inmost nooks
Of a hollow passage. Aye, for them the Daunites
Shall build a tomb, with never a funeral rite,
Roofed over by a pile of rounded stones.

But whether the Daunioi had tholoid wells, we cannot even conjecture. Surviving examples of the type on Italian soil are the

Tullianum at Rome¹ and—perhaps one should add—the well-chamber at Tusculum². In neither case have we the slightest reason to connect the structure with the Daunioi. It cannot, therefore, be claimed that the rôle played by the Daunioi in Italy answers to that played by Danaos and his daughters in Greece.

But here a further possibility has to be faced. If the Danaoi were indeed Illyrian **Danŭ-aoi*, and if the Daunioi were a branch of the same stock transplanted to Apulia, we can hardly avoid the conclusion that both tribal names are akin to that of the great river *Dānucius* (Danube), which in turn—as O. Schrader³ points out—is certainly related to the river-names *Dānapris* (Dnieper, and *Dānastris* (Dniester), and probably to the Thracian *Sān-danos*, the Thessalian *Api-danos*, the Italian *Eri-danos*, and the Celto-Ligurian *Rho-danos*, if not also to the Scythian *Tānais*. *Dānucius* and its cognates must moreover be connected with the Avestan *dānu-*, 'river,' and the Ossetic *don*, 'water' (whence Don, the modern name of the *Tānais*). On this showing, the Danaoi and the Daunioi both bore a name that meant the 'River-folk' or 'Water-folk.' That, one imagines, would have signified, at least primarily, the folk that dwelt along the River or beside the Water. Secondly such folk, since they lived beside the water-ways, might be expected to know the ways of water, and would thus come to be regarded as good water-magicians or experts in irrigation. Now it is commonly admitted that the name *Dānucius* is of Celtic origin⁴. And, this being so, it

In fact, it begins to look as though, far back in the Middle Bronze Age, some proto-Celtic⁴ tribe or tribes had traversed Europe along the great river-routes and appeared at places as widely separated as Argos and Ireland⁵, nay more, that this adventurous race, everywhere expansive and intrusive⁶, had pushed on to the very confines of Egypt. Nor is that a fantastic impossibility. After all, if in the third century B.C. Celts could force their way into the heart of Asia Minor and leave a permanent population in Galatia, for aught we know, in the second millennium B.C. their ancestors

The question cannot here be discussed; but we should note their frequent association with burial-mounds (*síd*) conceived as underground palaces.

⁴ Since 'Celtic' is a term of linguistic rather than racial significance, it might be safer to say simply 'Aryan' or 'Indo-European.' But I mean to imply that the descendants of this tribe were of Celtic speech. The Germans have coined *Urkelten* (E. may have penetrated yet farther south¹ and as *Danauna* have occupied, at least for a time, some portion of the Egyptian coast.

Returning now to the myth of Danaos and the Danaïdes, we are in a position to understand better the early Hesiodic line—

Waterless Argos Danaos made well-watered².

A tribe that bore an Illyrian name³ and at one time dwelt as 'River-folk' or 'Water-folk' along the banks of the Danube⁴ would be just the right tribe to cure a 'very thirsty'⁵ land of its drought. The Danube itself was at a later date believed to gather clouds and cause incessant rain⁶. The fact that the Danaïdes bulk bigger in the myth than the Danaoi is, however, suggestive of magic rather than scientific irrigation; and here there were various possibilities. To begin with, Danaos son of Belos was a twin⁷; and twins are notorious as rain-makers⁸, especially if their father is, like Belos⁹, a

When a drought threatens, the women strip and put on girdles and head-dresses of grass, or short petticoats made of the leaves of a certain creeper. Thus attired they go from well to well, cleansing the well-holes of mud. They must also repair to the house of a woman who has given birth to twins (such a woman is called *Tilo*, 'Sky': her twins are *Bana ba Tilo*, 'Children of the Sky' [*supra* ii. 434]) and drench her with water, which they carry in little pitchers. Then they go on their way shrieking loose songs and dancing immodest dances, which men may not witness. They also pour water on the graves of their ancestors in a sacred grove, and on the graves of twins who are regularly buried near a lake (Frazer and Rendel Harris *loc. citl.*).

sky-god¹. Again, O. Gruppe² detects a rain-charm³ in the tradition that the heads of Aigyptos' sons were buried by Danaos' daughters at Lerna⁴ or dropped into the spring there as offscourings (*apokathármata*) by Danaos himself⁵. Lastly, we note the side-issue or inserted tale that Poseidon showed Amymone the Lernaean springs in consequence of her union with him⁶. I am disposed, therefore, to conjecture that the wholesale endogamic marriage of the Danaides with the Aigyptiadaí was regarded as a most potent fertility-charm⁷.

So far little or nothing has been said about a point which to the later Greeks and to the Romans after them became *the* point of the whole story—I refer of course to the punishment of the Danaides in the world below. Here they must for ever carry water to fill a holed *píthos*, and so atone for the murder of their cousins⁸. This water-carrying on the part of the Danaides cannot, however, be traced back in literature beyond the pseudo-Platonic *Axióchos*⁹, which betrays Epicurean influence¹⁰ and has been assigned to the Alexandrine

If I am right in my interpretation of the myth, it is easy to see why Danaos cast Hypermetra into prison. She had saved Lynkeus *because he spared her virginity* (*supra* p. 356): the love-motive was merely a poetic recasting of the prosaic fact (*supra* p. 356 n. 3).

age¹; nor in art beyond the great Under-world vases of 'Apulian' style², which belong to the second half of the fourth century B.C.³ And in the myth as related by Apollodoros there is no question of punishment except for the one Danaïd who did *not* slay her lover!⁴ Whence—we may ask—came the idea that the Danaides deserved to be punished? And what above all is the significance of their somewhat peculiar punishment?

(β) Water-carrying in connexion with marriage.

In attempting to answer these questions we must first turn our attention from mythology to ritual. Athenian custom prescribed that, when a wedding had been arranged and the wedding-day had come, the bridegroom must bathe in water from the fountain of Kallirrhoe—Enneakrounos, as it was styled at a later date⁵. The

⁵ The situation of this fountain has been the subject of long and lively debate. Till the closing decade of last century it was commonly held (see e.g. W. Smith in Smith *Dict. Geogr.* i. 292 'The Fountain of Callirrhoe, or Enneakrounos') that Kallirrhoe was the spring, which flows from the foot of a broad ridge of rocks crossing the bed of the Ilissos due south of the Olympieion, and that it was re-named Enneakrounos, when fitted with nine pipes by the Peisistratidai (Thouk. 2. 15 καὶ τῇ κρήνῃ τῇ νῦν μὲν τῶν τιμάνων οἰσὼς σκευασάντων Ἐννεακροῦνός τε καλουμένη. τὸ δὲ πάλαι φανερώων τῶν πηγῶν οὐσῶν Καλλιρρόῃ ὀνομασμένη ἐκείνοι τε ἐγγὺς οὕσῃ τὰ πλείστον ἀξία ἐχρῶντο. καὶ νῦν ἐπὶ ἀπὸ τοῦ ἀρχαίου προτε γαμικῶν καὶ ἐς ἄλλα τῶν ἱερῶν νομίζεται τῷ ὕδατι χρῆσθαι). The name Kallirrhoe still attaches to this spring. But an excavation by A. N. Skias in 1893 failed to discover any evidence of Peisistratid construction (E. A. Gardner in the *Journ. Hell. Stud.* 1894 xiv. 226), and the excavator concluded that the modern Kallirrhoe was neither Kallirrhoe nor Enneakrounos (T. Homolle in the *Bull. Corr. Hell.* 1893 xvii. 624).

Meantime W. Dorpfeld, as the result of excavations carried out from 1891 to 1894, was able to show that in antiquity several natural springs rose at the foot of the Pnyx hill, that here at least seven tunnels and six cisterns (still containing water) had been cut in the rock, that one large cistern immediately above the site of an ancient fountain was built of polygonal masonry dating from s. v or vi B.C., that a great rock-cut conduit which could be traced from the upper valley of the Ilissos along the southern slope of the Akiropolis probably ended at this cistern, and that two sets of water-pipes diverging from it, made of a yellowish clay with a red glaze inside, exactly resembled those of Eupalmos' aqueduct in Samos and could therefore be dated to s. vi. Hence Dorpfeld concluded that Kallirrhoe was the name originally given to the open springs on the Pnyx hill, that these when enclosed with masonry and formed into a fountain with nine jets by Peisistratos were re-christened Enneakrounos, and that the old name Kallirrhoe was from s. v onwards transferred to the spring on the Ilissos (W. Dorpfeld in the *Mon. Mitth.* 1891 xvi. 444 f., 1892 xvii. 92 f., 439 ff., 1894 xix. 143 ff., 504 ff., *id.* 'Ἡ Ἐννεακροῦνος καὶ ἡ Καλλιρρόη',

water had to be fetched in a pitcher by the next of kin, a boy¹ who, like the vessel that he bore, was called a *loutrophóros* or 'bath-carrier²'. The bride too had her bridal bath fetched from the same fountain by a female *loutrophóros*³. And in both cases, according to Photios⁴, the bath-water was brought on a car drawn by a yoked

in the 'Εφ. 'Αρχ. 1894 pp. 1—10, *id.* in the *Berl. philol. Woch.* Aug. 28, 1907 pp. 940—945). Dorpfeld's conclusions have been widely accepted (e.g. by J. E. Harrison *Myth. Mon. Anc. Ath.* pp. 87—91, *Primitive Athens as described by Thucydides* Cambridge 1906 pp. 111—131, 153—158, and by W. Judeich *Topographie von Athen* München 1905 pp. 179—185), and embodied in the final publication by F. Graber 'Die Enneakrunos' in the *Ath. Mitt.* 1905 xxvi. 1—64 with 32 figs. and 3 plans.

But Dorpfeld's hypothesis, however attractive, is far from being unassailable. Sir James Frazer, after a patient hearing of both sides, can sum up thus: 'On the whole the evidence of all ancient writers except Pausanias goes to show that the names Callirhoe and Enneakrunos were always applied to one and the same spring, and that this was the spring in the bed of the Ilissus which still bears the ancient name of Callirhoe' (*Pausanias* ii. 116). Twenty-one years later W. Kroll, despite the fact that Graber's persuasive article had appeared in the *interim*, again pronounces the same verdict (in Pauly—Wissowa *Real-Enc.* x. 1669—1672 'Daher muss man denen Recht geben, die wie neuerdings noch [A.] Malinin [*Hat Dorpfeld die Enneakrunos-Episode bei Pausanias tatsächlich gelöst oder auf welchem Wege kann diese gelöst werden*?' Wien 1906 pp. 1—35, *cp. id. Zwei Streitfragen der Topographie von Athen* Berlin 1901 pp. 21—43 'Die Enneakrunos-episode'] und [E.] Pfuhl [in the *Gott. gel. Anz.* 1907 clxiv.] 472 die Dorpfeld'sche Hypothese ablehnen, während Judeich *Topogr. von Athen* (München 1905) 179 und Baedeker *Griechenland*⁵ 29, 37 sich ihr angeschlossen hat. Ungelöst bleibt nach wie vor das Rätsel der Pausaniasstelle. Vgl. Frazer *Paus.* ii. 112'). It amounts to this. Dorpfeld is justified by the spade. But the literary evidence is almost all against him, and at any moment discoveries might be made on the Ilissos-bank. *Supra* n. 1116 'the later Kallirhoe' follows the view of A. N. Skias.

pair of animals. The custom was observed in other places besides Athens: at Thebes the water was drawn from the river Ismenos¹; elsewhere from any convenient source².

If a man died unmarried, his relatives still performed the 'bath-carrying' for him and—we are told—set up over his tomb the representation of a boy with a pitcher³, known as a *loutrophoros*⁴. Similarly, if a woman died unmarried, a girl with a pitcher, that is to say a female *loutrophoros*, was erected over her tomb⁵. But, since no such statues or reliefs or paintings have come down to us, the testimony of the old grammarians has been discredited⁶. Other ancient authorities, however, state that pitchers called *loutrophoroi* were placed over those who died unmarried⁷, or that black pitchers called 'Libyans' were set upon their tombs⁸. And these statements

⁶ A. Herzog 'Eine Lutrophoros' in the *Arch. Sabourroff* Vasen pl. 58 f. p. 3 n. 1 regards Herzog as over-sceptical. But Nachod in Pauly—Wissowa *Real-Enc.* xiii. 2098 says with some justice: 'diese Erklärungen (sc. of Pollux and Harpokration) beweisen nur, wie wenig die späten Lexikographen von solchen Gebräuchen noch wussten.'

Bemalung,' but demurs to Pfuhl *Makrel u. Zeichnung d. Gr.* i. 342 'der technische und teilweise auch stilistische Archaismus der schwarzfigurigen Lutrophoren und panathenaischen Amphoren hat unkonstlerische, religiöse Gründe'). But there is, to my thinking, an Aristophanic touch about the phrase, which suggests a secondary allusion to libations (λιβάς etc.), if not also a tertiary allusion (see e.g. *supra* ii. 2 n. 4) to the Libyan custom of pouring water into a holed jar (*supra* pp. 338 f., 354. Note also the grave of Antaios, shown at Tingis in Mauretania: it was a hill resembling a man lying on his back: and it was said that, whenever a hole was made in it, rain fell till the hole was filled up again (Mela 3. 106)).

Water-carrying in connexion with marriage 373

can fortunately be confirmed, at least in part, both by literary¹ and by monumental evidence.

Over some of the graves in the 'Dipylon' cemetery at Athens stood a huge sepulchral jar, measuring from three and a half to nearly six feet in height². Such jars might be *kratêres*³, but were more often four-handled⁴ or two-handled *amphorae*⁵. They are regularly decorated with scenes representing obsequies or funeral sports, and—an important feature—they have either no bottom or a bottom with a hole left in it⁶. A. Brückner and E. Pernice, after a careful study of the subject, came to the conclusion that the jars were holed in order that libations might filter through the earth beneath and so reach the dead⁷. This may well be⁸. Yet A. Milchhofer⁹ was certainly right when he claimed kinship between the 'Dipylon' *amphorae* and the black-figured or red-figured *loutrophoroi* of later Athenian times—vases of an elongated and graceful shape, from ten to forty inches in height¹⁰, usually furnished with a hole through the bottom, and painted with scenes of *próthesis* or of marriage-rites according as they were intended to play their part at a funeral or a wedding. Surviving specimens of the *loutrophoroi*, listed by Nachod¹¹, range in date from the last decade of the sixth century

to the last third of the fifth century B.C. (pl. xxxv, figs. 236—239)¹. A point connecting them with the 'Dipylon' *amphorae*² is that some early examples have their handles adorned with snakes³, while many have rims and handles marked with a snaky pattern⁴. The usage of *loutrophóroi* lasted on into the fourth century, and late examples, made on a smaller scale, acquired a third handle under the influence of the three-handled *hydria*⁵. Other evidence of the shapes taken by fourth-century *loutrophóroi* may be found in the magnificent series of marble *stilai* yielded by Attic graves⁶. These extend in

A last term in the series may perhaps be found in a fluted *hydria* of red ware from Kourion in Kypros, formerly in the Pierides collection and now in mine (fig. 240 a—d. Height: 14½ inches). This vase too has no bottom to it, and is further pierced under its three handles by three holes, the purpose of which is not clear (? to prevent contents rising above the level of the handles, even if foot were blocked).

stately sequence from the close of the fifth century down to the year 317 B.C., when Demetrios of Phaleron passed a sumptuary law that no monument should be erected on a grave-mound but a small pillar, not exceeding three feet in height, or a table-like slab, or a bath-basin¹. Accordingly we see *loutrophóroi* in the round, sometimes quite plain and presumably painted (fig. 242)², sometimes exquisitely carved with a profusion of motives—vegetable (fig. 243)³, animal (fig. 244)⁴, human (figs. 244, 250)⁵, divine (fig. 245)⁶—and further

They are cylinders that taper slightly towards the bottom, and were either stuck in the ground or inserted in a holed stone socket. Near the top they have a projecting collar, which sometimes shows traces of fillets painted in red. The *mensae* are solid plinths, oblong in plan, with upper and lower mouldings. They originally served as bases for sepulchral vases or *stélai* (A. Bruckner *Der Friedhof am Eridanos* Berlin 1909 p. 99 f. fig. 64 three *mensae* still supporting portions of marble vases on their flat tops, A. 392 Water-carrying in connexion with marriage

What is the meaning of these customs, and why should a ceremony performed at a wedding also be performed, or at least imitated, at the burial of a bachelor or spinster? A typical case may serve to point the question. Here, for example, is a *stèle* in the Ny Carlsberg collection (fig. 260)¹. Hippon, son of Agonippos, has died unwed

Fig. 260.

Mus. Cat. Vases n. 12 Type C). The deities, from left to right, are Apollon, Zeus and Hera, Dionysos, Aphrodite, Poseidon, Artemis, Hermes. Aphrodite carries on her head a *lébes*, of which A. de Ridder in Daremberg—Saglio *Dict. Ant.* iii. 1001 says: 'il contenait sans doute l'eau lustrale.' Cp. the black-figured *hybris* published by Gerhard *Auserl. Vasenb.* iv. 85 f. pl. 313, where the *lébes* rests on the head of a torch-bearing goddess.

and will leave no children to carry on the proud tradition of knightly names¹. His mother Philostrate, seated in the foreground, looks with steadfast gaze at the young man's face, while she clasps his hand for the last time. His father, a bearded figure with furrowed forehead, stands in the background leaning on a staff and lays a detaining hand on the lad's shoulder. And in the centre of the little gable above their heads is carved in low relief the wedding-vase. Now, how is this seemingly inappropriate addition to be explained?

Is it to be regarded as a pathetic reminder of all that might have been? Hardly so. That would be modern, not ancient, sentiment. The Greeks did not care to be reminded of their sorrows², and we never find in their graveyards such a poignant symbol as a broken column. M. Collignon³, taking a more practical, not to say prosaic, view, holds that the vase commemorates the 'chthonian bath'—a final act of the obsequies, in which water for washing the dead was brought to the tomb⁴. But, if so, we are left wondering how a rite once common to all the dead ever came to be restricted to those that died unmarried.

More to our purpose is an explanation advanced by Sir J. G. Frazer⁵:

'It may be suggested that originally the custom of placing a water-pitcher on the grave of unmarried persons...may have been meant to help them to obtain in another world the happiness they had missed in this. In fact, it may have been part of a ceremony designed to provide the dead maiden or bachelor with a spouse in the spirit land. Such ceremonies have been observed in various parts of the inscription on the cormice is $\text{ΙΡΓΩΝ ΑΓΩΝΙΡΡΟ ΓΕΙΡΑΕΥΣ ΦΙΛΟΣΤΡΑΤΗ}$. The termination of Ἀγωνίρρο points to a date in the first half of c. iv B.C. Pentelic marble. Height 1'40".

For the *loutrophoros* thus placed Poulsen cp. the *stèle* of Silenis, daughter of Myiskos, at Berlin (no. 1492, R. Kekulé von Stradonitz *Die Griechische Skulptur*³ Berlin—Leipzig 1922 p. 186 f. with fig., Reinach *Rép. 394 Water-carrying in connexion with marriage

world by peoples who, like the Greeks, esteemed it a great misfortune to die unmarried¹.

The examples quoted in support of this explanation prove beyond all doubt that *post mortem* marriage is or has been a widely prevalent custom.

But marriage with whom? O. Schrader, who more than once attacked the problem¹, summarised his contentions as follows²:

'It is only by comparing the Greek customs with those of other Aryan peoples that we can discover the meaning of this custom. We then find that the placing of the bridal *κοιτοφυλας* on the grave of unmarried people represents the symbolical preservation of a custom still very wide-spread among the Slavonic races... a ceremonial imitation-marriage was celebrated at the graves of unmarried men and maidens, during which a bride or a bridegroom was there and then assigned to the dead person* *Remains of this custom are found also in Germany; for in Hesse the coffins of single men who have died must be accompanied by "wreathed girls," who must wear mourning for four weeks, etc. (cf. [C.] Hessler! *Heussische Landes- und Volkskunde* Marburg 1904 ii. 152)'. The third and last stage of the custom under discussion is presented to us in the accounts of the Arabs regarding the eldest Slavonic and Russian conditions of life. According to them, not only was the wife of the dead *married man* given to him as a companion in death, but the *single man* too was, after his death, married *in regular fashion* to a young girl, who also was therefore doomed to die (cf. Mas'udi, *Les Princes d'or*, ed. Barbier de Meynard, Paris, 1861-1865, ii. p. 6, n. 7). One of these "death-weddings" is described in detail by the Arab Ibn Fossan; text and translation ed. by C. E. Frahn, St. Petersburg, 1823 [See now Miss H. E. Formica 'A Scandinavian Cremation-Ceremony' in *Intiquity* 1934 vii. 58-62, an article which includes a fresh and full translation made from the text of Ahmad bin Fudhlan by Miss C. Waddy]. But it follows from isolated traces that the custom of the wife dying along with her husband was prevalent also in Greece in prehistoric times (cf. Pausanias, i. 21. 7), and in the story of the Trojan maiden Polyxene, sacrificed at the grave of Achilles, there exists also on classical soil a case of the barbarian custom of "death-marriage."

Thus, on Schrader's showing, the death of a bachelor or spinster once involved the provision and actual killing of a human consort — a grim practice, which had indeed left lasting traces of itself in mythology, but in real life had long since decayed into a mimetic ceremony and thence into the mere symbolism of the marriage-vase.

Mr J. C. Lawson³ viewed the matter from a somewhat different stand-point. He too regarded the *κοιτοφυλας* as implying that

Water-carrying in connexion with marriage 395

a definite marriage awaited the dead bachelor or spinster. But he treated it as one out of many facts tending to establish the important conclusion that, in Greek belief, every man might look forward to becoming the groom of Persephone, every woman to becoming Hades' bride¹:

'Custom past and present, ancient literature, modern folk-song, all agree in the representation of death as a marriage into the house of Hades.

To me it seems that the opinions of Schrader and Lawson are not mutually exclusive. It may well be (though the evidence for it is slight²) that in prehistoric times the dead bachelor demanded—like Achilles (?)—a bride to keep him company. And, when this savage custom had dwindled into a set of merely mimetic rites and symbols, it may well have left behind it the feeling that the prematurely dead must needs be married somehow in the world beyond the tomb. If so, the great wave of oriental influence which swept the Mediterranean *c.* 600 B.C.³ and the subsequent (or consequent?) growth of Greek mysticism very possibly intensified a latent belief in the divinity of the dead. The Egyptian identification of the mummified man with Osiris⁴ is at least paralleled by the Orphic declaration:

Happy and blest one, a god thou shalt be in place of a mortal⁵.

Murray in Harrison *Proleg. Gr. Relig.* p. 667 no. 2 (with facsimile); H. Diels *Die Fragmente der Vorsokratiker* Berlin 1912 n. 176 Orph. frag. 18, 10 Orph. frag. 32 f. 10 Kern), which seems to have been spoken by the mysticizing or divinizing of Persephone (so J. H. Wieten *De tribus laminae aureis quae in sepulchris Phociae sunt inventae* Amsterdam 1915 p. 118). Another tablet of the same date and place substitutes the prose formula θεὸς ἐγένον ἐξ ἀνθρώπων (Inscr. Gr. Sc. P. no. 642, 4 f.; G. Murray *loc. cit.* p. 662 no. 3 (with facsimile); H. 396 Water-carrying in connexion with marriage

Final felicity for the divinised, but unmarried, dead would be felt to imply a marriage-union in the house of Hades. The Orphic initiate in fact carried with him to the tomb, engraved on a golden tablet, the assurance that he had become the very consort of Despoina¹. And such hopes in less tangible form were certainly entertained by wider circles².

But, if the sepulchral *loutrophóros* is thus reducible to a nuptial *loutrophóros*, we have yet to enquire what meaning attached to them both. Eustathios³, though he does not reach a satisfactory solution of the problem, at least goes some way towards one.

‘The ancients,’ he says, ‘treat river-water as something solemn.... Bridegrooms had their bath fetched from a river as an omen of fertility... And over those that died before marriage the so-called bath-carrying pitcher was set, to show that the deceased took his departure unbathed of the bridal bath and unfertile withal’

This insistence upon the idea of fertility is right. Water-carrying, whether for the married living or for the unmarried dead, was a fertility-charm of a simple and intelligible sort. As such it can be paralleled by a variety of popular customs⁴. But the employment of a holed vessel for the purpose justifies us, if I am not mistaken, in defining the fertility-charm more nearly as a rain-charm. Rain, as we shall have occasion to note⁵, was the very means by which Father Sky impregnated Mother Earth.

⁴ F. von Reitzenstein in the *Zeitschrift für Ethnologie* 1909 xli, 671 f., *a propos* of ‘Der Fruchtbarkeitszauber,’ writes: ‘Neben Wablern haben wir oben besonders Brunnen und Weiher oder—pars pro toto—Gefässe mit Wasser als Kinderheimat erkannt. Dementsprechend ist der Wasserzauber in der verschiedensten Form, besonders als Brunnenzauber, sehr weit verbreitet. Am dritten Tag nach der Hochzeit geht z. B. die griechische Braut noch heute an vielen Orten zum Brunnen, aus dem sie mit eigenem Gefäss Wasser schöpft und verschiedene Esswaren und Brotkrumen hineinwirft, während zugleich ein Rundtanz darum vollzogen wird’ (⁵ [I. von Duringsfeld und O. von] Reinsberg-Duringsfeld [*Hochzeitssuch* Leipzig 1871] S. 59). (γ) Water-carrying in connexion with the mysteries.

Water-carrying in a holed vessel reappears in connexion with the mysteries. Polygnotos in his famous fresco of the Underworld (painted shortly after 458 B.C.¹) represented certain women bearing

water in broken pitchers: one of them was in the bloom of youth, the other advanced in years; and an inscription common to them

¹ So A. Reinach *Textes Peint. Anc.* i. 86 n. 1, 90 n. 0 followed by Miss M. H. Swindler *Ancient Painting* New Haven: Yale University Press 1929 p. 202 n. 20.

both set forth that they were of the uninitiated. Further, the same picture showed a *píthos*, an elderly man, a boy, and a couple of women—one young, the other elderly. They were all bearing water; but the old dame's pitcher seemed to be broken, and she was emptying into the *píthos* such water as was left in her crock. Pausanias¹, who saw the fresco in the Cnidian Lesche at Delphoi, adds: 'We inferred that these persons also were of the number of those who held the Eleusinian rites of no account.' In thus connecting the two groups of water-carriers and assuming one label for the lot Pausanias was almost certainly correct². An approximate arrangement of the contiguous figures may be seen in C. Robert's clever reconstruction (fig. 261)³.

Platon in his *Gorgias* (written between 399 and 388 B.C.⁴) likewise states that in Hades the uninitiated carry water in a sieve to a holed *píthos*⁵. Indeed, their punishment became proverbial⁶, and can be illustrated from more than one extant vase-painting.

The 'Sicilian or Italian' of the former passage is probably Philolaos or some other Pythagorean, e.g. Archytas (E. Frank *Plato und die sogenannten Pythagoreer* Halle (Saale) 1923 pp. 90 f., 298 ff., 364 n. 219. P. Frutiger *Les mythes de Platon* Paris 1930 p. 111 f.). The 'mud' of the latter passage is definitely Orphic (A. Dieterich *Nekyia* Leipzig 1893 p. 75 n. o. Rohde *Psyche* i. 313 n. 1, J. Adam on Plat. *rep.* 363 D).

An archaic black-figure *amphora*, formerly in the Canino collection and now at Munich¹, has for obverse design (fig. 262)² four winged souls emptying pitchers into an enormous *píthos* partly sunk in the earth: the presence of Sisyphos rolling his stone up a hill shows that the scene is laid in the Underworld, as does the reverse design (fig. 263)³ of Herakles dragging off a two-headed Kerberos. Both sides of the vase may be indebted to some sixth-century fresco,

pithos, as before planted deeply in the ground. Here Oknos and his ass¹ serve to fix the locality. The lively and humorous rendering of the whole scene makes it difficult to resist the impression that there is present an element of intentional caricature. And if so, the artist was conceivably inspired by some actual pre-literary performance of a mimic or comic sort, though when and where escapes us². Be that as it may, of these two vases the first probably, the second certainly, shows the penance of the uninitiated in general, not that of the Danaides in particular.

The same may perhaps be said of a splendid 'Apulian' *kratér*, which came to the Munich collection from a grave near Canosa³. This famous vase dates from the second half of s. iv B.C.⁴ and is

¹ A. Furtwangler *loc. cit.* rightly interpreted the lame ass and the lame driver looking stupidly at the ticks, which have fallen from his pack, by a reference to Apul. met. 6. 18 iamque confecta bona parte mortiferae viae continaberis (so J. van der Vliet for *continuaueris* codd. F. Boll 'Oknos' in the *Archiv f. Rel.* 1916—1919 xiv. 151—157 holds that this curious figure originates in a 'Traumphantasia' of the sort known as 'Behinderung-traum' (cp. II. 22. 199 ff. (=Verg. *Aen.* 12. 908 ff.), 23. 99 ff., Enn. *ann. frag.* 28. 6 ff. Baehrens). He cites (after A. Grunwedel in the *Original-Mittheilungen aus der ethnologischen Abtheilung der k. Tantale	Cronos	Rhadamanthe (A. L. Millin <i>op. cit.</i> p. 22 f.)
Lyceus	Kronos	Rhadamanth (E. Cizeux in the <i>Bibliothèque de la Faculté des Lettres de la Sorbonne</i> 1817 ii. 798)
Tantalo	Crono	Rhadamanto (Inghirami <i>op. cit.</i> iv. 124 f.)
Rhadamanthys	Kronos	Minos (E. Gerhard in the <i>Arch. Zeit.</i> 1843 i. 202)
Rhadamanthys	Aiakos	Minos (C. O. Müller <i>op. cit.</i> i. 55)
Minos	Aiakos	Rhadamanthys (A. Winkler <i>Die Vorstellungen der Unterwelt auf unteritalischen Vasen</i> Breslau 1888 pp. 10, 25)
Minos	Triptolemos	Rhadamanthys (Harrison <i>op. cit.</i> p. cxlv f.)
Aiakos	Triptolemos	Rhadamanthys (Furtwangler—Reichhold <i>op. cit.</i> i. 48)
Eaco	Triptolemo	Rhadamanto (P. Ducati <i>op. cit.</i> ii. 458).

An analogous group on the vase from Altamura (Heydenmann *Vasensamml. Neapel* p. 510 ff. no. 3222, *infra* p. 423 n. 2 (2)) is inscribed ΤΡΙΠΤΟΛΕΜΟΣ, ΑΙΑΚΟΣ, [ΡΑΔΑ]ΜΑΝΟΥΣ. The only reasonable doubt is, therefore, whether on our vase the series should be called A—T—R or R—T—A. I have followed Furtwangler and Ducati, though with some hesitation.

headed¹ Kerberos away from Hekate and her torches towards some

folk-lore *motif* of the immobilised hero and thinks that it may have originated in dream-phenomena [cp. *Il.* 22. 199 f.] ultimately occasioned by paralysing fear.

¹ Both in literature and in art there was a natural tendency to make the monster more monstrous still. Heads could always be multiplied, and tails turned into snakes. It must, however, be borne in mind that a dog with fifty or a hundred heads could hardly be visualised unless, as Acr. and Porphy. in *Hor. od.* 2. 13. 34 long since suggested, the heads were those of snakes. Similarly J. P. Postgate in his preface to M. Bréal *Semantics* trans. Mrs H. Cust London 1900 p. xviii ff. (*id.* in the *Class. Rev.* 1905 xix. 412) argues that such polyccephalism connotes a frill of serpentine heads, like those of Typhoeus (J. Schmidt in Roscher *Lex. Myth.* v. 1429 f.) or the Hydra (Bolte in Pauly—Wissowa *Real-Enc.* ix. 45 f.).

Hes. *theog.* 767 ff. gives the dread hound of the under-world god a tail and two ears, presumably therefore one head. But the same author (according to F. Jacoby ed. Berlin 1930 p. 87. a rhapsode of s. vii—vi) *ib.* 310 ff. describes avenging Kerberos, the bronze-voiced hound of Hades, as fifty-headed. *Hor. od.* 2. 13. 34 f., perhaps in imitation of Pind. *frag.* 249 Bergk⁴ ap. schol. A.B.V. *Il.* 8. 368 (though schol. Hes. *theog.* 311 suggests some confusion with the Typhos of Pind. *Pyth.* 1. 16 or the Typhon of Pind. *frag.* 93 Bergk⁴ ap. Strab. 627), makes him a beast with black ears and a hundred heads. Aristophanes more than once paints Kleon as a Kerberos (*eq.* 1017, 1030, *frag.* 313) whose head was fringed by a hundred flatterers with flickering tongues (*vesp.* 1029 ff. = *frag.* 751 ff.). *Hor. od.* 2. 19. 29 ff. mentions Kerberos' tail and his 'three-tongued mouth,' *trilinguis* | *ore*—a curious phrase, which does not mean (as A. F. Naacke supposed) a single mouth with three tongues, or a triply forked tongue, in it, but (as J. C. Orelli—J. G. Baier—W. Hirschfelder urge) three mouths with a tongue in each. Horace was pleased with the conceit, for he repeats it in *od.* 3. 11. 15 ff., where the hound has a hundred snakes about his head and a 'three-tongued mouth,' *ore trilingui*—again a precious description of the three-headed type (*pace* S. Entrem in Pauly—Wissowa *Real-Enc.* xi. 272). Soph. *Trach.* 1097 ff., normal in this as in so much besides, calls him 'Αἰδὼν τρικράνον σκυῖακ' δεινῆς Ἐχιδνῆς ἡμεῖμα, and Eur. *Hf.* 24 f. μέθρη' ἐς Αἰδὼν τὸν τρισώματον κύνα | ἐς φῶς ἀναξων, 611 καὶ θῆρα γ' ἐς φῶς τὸν τρικράνον ἡγαγον, 1277 f. Αἰδὼν πύλων κῆνα τρικράνον ἐς φῶς ὅπως πορεύεται follows suit. Latin writers in general settled down to the belief that he was three-headed (Cic. *Tusc.* 1. 10 triceps apud inferos Cerberus, 2. 22 (in a rendering of Soph. *loc. cit.*) tripitem Hydra generatum canem, Verg. *Aen.* 6. 417 latratu trifauci, Tib. 3. 4. 88 cum tres sunt linguae tergeminumque caput, Prop. 4. 7. 52 tergeminusque canis, Ov. *trist.* 4. 7. 16 tergeminumque canem, *met.* 10. 21 f. villosa colubris | terna Medusaei guttura monstri, Sen. *Hf.* 787 ff. saevus Stygius canis | qui trina vasto capita (R. Peiper cj. *latra*) concutiens sono | regnum tuetur, *Oed.* 594 triceps Cerberus, Sil. It. 6. 629 triplicis monstri, Stat. *Theb.* 2. 53 f. Letique triformis | ianitor, *silv.* 3. 3. 27 tergeminus custos, Hyg. *fab.* 151 canis Cerberus triceps, Aug. *de civ. Dei* 18. 13 triceps inferorum canis, Fulgent. *myth.* 1. 6 tria habere capita). Hence he was Τρικάρηνος *par excellence* (Loukian. *philopat.* 1. cp. *pseudolog.* 29). But the title Τρικέρβερος, which frequently figures in late sources (Serv. in Verg. *Aen.* 1. 133, Fulgent. *myth.* 1. 6, *Myth. Vat.* 1. 92, 1. 102, 1. 108, 2. 11, 2. 154, Io. Malal. *chron.* 3 p. 62 Dindorf, Kedien. *hist. comp.* 81 C (l. 143 Bekker), Soud. s.v. Κόρη, Tzetz. *chil.* 2. 751, Kosmas of Jerusalem *ad iarm.* Greg. Naz. index 64 (xxxviii. 676, cp. 493, Migne)), is of less certain interpretation: the rationalists at least took it to mean merely a dog of monstrous size.

On the 'ring of Nestor,' a handsome gold signet found by a peasant in the largest *tholos*-tomb at Kakovatos above the Pylian Plain, Sir A. J. Evans claims to detect 'the solitary glimpse that we possess of the Minoan Underworld, and of the admission of the departed into the realms of bliss' (Sir A. J. Evans in the *Journ. Hell. Stud.* 1925 xlv. 43—74 figs. 42, 44, 45, 55 (=my fig. 265: scale $\frac{1}{2}$), pl. 4, 2 intaglio, col. pl. 5 restoration as fresco (!), *id.* *The Palace of Minos* London 1928 ii. 2. 432 fig. 289, 1930 iii. 145—157 figs. 94, 95, 96, 104, col. pl. 20 A, S. Rel.* pp. 549—556 (compares the 'Tree of Life' in the garden of the Hesperides protected by the snake Ladon, but thinks that the whole ring 'may merely represent some cult scenes performed in an open-air sanctuary beneath the shadow of an aged tree'). The chief feature in the design is an old, leafless tree, with wide-stretched boughs, springing from a mound, on which couches 'an animal, apparently intended for a dog'. Here Sir Arthur sees a parallel to the Scandinavian world-tree, the ash of Odhin's steed, Yggdrasil, whose roots were gnawed by the serpent Níðhoggr (K. Simrock *Handbuch der Deutschen Mythologie*³ Bonn 1878 p. 36 ff. ('Die Weltesche'), J. Grimm *Teutonic Mythology* trans. J. S. Stallybrass London 1883 ii. 796 ff., 1888 iv. 133 f. 1536 f., E. H. Cerberus.' If so, on a ring which Evans would refer to the period 'Late Minoan i a' (c. 1550—1500 B.C.) Kerberos has but a single head.

H. B. Walters in the *Journ. Hell. Stud.* 1898 xviii. 296 f. draws up a list of 49 vases representing the subject of Herakles and Kerberos. Of these—

1	Corinthian <i>skyphos</i> shows Kerberos with	1	head and a frill of snakes.
2	'Caeretan' <i>hydria</i> show	3	heads and a frill of snakes.
1	Attic black-figured vase shows	3	heads.
1	Attic black-figured vase shows	2	dogs' heads and 1 snake's head.
31	Attic black-figured vases show	2	heads.
5	Attic red-figured vases show	2	heads.
1	Attic red-figured vase shows	1	head.
6	'Apulian' vases show	3	heads.
1	relief-vase shows	3	heads.

I illustrate the main ceramic types: (1) the Corinthian *skyphos* from Argos (A. Conze in the *Arch. Zeit.* 1859 xvii. 34 ff. pl. 125, 3a (half of which = my fig. 266), 3b, 3 = Reinach *Rep. Vases* i. 389, 1, 2, 5, A. Furtwangler in Roscher *Lex. Myth.* i. 2205, O. Immi-ch ib. ii. 1121 with fig. 1. Hades, threatened with a stone by Herakles, springs up from his throne in alarm and leaves Persephone to face the intruder, whom Hermes has conducted in safety past the entrance of the underground palace and its ravening watch-dog). (2) a 'Caeretan' *hydria* (E. Pottier *Vases antiques du Louvre* 2^{me} Série Paris 1901 p. 66 no. E 701, A. Conze in the *Ann. d. Inst.* 1859 xxxi. 398 ff., *Mon. d. Inst.* vi pl. 36 (= my fig. 267) = Reinach *Rep. Vases* i. 153, 3, F. Durrbach in Daremberg—Saglio *Dict. Ant.* iii. 98 fig. 3771. Herakles brings Kerberos to Eurystheus, who takes refuge in his *pfthos*). (3) an Attic black-figured *amphora* from Aigina, now in the British Museum (H. B. Walters in the *Journ. Hell. Stud.* 1898 xviii. 292 ff. fig. 6 (= my fig. 268). Herakles, escorted by Hermes, drags Kerberos from the palace of Persephone. The monster has 2 heads, a leonine mane, and a snaky tail). (4) the 'Apulian' *kratér* from Canosa (*supra* pl. xxxviii).

On coins there is a like variation. An electrum *statér* of Kyzikos, struck c. 450—400 B.C., shows two heads, with a collar round either neck, and a snaky tail (B. V. Head in the *Num. Chron.* New Series 1876 xvi. 284 pl. 8, 24. W. Greenwell 'The electrum coinage of Cyzicus' ib. Third Series 1887 vii. 116 f. no. 141 pl. 6, 3, *Brit. Mus. Cat. Coin. Mysia* p. 31 pl. 8, 2 (= my fig. 269), Babelon *Monn. gr. rom.* ii. 2. 1443 f. (wrongly described) pl. 176, 8 (cp. ib. 9 a similar *hékte* at Paris), Head *Hist. num.* 2 p. 525). A unique silver *drachmē* (?) of some Etruscan town, now in the British Museum, has for reverse design a three-headed hound with a snaky tail (F. Bompais 'Drachme inédite frappée dans l'Étrurie' in the *Rev. Arch.* 1879 ii. 28—38 with fig., Garrucci *Mon. It. ant.* p. 49 f. pl. 71, 30 (= my fig. 270). Sambon *Monn. ant. It.* i. pl. 1, 21, Head *Hist. num.* 2 p. 15). Bronze coins of Italy inscribed KVB and possibly issued by the *gens Rubria* (J. Millingen *Considérations sur la numismatique de l'ancienne Italie* Florence 1841 p. 233, Imhoof-Blumer *Monn. gr.* p. 13 no. 50) have *obv.* bearded head of Hercules with club, *rev.* three-headed Cerberus (Garrucci *Mon. It. ant.* p. 59 pl. 77, 1 and 2 (= my fig. 271), Babelon *Cat. Monn. gr. de Lyones* i. 6 no. 18 pl. 11. Similarly bronze coins of Capua have *obv.* beardless head of Hercules with club, *rev.* three-headed Cerberus (Garrucci *Mon. It. ant.* p. 88 pl. 86, 28, Head *Hist. num.* 2 p. 35). At Sebastopolis in Pontos, a town so devoted to Herakles that it was also known as Herakleopolis (W. Ruge in Pauly—Wissowa *Real-Enc.* ii A. 956), Caracalla struck a bronze piece with *rev.* Herakles, wearing lion-skin and grasping club, as he drags after him a three-headed Kerberos (Imhoof-Blumer *Gr. Münz.* i. 57 no. 68 pl. 5, 4 Berlin, Waddington—Babelon—Reinach *Monn. gr. d'As.* *Mün.* i. 104 no. 15 pl. 15, 3 (= my fig. 272) Berlin). Other renderings of the same scene on bronze coins of Germe (Head *Hist. num.* 2 p. 650) and Saittai in Lydia (Imhoof-Blumer *Kleinasi. Münz.* i. 182 no. 1 pl. 6, 14). See further Rasche *Lex. Num.* ii. 477 f., Suppl. i. 1738 f., Stevenson—Smith—Madden *Dict. Rom. Coins* p. 454 f., F. Gnecchi in the *Rivista italiana di numismatica e scienze affini* 1916 xix. 38 ('Cerberus').

The variation in gem-types is even greater. A cornelian scarab in the British

Museum, early Ionic rather than Etruscan in character (A. Furtwangler in Roscher *Lex. Myth.* i. 2212 fig.), shows Herakles carrying off the Delphic tripod: the hero is accompanied by Kerberos, a hound with a single head, snakes starting from his back, and a snakey tail (*Brit. Mus. Cat. Gems*² p. 75 no. 620 pl. 11, Furtwangler *Ant. Gemmen* i. pl. 8, 9, 11, 38, Lippold *Gemmen* pl. 38, 13 p. 173 ('Archaisch (italisch-griechisch)'). My fig. 273 is after Lippold: scale $\frac{1}{2}$). A cornelian scarab of late Etruscan style, formerly in the Durand collection, gives the hound three heads (E. Braun in the *Bull. d. Inst.* 1839 p. 103 no. 38, Furtwangler *Ant. Gemmen* i. pl. 18, 49 (= my fig. 274: scale $\frac{1}{2}$), in. 90. Lippold *Gemmen* pl. 83, 6 p. 180). Another Etruscan scarab, of the same material and style, now at Berlin, shows the three heads facing, not in profile (Imhoof-Blumer and O. Keller: *Tier- und Pflanzenbilder auf Münzen und Gemmen des klassischen Altertums* Leipzig

1889 p. 151 f. pl. 25, 36 (= my fig. 275: scale $\frac{1}{2}$), Furtwangler *Geschnitt. Steine Berlin* p. 27 no. 263 pl. 5), and yet another, of the same description, in the British Museum, makes Herakles lead Kerberos by a triple leash fastened to a collar on each of his three necks (*Brit. Mus. Cat. Gems*² p. 89 no. 723 pl. 12, A. S. Murray and A. H. Smith in *The Encyclopedia Britannica*¹¹ Cambridge 1910 xi pl. 2, 48, H. B. Walters *The Art of the Greeks* London (1906) pl. 93, 17). But a fourth scarab of the same sort, likewise in the British Museum (*Brit. Mus. Cat. Jewellery* p. 258 f. no. 2273 fig. 73, 19 pl. 46 = *Brit. Mus. Cat. Gems*² p. 105 no. 895 fig. 42, 19. My fig. 276 is from a cast: scale $\frac{1}{2}$), and a convex chalcedony of early Roman date in the Berlin collection (Furtwangler *Geschnitt. Steine Berlin* p. 104 no. 2153 (cp. no. 2154 paste) pl. 19, *id. Ant. Gemmen* i. pl. 29, 2 (= my fig. 277: scale $\frac{1}{2}$), in. 143) give the hound two heads only. A sardonyx of late imperial style at Berlin (Furtwangler *Geschnitt. Steine Berlin* p. 322 no. 8792 pl. 62

(= my fig. 278: scale $\frac{2}{3}$) and a ja-sper of like kind in the British Museum (Imhoof-Blumer and O. Keller *Tier- und Pflanzenbilder auf Münzen und Gemmen des klassischen Altertums* Leipzig 1889 p. 151 pl. 25. 35 (= my fig. 279: scale $\frac{2}{3}$)) figure him with a canine body, but three serpentine heads.

It would thus appear that Kerberos started with one head, and that in Attic art he normally has two, but that in old Ionic art he had already acquired three, and that this threefold type ultimately prevailed. J. P. Postgate in M. Bréal *Semantics* trans. Mrs H. Cust London 1900 p. xx ff. rightly insists on his snaky adjuncts (for which see especially O. Immisch in Roscher *Lex. Myth.* ii. 1133 (citing Hekataios *frag.* 346 (*Frags. hist. Gr.* i. 27 Muller) = *frag.* 27 (*Frags. gr. but *ib.* p. xxiv wrongly explains his double and treble heads ('Let us hazard a conjecture. May not the double head of the κύων "Αἰδου, the *ianitor Orci*, whose duty it was to keep the threshold of the lower world from being trespassed on from either side, be compared to the double aspect of the god of the doorway, upon which his triple head is a later refinement to symbolize the *τρίποδος* or forking of the ways, the one leading to Elysium and the other to Tartaros [Plat. *Gorg.* §24 v?]). We should rather conceive of the duplication and triplication as early efforts at multiplication, implying intensified power to watch and to bite.

Single, double, and treble heads are found again in the case of Orthos or Orthos, the hound of Geryones (O. Hofer in Roscher *Lex. Myth.* iii. 1217 f.), who had the same mother as Kerberos, viz. Echidna (*id. ib.* iii. 1215), and appears in fact to have been his doublet.

At this point we must note the ingenious view of M. Bloomfield 'The Two Dogs of Yama in a New Rôle' in the *Journal of the American Oriental Society* 1893 xv. 163-172,

id. *Cerberus, The Dog of Hades* Chicago 1905 pp. 1—41, id. in J. Hastings *Encyclopædia of Religion and Ethics* Edinburgh 1910 iii. 316^a—318^a. This eminent philologist revived an idea originally put forward by F. Wilford in *Asiatic Researches* London 1799 iii. 408 f. ('Yama, the regent of hell, has two dogs, according to the *Purāṇas*, one of them, named CERBURA and SABALA, or *varied*; the other SYĀMA, or *black*; the first of whom is also called *Trīśiras*, or *with three heads*, and has the additional epithets of *Calmasha*, *Chitra*, and *Cirmira*, all signifying *stained*, or *spotted*: .. the CERBURA of the *Hindus* is indubitably the CERBERUS of the *Greeks*') and later supported by numerous scholars including A. Kuhn (in the *Zeitschrift für deutsches Alterthum* 1848 vi. 125 ff. (equating *Sīrameya* with 'Ερμείας, Ερμῆς) and 'Namen der milchstrasse und des hollenhunds' in the *Zeitschrift für vergleichende Sprachforschung* 1853 ii. 311 ff. (accepting A. Weber's *cyāma* and *ḡabala*, *ḡabara*, *kāṛvara* = κέρβερος)), F. Max Müller (in the *Transactions of the Philological Society* for 14 April 1848 (Kerberos = *śarvari* 'night'), id. in the *Zeitschrift für vergleichende Sprachforschung* 1856 v. 149 ff., *id. Chips from a German Workshop*² London 1868 ii. 185 ff., id. *The Science of Language* London 1891 ii. 595 ('Kerberos and Orthos'), id. *Contributions to the Science of Mythology* London 1897 ii. 627 ff. ('Kerberos')), A. Weber (*Indische Studien* Berlin 1853 ii. 295 ff. (*cyāma* 'scheckig' and *ḡabala* 'schwarz,' later *cavala*, glossed *karhura* = κέρβερος), id. *The History of Indian Literature* trans. J. Mann and T. Zachariae London 1878 p. 35 (Sabala = κέρβερος), id. in the *Sitzungsber. d. Akad. d. Wiss.* Berlin 1895 p. 848 f. (*ḡabala* = κέρβερος)), M. Bréal (*Hercule et Cacus* Paris 1863 p. 122 f. (accepting A. Kuhn's dog *Sīrameya* = the god 'Ερμείας, Ερμῆς and A. Weber's *ḡarvara* = κέρβερος)). Gruppe *Cult. Myth. orient. Rel.* i. 114 summarises their case thus. In a prayer interpolated into the earliest collection of Veda and in several of the more recent Vedic poems (see especially *Rig-Veda* 10. 14. 10—12) Yama is invoked to protect the deceased from the two spotted four-eyed dogs of *Saramā*, watchers that with wide nostrils and ravening mouths roam the world as dark messengers of death. These dogs in the *Rig-Veda* have no names, but in later Indian writings are called respectively *cyāma* 'the Black' and *ḡabala* 'the Motley'—epithets presumably drawn from the aforesaid passages of the *Rig-Veda*. The dictionary of Amara [Amara-sinha *Amarakośa*] gives also *karvura*, *karhura*, *karvara* as meaning 'dappled,' and this according to Kuhn was the form from which *ḡabala* arose. *Karvura*, *Karhura* is to be compared with κέρβερος. See further Monier Williams *A Sanskrit-English Dictionary* Oxford 1872 p. 995 ('*śarvara*... darkness—[cf. probably Gr. κέρβερος]'), J. van den Gheyn *Cerbère. Étude de mythologie comparée* Bruxelles 1883, E. W. Hopkins *The Religions of India* Boston etc. 1895 p. 132 n. 3 ('κέρβερος (= *ḡabala*) = (*śarvara*)', Gruppe *Gr. Myth. Rel.* p. 408 ('Kerberos, der "Bleiche," cp. Hesych. s.v. κέρβερος: κινδυνος. τάρταρος. ὄψρος. καὶ κίον μεγας ἄδον (τρικάρηνος)). Doubts are expressed by H. Oldenberg *La religion du Veda* Paris 1903 p. 459 n. 3, Rohde *Psyche*³ i. 306 n. o, A. A. Macdonell *Vedic Mythology* Strassburg 1897 p. 173, J. P. Postgate in the *Class. Rev.* 1905 xix. 412, Schrader *Reallex.*⁴ ii. 561 ('Jedenfalls haben sich alle sprachlichen Gleichungen wie griech. κέρβερος = scrt. *ḡarvara*, *ḡabala* (Beiname eines indischen Totenhund-), griech. *τάρταρος* = scrt. *talātala* (später Name einer bestimmten Hölle), griech. 'Ερμείας = scrt. *śīramā* (von den Hunden der indischen Totenwelt gesagt), griech. *Μῆνους* = scrt. *mānu* u.a., von denen man früher auf das Bestehen derartiger und zwar schon sehr ausgebildeter indg. Toten- und Höllereiche geschlossen hat, als hinfallig erwiesen').

Uncertainties abound; but on the whole I incline to accept as probable the following conclusions: (1) The two hell-hounds of Yama, at first nameless, then called *cyāma* 'Black' and *ḡabala* 'Motley' (cp. *ḡarvara* 'dappled, dark'), came to be viewed as Night and Day respectively, and even as Moon and Sun (F. Max Müller *Contributions to the Science of Mythology* London 1897 ii. 628 f. 'Thus in the *Kāthaka-saṃhitā* xvii. 14, it is simply stated that the two dogs of Yama were day and night. And in the *Kāth.-brāhmaṇa* we read: "Sabala, the speckled, is the day, Syāma, the dark, is the night." Sometimes these two dogs represent not only day and night, but even sun and moon .. Thus we read in *Ath.-veda* vi. 80:—"He (the sun) flies through the air, looking down upon all beings, we desire to do homage with havis to thee (who art) the majesty of the heavenly dog."').

But the moon also was called the heavenly dog. In Sat.-br. XI, 1, 5, 1, we read: "He (the moon) is the heavenly dog; he watches the animals of the sacrifice." See further M. Bloomfield in J. Hastings *Encyclopædia of Religion and Ethics* Edinburgh 1910 iii. 317^{a-b}). (2) The name Κέρβερος is akin to *zárvara* 'dappled, dark.' But we can hardly suppose that Kerberos and Orthros formed an original pair resembling the dogs of Yama. And that for two reasons. In the first place, Kerberos and Orthros belong to different myths, and are brought together only by a pedigree-making rhapsode of the seventh or even sixth century B.C. (Hes. *theog.* 309 ff. "Ὀρθρον μὲν πρῶτον κύνα γείνατο Γηριονῆ· δεύτερον αὖτις ἔτικτεν ἀμήχανον, οὗ τι φατειὼν | Κέρβερον ὠμηστήν, Ἄϊδεω κύνα χαλκεόφωνον, | κ.τ.λ. with the comments of F. Jacoby ed. 1930 p. 87). In the second place, if Kerberos corresponds with *Ḫabala* (cp. *zárvara*), he ought to be the dog of daylight. And, if Orthros is analogous to *Ḫyāma*, he should be the dog of darkness. But, of the two, Kerberos is the more suggestive of darkness, and Orthros of dawn. Accordingly I infer that the Greeks had but one hell-hound—Kerberos, of whom Orthros or Orthos was a mere variant or doublet.

Kerberos is still remembered by the peasants. At *Kóvliomno*, a village in Zakynthos. B. Schmidt *Griechische Märchen, Sagen und Volkslieder* Leipzig 1877 pp. 178 ff., 266 f. heard a song containing a graphic description of the three-headed hound that keeps guard over the dead (no. 39. 13 ff. Charon says *ἔχω ὄχτρο ἐγὼ σκυλί, π' οὐλοῦς μάς φιλάει, κῆ ἄντας μὲ ἰδῆ, παράζεται καὶ θέλει νὰ μὲ φάγῃ. εἶναι σκυλί τρικέφαλο, ποῦ καίει σὰ φωτιά. ἔχει τὰ νύχια πουντερὰ καὶ τὴν ὥρὰ μακρὰ. | βγάνει φωτιά 'φ' τὰ μάτια του, ἀπὸ τὸ στόμα λάβρα, | ἡ γλῶσσά του εἶναι μακρὰ, τὰ δόντια του εἶναι μαῖρα. | κῆ ἄντας πεινάει, τὰ δόντια του τ' ἓνα μὲ τ' ἄλλο σκάνε, | σὰν νὰ ἦτοια ἐκεῖ κοντὰ φάβροι ποῦ πελεκᾶνε*). Schmidt's suspicion that this song was not an 'echtes Volkslied' (*id. Das Volksleben der Neugriechen* Leipzig 1871 i. 245 n. 2) is countered by J. C. Lawson *Modern Greek Folklore and Ancient Greek Religion* Cambridge 1910 p. 99 f., who notes (a) that in a folk-tale from Zakynthos the hero, enamoured of the Mistress of Earth and Sea (*τῇ κυρὰς τῇ γῆς καὶ τῇ θαλάσσης*), has to obtain the skin of the three-headed snake and the crest (?) (*τὸ κόκαλο*, literally 'bone') that it wears on its heads (B. Schmidt *Griechische Märchen, Sagen und Volkslieder* pp. 79 ff., 227 no. 7 'Die Herrin über Erde und Meer' translation of an unpublished text. J. C. Lawson *op. cit.* pp. 91 ff. summary and identification of *ἡ δέσποινα* with Demeter. 99 'This is Cerberus without doubt; and if the story calls him "serpent" rather than "dog," ancient mythology and art alike justify in part the description'); (b) that in an Albanian tale from *Riza* the hero, who descends into the Underworld to get a golden hair from the Beauty of the Earth, finds her guarded by a three-headed hound that sleeps neither by day nor by night (J. G. von Hahn *Griechische und albanesische Märchen* Leipzig 1864 ii. 112 ff., 310 no. 97 'Das Haar der Schönen der Erde' translation of an unpublished text. J. C. Lawson *op. cit.* p. 97 "the beautiful one of the earth" can be none other than Persephone); (c) that a traveller in Macedonia, *teste* G. F. Abbott, heard recently of a three-headed dog belonging to Charon (J. C. Lawson *op. cit.* p. 100). Further, B. Schmidt *Das Volksleben der Neugriechen* i. 245 n. 2 observes: 'ebenso kennen die Romanen einen Hollenhund (vgl. Schuller Volksthuml. Glaube und Brauch I. S. 13, Anm. 41). Der Name des Kerberos selbst kommt vor bei Georgillis *Θανατικὸν τῆς Ῥόδου* v. 213 Wagn., eine Stelle, die mir übrigens nicht recht verständlich ist [E. Endlich sei noch an ein Lied bei Passow n. 407 b erinnert, das ich indes auch nicht für ein wahres Volkslied halte, wo v. 16 die Worte *Στὴν κόλασιν ἐπάησεν* (?) *ἡ σκυλα τη ψυχὴ της* schwerlich anders als auf den Hollenhund bezogen werden können (vgl. Pass. *Ind. Verh.* p. 633 u. *Σκύλα* ['canis Tartari']), wiewohl die Art seiner Erwähnung seltsam genug ist [A. G. Loeschke *Aus der Unterwelt* Dorpat Livonorum 1888 pp. 1—12 with fig. argues from the fragment of a Clavomenian *sarcophagus* in the British Museum (not in A. S. Murray *Terracotta Sarcophagi Greek and Etruscan in the British Museum* London 1898, but published by F. Winter in *Ant. Denkm.* i. 34 frags. E pl. 46, 3, copied by P. Perdrizet in the *Revue des études anciennes* 1904 p. 14 fig. 2 and thence by C. T. Seltman in the *Ann. Brit. Sch. Ath.* 1923—1925 xxvi. 93 fig. 3), which represents a boy holding in either hand a hen between two bitches flanked by cocks, that the Greeks like the Indians recognized two dogs of the Underworld. But dogs and cocks may be merely apotropaic.

S. Eitrem in Pauly—Wissowa *Real-Enc.* xi. 274 f. thinks that the conception of the soul of the dead as a hound (e.g. Pythagoras in Xenophanes *frag.* 7 Diels *ap.* Diog. Laert. 8. 36) had deep and wide-spread roots on Greek soil. He cites in this connexion, not only Hekate (Σαρκαίτις (Orph. *h. Hek.* i. 5), cp. Artemis Σαρκαίτις (Orph. *h. Artem.* 36. 12): see further B. Kock in Pauly—Wissowa *Real-Enc.* iiiA. 619) and Skylakeus [Quint. hound—a contention insufficiently supported by the thunderbolt, which on certain specimens (e.g. fig. 281) appears as a symbol beside the type. W. Aly in *Philologus* 1909 lxviii. 430 n. 8 proposes to connect Zeus Σκύλλιος of Crete, Dionysos Σκυλλίτας of Kos, and Σκυλλίης the mythical diver of Skione (Hdt. 8. 8) with Σκύλλα. This amounts to the same thing, if Skylla was early interpreted as σκύλαξ (*Od.* 12. 85 ff. ἐνθα δ' ἐνὶ Σκύλλῃ ναίει δεινὸν λελακνῦ· | τῆς ἥτοι φωνῇ μὲν ὅση σκύλακος νεογελῆς, γινεται. αὐτὴ δ' αἶτε πέλωρ κακόν· κ.τ.λ.) and perhaps represented as a dog (on a clay seal-impression of the Middle Minoan iii period (1700—1580 B.C.) from Knossos published by Sir A. Even in her later semi-human form she remains essentially connected with dogs (O. Wasser *Skylla und Charybdis in der Literatur und Kunst der Griechen und Römer* Zurich 1894 p. 78 ff. I figure a few characteristic examples: (a) a 'Melian' relief from Aigina now in the British Museum (*Brit. Mus. Cat. Terracottas* p. 135 no. B 374, E. Vinet in the *Ann. d. It should be noted that other tetradrachms of Akragas replace Skylla by a large fish (Head *Hist. num.*² p. 121. Imhoof-Blumer and O. Keller *op. cit.* p. 44 pl. 7, 3, after E. v. Shipley, says 'a Gurnard, *Genus Trigla*') perhaps called σκύλλος or σκέλλα (?), but not to be confused with the σκύλιον or 'dog-fish' (H. Bonitz *Index Aristotelicus* p. 686 a 37 ff.), and that the 'Campanian' *hydria* attaches to her the head of this fish in lieu of a

exit pointed out to him by Hermes. On the left Sisyphos, lashed by an Erinys, vainly pushes his great stone up a hill. On the right Tantalos suffers perpetual terrors on account of an overhanging rock, which threatens to crush him¹. At their feet flows the river Acheron, with a duck pecking here and there and asphodel growing

dog's head). Indeed, it is not impossible that Σκύλλα *ab initio* meant 'Dog' (O. Waser in Roscher *Lex. Myth.* iv. 1071, J. Schmidt in Pauly-Wissowa *Real-Enc.* iii A. 658. Cp. Hesych. s. *ντ*. κύλλα· σκύλαξ (so I. Voss for κύλλας· κύλαξ cod.). in *Il.* p. 843 Bachmann)), and that as a mythical monster she was 'eine Abart des Totenhundes' (Pfister *Rel. Gr. Rom.* 1930 p. 166). Be that as it may, E. Maass in *Hermes.* 1891 xxvi. 188 derives Dionysos Σκυλλίτας from σέλλαι 'die Hunde, besonders die Seehunde, von denen die griechischen Gewässer wimmelten,' cp. W. Aly in *Philologus.* 1909 lxxviii. 430 n. 8. But that Zeus Σκυλλίος had anything to do with dogs is at best a remote possibility. And Dionysos Σκυλλίτας is explained with far greater probability by W. R. Paton—E. L. Hicks *The Inscriptions of Cos* Oxford 1891 p. 86, H. Dübelt *Quaestiones Coae mythologiae Gryphiswaldiae* 1891 p. 62 f., Nilsson *Gr. Feste* p. 306, who quote Hesych. σκυλλίς· κλημαρίς=Favorin. *lex.* p. 1663, 18.

¹ The literary evidence for Tantalos is most fully collected by J. E. Hykn *D. Tantalos* Upsalæ 1896 pp. 1—129. But the best survey of all our sources is that given by W. Scheuer in Roscher *Lex. Myth.* v. 75—86. See also E. Thraemer *Perseus* Leipzig 1888 pp. 84—99 ('Tantalos'), S. Reinach in the *Rev. Arch.* 1903 i. 172—177 (=id. *Critique, mythes et religions* Paris 1906 ii. 177—182), Gruppe *Gr. Myth. Rel.* p. 277 f. (helpful), H. J. Rose *A Handbook of Greek Mythology* London 1928 pp. 81, 97 (slight).

It is within the bounds of possibility that Tantalos began his career as an actual man. G. Poisson 'Tantale, roi des Hittites' in the *Rev. Arch.* 1925 ii. 75—94 seeks to identify him with Todhalijas (S. A. Cook in *The Cambridge Ancient History* Cambridge 1923 i. 236: 'The name of Tidal of Goim ("peoples, hordes") [*Gien.* 14. 1. 9] may be the Hittite Dudkhalia, known in the thirteenth century'), and R. J. H. Jenkins, accepting Poisson's identifica-

tion, urges that Pelops son of Tantalos may well have been an Achaean prince of the East-Achaean empire, who as a Hittite vassal would be called the 'son,' i.e. the servant, of the great Hittite king.

Tantalos' grave was shown in two localities, both Hittite centres. He had a shrine at Polion in Lesbos (Steph. Byz. s.v. Πόλιον, ἐν Λέσβῳ τόπος, ὅπου τὸ ἡρώιον Ταντάλου), where a mountain bore his name (Steph. Byz. s.v. Τάνταλος, ὄρος Λέσβου, ἀπὸ Ταντάλου). The mountain has not been identified with certainty (L. Burchner in Pauly—Wissowa *Real-Enc.* xii. 2116), but is probably the height near Cape *Plaznis* on which stands the modern *Pólis* (*id.* *ib.* xii. 2131), despite the reported absence of ancient remains (A. Conze *Reise auf der Insel Lesbos* Hannover 1865 p. 50 pl. 1 map). Again, Tantalos had a famous grave on Mt Sipylus in Lydia. In view of Paus. 2. 22. 3 τοῦ δὲ λεγομένου Διὸς τε εἶναι καὶ Πιλοτοῦς (πλητοῦς cod. M. λητοῦς codd. Vab. M. La. R. Pa., the last two with πλουτοῦς in marg. *Supra* i. 156 n. 13) ἰδὼν οἶδα ἐν Σιπύλῳ τάφον θεῶς ἄξιον and 5. 13. 7 Πέλοπος δὲ καὶ Ταντάλου τῆς παρ' ἡμῖν ἐνοικήσεως σημεῖα ἐστὶ καὶ ἐς τὸδε λείπεται, Ταντάλου μὲν λίμνη τε ἀπ' αὐτοῦ καλουμένη (cp. 8. 17. 3) καὶ οἷ' ἀφανὲς τάφος, Πέλοπος δὲ ἐν Σιπύλῳ μὲν θρόνος κ.τ.λ. (*supra* i. 137 ff., ii. 956 n. 2) Harrison *Proleg. Gk. Rel.*² p. 607 justly concludes: 'Tantalos is a real king, with a real grave. Pausanias mentions no cult, but a grave so noteworthy would not be left untended.' It must also be remembered that the bones preserved in a bronze *ista* (?) close to the tomb of Pelasgos in the precinct of Demeter Πελασγίς at Argos were by some taken to be those of Tantalos (*supra* ii. 1144 n. 2). P. Friedlaender *Archologia* Berolin 1905 p. 74 with n. 17 holds that Tantalos was originally connected with Lesbos, later located 'a poeta aliquo' on Sipylus, and never had any substantial existence in the Peloponnese.

Tantalos in Greek times became almost a doublet of Atlas (F. Creuzer *Symbolik und Mythologie*¹ Leipzig and Darmstadt 1836 i. 9 'einem Atlas des Morgenlandes.' G. Dumézil *Le festin d'immortalité* Paris 1924 p. 91 'Atlas, où l'on a depuis longtemps deviné un doublet de Tantalos,' cp. *ib.* p. 121, J. Karst *Die vorgeschichtlichen Mittelmeer-völker* Heidelberg 1931 p. 433 'Der "Phryger-Lyder" Tantalos ist eine Doppelfigur des hesperidischen Atlas'). How this happened is far from clear. Conceivably the Lesbian mountain Tantalos was locally regarded as a sky-pillar, and the place Polion mistakenly connected with πόλις, the 'sky.' If so, Tantalos supporting Polion might be suggestive of Atlas bearing his πόλις (Aisch. *Per.* 430, Eur. *frag.* 594 Nauck² (Kritias *frag.* 18 Diels) ap. Clem. Al. *strom.* 5. 6 p. 350, 13 Stahlin and schol. Aristoph. *az.* 179=Soud. s.v. πόλις, Ov. *fast.* 5. 180). A parallel is afforded by Tanagra: here was a tomb of Orion, a Mt Kerykion on which Hermes was born, and a place called Polos where Atlas sat to ponder the things under the earth and the things in heaven—Atlas ὃς τε θαλάσσης | πάσης βένθεα ὀδεν, ἔχει δὲ τε κίονας αὐτὸς | μακράς, αἱ γαῖαν τε καὶ οὐρανὸν ἀμφὶς ἔχουσιν (Paus. 9. 20. 3 citing *Od.* 1. 52 ff.). Another reason likely to assimilate Tantalos to Atlas is that both names were of kindred significance (W. Scheuer in Roscher *L.u. Myth.* v. 82 'Tάνταλος wird allgemein gestellt zu den Wurzeln τελ-, ταλ-, τλη-, deren Grundbedeutung "heben, aufheben, tragen" ist. Also ist der Name herzuleiten von ταλαω~τληναι "tragen". ταλ- ist zur Intensivform redupliziert worden. Demnach lautete die Form ursprünglich Τάλλατος "der Träger" (nicht "der viel Duldende", sondern wohl eher "der das Himmelsgewölbe Stützende" . . .), wobei dann das erste A durch Assimilation an Dentale (τ, θ) zu γ geworden ist. . . Zu Τάνταλος gehört etymologisch auch der Heros Ἀτλας (a *intensive* und der Stamm ταλ-), also "der schwer Tragende." Cp. A. Fick *Die Griechischen Personennamen*² Göttingen 1894 p. 410. Boisacq *Dict. étym. de la Langue Gr.* p. 938, Walde—Pokorny *Vergl. Wörterb. d. indogerm. Spr.* 1. 739).

Accordingly, Euripides tells how 'Tantalus, the reputed son of Zeus, hangs suspended in mid air, quailing at the crag which looms above his head' (*Or.* 5 ff. trans. E. P. Coleridge), and makes Elektra sigh 'Oh! to reach that rock which hangs suspended midway 'twixt earth and heaven, that fragment from Olympus torn, which swings on chains of gold in ceaseless revolution, that I may utter my lament to Tantalus my forefather, who begat the ancestors of my house' (*Or.* 982 ff. trans. E. P. Coleridge). The schol. Pind. *Ol.* 1. 91 a (p. 38, 6 ff. Diachmann) claims that in these passages Euripides,

on either bank¹. In sharp contrast with these doleful surroundings is a group of three persons approaching the palace. They are not mythical characters at all, but just a typical human family—father, mother, and child². The father sets a myrtle-wreath³ on his brow

as disciple of Anaxagoras, is referring to the sun, and the schol. A.B.M.I. Eur. *Or.* 981 agrees with him. That may be so (Diog. Laert. 2. 8 οὗτος ἔλεγε τὸν ἥλιον μύδρον εἶναι διάπυρον καὶ μείζω τῆς Πελοποννήσου· οἱ δὲ φασὶ Τάνταλον, 12 τὸν δὲ Ἀναξαγόραν εἰπεῖν ὡς ὅλος ὁ οὐρανὸς ἐκ λίθων συγκέκοιτο τῇ σφοδρᾷ δὲ περιδιῶνσει συνεστάναι καὶ ἀνεθέντα κατενεχθήσεσθαι. κ.τ.λ., cp. Ioseph. *c. Ap.* 2. 265. Harpokr. s.v. Ἀναξαγόρας, Plout. *de plai.* phil. 2. 20 and Stob. *eccl.* 1. 25. 3^p p. 209, 21 ff. Wachsmuth = H. Diels *Doxographi Graeci* Berolini 1879 p. 349 a 6 f., b 6 f., Olympiod. in *Aristot. nicom.* p. 17, 19 ff. Stuvei. In any case, the notion of Tantalos terrified by the rock about to fall is a moralising version of Tantalos as supporter of the sky and involves the old-world dread of a collapsing heaven (*supra* ii. 54 ff.). Morality bulks bigger still in John Bunyan's allegory of Christian under Mount Sinai. Nonn. *Dion.* 18. 32 Τάνταλον ἡεροφῶτην (the Count de Marcellus wrongly accepted C. F. Graefe's cj ἡεροπευτήν) and 35. 295 f. οἶος ἀλήτης | Τάνταλος ἡερόφοιτος is trying by means of a single allusive epithet to recall both Pind. *Ol.* 1. 58 ἐμφοσύνας ἀλάται and Eur. *Or.* 7 ἀέρι ποτάται. The epithet is of course modelled on Homer's ἡεροφῶιτος Ἐρινύς (*Il.* 9. 571. 19. 87).

The change from the world above to the world below probably hangs together with the conception of Tantalos as a Giant or Titan (M. Mayer *Die Giganten und Titanen in der antiken Sage und Kunst* Berlin 1887 p. 88 f., Gruppe *Gr. Myth. Rel.* pp. 277, 434 n. 2, W. Scheuer in Roscher *Lex. Myth.* v. 78, H. J. Rose *A Handbook of Greek Mythology* London 1928 p. 97 n. 12). As such, he was buried beneath Mt Sipylus (J. E. Hylén *De Tantalos* Upsalæ 1896 pp. 44 ff., 54), and S. Reinach in the *Rev. Arch.* 1903 i. 172 ff. (= *id.* *Cultes, mythes et religions* Paris 1906 n. 177 ff.) explains the Homeric description of Tantalos agonising among the shades (*Od.* 11. 582 ff.) by reference to local conditions (Demokles of Pygela or Phygela (s. v or iv B.C.) *frag.* 1 (*Frag. hist. Gr.* ii. 20 Müller) cited by Demetrios of Skepsis (s. ii B.C.) *ap.* Strab. 58 μνησκαται δὲ πρὸς ταῖτα τῶν ἱπο Δημοκλέους λεγομένων, σεισμούς τινας μεγάλους τοὺς μὲν πάλαι περὶ Λίδιαν γενομένους καὶ Ἰωρίαν μεχρὶ τῆς Τρωάδος ἱστοροῦντος, ὅφ' ὧν καὶ κῦμαι κατεπόθησαν καὶ Σίπιλος κατεστράφη, κατὰ τὴν Ταντάλου βασιλείαν, καὶ ἐξ ἐλῶν (S. Reinach *cj.* ἰλιών) λίμναι ἐγένοντο, τὴν δὲ Τροίαν ἐπέκλυσε κῦμα, *id.* 579 καὶ τὰ περὶ Σίπιλον δὲ καὶ τὴν ἀνατροπὴν αὐτοῖς μῦθον οὐ δεῖ τίθεσθαι· ἀκούειν δ' ἐστὶ καὶ τῶν παλαιῶν συγγραφέων, οἳ φησιν ὁ τὰ Λίδια συγγράμματα Ξάνθος, διηγοίμενος, οἳ μεταβολαὶ κατέσχον πολλάκις τὴν χώραν ταυτήν, ὧν ἐμνησθῆναι που καὶ ἐν τοῖς πρόσθεν (*ib.* 49) = Xanth. *frag.* 2 (*Frag. hist. Gr.* i. 36 f. Müller), cp. *Plin. nat. hist.* 2. 205, 5. 117). Reinach concludes: 'Le roi Tantale est l'éponyme de la ville de Tantalos. Cette ville fut engloutie dans un lac à la suite d'un tremblement de terre qui ébranla toute la montagne du Sipyle. Donc, l'image funéraire de Tantale pouvait le représenter dans un lac, ayant de l'eau jusqu'au menton et cherchant vainement à se raccrocher à des branches d'arbres; ou elle pouvait le figurer sous des tochers du Sipyle prêts à l'écraser sous leur masse. Ces deux images ont dû exister et les supplices de Tantale, tels qu'ils sont décrits par les textes et reproduits par les monuments de l'époque classique, ne sont que des traductions de ces formules graphiques beaucoup plus anciennes.' But it is dangerous to assume that the details of a Greek myth originated in the misunderstanding of an earlier representation, if no example of such a representation has come down to us.

The Otherworld landscape, here described in language of haunting beauty and profound significance, includes the palace of Hades, with a white cypress standing beside it, and a fountain on either hand. The soul must avoid that on the left—the water of Lethe—and beg a draught from the other, the water of Mnemosyne. Guardians are set before it; but he is to challenge them boldly with the words:

I am the child of Earth and starry Sky.
Sky-born—ye know it of yourselves—am I.
Now parched with thirst I perish; cool the cup
Of Memory's water—let me drink it up.

At this the Guardians will suffer him to drink from the fountain divine, and thereafter he shall live as a king among heroic peers.

The same scenery appears in the Celtic Elysium—the palace, the silver apple-tree beside it, the shining well with its five streams (*Folk-Lore* 1906 xvii. 144 ff.). Much the same is implied by the quests undertaken in South-European 'Expulsion' Tales—the golden seat, the apple-tree beside it, the Dancing Water with its formidable guardians (*supra* ii. 1016). Nay more, the self-same landscape furnishes not a little of the imagery in *The Revelation of St John*—the throne of God, the tree of life, the river proceeding out of the throne (*Rev.* 2. 7, 22. 1 ff.). All such pictures, if I am not mistaken, presuppose in a more or less sublimated form the essential features of the old-world king, as Sir James Frazer first descried him. He is the local champion, the strongest man of the district, who is prepared to defend his title against all comers. He is found at an appropriate centre, beneath a sacred tree, beside a sacred river. He must keep up his strength by feeding perpetually upon the fruit of his tree. He fights, indeed, with a branch of it in his hand. And if he feels faint with the effort, there is the magic water gushing at his feet. Last but not least, he is a divine personage, at once mortal and immortal, a priestly king, a kingly priest. In such an one we recognise not only the Orphic votary, but the Otherworld visitant, the folk-tale hero, and 'him that overcometh.'

As to details, the λευκή κυπάρισσος is hardly to be explained as a white-poplar (D. Comparetti *Lamelle orfiche* Firenze 1910), despite the name (λευκή) and chthonian associations of that tree (*supra* ii. 467 ff.). One recalls, by way of warning, Joshua Barnes' comment on Eur. *Hel.* 384 'figura Leaeanae, i.e. Uisae,' or for that matter Sir John Sandy's note on Eur. *Bacch.* 1017 'It is highly probable that by the "lion" in these passages a panther is really meant'. That κυπάρισσος was not used at random appears from its recurrence on the three gold tablets of s. ii b.c. found at Eleutheraï in Crte and now in the Museum at Athens (A. Joubin in the *Bull. Corr. Hell.* 1893 xvii. 121 ff., T. Gompertz *ib.* p. 124, J. L. Myres *ib.* p. 629, F. Blass in Collitz—Bechtel *Gr. Dial.-Inschr.* iii. 2. 245 no. 4959 a, Harrison *Proleg. Gr. Rel.* p. 574, G. Murray *ib.* p. 660 f., H. Diels *Ph. Fragmente der Vorsokratiker* Berlin 1912 ii. 176 (Orph. 'Althezeugte Fragmente' 17), A. Olivieri *Lamellae aureae Orphicae* Bonn 1915 p. 14 f., O. Kern *Orphicorum Fragmenta* Berolini 1922 p. 105 f. ('Fragmenta veteriora' 32 b)), of which the archetype as restored by Olivieri runs: 'οἶψαι αἶος ἐζ' ὧ καὶ ἀπόλλυμαι.' 'ἀλλὰ τίς μουν' κράνας αἰέναν ἐπὶ δεξιᾷ, τῇ(ι) κυπάρισσος. | τίς δ' ἐσί. [πῶ δ' ἐσί:]' 'Γὰρ υἱὸς ἡμὶ καὶ Ὠρανῶ ἀστερόεντος.' But why should a cypress be described as λευκή? F. Lajard *Recherches sur le culte du cypres pyramidal* Paris 1854 pp. 156 ff., 311 f., observes that the oracular trees of the Sun and Moon consulted by Alexander the Great in Prastake are said to have been cypresses (pseudo-Kallisthenes *hist. Alcx. Mag.* 17. 27 ff. Kioll καὶ εἰσήμεκον ἡμᾶς εἰς τινα παράδεισον, ἐνθα ἥλιος καὶ [ἡ] σελήνη ἐν μέσῳ τοῦ παραδείσου.† κατὰ δὲ αὐτοῖς φοιρὰ ἱερὸν ἡλίου καὶ σελήνης. οὗο δὲ ἦν δένδρα τὰ προειρημένα. ἃ ἦν παραπλήσια κυπάρισσοις λευκῶν δὲ ἦν δένδρα [τὰ προειρημένα] παρόμοια τῇ ἐν Αἰγύπτῳ μυροβαλανῶ. καὶ ὁ καιρὸς ὁμοίος. προσηγόρεον δὲ τὸ μὲν ἀρρενικὸν ἀρρένων λογισμόν, τὸ δὲ θηλυκὸν θηλειῶν. ὄνομα δὲ ἦν τοῦ ἐνὸς ἡλίου, τῆς δὲ θηλείας σελήνης. τὸν τοῦ ἡλίου καὶ τῆς σελήνης (ιερέα). περιβολαῖς δὲ ἐχρῶντο τῶν θηρίων ταῖς δοραῖς, cp. Iul. Val. 3. 24 ff.), that the Florentine priest Jacopo di Carlo in his poem *Alessandro Magno* or *Alessandreide* describes the Sun-tree as having leaves red like burnished gold, the Moon-tree as having them white like pure silver (canto 10 ed. Venezia 1627 'L'arbor del Sole le sue foglie hauia | Rosse sì come lo oro lustrante: | Quello della luna bianche le tenia | Sì come argento chiare, candidante'), and that in Chinese—according to the Sinologue Stanislas Julien—the pyramidal cypress is called *pe*, the 'white' tree, because, while other trees turn towards the south, it alone turns towards the west and white is the western colour. Lajard concludes that the λευκή κυπάρισσος was 'à la fois symbole de la lune et emblème funéraire' (cp. cit. p. 312). O. Gruppe in the *Berl. philol. Woch.* Jan. 27, 1912 p. 107 f. makes no such attempt to link up Europe with Asia, but is content to say: 'Zwar nicht von der Farbe ihres Laubes, wohl aber nach dem weissen Stamm.' Another line of explanation is suggested by the fact that the tablets mentioning κυπάρισσος hail from Eleutherna. Coins of the town show Apollon flanked by storax-trees (*supra* ii. 491 f. fig. 377), which bear some resemblance to the pyramidal cypress but, like the λεύκη, have a white under-surface to their leaves (Steier in Pauly—Wissowa *Real-Enc.* iv A. 65 'das Blatt des S[torax]-Baumes langlich, lederartig und unterseits weissfilzig 1st'). Hence O. Gruppe's conjecture that on Greek soil λεύκη was a surrogate of στίραξ (*supra* ii. 492). Yet another possibility would be to suppose that the λευκή κυπάρισσος was in fact the East Indian species *Cupressus glauca* (J. Lindley—T. Moore *The Treasury of Botany*² London 1884 i. 362, *The Encyclopedia Britannica*¹¹ Cambridge 1910 vii. 694), or the *Cupressus nuxia* (K. Thompson—W. Watson *The Gardener's Assistant*² London 1900 i. 2. 330). On the whole, however, it seems most likely that the tree of the tablets was a miraculous cypress, its peculiarity consisting in its assimilation to that other Borderland tree, the white-poplar. It would thus come into line with such marvels as the silver apple-tree of the Celts or the twelve-fruited tree of *The Revelation*.

On the waters of Lethe and Mnemosyne see an interesting section in M. Nink *Die Bedeutung des Wassers im Kult und Leben der Alten* Leipzig 1921 p. 104 ff. together with the comments of W. Kroll in Pauly—Wissowa *Real-Enc.* xii. 2141—2144. It seems to me probable (a) that the two fountains of the Petelia tablet were an Orphic conception (Orph. *h. Mucm.* 77. 9 f. ἀλλά, μάκαιρα θεά, μύσταις μνήμην ἐπέχειμε 'εὐτέρων τελετῆς, λήθην δ' ἀπὸ τῶνδ' (so G. Hermann for τῶν codd.) ἀποπεμπεῖ, traceable back to the time of Pindar (Pind. *frag.* 129, 130 Bergk⁴ ap. Plout. *de oculis* 277. 7 καίτοι τῆς γε δόξης καὶ τοῦ εἶναι φέσιν [D. (b) that this conception presupposes a folk-belief in two contrasted fountains of Death (Forgetfulness) and Life (Memory) (cp. Theopomp. *frag.* 76 (*Frag. hist. Gr.* i. 289 ff. Muller) = *frag.* 75 c (*Frag. Gr. Hist.* ii. 551 f. Jacoby) ap. Ail. *var. hist.* 3. 18 rivers of 'Hδονή and Λύπη near Anostos in the land of the Maeotae, Theophr. *ap. water of Lethe can be seen gushing. These happy ones have no sorrows to forget. But beside that fountain the vase-painter has placed another family—Megara and her murdered boys. Despite the bandages bound tightly about them, the blood still trickles from the wounds inflicted by their father in his madness. No wonder that they linger beside the waters of oblivion. Finally, on the brink of the infernal river is an object interpreted by A. Furtwängler¹ as a large sieve with many holes in its upper surface. Rather, perhaps², we should see in it the mouth of a big *pithos*, sunk in the soil and riddled with holes. The context in which it is found favours

Local appropriations and adaptations of the idea are found at Lebadeia (Paus. 9. 39. 8 *ἐνταῦθα δὴ χρὴ πλεῖν αὐτὸν Λήθης τε ἰδῶν καλούμενον, ἵνα Λήθη γένηται οἱ πάντων ἃ τῶς ἐφρόντιζε, καὶ ἐπὶ τῷδε ἄλλο αἰθῆς ἰδῶν πίνειν Μνημοσύνης· ἀπὸ τοῦτου τε μνημονεύει τὰ ὀφθέντα οἱ καταβάντι*, Plin. *nat. hist.* 31. 15 in Boeotia ad Trophonium deum iuxta flumen Hercynnum e duobus fontibus alter memoriam, alter oblivionem affert, inde nominibus inventis, Isid. *orig.* 13. 13. 3 in Boeotia duo fontes alter memoriam, alter oblivionem affert), at Ephesos (E. Wood on the site of the great theatre, gives a list of persons who on a certain occasion in honour of Dionysos, Zeus Πανελλήνιος (= Hadrian: *supra* ii. 1120 f. n. o) performed a mystic play, taking the parts of Meneia, Lethe, etc.: see W. Quandt *De Baccho ab Alexandri aetate in Asia Minori culto* (Halis Saxonum 1913 p. 265 ff.), and perhaps in Lusitania, where the river Lima (the modern *Lima*) was identified with Lethe (Strab. 153, Appian. *Iher.* 71 f.) or Oblivio (Mela 3. 10, Plin. *nat. hist.* 4. 115 (112), Flor. 1. 33. 12, Liv. *perioch.* 55, cp. Sall. *hist.* 3. 44, Sil. It. 1. 235 f., 13. 555, 16. 476 f.), if not also in Kyrenake, where the river Lethon was similarly explained (Lucan. 9. 355 f., Solin. 27. 54).

O. Kern in *Hermes* 1916 li. 555 infers from lines 6 f. of the Petelia tablet that the mystic, though a child of Gaia as well as Ouranos, claims to be essentially οὐράνιος and as such contrasted with the χθόνιοι (Orph. *h. Tit.* 37. 6 ff. *ἐξ ὑμέων γὰρ πᾶσα πέλει γενεή κατὰ κόσμον. | υμᾶς κυκλήσκω μῆνιν χαλεπὴν ἀποπέμπειν. | εἴ τις ἀπὸ χθονίων προγόνων οἴκοις πελάσθῃ*). *Id.* 1917 li. 475 interprets in the same manner the epigram on a temple of the Meter Theon at Phaistos (F. Halbherr in the *Museo Italiano di Antichità Classica* 1890 iii. 735 f. no. 183, E. Maass in the *Ath. Mitt.* 1893 xiii. 272 ff., K. Weimcke *ib.* 1894 xix. 290 ff., E. ¹ Furtwängler—Reichhold *Gr. Vas.malerei* i. 50.

² This explanation is dismissed by Furtwängler *op. cit.* i. 50 n. 1 ('noch das Fass der Danaiden, das im Boden stecken musste, auch nicht das umgekehrte Fass, das ganz andere Form haben musste'). But the analogy of the Munich *amphora* (*supra* p. 399 fig. 262) and of the Palermo *kylix* (*supra* p. 400 pl. xxxvi) affords the strongest presumption that the doubtful object is really meant for the mouth of a great jar buried in the ground. And how else should the vase-painter have indicated that it was leaky except by the naive expedient of adding dots to represent the leaks?

the supposition that by means of it the artist wished to suggest the pains awaiting any who would not undergo initiation into the Orphic mysteries¹.

Other 'Apulian' vases of a similar kind substitute the Danaïdes with their *hydriai* for the aforesaid *pithos*². For example, a fine *kratér*

¹ The allusion *may*, of course, be to the punishment of the Danaides. But if so, one or more of them would surely have been shown beside the *pithos*, as on the vases mentioned in the next paragraph.

from Campania, now in the Hermitage collection (fig. 289)¹, shows four Danaides sitting or standing on the further bank of the Acheron. They have their *hydriai* with them, but seem more intent on talking together or surveying their charms in a mirror than on drawing water from the river. A fifth sister, busier than the rest, empties her vessel into a large unburied *pithos*.

Comparable with these 'Apulian' vases both in subject and in style, and referable to approximately the same period (350—300 B.C.²), is a limestone relief from Apulia now in the Glyptothek at Munich (fig. 290³). It probably formed the left-hand half of a frieze decorating the plinth of a *naïskos*-tomb at Tarentum⁴. In the centre of the extant portion sit Hades and Persephone. On the left stand two Danaides emptying their pitchers into a large half-sunk jar. On the right Hermes hastens towards Herakles, whose lion-skin flutters in the breeze. Beyond the break would come Kerberos, Erinyes, and other familiar figures of the Underworld.

(δ) Conclusions with regard to the myth of the Danaïdes

In view of the foregoing evidence, both literary and monumental, E. Rohde⁵ and A. Dieterich⁶ drew the following conclusions. The mysteries and marriage are analogous, for both involve rites of lustration. Those that neglect such rites in the world above must perform them in the world below. Hence on the one hand the uninitiated, and on the other hand the unmarried, are bound to carry

lowered left hand (J. Overbeck in the *Arch. Zeit.* 1884 xlin. 261)—stand idly by, facing in the same direction.

water themselves after death, or at least to have it carried for them by others. The Danaïdes undergo this *post mortem* penalty because they died unmarried.

The explanation advanced by Rohde and Dieterich is not, in my opinion, altogether satisfactory. It assumes that the Danaïdes were typical spinsters¹. But this is not the case. They were duly married to the Aigyptiadaï, and Hypermnestra was the only one of them who retained her virginity². Rather, their marriage was, as I have suggested³, in the nature of a fertility-charm, the operation of which would be hindered, indeed absolutely nullified, by the guilt that they incurred through murdering their husbands. The guilt of murder would suffice to bring drought upon the land. Thebes, for instance, stricken for the unavenged death of king Laios, is described as—

Blighted in fruitful buds and grazing kine,
Blighted in throes of barren womanhood,
While, lo, the fiery god, the fever dread,
Has fallen and makes havoc of the town⁴

If the Danaïdes thus frustrated an all-important fertility-charm, they deserved to be punished. And the punishment meted out to them consisted, appropriately enough⁵, in the perpetual performance of a similar charm⁶.

¹ Somewhat different, but exposed to a like objection, is the view taken by H. J. Rose in the *Class. Quart.* 1925 xiv. 148: 'the half-married are clearly in a very parlous state, belonging neither to one class nor to another, and therefore in a tabu condition, from which they can release themselves only by fulfilling the rite they have begun. This, doubtless, is the reason why in Hades we find not only the Danaids, who on the most plausible explanation of their punishment spend eternity in trying to get married, but also a host of unhappy lovers, who have nearly all this in common, in Vergil¹ (*I. Aen.* vi. 444 sqq.), that at the time of their death they were betwixt and between in some way or other'.

Similarly when Lykourgos, king of the Edonoi, slays his son Dryas in a frenzy-fit, his land remains barren and, according to an oracle, cannot recover its fertility till he himself be put to death (Apollod. 3. 5. 1. *supra* i. 75). Again, when Orestes kills Klytaimnestra and is acquitted of the deed, the Eumyres (*supra* ii. 206 n. 2 with fig. 146. a) threaten to bring a blight upon the land (Aesch. *Eum.* 778 n.).

⁵ There is, of course, no need to bring in the far-fetched symbolism of the schol. Aristid. p. 158. 12 ff. Dindorf τῶν δὲ Δαναίδων ὁ τετραμῆνος πῖθος (sc. αἰνιττεται) τὸ μήποτε ταύτας μετὰ τὸν φόνον τῶν φιλάτων τὴν ἀναψύχουσαν ταύτας ἐκ τῆς ἀνδρῶας κηδεμονίας χάριν παρ' ἄλλων τιγχνάνειν, πᾶσι γερούμενας ὑπόπτους διὰ τὸ ἄγος. καὶ μηδαμῶθεν ταύτην πληρουμένην εἶρεῖν.

⁶ In the Swiss canton of Valais it is believed that old bachelors, when they die, are bound to live in a certain place and there spend their time bringing up sand from the Rhone in baskets with holes in them (E. L. Rochholz *Deutscher Glaube und Brauch im Spiegel der heidnischen Vorzeit* Berlin 1867 i. 155, Haberland in *Globus* 1878 lxxiv. 205 cited by O. Waser in the *Archiv f. Rel.* 1899 ii. 611).

iii. The holed vessel in Italy.

In the preceding sections it has been argued that certain phrases and beliefs current among the modern and Byzantine Greeks¹, taken together with the wording of a well-known Aristophanic verse², point backward to the existence of a primitive rain-charm, which consisted in pouring water through a sieve³. It has been suggested that such a custom would fitly explain the use of a sieve in divination⁴ and of a holed vessel in various myths, rites, and doctrines—the water-carrying of the Danaides⁵, the nuptial and sepulchral *loutrophóroi*⁶, and the punishment of the uninitiated in Hades, who are doomed to bear water in broken pitchers, or in a sieve to a leaky *pitthos*⁷.

Now it seems *à priori* probable that the same ancient fertility-charm was at one time practised in Italy as in Greece. But that this was actually the case, cannot be proved. At most we may suspect that the usage underlies a few proverbial phrases and popular traditions.

Plautus⁸, for example, makes a slave say to a lover, who is moping for his mistress:

Unless you weep for her with tears of silver,
That which you claim to prove by these your tears
Is worth no more than rain-drops caught in a sieve.

Doubtless this is, as it is commonly assumed to be, a proverb for futile effort after the unattainable. But whether Plautus was here simply writing Latin or—as is certainly possible—translating from a Greek original (say, by Menandros⁹), we have no means of deciding¹⁰. In either event the form of the expression is peculiar and

¹⁰ There are several Greek variants of the proverb, but all of Roman or Byzantine date: (1) Plaut. *prot.* 8 κοσκίνῳ ὕδωρ ἀντλεῖς, Makar. 5. 20 κοσκίνῳ ἀντλεῖς· ἐπὶ τῶν ἀνθρώπων καὶ μάτην ποιοῦντων. (2) Plaut. *prot.* 50 κοσκίνῳ φέρεις ὕδωρ, Apostol. 9. 91 κοσκίνῳ ὕδωρ φέρει· ἐπὶ τῶν ἀδυνάτων, Soud. s.v. κοσκινῶδον (Loukian. *Tim.* 3, *epist.* Saturn. 24) καὶ παροιμία· κοσκίνῳ ὕδωρ περιφέρεις. ἐπὶ τῶν ἀδυνάτων. (3) Loukian. *Demon.* 28 'οὐ δοκεῖ ὑμῖν,' ἔφη, 'ὦ φίλοι, ὁ μὲν ἕτερος τοῦτων τράγον ἀμελεῖν, ὁ δὲ αὐτῷ κοσκινὸν ὑποτιθέναι.'

A similar locution substitutes a net for a sieve: (4) Plaut. *prot.* 31 παρὰ δικτύου ὕδωρ κομίζεις, Georgides *gnomologion* in Boissonade *anecd.* 1. 29 δικτύῳ κομίζειν ὕδωρ ἢ πλίνθον πλύνειν εὐπετές, ἢ κακίαν ποιωθένσαν χρόνῳ πολλῷ ἐν ἀνθρώπῳ ψυχῇ ἐξελεῖν δυνατόν:

Both images are already combined in Sen. *de benef.* 7. 19. 1 'reddere est' inquit

may well have been derived from the rain-charm aforesaid. For, when men had once begun to distrust the magician and his magic, a charm to produce rain might easily pass into a proverb for labour wasted in the attempt to compass impossibilities.

Further, a typical impossibility of this sort would furnish the ideal test for an early ordeal¹, since the performance of it implies the manifest interposition of the gods in favour of the accused. Thus, when the Vestal Tuccia was charged with violation of her vows, she proved her chastity by successfully carrying water in a sieve from the river Tiber to the house of Vesta in the Roman Forum². The event, which is said to have occurred in the year 235 B.C.³, has repeatedly furnished artists with a theme. Count Clarac⁴ published a couple of marble statues representing Tuccia with her sieve, one in the Museo Chiaramonti⁵, the other at Dresden⁶. Montfaucon had previously made known a statuette belonging to a M. Boisot and an engraved gem from the cabinet of M. de la Chausse⁷, not to mention a print communicated by Baron Crassier⁸, all of which portrayed the same subject with minor variations. M. P. Lévesque de Gravelle was able to figure another gem illustrating the scene⁹. There are, however, grave doubts as to the authenticity of any of these representations¹⁰. They appear to be nothing but modern

¹⁰ In both the statues published by Clarac the sieve is a restoration: they may have portrayed priestesses carrying baskets (Clarac *loc. cit.*). The statuette and gems figured by Montfaucon and Lévesque de Gravelle do not inspire confidence, and seem to have vanished.

restorations or copies, just conceivably based upon some genuine antique which has since disappeared.

The probability that a holed vessel was formerly used as a rain-charm in Italy would be strengthened, if it could be shown that the Italians ever believed rain to fall through a hole or holes in the sky. Unfortunately direct evidence to that effect is altogether wanting, and indirect evidence is at best disputable. Nevertheless certain facts connected with the *mundus* and the *manalis lapis* at Rome appear to presuppose some such belief.

The *mundus*¹ was an underground dome or tholoid structure,

¹ During the last decade there has been much discussion of this difficult topic. The disputants include the following:

E. Taubler '*Roma quadrata* und *mundus*' in the *Rom. Mitth.* 1926 xli. 212—226 (*Roma quadrata* was the early settlement on the Palatine surveyed as a *templum* with its *decumanus* extending from the *supercilium Sclavum Caci* to the *summa Sacra Via*. The *mundus*, an opening to the lower world, enclosed by a square stone wall, formed the centre of this *Roma quadrata*. When the Palatine settlement was enlarged into the city of the Four Regions, Rome ceased to be *quadrata* in the original sense, but antiquarians perpetuated the old name for the new foundation. Summary and criticism in the *Am. Journ. Arch.* 1927 xxxi. 494). *id.* 'Terremare und Rom' in the *Sitzungsber. d. Heidelb. Akad. d. Wiss.* Phil.-hist. Classe 1931/2 Abh. ii especially pp. 43—63 (the *mundus* was the central point of *Roma quadrata*, a *templum* or sacred square on the Palatine: it is therefore comparable with the ritual pits within the square Terremare settlements).

S. Weinstock '*Mundus fatet*' in the *Rom. Mitth.* 1930 xlv. 111—123 (most ancient authors speak of the *mundus* as connected with cult-usage: Ovid and Plutarch alone associate it with the legend of Rome's foundation by Romulus. *Mundus* must be carefully distinguished from *Roma quadrata*: there was no *mundus* on the Palatine—Boni's find was a mere cistern—nor is there the least reason to connect *mundus* with *templum* either square or round, with the ritual pits of Terremare villages, with the dedication of boundary-stones and the like. There was a *mundus* on the *Comitum* at Rome, and another at Capua (*Corp. inscr. Lat.* x no. 3926, *infra* p. 438 n. 5). The *mundus* was essentially a pit in *sacro Ceresis* (schol. Bern. in Verg. *eccl.* 3. 105, *infra* p. 438 n. 5), the said *sacrum* being a small chamber built to contain it. Analogous structures are noted by F. Studniczka 'Altare mit Grubenkammern' in the *Jahresh. d. east. arch. Inst.* 1903 vi. 123—186. But the Ceres in question need not be the old Roman goddess: she might be the Latinised Demeter; she might be an Etruscan deity—F. Ribezzo in the *Rivista Indo-Greco-Italica di filologia, lingua, antichità* 1928 xi. 89 draws attention to Etr. *mutna* = "sepolcro, cassa, ossuario"). *id. ib.* 1932 xlvii. 120 n. 1 (criticises Taubler's view that *Roma quadrata* was not identical with *mundus*, nor yet the special name of the Palatine settlement, but originally the square or *templum* round the *mundus*, and hence applied to the Palatine town. Weinstock reaffirms his belief that the *mundus* must be

sought neither on the Palatine, nor in Terremare, and that its sacred functions—Ovid and Plutarch notwithstanding—had nothing to do with the foundation of Rome.

L. du Jardin '*Mundus, Roma quadrata e lapis niger*' in the *Rendiconti della Pontificia Accademia* 1930 vi. 47 ff. (*mundus* and *Roma quadrata* were originally on the Palatine, but, when built over by Domitian's palace, were removed to the *Comitium*).

H. J. Rose '*The Mundus*' in *Studi e Materiali di Storia delle Religioni* 1931 vii. 115–127 (largely in agreement with Weinstock puts forward the following contentions: (1) The word *mundus*, in the sense of a pit or underground shrine of some kind, is probably not Latin. (2) So far as we know, it was applied to at least two underground structures in Rome, one in the *Comitium*, the other of unknown locality, which were, or had been, used for wholly different rites. (3) Neither of these had anything to do with *Roma Quadrata*, or with the *lapis manalis*. (4) Neither of them had anything to do with the so-called *mundus* found on the Palatine in 1914. (5) The connection of either with the pit to be found in *terremare* is possible, but unproved').

W. Kroll '*Mundus*' in Pauly—Wissowa *Real-Enc.* xvi. 560–564 (the *mundus* was a chthonian cult-centre, probably close to the *Comitium*. It was a circular pit opened thrice a year, on days that were all *comitiales*, for the emergence of souls of the dead (cp. the Greek Anthesteria: *supra* i. 687)—no concern of Ceres or any other deity. The *lapis manalis* of Festus (*infra* p. 432) must have been the famous *lapis manalis* outside the Porta Capena (*infra* p. 432 ff.) and should not—with E. Samter in the *Archiv. f. Rel.* 1922 xxi. 332 f. and in Pauly—Wissowa *Real-Enc.* xii. 784—be assumed to have closed the *mundus*. Weinstock and Rose rightly rejected the identification of this *mundus* with the *Roma quadrata* of the Palatine and doubted the analogy of the Terremare pits. As to etymology, the Etruscan goddess *muntur* (E. Fiesel in Pauly—Wissowa *Real-Enc.* xvi. 643 f., *infra* p. 439 n. 2) is better ignored. P. Kretschmer suggests connexion with German *Mund*, Gothic *munfs*).

L. Deubner '*Mundus*' in *Hermes* 1933 lxxviii. 276–287 (*Ov. fast.* 4. 821 ff. describes three successive rites: (1) *fruges* thrown into a deep *fossa*; (2) earth from the neighbouring soil likewise thrown in; (3) an altar placed above the filled-in *fossa* and kindled. The parallel in Plout. v. *Rom.* 11 proves that Ovid's pit was the *mundus*. Ovid's altar above the pit is due—as C. O. Thulin *Die etruskische Disziplin* iii (Göteborgs Högskolas Årsskrift 1909 1) p. 20 saw—to contamination with the rites of Terminus. Ovid's earth thrown in was another accretion wrongly connected by him with the *mundus*: the clods really symbolised Rome's mastery over all the neighbourhood (*Lyd. de mens.* 4. 73 p. 124, 21 ff.). Ovid's *fruges* thrown in were a gift to chthonian powers made at the moment of founding the town. Kroll and Weinstock dismiss this association of the *mundus* with the founding of a town as an antiquarian figment. Deubner sees no ground for their scepticism: town-foundations, the planting of boundary-stones, the erection of buildings, all involved breaking into the earth and the earth-powers must in each case be propitiated by gifts. Ovid does not definitely state that the *mundus* was on the Palatine; but he is speaking of Romulus as the founder of Rome, and everyone knew that Romulus' foundation was on the Palatine. Weinstock wrongly refuses to admit the real existence of a Palatine *mundus*. Plutarch errs in locating Romulus' *mundus* on the *Comitium*. Probably there was a *mundus* there; but, if so, it was the *mundus* of a new foundation—the Etruscan town of Four Regions (Plout. v. *Rom.* 11 brings the experts from Etruria). Deubner thinks it likely that this *mundus* on the *Comitium*, though described by Plutarch as *βόθρος κυκλωτέρης*, should be identified with the quadrangular pit for offerings in the Grave of Romulus: Plutarch may well have blundered here also and attributed to the *mundus* on the *Comitium* the shape of the *mundus* on the Palatine. As to the phrase *mundus patet*, that refers to the Palatine *mundus*. Weinstock misunderstands schol. Bern. in *Verg. ecl.* 3. 105 *mundus in sacro Cereris*, this might mean, not a *mundus* in a small chamber built to contain it, but a *mundus* in the sacred precinct of Ceres: more probably, however, it was a mere guess of the scholiast or his source. *Roma quadrata* too was on the Palatine and had something to do with the founding of the town (*Fest.* p. 310, 35 ff. Lindsay, *infra* p. 436 n. o). Thulin *op. cit.* p. 20 n. 1 already compared it with the quadrangular

concerning which M. Porcius Cato—the jurist perhaps rather than his more famous father¹—in his *Notes on Cases of Civil Law* remarks: ‘The *mundus* gets its name from the “sky” above our heads; indeed in shape it resembles the sky, as I have been able to ascertain from those who have entered it².’ Another jurist C. Ateius Capito, the *consul suffectus* of 5 A.D., in his work *On Pontifical Law*³ states that thrice a year, on August 24, October 5, and November 8, the *mundus* was left open⁴. Festus adds that the lower part of it was consecrated to the Di Manes and kept closed except on these days, when their secrets were brought to light⁵. Varro emphasises the solemn character of the said days: ‘When the *mundus* is open, it is as though the gate of gloomy underworld gods were left ajar. Hence it is taboo, not only for a battle to be joined, but even for a military

templa of the Terremare settlements. F. von Duhn in Ebert *Reallex.* ii. 286 remarked that their east-to-west trench had five pits in it containing sherds, pebbles, mussel-shells, and animal-bones—‘sacrale Dinge, die mit der Inauguration der Siedelung und dem, was die Römer später *mundus* nannten, in Zusammenhang stehen werden,’ etc. Taubler was justified therefore in emphasising the resemblance of *Roma quadrata* and the *mundus* to the Terremare *templa* and their pits. Weinstock again was over-sceptical).

My own account of the *mundus*, which was penned before I had read any of the foregoing articles, is in the main compatible with Deubner’s cautious and convincing conclusions. Deubner keeps clear of the *manalis lapsus*, and ignores Boni’s alleged *mundus*. Perhaps he was wise. At any rate I alone must bear the responsibility of conjecturing that the *mundus* on the Palatine was originally the Bronze-Age *tholos* of a Palatine king, and of seeking a parallel to it on the adjacent Capitol.

The *mundus*, then, was in some sense the gate of the Underworld. But Paulus epitomizing Festus, himself the epitomator of Verrius Flaccus², says that the portal of Orcus, through which souls of the dead (*Manes*) streamed³ up to join the living (*ad superos manarent*), was known as *manalis lapis*⁴. Unless we are to suppose that Rome boasted of rival entrances to the nether regions, we are driven to conclude that this *manalis lapis* was a single stone by which the mouth of the bottle-shaped *mundus* was corked or stoppered. Paulus obviously connects the word *manalis* both with *Manes*, 'the dead,' and with *manare*, 'to stream.' The former connexion is possible⁵, but improbable; the latter alone is valid. He continues⁶: 'They used the term *manalis lapis* also of a certain block (*petra*⁷), which was outside the Porta Capena close to the temple of Mars⁸. When in time of severe drought they dragged this block into the City, a shower immediately followed⁹, and since the block streamed

G. Wissowa in Pauly—Wissowa *Real-Enc.* ii. 310, *id.* *Rel. Kult. Rom.*² p. 121 approves the connexion of *aqua-elictum* with Iupiter *Elitius* propounded by O. Gilbert *Geschichte und Topographie der Stadt Rom im Altertum* Leipzig 1882 ii. 154 and accepted by E. Aust in Roscher *Lex. Myth.* ii. 658, *id.* in Pauly—Wissowa *Real-Enc.* v. 2366 f., despite the objections of M. H. Morgan 'Greek and Roman Rain-Gods and Rain-Charms' in the *Transactions of the American Philological Association* 1901 xxvii. 100 ff. (especially p. 105 f.). I was formerly attracted by this view (*Folk-Lore* 1904 xv. 269), but am now satisfied that Iupiter *Elitius* was essentially a lightning-god, not a rain-god (pace J. B. Carter *De deorum Romanorum cognominibus* Lipsiae 1898 p. 42, P. Perdrizet in Daremberg—Saglio *Dict. Ant.* iii. 710). He had an altar on the Aventine (Varr. *de ling. Lat.* 6. 94) founded by Numa, whom he had instructed in lightning-lore (Liv. 1. 20). About this altar an odd tale was told by Valerius Antias (*frag.* 6 Peter *ap.* Arnob. *adv. nat.* 5. 1, cp. Ov. *fast.* 3. 285 ff., Plout. *v. Num.* 15). Numa, at the advice of Egeria, posted a dozen chaste youths in ambush beside a spring, from which Faunus and Martius Pius were wont to drink, and further mixed much wine with the water. The gods drank deep, fell into a stupor, and were bound fast by the young men (Sir J. G. Frazer in his note on Ov. *fast.* 3. 289 regards the incident as 'probably modelled on' the ruse by which Midas captured Silenus). Faunus and Martius Pius were thus forced to disclose to the king the means by which Iupiter could be enticed from heaven to earth. The king thereupon offered sacrifice on the Aventine, enticed Iupiter to come down, and pressed him to reveal the right method of expiating thunderbolts. 'With the head...' said Iupiter: 'of an onion,' added Numa. 'With a human...', said Iupiter: 'hair,' put in Numa. 'With a living creature,' said the god: 'With a sprat,' concluded the king. And so surrogates for the head and hair of a live man were found in an onion, a hair, and a sprat (apparently the 'hair' suggested a small fish, cp. the use of *τριχίς, τριχίας, τριχιδιον*, etc.), which things continued to form the ingredients of a lightning-spell (Plout. *v. Num.* 15) (in the *Class. Rev.* 1903 xvii. 269 and 270 n. 1 I have discussed the similar mitigation of human sacrifice to Dis and Saturn (Varr. *ap.* Macrobi. *Sat.* 1. 7. 28 ff., 1. 11. 48 f., cp. Dion. Hal. *ant. Rom.* 1. 19) and to Mania (Macrobi. *Sat.* 1. 7. 34 f)). Iupiter returned to heaven in a 'gracious' mood and the place was called *Ilivum* in consequence (Plout. *v. Num.* 15 καὶ τὸν μὲν θεὸν ἀπελθεῖν ἔλεω γενόμενον, τὸν δὲ τόπον Ἰλίκιον ἀπ' ἐλείων προσαγορευθῆναι). Later, however, he slew with a thunderbolt Numa's successor, Tullus Hostilius, who had made some slip in the due performance of these rites (L. Calpurnius Piso *frag.* 10 Peter *ap.* Plin. *nat. hist.* 2. 140 and *frag.* 13 Peter *ap.* Plin. *nat. hist.* 28. 14, Liv. 1. 31, Aur. Vict. *de viris illustr.* 4. 4).

Since the wooded slope of the Aventine (A. Mehin *L'Aventin dans l'antiquité* Paris 1906 p. 110) was 'black with the shade of the ilex' (Ov. *fast.* 3. 295), I conjectured years ago (*Class. Rev.* 1903 xvii. 270, *ib.* 1904 xviii. 365 f.) that Iupiter *Elitius* should rather be Iupiter *Ilivius*, god 'of the Oak' (*ilex, ilicinus, ilignus, iligneus*). Prof. Goldmann tells me that he had independently hit upon the rendering *Elivius*, 'of the Oak.' He kindly drew my attention to a paragraph by H. Schuchardt in the *Zeitschrift für romanische*

with water they called it *manalis lapis*.' Once more we hear of *manales lapides* or *petrae* in a suggestive context. Fulgentius (c. 480—550 A.D.¹) in his *Explanation of antiquated Phrases* asks what *manales lapides* are, and answers: 'Labeo², who expounded the Etruscan lore of Tages and Begoe(?)³ in fifteen volumes, has the following observation: "If the lobes of the liver prove to be coloured like red arsenic, then you need to trail the *manales petrae*." These are blocks which the ancients used to draw like rollers round their boundaries with a view to curing a dearth of rain⁴.' G. Wissowa denounced the extract from Labeo as a forgery⁵, but there is no real ground for doubting the accuracy of Fulgentius' explanation. It is quite possible, indeed highly probable, that the *manalis lapis* outside the Porta Capena was an old sepulchral pillar of the Etruscan sort⁶: the *via Appia*, bordered with tombs, skirts the hill on which stood the temple of Mars⁷. Similarly the *manales petrae* mentioned

by Fulgentius were in all probability Etruscan tomb-pillars or boundary-stones¹, which in time of distress would be trundled round the area under their especial protection. Finally, Varro informs us that *aquae manale* meant a small water-jug². The term had an interesting history, and seems to have been re-interpreted as a basin for the hands in the *aquimanile* or *aquiminarium* of Christian ritual³.

Early in 1914 Commendatore Boni, digging on the Palatine under the north-eastern part of the peristyle of the *domus Augustiana*, discovered a *tholos*, which he identified with the *mundus*. This identification was promptly accepted by T. Ashby⁴, O. L. Richmond⁵, A. L. Frothingham⁶, and others⁷ on grounds that seem *prima facie* plausible⁸. Ashby reports⁹: 'a chamber with a bee-hive roof was found, the sides of which are lined with blocks of cappellaccio (a soft tufa); in the centre of it a circular shaft descends to two underground passages cut in the rock...which diverge but (after forming a right-angled triangle with a hypotenuse of 12 metres) meet again in a rock-cut domed chamber, half of which has been destroyed by Domitian's foundations.' Some further details are given by Richmond¹⁰ and L. A. Constans¹¹, but so far no complete ground-plan or section has been published.

Now *à priori* a tholoid structure underground might be one of three things—a granary, a well, or a tomb. And arguments are not wanting in support of each identification.

K. O. Muller¹ long since drew attention to Plutarch's² account

found that the ancient "mundus" had been excavated at the augural centre of the hill, on the true summit, and that the direction of the caverns followed the lines of "cardo" and "decumanus." Domitian covered it with indestructible concrete several feet thick, over which was his area Palatina. The position is to the east of the Apollo temple. It is thought that the mouth had been covered over and disused not later than the fourth century B.C.... In 1913—1914 the excavators discovered over the round mouth of the ancient "mundus" on the Palatine a square depression, and a rectangular block of specially hard stone fitting one half of it. There were fragments of a second such block near by.

Richmond naturally claims that these facts confirm his restoration of Fest. p. 258 b 5 ff. Muller, p. 310. 35 ff. Frazer in his note on *Ov. fast.* 4. 821 (p. 386 n. 3) says: 'Perhaps we should insert *locus* after *Quadrata Roma* or after *saxo* to correspond with *munitus*.' But Richmond's emendation is more attractive.*

¹ L. A. Constans in the *Comptes rendus de l'Acad. des inscr. et belles-lettres* 1914 pp. 109—111: 'M. Boni a trouvé une voûte à tholos, faite d'une superposition de blocs quadrangulaires, ouverte, et inclinée vers le midi, en telle sorte qu'elle ne forme pas une circonférence parfaite. Là s'ouvre un nouveau puits, creusé dans le tuf, au fond de ce puits, à 12 mètres au-dessous du niveau du sol, deux couloirs bifurquent: l'un, le plus étroit, est droit; l'autre, plus large, est coudé, au bout de quelques mètres, à angle droit, en telle sorte qu'il rejoint l'extrémité du premier, déterminant avec lui un triangle rectangle dont l'hypoténuse, formée par le couloir étroit, a une douzaine de mètres de long. M. Boni imagine que lorsqu'on portait dans le *munitus*, grenier sacré, les grains, prémices de la saison, on allait par le couloir large et revenait par le couloir étroit. On suivait la marche inverse quand on voulait chercher du grain dans le *mundus* pour les semailles. Ces deux couloirs aboutissent l'un et l'autre à une chambre circulaire, tout entière taillée dans le tuf, avec une coupole haute au sommet de laquelle un trou circulaire laisse voir le jour; sur les parois, des ouvertures à sommet formant angle aigu semblent être l'accès d'autres couloirs. Une banquette est ménagée à une assez grande hauteur en face de l'aboutissement des deux couloirs. Les couloirs et la chambre circulaire sont tapissés d'un enduit argileux: à la rencontre du sol et des parois, le tuf est taillé de façon à former une baguette arrondie; M. Boni prétend que, d'après un texte de Columelle (*de re rust.* 1. 6), ce serait une particularité de la construction des greniers, destinée à éviter des angles où des animaux pourraient faire leur nid. Le *mundus* en question se trouve à peu près sous l'emplacement du trône impérial, dans le fond du *tablinum* du palais des Flaviens. M. Boni pense qu'au-dessus du *mundus*, et non dans la *Régia*, devait être le sanctuaire de Mars, protecteur de l'agriculture: les Saliens auraient conservé les armes sacrées dans la chambre à tholos du premier étage. On a recueilli au cours des fouilles un objet conique en bronze, avec des ornements en fer, formant douze lignes, qui rayonnent à partir du sommet. M. Boni y voit un casque.'

of the foundation of Roma Quadrata and inferred from the casting of first-fruits into the pit¹ that the *mundus* was the larder or store-house of the new city. W. Warde Fowler urged that, if it was used for storing grain, we can see why it should have been opened on August 24². That date 'follows the Consualia [Aug. 21], a festival which almost beyond doubt has reference to harvesting, and immediately precedes the Opiconsivia [Aug. 25], which almost as certainly represents the storage of the grain as completed³.' Warde Fowler further conjectured that on August 24 'the seed-corn for the autumn sowing was separated from the rest of the grain, and deposited in an underground storing-place⁴, the *mundus*. Since the rough old-fashioned wheat called *far* was sown throughout October⁵, whereas the better wheat called *triticum* was not to be sown till after the setting of the Pleiades⁶ (on or about Nov. 9), the other two days for the opening of the *mundus*—October 5 and November 8—are equally intelligible. When the city ceased to be a practical centre of agriculture, and the Etruscans established their dominion in Rome, 'the *mundus* took on a new meaning connected with the Etruscan ideas of a nether world⁷' and the *lapis manalis* was wrongly linked with the Manes. The transition would be facilitated by the fact, duly noted by Sir J. G. Frazer, that 'the spirits of the dead are often supposed to watch over or further the growth of the crops: that is why the firstfruits are often presented to them⁸.'

A. L. Frothingham in the *Am. Journ. Arch.* 1914 xviii. 315 and, apparently, Sir J. G. Frazer in his note on *Ov. fast.* 4. 821 (p. 386) mis-translate the passage.

Warde Fowler's explanation of the *mundus* as essentially a subterranean granary for the seed-corn commended itself to Professor F. M. Cornford, who worked out an interesting parallel in Eleusinian usage¹. Boni too regarded the *mundus* that he found on the Palatine as the sacred granary of early Rome and sought to elucidate its arrangements on that assumption². This granary-hypothesis, which obviously suits the name *Cereris mundus* used by Festus³, Apuleius⁴, etc.⁵ and can at least be made to fit the accounts of *Quadrata Roma* given by Festus⁶ and Plutarch⁷, is in fact the accepted solution of the problem.

Still, it must be borne in mind that other *thóloi* on the Palatine are beyond question in the nature of early cisterns⁸, and that the

⁷ *Supra* p. 436 n. 2. There is an important discrepancy here between Plutarch and Ovid. Plutarch places the *mundus*, into which at the foundation of the city first-fruits and earth were thrown, somewhere in the neighbourhood of the later Comitium. Ovid puts his corresponding *fossa* on the Palatine (*fast.* 4. 815 alter adit nemorosi saxa Palati... 821 ff. fossa fit ad solidum, fruges iaciuntur in ima | et de vicino terra petita solo. | fossa repletur humo, plenaeque imponitur ara. | et novus accenso fungitur igne focus). It is usually assumed that Plutarch has blundered. But A. L. Frothingham in the *Am. Journ. Arch.* 1914 xviii. 316 f. notes 'the transfer to the Comitium of so many of the *sacra* and traditions of the Palatine' and concludes: 'When the city of the Four Regions was established and the new classification of the population was made that is associated in one tradition with the famous augur Attus Navius, it is reasonable to suppose that the founding of the new and larger *urbs* of Rome with its single and extended pomerium, centring in or near the Comitium, would be celebrated by a new *mundus* in the centre of the new *urbs*. It is curious that it is precisely with Attus Navius that tradition connects the transfer from the Palatine to the Comitium of the Ficus Ruminalis of Romulus and Remus, and also with him the establishment of the *putal* or circular sacred enclosure in the Comitium. It seems probable that when Plutarch wrote, the old *mundus* of the Palatine had long ceased to be used, and may even have been forgotten; and that in speaking of the *mundus* as in the Comitium he was not making any blunder.'

⁸ *Supra* p. 366 n. 1.

rock-cut chambers and channels of Boni's *mundus* could, not unreasonably, be explained as a somewhat more extensive reservoir¹. Besides, such an explanation would make sense of the *manalis lapis*. The well-mouth would be appropriately closed by a 'streaming stone.' More than that. Recent philologists² derive the word *mundus*, both adjective and substantive, from a root meaning 'damp, wet, moisten, wash.' They suggest that *mundus* the adjective denoted successively 'watered, washed down, clean, clear, neat,' and that *mundus* the substantive continued the series 'neatness, adornment, order, cosmic order, world.' But on this showing it is thinkable that *mundus* the substantive at an early stage in its history meant 'place washed down, cistern' or the like, being perhaps a *Reimwortbildung* to pair

with *fundus*¹. The *mundus* on the Palatine may in fact be a religious survival, perpetuating the equipment of a primitive homestead.

Neither the granary- nor the well-hypothesis will quite adequately explain the dreadful sanctity that in Roman belief attached to the Palatine *mundus* or justify its description as 'the jaws of Pluto'², 'the gate of gloomy underworld gods'³, and 'the portal of Orcus'⁴. These expressions point rather to a third possibility. Was the *mundus* originally neither a granary, nor a well, but a tomb—say the Bronze-Age *thólos* of the Palatine king? As such it might fairly be dubbed *mundus* by a later generation and held to imitate the celestial vault⁵. Offerings of food and other necessities brought to the buried king might in Italy as in Greece lead to his grave being deemed a *thesaurós*⁶ and even, in post-regal times, being treated as a real or symbolic store-house for the seed-corn of the community⁷. Lastly, the stone that formed the apex or finial of the tomb would doubly deserve its name *manalis*. For, while some would think of the Manes⁸ returning from the Underworld to help their people in distress, others might remember that to open up the grave of a buried king was one method of inducing a deluge of rain⁹. In short,

A striking case is that of Antaios king of Mauretania: Mela 3. 106 hic Antaeus regnasse dicitur, et signum quod fabulae clarum prorsus ostenditur collis modicus resupini homini imagine iacentis, illius ut incolae ferunt tumulus: unde ubi aliqua pars eruta est solent imbres spargi, et donec effusa repleantur eveniunt. Gerhard *Ausl. Eisenb.* ii. 105 n. 75, 132 n. 18 and K. Wernicke in Pauly—Wissowa *Real-En.* i. 2340 think that the myth of Antaios

the assumption that the *mundus* was a prehistoric tomb is found to cover the whole spread of usages connected with it in historic days. Nor have we far to look for a somewhat analogous case. Adjoining the Palatine was the Capitol, and we have already seen that in the Capitoline temple, side by side with Jupiter on his throne, stood an ancient grave-stéle or boundary-stone¹, which was viewed as an appanage of the sky-god and in art portrayed as a blue globe resting on a square plinth²—a *mundus* of the celestial sort. Roman writers called it the stone of Terminus³. But such a stone, at its erection, had the blood of a burnt sacrifice along with incense, corn, honeycombs, wine etc. placed in the hole prepared for it⁴. In other words, it was treated as the tombstone of a man and received the offerings normally brought to the Manes⁵. Nor is the notion of an early tomb on the Capitol beyond the pale of possibility. The story of Aulus' head dug up on that very spot is more than a mere piece of bad etymology⁶.

In this connexion it is impossible to ignore that most impressive of all Roman temples, the Pantheon⁷. For its amazing dome, while

has borrowed this trait from the myth of Kyknos (Hes. sc. *Hor.* 472 ff. Venus, the most prominent among the ancestral deities of that family¹. So much, indeed, is clear from Dion Cassius' account²:

'Also he (*sc.* Agrippa³) completed the building called the Pantheon. It has this name, perhaps because it received among the images which decorated it the statues of many gods, including Mars and Venus: but my own opinion of the name is that, because of its vaulted roof, it resembles the heavens. Agrippa, for his part, wished to place a statue of Augustus there also and to bestow upon him the honour of having the structure named after him: but when the emperor would not accept either honour, he placed in the temple itself a statue of the former Caesar and in the ante-room statues of Augustus and himself.'

³ Opinions differ as to the character and general aspect of Agrippa's Pantheon.

In 1892 the architect G. Chedanne, from careful examination of the consoles etc. in the existing portico, concluded that Agrippa's building was a deca-style, peripteral hall, originally facing south and covering the whole space now occupied by the *Piazza del Pantheon* (H. Jordan—C. Hulsen *Topographie der Stadt Rom im Alterthum* Berlin 1907 i. 3. 589). Further, by means of brick-stamps taken from many parts of the extant rotunda, he showed that this was constructed by Hadrian in 120—124 A.D. (*ib.* p. 587 n. 81).

Subsequent investigations have been held to establish the following points: '(1) that the temple built by Agrippa consisted of an oblong cella with a portico of ten columns facing the south: (2) that in front of this temple, *viz.*, on the south side, was an immense circular piazza, of which a portion of the enclosing wall concentric with and contiguous to the rotunda has been found; (3) that this circular piazza was uncovered, as its pavement, found 8 feet below the floor of the Pantheon, sloped downwards from the centre to the circumference' (³ It is probable that this piazza was surrounded with a portico, the founda-

The resemblance of the whole edifice (fig. 291)¹ to the sky would be enhanced by its ceiling coffered with bronze flowers² or stars (fig. 292)³, and perhaps also by its seven niches tenanted—if Mommsen's conjecture is sound⁴—by the seven gods of the week

tion walls of which were uprooted when the rotunda was built): (4) that the rotunda was built on the site of the circular piazza, some 7 or 8 feet above the pavement of the same; and (5) that at a subsequent period Agrippa's temple and its portico were taken down and rebuilt at a higher level, to form the portico of the existing Pantheon facing north. In rebuilding the portico it was made octostyle instead of decastyle, the eight columns of the front resting on what must have been the rear wall of Agrippa's cella. The entablature, with the inscription on the frieze, and the pediment also belonged to Agrippa's temple' (W. J. Anderson—R. P. Spiers *The Architecture of Ancient Rome* rev. by T. Ashby London 1927 p. 79 f.).

Recently, however, the pendulum has swung back. G. Cozzo *Ingegneria romana* Roma 1928 pp. 255—297 ('La costruzione del Pantheon') with pls. 96—117 figs. 185—214 argues that the Pantheon of to-day is essentially the structure raised by Agrippa in 27 B.C.: that its original entrance was on the south through a great outer hall; that later this hall became part of the *Thermae*, the rotunda-entrance being then transferred to the north, and lastly that the solid projection and porch of the Pantheon were added, perhaps in the time of Septimius Severus, on the site of a quite separate pre-Agrippan building.

D. S. Robertson *A Handbook of Greek & Roman Architecture* Cambridge 1929 p. 248 *à propos* of Cozzo's view concludes: 'This bold theory, which is supported by many arguments of detail, could perhaps be adapted to fit a Hadrianic date for the rotunda, but, even so, it seems very unlikely that it will win general acceptance.' *Id.* in the *Class. Rev.* 1934 xlviii. 229 demurs also to F. Granger's contention, 'most fully explained in *J. R. I. B. A.* 26 November 1932, that the Pantheon is a huge sundial, designed to show the summer solstice by the passing of the sun's rays through the centre of the imaginary sphere of which the dome forms the upper half.'

An item of evidence hitherto, I think, unnoticed may be found in the fresco-work illustrated above (fig. 292). Wall-decoration of the 'Third Pompeian Style' (c. 25 B.C. — c. 50 A.D.) might well be inspired by Agrippa's Pantheon, a recent architectural triumph just finished in 25 B.C. No doubt, the quasi-architecture of the 'Third Style' was often fantastic and unreal. Still, the occurrence of this novel and striking *motif* demands some explanation. It is fittingly explained, if we admit that Agrippa's building was a domed structure like its Hadrianic successor.

Saturnus, Sol, Luna, Mars, Mercurius, Iupiter, Venus¹. Now at the very summit of this great rotunda, at a height of 43·20^m (144 ft.) above the coloured pavement, was a circular opening some 9^m (29 ft.) across, surrounded by an ornamental cornice of bronze. Through that opening rain fell, and still falls, unheeded. Is it fanciful to suggest² that such an arrangement of the louver³ points to, or at least accords with, a long-standing belief that rain habitually fell through a hole in the sky?

iv. The holed vessel elsewhere.

An analogous Semitic conception, the 'windows of heaven' (*'rubboth hashshamayim*), has been mentioned in a foot-note⁴, but is deserving of fuller treatment⁵. The Hebrew phrase is rendered by some the 'lattices of heaven⁶', and the late Dr A. Wright reminds us 'that in Egypt and Libya the open windows of the harem are regularly fitted with lattice work containing minute perforations⁷'. The transition in meaning from a window to a sieve⁸ was therefore not difficult. Hence we may explain the vulgate version of an obscure passage in the Old Testament: 'He made darkness a hiding-place round about him, sending waters from the clouds of the skies as through a sieve⁹.' Hence too Theodoret in *s. v* A.D. could describe God as 'raining from the clouds...and separating the drops and letting them fall now in fine rain, now in copious streams, and parting as it were with a sieve the offspring of the clouds¹⁰.' The *graphical Dictionary of Ancient Rome* Oxford 1929 p. 382 f. The subject could readily be expanded into a monograph (R. Eisler *Weltenmantel und Himmelszelt* München 1910 has shown the way and collected much relevant material); for such treatment, losing its significance, passed into the repertory of renaissance and modern decorative art. To give but a single instance, the hall of Queens' College, Cambridge, has a timbered roof painted blue and spangled with stars of lead-gilt round its central louver.

alleged examples of rain-charms in Scripture¹ do not, however, illustrate the actual usage of a holed vessel or sieve².

A remarkable instance of rain-making through a celestial sieve is recorded by Major S. C. Macpherson in his account of the Khonds' religion. A great Janni with two smaller priests and some of the principal elders address the following prayer to the rain-god Pidzu Pennu:

'Oh, give us abundant rain, enough to melt the hill-tops. Go and fetch water for us, if need be, by force or fraud, from the stores of your friends the gods of rain. Bring it in brass vessels, and in hollow gourds, and resting on the sky above our land, pour the water down on it through your sieve until the sambur, unable to live in the forests, shall seek shelter in our houses, and till the soil of the mountains shall be washed into our valleys³.' Etc.

In the Finnish *Kalevala* Louhi, the lady of the north country Pohjola, prays thus:

Maiden of the Clouds, Mist-Maiden,
Scatter from thy sieve the cloudlets,
And the mists around thee scatter,
Send the thick clouds down from heaven,
Sink thou from the air of vapour,
O'er the broad lake's shining surface,
Out upon the open water,
On the head of Vainamoinen,
Falling on Uvantolainen⁴.

also haunts lakes and fountains, where she may be seen at noon as a fair white lady¹. In the Harz district it is believed that, between eleven and twelve o'clock at night, she carries water in a vessel without a bottom². Or again, in the same locality she appears as a black woman with two buckets that have no bottom to them³.

The *motif* of the holed bucket is worked into the German folk-tale of 'Master Awl' (*Meister Pfriem*)⁴. This tells how a shoe-maker, who grumbled at everything, once dreamt that he was knocking loudly at the door of heaven. Saint Peter let him in, provided he gave up his grumbling ways and found fault with nothing inside.

'So he went in, and walked up and down the wide expanses of heaven. He looked around him, to the left and to the right, but sometimes shook his head, or muttered something to himself. Then he saw two angels who were carrying away a beam. It was the beam which some one had had in his own eye whilst he was looking for the splinter in the eye of another. They did not, however, carry the beam lengthways, but obliquely. "Did any one ever see such a piece of stupidity?" thought Master Pfriem; but he said nothing, and seemed satisfied with it. "It comes to the same thing after all, whichever way they carry the beam, straight or crooked, if they only get along with it, and truly I do not see them knock against anything." Soon after this he saw two angels who were drawing water out of a well into a bucket, but at the same time he observed that the bucket was full of holes, and that the water was running out of it on every side. They were watering the earth with rain. "Hang it!" he exclaimed; but happily recollected himself, and thought, "Perhaps it is only a pastime. If it is an amusement, then it seems they can do useless things of this kind even here in heaven, where people, as I have already noticed, do nothing but idle about." He went farther and saw a cart which had stuck fast in a deep hole. "It's no wonder," said he to the man who stood by it; "who would load so unreasonably? what have you there?" "Good wishes," replied the man. "I could not go along the right way with it, but still I have pushed it safely up here, and they won't leave me sucking here." In fact an angel did come and harnessed two horses to it. "That's quite right," thought Pfriem, "but two horses won't get that cart out, it must at least have four to it." Another angel came and brought two more horses; she [*he*, he] did not, however, harness them in front of it, but behind. That was too much for Master Pfriem, "Clumsy creature," he burst out with, "what are you doing there? Has any one ever since the world began seen a cart drawn in that way? But, in your conceited arrogance, think that you know everything best." He was going to say more, but one of the inhabitants of heaven seized

him by the throat and pushed him forth with irresistible strength. Beneath the gateway Master Pfriem turned his head round to take one more look at the cart, and saw that it was being raised into the air by four winged horses. At this moment Master Pfriem awoke.⁷

J. Bolte and G. Polívka¹ in a thorough-going commentary on this tale regard it as composed of two distinct elements—an early legend involving symbols of fruitless labour, and a popular story about an impudent fellow who pushed his way into heaven. They trace the former element back to a date *c.* 800 A.D., when it is found in a Greek legend of Saint Arsenios the Great², ex-tutor of Arcadius and Honorius (*c.* 334—449 A.D.). This anchorite saw in a vision three successive symbols of human vanity—(1) an Ethiopian trying to lift a pile of wood, but adding logs to his burden instead of subtracting them from it; (2) a man baling water out of a pit into a cistern, which had holes in it; and (3) two men on horseback carrying a pole between them, but endeavouring to enter the door of a sanctuary side by side, because neither of them was willing to let the other enter first.

Such symbols for labour lost may occur singly and give rise to proverbial phrases. Thus the Germans say:

*Wasser in ein löcheriges Fass schöpfen*³.

*Wasser in ein sybeckin schöpfen*⁴.

*Wasser schöpfen mit einem Siebe*⁵.

Often the emptying of a lake or pool with a sieve is an impossible task laid upon a human by a superhuman being. In a folk-tale from Haute-Bretagne Blue Beard bids a man, who enters his service, drain a pond with a sieve⁶. In another from central Germany

the ghost of a dead woman is put under a ban to empty a pool with the same utensil¹. In an English tale a girl is ordered by her step-mother to fill a sieve at the Well of the World's End, and succeeds in so doing thanks to the advice of a friendly frog:

'Stop it with moss and daub it with clay.
And then it will carry the water away².'

The performance of manifest impossibilities³ was throughout the middle ages held to be a signal proof of divine favour or at least of superhuman powers. As late as 1209 A.D. the Poles were confident of victory because a certain sorceress (*Pythonissa*) marched at the head of Duke Wlodislaus' army bearing water in a sieve⁴.

In general it may be maintained that the frequent connexion of witches with sieves⁵ depends on the belief that witches are rain-makers, and that rain can be made by pouring water through a sieve. It is not, however, easy to cite unequivocal evidence of a sieve

being actually used in a rain-charm within the confines of Europe. Perhaps the clearest case is one quoted by Sir James Frazer¹:

'In 1868 the prospect of a bad harvest, caused by a prolonged drought, induced the inhabitants of a village in the Tarashchansk district to dig up the body of a Raskolnik, or Dissenter, who had died in the preceding December. Some of the party beat the corpse, or what was left of it, about the head, exclaiming, "Give us rain!" while others poured water on it through a sieve.'

The last stage in the history of such a conception is reached, when it ceases to be serious and becomes merely jocular. Verbally there is not much to choose between the threat of the witch in Shakespeare's *Macbeth*—

But in a sieve I'll thither sail²—

and the performance of Edward Lear's Jumbles—

They went to sea in a Sieve, they did,
In a Sieve they went to sea³.

Yet the two are poles asunder. Three centuries have intervened and brought with them the momentous change from belief to disbelief.

(e) Rain as the seed of Zeus.

i. Zeus identified with rain.

That rain was regarded by the Greeks as the water of Zeus, we have already seen⁴. It may next be shown that Zeus himself was thought to descend in the falling shower and thereby to fertilise Mother Earth.

Euripides speaks of rain as 'Zeus-drops' in the opening lines of the *Helene*:

See the fair virgin streams of Neilos, who—
Instead of Zeus-drops—waters all the plain
Of Egypt, fed by the white melting snow⁵.

Similarly Greek magical papyri found in Egypt refer to rain more than once as 'Zeus-water⁶'. These curious adjectival phrases are

noteworthy, because they seem to imply that Zeus was in a very special sense connected with, perhaps even identified with, the rain that fell from the sky.

Direct identification of Zeus with the rain is, however, a product of philosophizing thought, and is not expressed in literature till Roman times. Thus Varro writes: 'These same deities, sky and earth, are Iupiter and Iuno; for, as Ennius puts it,—

There is the Iupiter for me: the Greeks
So name the air. He's wind and cloud, then rain,
From rain turns cold, then once again thin air.
Yes, the same things are Iupiter just because
He helps both mortal crowds and all the beasts¹.

Again, Arnobius makes a hypothetical opponent explain away the pagan belief in a union between Iupiter and Ceres by saying that 'Iupiter' really means the rain and 'Ceres' the earth—an easy method of allegorical interpretation, which he goes on to apply to other cases also².

ii. Zeus descends in rain to fertilise the earth.

More genuinely Greek is the conception of rain that occurs in a beautiful passage of Virgil's *Georgics*. The poet is describing the spring-time:

Spring helps the leafy grove: spring helps the wood:
Spring makes Earth swell and crave the seeds of birth.
Then the omnipotent sire, the Burning Sky,
Into the bosom of his joyous wife
With fruitful rain comes down, and mightily
Himself commingled with her mighty body
Nurtures all life that thence originates³.

Zeus descends in rain to fertilise the earth 453

Virgil's description, according to J. Conington¹, was evidently suggested by certain lines of Lucretius:

Lastly rain perishes
When downward dropped by the sire, the Burning Sky,
Into the bosom of mother Earth².

Lucretius in turn, according to H. A. J. Munro³, may have had in view a remarkable fragment from the *Danaides* of Aischylos, in which Aphrodite says:

The pure Sky yearns to pierce the soil, and Earth
Yearns likewise for that wedlock. Whereupon
Rain falls from the bridegroom Sky and wets the Earth;
And she brings forth her brood for mortal men—
Grass for their sheep and grain, Demeter's gift,
While trees from that same watery brilliance grow
Their fruits to fullness. And I help them all⁴.

But indeed the thought was a commonplace in classical poetry⁵. Euripides in words often cited by ancient writers expresses it thus:

Earth yearns for rain, whenever her parched field
Lacks moisture and a drought destroys the corn.
The great Sky filled with rain is fain to fall
Into the Earth through Aphrodite's might.
Soon as the two are one, they generate
And nurture for our sake all things whereby
The race of mortal man may live and thrive⁶.

454 Zeus descends in rain to fertilise the earth

An equally famous passage from the *Chrysippos* of the same poet expands the idea:

Mightiest Earth and Burning Sky of Zeus--
 He was the sire of men and gods alike,
 And she from him received
 The pelting watery drops
 And mortals bare, bare too both blade and beast.
 Wherefore aright we deem her mother of all.
 Yea, and the things that spring
 From Earth to Earth return,
 But such as grow from seed aethereal
 Home again go to the very height of heaven.
 Nothing that lives shall die,
 But, scattered now by this and now by that,
 Put on fresh forms of immortality¹.

Vitruvius informs us that Euripides took these views—views which left a lasting trace on the poetic thought of Rome—from the philosopher Anaxagoras². But if so, it is merely one more case of Greek philosophy starting from the premises of folk-belief³. And that belief I take to have been that the rain falling from the sky was in very truth the seed of the sky-god.

Nowhere, perhaps, is this put more simply than in Proklos' commentary on the *Timaios* of Platon. After remarking that Orpheus speaks of the Earth as the first bride and of her union with the Sky as the very first marriage⁴, he proceeds: 'The ordinances of the Athenians were aware of this, when they bade the preliminary marriage sacrifice be offered to Sky and Earth. It was with the same intent that at the Eleusinian rites they looked up to the Sky and shouted *hýe*, "rain," then down to the Earth and added *kýe*, "conceive": they realised, in fact, that all things spring from Sky and Earth as from a father and a mother⁵.'

iii. The myth of Danaë and analogous myths.

The belief enunciated in the foregoing paragraph explains more than one incident belonging to an early stratum of Greek mythology¹.

Thus it was as a fall of golden rain that Zeus visited Danaë². Apart from a few stray allusions³, the oldest version of her myth is that given by Pherekydes of Athens, an ancient logographer who drew from epic sources⁴. His narrative is preserved by the learned scholiast on Apollonios Rhodios in the following form⁵:

¹ Pherekydes in his second book tells how Akrisios married Eurydike, daughter of Lakedaimon. They had a child, Danaë. But when her father consulted the oracle about male offspring, the god at Pytho replied that a son would be born, not to him but to his daughter, and that he himself would be slain by that son. Thereupon Akrisios returned to Argos and made an underground chamber of bronze in the courtyard of his house⁶. Here he brought Danaë with a nurse, and kept watch over her lest she should give birth to a son. But Zeus was enamoured of the maiden and poured from the roof in the likeness of gold. She received it in her bosom; and Zeus manifesting himself had intercourse with the maiden⁷. They had a son, Perseus. Danaë and the nurse reared him unbeknown to Akrisios. But when Perseus was three or four years old, Akrisios heard the voice of the child at play, and sent his servants to fetch Danaë and the nurse. The latter he slew. The former with the child he brought to the altar of Zeus *Herkios*, and asked her privily whence came the boy. She said "From Zeus." He did not believe it, but put her and the boy into a chest, shut the lid, and cast it into the sea. They drifted to the island of Seriphos, and there Diktys the son of Peristhenes when fishing with a net (*diktylon*) drew them to land. Then Danaë begged him to open the chest. He did so, and on hearing who they were took them to his home and brought them up as his own kith and kin.⁸

The myth combines the episode of the golden rain with that of the floating coffer—a folk-tale *motif* which we have already had occasion to notice¹. Both subjects are represented (figs. 293, 294) on a red-figured *kylix* in the Hermitage², found at Caere and attributed to the 'Foundry Painter'³ or to the 'Triptolemos Painter'⁴. In either case the artist must have been at work between 490 and 470 B.C.⁵, a period when the relations of Athens to Persia might well quicken Athenian interest in the story of Perseus. The obverse shows Danaë sitting at the foot-end of a richly decorated couch and looking up in amazement as the long brown drops descend upon her. Mirror and *sakkos* hanging on the wall imply that this is her private bower.

The reverse gives the moment when the carpenter with mallet and bow-drill²⁶ is putting the last touches to the chest, and

Akrisios bids him close the lid upon the protesting mother and her unheeding child¹. The starry decoration of the chest was perhaps traditional, for it occurs with equal insistence on other representations of the same scene (pl. xxxviii, figs. 295¹, 296²). Indeed, it is tempting to conjecture that the star-spangled coffer was, by those who first designed it, felt to be the equivalent of a gilded coffin³, fitting sequel of the star-spangled vault in which Akrisios had confined his daughter.

A red-figured *oinochôe* in the Louvre again has Danaë sitting alone and looking upwards at the shower that falls upon her⁴. But

an *aryballos* of late, crude style, found in Kyrenaike and now in London (fig. 297)¹, complicates the scene by the addition of Eros moving away with a gesture of encouragement on the right, and an attendant woman—presumably the nurse of Pherekydes' narrative—struck with wonder on the left. The painter has here used actual gilding to denote the golden drops.

Nikias of Athens, an artist who flourished c. 350—300 B.C.² and was famous at once for his careful rendering of women and his skilful *chiaroscuro*³, must have found in Danaë a congenial subject. Tiberius is said to have dedicated this masterpiece, along with the same artist's Hyakinthos, in the temple of Augustus at Rome⁴. Not

on a picture of Danaë¹ may well refer to the work of Nikias, with which the poet must have been familiar. But certainty is unattainable.

Variations on the same theme occur in Pompeian art². The simplest and finest of these, which—I should suppose—perpetuates the scheme of Nikias with the addition of a conventional³ landscape background, is a fresco from the *Casa di Pansa* (fig. 298).⁴ Danaë, recumbent, is half-draped in a purple garment. himation yellow with green lining and deep violet shadows. Yet another fresco, in the House of M. Gavius Rufus (fig. 301)¹, unites the standing Danaë and the hovering Eros with the youthful (?) seated Zeus in a novel, but thoroughly unsatisfactory, whole.

Zeus changing himself into a lapful of gold in order to win his *innamorata* was a subject not likely to escape the notice of comedians, rationalists, and moralising expositors. Terence (or Menandros?)² already makes capital of the situation. Latin poets, both Greek³ and Roman⁴, follow suit. Prudentius at the beginning of the fifth century talks roundly of the crafty god turning himself into hard cash (*nummi*)⁵. Indeed, the gibe had long been a commonplace with the Christian fathers⁶ and is the accepted explanation of belated allegorists⁷. Small wonder, then, that Renaissance and *post*-Renaissance art perpetuated the libellous tradition⁸. Titian harped on the theme

and attempted several variations of it. At Naples¹ Cupid raises a deprecating hand as he escapes across the foot of the couch. At Madrid² and Petrograd³ the face of Jove is half-seen amid the clouds and an attendant duenna tries to catch some of the gold in her apron. At Vienna⁴ (fig. 302) the god's face again peeps through the clouds, while the old crone holds an alms-dish to take the collection. Finally, Van Dyck's Danaë at Dresden⁵ (fig. 303) extends her arms towards a shower, not only of coined money, but of chains, rings, and trinkets. So the heroine, who began by adorning a tale, ends by pointing a moral.

Little is added to our understanding of the myth by other representations of it in ancient art⁶. A fine Roman mosaic, found at Palermo in 1869 and dating perhaps from the early part of s. ii A.D., figures side by side three amatory exploits of the sky-god⁷: on the left he woos Antiope as a Satyr (*supra* i. 735 fig. 541), on the right he courts Leda as a swan, and in the centre he falls as a golden shower upon Danaë (pl. xxxix)⁸. Another great mosaic, at *Ouled Agla*

1847 i. 125 f. draws attention to the *Defensorium inviolatae virginitatis b. Mariae virginis*, a work compiled by the Dominican Franciscus de Retza (professor of theology at Vienna in 1388), in which various classical parallels to the immaculate conception are adduced and illustrated: 'So erscheint in dem einen Bilde die Danaë hinter einem vergitterten Fenster stehend, wie sie von den goldenen Strahlen des Halbmondes beschienen wird,— mit der Unterschrift: Si Dana(e) auri pluvia praegnans a Jove claret, | Cur spiritu sancto gravida virgo non generaret.' leaves the drops to our imagination, but gives us a Maenad-like Danaë sitting on a stool, with bare breast and wide-flung mantle, as she turns her face towards the sky (fig. 309)¹. The last two gems attest the all-pervading influence of such popular types as those of Doidalses' Aphrodite and Skopas' Maenad.

Finally, a bronze coin of Argos, struck by Hadrian (fig. 311)², represents Danaë seated on a throne, her head thrown back, her breast bared, and her garment held wide in the same significant manner.

The episode of the floating coffer found its highest expression, not in art³, but in literature⁴. Simonides of Keos, perhaps in one of his *thrinoi*⁵, limned the scene with exquisite skill⁶:

When in the well-wrought chest
She felt the blowing wind and moving mere,
She cowered in tearful terror and
Round Perseus cast a loving hand.
‘Child, I am sore distressed.
But thou, a baby-boy, art slumbering here
In this same comfortless bronze-bolted bark,
Stretched out ‘neath starlit night and the blue dark.
The brine that passes higher than thy hair
Thou heedest not, nor dost thou even hark
The whistling wind; but lo, thou liest there
To the crimson cloak turning thy forehead fair.
If terrors had been terrible to thee,
Thy tiny ear had listened unto me.
But now sleep babe, sleep surging sea,
Sleep all our trouble infinite.
Yet, Father Zeus, some better plight
Send, and if overbold this prayer I pray,
Forgive each wrongful word I say.’

472 The myth of Danaë and analogous myths

Simonides' verses are of course merely a poet's elaboration of a mythical theme. But the Greek mind, even in the fifth century B.C., passed readily from myth to moral; and the tale of Danaë, like many another¹, could on occasion be made the vehicle of serious thought². Later, it was not without its influence upon Christian legends³.

Barbara a martyr in Tuscany; Metaphrastes says she suffered at Heliopolis; Baronius, in the Roman Martyrology, sets her down as a martyr at Nicomedia. One authority is just as right as the other, for S. Barbara is a wholly mythical personage. There was once upon a time a very wealthy and noble Greek named Dioscorus, an idolater, who had a daughter so beautiful in face and form that he shut her up in a tower, very lofty and inaccessible, so that no man might see her, and that thus she might be kept out of mischief. According to one account, however, he allowed her to take lessons of masters, of advanced age, or, no doubt, of disagreeable appearance'. Her father, before departing on a long journey, built her a bath at the basement of her tower with two windows high up in the wall. On his return he was indignant to find that Barbara had insisted on the workmen making a third window. Taking these windows as her text, she preached to him the mystery of the Trinity. Dioscorus was furious; but, when he attacked her with his sword, the rock opened and received her into its bosom. Afterwards, directed by a wicked shepherd, her father found her and haled her by the hair to the chief magistrate, Marcian. When she refused to sacrifice to the gods, Marcian had her stripped and beaten, torn with iron combs, and hammered on the head. Juliana, a girl who pitied her, was arrested and treated in the same manner. Marcian then had the breasts of Barbara cut off, and gave orders that she should be led naked round the town. But Christ, in answer to her prayer, came from heaven and clothed her. Marcian finally gave sentence that Barbara and Juliana should be executed with the sword. 'On reaching the destined place, her father cut off her head, and Juliana suffered likewise. A flash of lightning fell and consumed Dioscorus, another flash reduced Marcian to a smoking ash-heap. Accordingly S. Barbara is held to be the patroness of firearms, and is invoked against the lightning') with pl. of S. Barbara after the painting by Hans

The myth of Danaë and analogous myths 473

All this, however, does not help us to grasp the original significance of Danaë and her golden shower. Recent investigators have attempted to explain the myth in terms of sun or shooting stars. Thus Sir James Frazer¹ writes:

'It has its counterpart in the legend which the Kirghiz of Siberia tell of their ancestry. A certain Khan had a fair daughter, whom he kept in a dark iron² house, that no man might see her. An old woman tended her; and when the girl was grown to maidenhood she asked the old woman, "Where do you go so often?" "My child," said the old dame, "there is a bright world. In that bright world your father and mother live, and all sorts of people live there. That is where I go." The maiden said, "Good mother. I will tell nobody, but shew me that bright world." So the old woman took the girl out of the iron house. But when she saw the bright world, the girl tottered and fainted; and the eye of God fell upon her, and she conceived. Her angry father put her in a golden chest and sent her floating away (fairy gold can float in fairyland³ over the wide sea⁴). The shower of gold in the Greek story, and the eye of God in the Kirghiz legend, probably stand for sunlight and the sun.'

Sir James goes on to quote other legendary examples of impregnation by the sun⁴. But he does not meet the obvious objection that

But it should be observed that neither the tower of S. Irene nor the tower of S. Barbara was an underground structure of bronze or iron, and that the sequel did not in either case involve the *motif* of the Floating Coffin. The Danaë-myth was but one ingredient of the hagiographer's strababout.

474 The myth of Danaë and analogous myths

Danaë is invariably said to have been impregnated by a golden rain, and that rain is not a very natural description of sunlight or the sun.

L. Radermacher¹ contends that the Greeks believed in impregnation by a falling star. In support of his contention he quotes the story told by Nikephoros Skeuophylax² about Saint Theodoros Sykeotes, archimandrite of Galatia and bishop of Anastasiopolis (590—613 A.D.).³ His mother Maria kept a public hostelry at Sykeon, where she met the magistrate Kosmas. On the night of her child's conception, a glittering star fell from the sky and entered her womb, symbolising—says the pious Nikephoros—the purity of his actions. The Greek life of the saint⁴ and its Latin version⁵ both vouch for the miracle. On the strength of this, and of sundry modern

superstitions about meteors¹, Radermacher suggests that Danaë's golden rain was essentially just a fine display of shooting stars. His suggestion would indeed account well for the curious persistence with which stars appear in connexion with Danaë's coffer². But shooting stars, after all, were a phenomenon familiar enough to the Greeks, and were never confused by them with rain, golden or otherwise.

Looking further afield we find that ordinary rain is sometimes credited with procreative powers. H. H. Bancroft³ in his account of the Pueblo religion describes the birth of 'the great leader, teacher, and god Montezuma':

Bell in *The Journal of the Ethnological Society of London* New Series 1868—69 i. 250 f. 'Two good-sized ruins are situated near the Pima villages; one is known as Casa Montezuma, the other as Casa Grande ... Long ago a woman of exquisite beauty ruled over the valleys and the region south of them. Many suitors came from far to woo her, and brought presents innumerable of corn, skins, and cattle to lay at her feet. Her virtue and determination to continue unmarried remained alike unshaken; and her store of worldly possessions so greatly increased that, when drought and desolation came upon her land, she fed her people out of her great abundance and did not miss it, there was so much left. One night, as she lay asleep, her garment was blown from off her breast, and a dewdrop from the Great Spirit fell upon her bosom, entered her blood, and caused her to conceive. In time, she bore a son, who was none other than Montezuma, and who built the large casas and all the other ruins which are scattered through the land. After instructing his people in the arts of civilization he departed for the south and then disappeared.'

476 The myth of Danaë and analogous myths

'His mother was, it is said, a woman of exquisite beauty, admired and sought after by all men, they making her presents of corn and skins and all that they had; but the fastidious beauty would accept nothing of them but their gifts. In process of time a season of drought brought on a famine and much distress: then it was that the rich lady showed her charity to be as great in one direction as it had been wanting in another. She opened her granaries and the gifts of the lovers she had not loved went to relieve the hungry she pitied. At last with rain, fertility returned to the earth: and on the chaste Artemis of the Pueblos its touch fell too. She bore a son to the thick summer shower and that son was Montezuma.'

The same story is current among the Pimas of California, the Mojave of the Rio Colorado in Arizona, and the Apaches¹. Indeed, the belief in conception through magical contact with water is of world-wide distribution².

We are justified, then, in the surmise that Danaë's golden shower was but a mythical expression for the rain whereby the sky-god fertilises the earth. But what of Danaë herself? She is hardly to be regarded as an earth-goddess, for she has no cult. Rather she is a heroine, whose name stands in obvious relation to that of the *Danaai* or *Danaïdes*³. Her myth too is in some points analogous to theirs. If Akrisios, king of Argos, imprisoned Danaë in an underground chamber to safeguard her virginity, his action bore an odd resemblance to that of his forefather Danaos, likewise king of Argos, who had imprisoned Hypermestra, the one Danaid that remained a virgin⁴. And if Zeus descended upon Danaë in the form of a golden rain, we cannot forget that the Danaïdes stood for the performance of a mimetic rain-charm⁵. It may well be that Danaë's complex tale⁶ includes at least one episode of an aetiological sort, and that the princess secluded, drenched with rain, and even sent adrift in a coffer was a mythical prototype of actual human happenings.

They describe her as a maiden living in isolation, unmoved by the addresses of suitors, and giving maize to the hungry Indians in times of dearth. One day, as she lay asleep, a raindrop fell on her naked bosom, and she became the ancestress of the maize-growing Pueblo Indians' J. G. Bourke *loc. cit.* tells the Mojave myth: 'This Earth is a woman; the Sky is a man; the Earth was asleep and a drop of rain fell upon her causing conception: two gods were born in the west. They were Ku-ku-matz and his brother, To-chi-pa.'

The myth of Danaë and analogous myths 477

Be that as it may, two similar epiphanies of the sky-god are recorded by Pindar, whose knowledge of the details of mythology was equalled only by his appreciation of their beauty. The poet in an Isthmian ode¹ asks his native town of Thebes on what local scene her memory most delights to dwell. On the birth of Dionysos (at whose nativity Zeus rained ambrosia²)?

Or when at midnight in a snow of gold
Thou didst receive the greatest of the gods,
What time he stood
Before Amphytrion's door
And wooed Amphytrion's wife
To bear him Herakles.

Again, in an Olympian ode³ Pindar speaks of Rhodes—

Where once the mighty king of the gods,
With golden snow-flakes rained upon the town,
When by Hephaistos' craft
The crown of the Father's head
Was cleft by a bronze-wrought axe,
And lo, Athena leapt to light
And cried aloud with a far-carrying cry—
Whereat Heaven shuddered, ay and Mother Earth.

Pindar does not expressly assert that Zeus was in this wondrous shower. But that such was the original concept is almost certain; for another Rhodian tale made Zeus consort with the earth-born Himalia 'by means of rain⁴.'

478 The myth of Danaë and analogous myths

A similar belief underlies the statement of Ovid that the Kouretes were 'sprung from an abundant shower of rain',¹ if not also the tradition preserved by the same author that at Corinth 'in the far past mortal bodies were born of rain-begotten mushrooms'.²

(f) Ominous rain sent by Zeus.

i. Rain of blood.

At critical moments Zeus expressed his mood by sending some abnormal shower. Specially ominous was the fall of blood-red rain. The *Iliad* makes it the prelude to a battle between Achaeans and Trojans:

Then Kronos' son sent evil strife among them
And from aloft, out of the burning sky,
Let fall drops dank with blood; for he was fain
To hurl to Hades many a valiant head.³

Again, when Sarpedon the Lycian was about to be slain, Zeus—

Shed gouts of blood upon the ground to honour
His own son, whom Patroklos was to kill
In fertile Troyland far away from home.⁴

The Hesiodic author of the *Shield* ('c. 650—600 B.C.⁵) has a similar description of the fight between Herakles and Kyklos:

*griechischen Literatur*⁶ München 1920 ii. 1. 217) who is named in the context (*frag.* 1 (*Frag. hist. Gr.* iii. 175 f. Bethe *op. l.* γίγαντας) ὅτε δὴ καὶ Ζεὺς λέγεται καταπεπολημνῶς Τιτᾶνας ἐρασθῆναι μιᾷς τῶν νυμφῶν Ἰμαλίας ὀνομαζομένης. καὶ τρεῖς ἐξ αὐτῆς τελευτᾶσαι ποῖδας, Σπαρταῖον (*scil.* Παρταῖον), Κρόνιον, Κέρον. Hence in Clem. Rom. *hom.* 5. 13 (iii. 184 A Migne) Εἴμα τῇ γηγενεῖ ἐν Ῥόδῳ διὰ ὄμβρου συνῆλθεν, ἐξ ἧς Παργαῖος, Κρόνιος, Κύρος A. Schwegler corrected Εἴμα τοῖς Ἰμαλίοις.

² *Ov. met.* 7. 391 ff. tandem vipereis Ephytiæ Pnenida pennis 'contigit (i. e. Medea). hic aevo veteres mortalia primo corpora vulgavit pluvialibus edita fungis.

This singular tradition perhaps implies the folk-etymology of Μυκῆναι from μύκησ (W. Pape—G. E. Benseler *Wörterbuch der griechischen Eigennamen*¹ Braunschweig 1875 ii. 958). Note especially Paus. 2. 16. 3 ἤκουσα δὲ καὶ ὡς διψῶντι (i. e. τῷ Περσέϊ) ἐπῆλθεν ἀνελέσθαι οἱ μύκητα ἐκ τῆς γῆς. βέντος δὲ ὕδατος πῶν καὶ ἡσθεῖς Μυκῆνας ἐθετο τὸ ὄνομα τῷ χωρίῳ—an obvious piece of folk-lore. The inhabitants of prehistoric Mykenai might well pass for the earliest race of men. On the mushroom's womb see Plin. *nat. hist.* 22. 93 vulvam enim terra ob hoc prius gignit, ipsum postea in vulva, seu in ovo est luteum. nec tunicae minor grana in cibo infantis boleti.

Silius Italicus, therefore, is following in the beaten track, when he makes Jupiter portend the death of Marcus Marcellus (in 208 B.C.) by the downfall of blood-drops from a clear sky². With other writers, Greek, Roman, and Byzantine, the portent passes into a commonplace and Zeus or Jupiter is ignored³. The same prodigy was repeatedly chronicled during the dark ages⁴. It has, indeed, attracted the

|----------|---|
| 718 B.C. | At Rome and at Laurentum after the murder of the Laurentine ambassadors and of Titus Tatius (Plout. <i>v. Rom.</i> 24). |
| 214 | At Rome in the Forum Boarium (Liv. 24. 10). |
| 194 | At Rome in the Forum, in the Comitium, and on the Capitol (Liv. 34. 45). |
| 184 | At Rome for two days on the Area Volcani (Liv. 39. 46. Iul. Obs. 59 = 4 under the date 183). |
| 183 | At Rome for two days on the Area Concordiae (Liv. 39. 56. Iul. Obs. 59 = 4). |
| 181 | At Rome on the Area Volcani and on the Area Concordiae (Liv. 40. 19. It seems probable that the portents of 184, 183, 181 were in reality the same occurrence variously dated). |
| 172 | At Saturnia in Etruria for three days (Liv. 42. 20). |
| 169 | At Rome by day on the temple of Fortuna <i>Primigenia</i> (Liv. 43. 13). |
| 166 | In the territory of Praeneste (Iul. Obs. 71 = 12). |
| 134 | At Amiternum (Iul. Obs. 86 = 27). |

- 869 At Brescia in Italy for three days (J. Twinger von Königshofen *Königshofens Chronik* p. 104. H. Barlandus *Historia Coloniae* 1603 p. 16 states that this portent happened at Brixen = Brescia. The date, however, is differently reported. B. Platina *Storia delle vite de' Pontefici* Venezia 1761 ii. 90 places it shortly before the death of Hadrian II, which occurred in 872. 'Poco innanzi, ch' egli morisse piovè sul Bresciano tre giorni sangue.' J. Wolf *op. cit.* ii. 308 says: 'Narrant historiographi, quod circa annum 873. plurima se exhibuerint mundo monstra & prodigia. Nam in Italia, in civitate Bressa, integri tridui spacio continue pluit sanguine.' C. Lycosthenes (K. Wolffhart) *op. cit.* p. 356 has under the date 874: 'Anno Ludouici imperatoris decimonono, in Italia Brixiae tribus diebus & tribus noctibus sanguis de celo pluisse dicitur').
- 990 In the days of King Robert (P. Gassendus *Viri illustris Nicolai Claudii Fabricii de Peiresc. senatoris Aquensestensis, vita* Quedlinburg 1706 p. 118 f. 'Itèmq̃ue quod memoratum temporibus Regis Roberti sanguine pluisse, circiter finem Iunii; adeo ut' etc., cp. ¹ First in the field was C. G. Ehrenberg 'Passatstaub und Blutregen' in the *Abh. d. berl. Akad.* 1847 Phys. Abh. pp. 269—460 with tables and 6 col. pls. This admirable monograph includes a chronological list of all comparable phenomena.

² Stegemann 'Blutregen' in the *Handwörterbuch des deutschen Aberglaubens* Berlin—Leipzig 1927 i. 1445—1447 with bibliography (Reddish dust from the Sahara, composed of silicic acid, argillaceous earth, iron- and copper-oxides, is sometimes swept by strong winds into the upper regions of the air and carried over southern or even northern Europe, with or without an admixture of rain: the water evaporating, there remains a deposit of reddish or yellowish dust. Again, bees and butterflies, when quitting the chrysalis, leave behind them some drops of blood. Finally, masses of red seaweed and 'Wundermonade' may also occasion a precipitate of red liquid).

There was an awful rainbow once in heaven:
We know her woof, her texture; she is given
In the dull catalogue of common things¹.

Different in character is a mystic and possibly Orphic anthropogony quoted by Julian² in his *Letter to a Priest*—

'the saying of the gods, which has been handed down to us by the theurgists of bygone days, to wit that, when Zeus was ordering all things, there fell drops of sacred blood, and that from these sprang the race of men.'

This rather isolated notion seems to have arisen, in some more or less philosophical *milieu*³, from an attempt to combine two passages of Hesiod. In the *Theogony*⁴, when Kronos mutilated Ouranos, Gaia received the blood-drops and in due course gave birth to the Erinyes, the Gigantes, and the nymphs called *Meliai*, 'Ash-trees.' In the *Works and Days*⁵ Zeus produces the men of the Bronze Age from *meliai*, 'ash-trees.' It followed, or seemed to follow, that the men of the Bronze Age were sprung from the blood-drops of Ouranos himself. Alkaios too and Akousilaos, presumably remembering that Phaiakia was named *Drepanē* after the *drépanon* or 'sickle' used by Kronos⁶, had claimed that the Phaeacians likewise were sprung from the blood of Ouranos⁷.

Miss W. C. Wright in the Loeb edition (London 1913) renders: 'when Zeus was setting all things in order there fell from him drops of sacred blood.' But the words 'from him' are not in the Greek and may be misleading.

ii. Rain of stones.

Equally portentous was the rain of stones, which in early times men attributed to the direct intervention of the sky-god¹.

A good example is furnished by La Crau, a large plain in the south of France, occupying the western portion of the department Bouches-du-Rhône². The name *Crau* is said to have come from a Celtic stem meaning 'cairn' or 'heap of stones³,' being akin to our own word 'crag⁴.' The arid surface of this plain is in fact covered with boulders and has been described by a French authority as a 'véritable mer de cailloux⁵.' Strabon⁶ calls it the 'Stony Plain'; Pomponius Mela⁷, Pliny⁸, Solinus⁹, and Martianus Capella¹⁰—not to mention later writers¹¹—the 'Stone Fields.' Attempts to explain along scientific lines such an enormous outcrop of stones were made by Aristotle and by Poseidonios. The former¹² thought them thrown

¹ J. F. Cerquand *Taranis lithobolus* (*Mémoires de l'Académie de l'Auxoise* 1880) Avignon 1881 argued for the recognition of an Indo-European god, who was at once a hurler of stones and wielder of a hammer, the hammer being a later substitute for the stone. As evidence of such a lithobolic deity in Gaul Cerquand quoted Arsch. *frag.* 199 Nauck² (*infra* p. 483 n. 3) and, more doubtfully, Paus. 10. 23. 1 ff. But see Reinach *Bronzes Figurés* p. 159 ff. up by earthquakes of the type termed *brástai*¹. The latter² held that they were a sort of beach resulting from the solidification of a previous lake. But Aischylos³ in his *Prometheus Unbound* had given a mythical explanation of the scene, which concerns us more closely. Prometheus, telling Herakles of the route from the Kaukasos to the Hesperides, had said:

Then shalt thou come to the undaunted host
O' the Ligyes, where, fighter as thou art,
Thou shalt have fights enow. For here Fate bids
Thine arrows fail thee; nor shalt thou avail
To get a stone from the ground —the ground is soft.
Howbeit Zeus, in pity for thy plight,
Will send a cloud to cover the whole land
With rounded stones, thick as the snowflakes fall.
These hurling, thou shalt thread that Ligyian host.

The incident appealed to certain astromythologists of the Hellenistic age as providing a plausible account of that much-disputed constellation Engonasin or Ingeniculus⁴. In the northern hemisphere, midway between Lyra and Corona, Draco and Ophiuchus, appears a male figure on bended knee. The Babylonians had named him *ilu kamû*, 'the fettered god,' and had regarded him as one of the seven astral powers called *da'-ik A.V. K1*, 'Breakers of Heaven and Earth⁵.' It is tempting to suppose that some transmitted memory of Mesopotamian lore led to the identification of him with Prometheus chained to the Kaukasos, or again with Ixion fastened to his wheel⁶. The neighbouring constellation Corona

might pass in the former case as the ring of Prometheus¹, in the latter as the wheel of Ixion². These, however, were stray opinions of doubtful date. More persistent is the idea that Engonasin was a nameless sufferer—toiling, says Aratos³, at some unknown task; tired and mournful, says Cicero⁴; weary and pitiable, says Germanicus⁵. Teukros of Babylon (*c.* 100 A.D.)⁶ went so far as to call him Talas⁷ the Man of Sorrows.

Others attempted to identify the kneeling figure with a definite mythical suppliant or the like and in so doing took further constellations into account. ¹² Theseus raising the rock was a subject in vogue with artists for some five hundred years. The hero is regularly represented with bent knee, a modification of the archaic *Knielauf*. Pausanias c. 150 A.D. saw on the Akropolis at Athens a bronze statue of Theseus pushing up an actual rock, beneath which were the shoes and sword of Aigeus (Paus. i. 27. 8). This curious work of art is shown on imperial bronze coins of Athens (E. Beulé *Les monnaies d'Athènes* Paris 1858 p. 397 f. fig., *Brit. Mus. Cat. Theseus¹. The vicinity of Lyra justified two other interpretations—Thamyris at the knees of the Muses who had blinded him², and Orpheus slain by the women of Thrace for intruding upon the Dionysiac rites³.

But such attempts too often involved a misconception of the old starry *schéma*. E. Bethe⁴ has done well to urge that Engonasin was first represented on some Ionic globe of the sixth century B.C. as an anonymous man in the attitude of *Knielauf* dear to archaic art⁵. Hence Aratos' professed inability to expound 'the mysterious phantom⁶.' Hence also the total absence of attributes both in the detailed descriptions given by Aratos⁷, Hipparchos⁸, Ptolemaios⁹, and in the clearly cut relief that adorns the Farnese globe (fig. 317)¹⁰. Since, however, the attitude of *Knielauf* was frequently employed by early artists to express the energetic action of Herakles¹¹, it was

misunderstandings. Herakles grasping his club was confused with Boötes grasping his *lagobolon*—witness the Carolingian paintings (figs. 320, 321) in the *codex Vossianus*¹. Herakles throwing stones was equated with the stone-thrower Talos², whose name bore a convenient resemblance to that of the sufferer Talas³. It was altered by some wiseacre into Tantalos⁴, the hero who lived in dread of the falling rock, and by some fool of a copyist into Taos the Peacock⁵! A final muddle, prompted perhaps by Tantalos under his rock, perhaps by Herakles fighting his snake, produced the name Atlas⁶. Modern sky-charts are content with the label Hercules. Having thus seen that certain anonymous Alexandrines used the Aeschylean myth of Zeus sending a rain of stones to Herakles¹ as a plausible explanation of Engonasin, we must next enquire whether the myth itself was a mere figment on the part of an imaginative poet or an episode strictly in accordance with popular classical belief. And here I shall at once cite a remarkable parallel recorded by Livy² as having taken place in the reign of Tullus Hostilius (672—640 B.C.):

‘After the defeat of the Sabines, when King Tullus and the whole Roman state were at a high pitch of glory and prosperity, it was reported to the king and senators that there had been a rain of stones on the Alban Mount. As this could scarce be credited, envoys were dispatched to examine the prodigy; and in their sight there fell from the sky, like hail that the wind piles in drifts upon the ground, a thick shower of stones. They thought too that they heard a great voice issuing from the grove on the mountain-top, which bade the Albans offer sacrifices after the fashion of their fathers: these they had in fact given over to oblivion, as though they had forsaken their gods along with their country, having either adopted Roman rites or in anger at their fortune, such as men sometimes feel, abandoned the worship of the gods. The Romans also, in consequence of the same portent, undertook an official nine days’ celebration, whether so commanded by the divine voice from the Alban Mount—for this too is handed down—or on the advice of soothsayers. At all events it remained a regular custom that, whenever the same prodigy was reported, there should be a nine days’ observance.’

The great voice heard from the grove on the mountain-top was that of Iupiter *Latiaris*, whose temple on the summit of the Alban Mount³ (*Monte Cavi*⁴) was the earliest religious centre of the

² Sir W. Gell *The Topography of Rome and its Vicinity*² London 1846 p. 38: 'Albano has been at different periods subject to earthquakes; these, however, have hitherto been productive of no serious mischief. Shocks were felt here in the year 1829, and in many of the villages around. After continuing for a considerable period, during which they were at times repeated as often as thrice in one day, they ceased in the autumn. The strange stories then current among the people, of flames breaking forth from a chasm, and of trees withering from volcanic effluvia, give an air of probability to the showers of stones and other prodigies, said to have occurred in ancient times on the Alban Hill. These phenomena may be referred to the volcanic nature of the mountain, which, at the time that they are said to have happened, was so much nearer the epoch of its vigour and activity.'

C. Daubeny *A Description of active and extinct Volcanos, of Earthquakes, and of Thermal Springs*² London 1848 p. 169 f.: 'To the south of Rome the whole of the country for several miles round Albano abounds in volcanic appearances. Amongst the mountains in this group are several lakes which appear originally to have been craters, as for instance that of Albano, Vallariccia, Nemi, and Juturna, to which we may add, intermediate between the Alban mountains and the Anio, the Lake of Gabii, noted for a particular variety of Peperino called the Gabian stone, and the singular hexagonal one of Cornufelle, near Frascati, supposed by Gell to be the Lake Regillus ... In proof that the volcanic action had not entirely ceased even in modern times, I may state that Pliny [*nat. hist.* 2. 240] mentions a report which had reached him as to the ground round the lake [of Aricia or Vallariccia] being hot enough to set fire to charcoal; and Livy [22. 36] notices a shower of stones that fell there, as well as the bursting out of a warm spring, having its water mixed with blood, which Heyne supposes to have been bitumen' ('Heyne, *Opusc. Acad.* vol. ii. p. 263). There are indeed some passages in ancient writers, which might lead us to suppose a volcano to have existed among these mountains even at a period within the limits of authentic history, for Livy [25. 7] notices a shower of stones which continued for two entire days from Mount Albano during the second Punic war, and Julius Obsequens in his work "De Prodigis" [98=38] remarks, that in the year [641] A.U.C. [= 113 B.C.] the hill appeared to be on fire during the night.... These accounts, indeed, if not confirmed by other testimony, might be rejected as fabulous, but they may perhaps suffice to establish the comparatively modern date at which the volcanic action continued, when viewed in connexion with the physical structure of the lake itself. This however, and the other lakes above-mentioned, if even they be considered as volcanic craters, are but the dependencies and offsets, as it were, of the great extinct volcano, the traces of which still remain upon the summit of the Alban hills.'

To these contentions E. H. Bunbury in Smith *Diet. Geogr.* i. 92 opposes a dogmatic denial, difficult to accept: 'Numerous prodigies are recorded by Roman writers as occurring on the Alban Mount: among these the falling of showers of stones is frequently mentioned, a circumstance which has been supposed by some writers to indicate that the volcanic energy of these mountains continued in historical times; but this suggestion is sufficiently disproved by historical, as well as geological, considerations.'

iii. Rain of food.

Another form of abnormal shower is the alleged fall of actual food from the skies. Thus in the book of *Exodus*² it is stated that the children of Israel on entering the wilderness of Sin, between Elim and Sinai, were distressed with hunger:

'Then said the LORD unto Moses, Behold, I will rain bread from heaven for you³....At even ye shall eat flesh, and in the morning ye shall be filled with bread; and ye shall know that I am the LORD your God. And it came to pass at even, that the quails came up, and covered the camp: and in the morning the dew lay round about the camp. And when the dew that lay was gone up, behold, upon the face of the wilderness a small round thing, small as the hoar frost on the ground⁴....And the house of Israel called the name thereof Manna: and it was like coriander seed, white: and the taste of it was like wafers made with honey⁵.'

This timely provision of tamarisk-droppings⁶ and migrating quails⁷ made a profound impression upon the people and is the subject of repeated allusions by other writers throughout the canon⁸. Indeed, it came to be regarded as frankly miraculous: *c.g.*

'Yet he commanded the skies above,
 And opened the doors of heaven ;
 And he rained down manna upon them to eat,
 And gave them of the corn of heaven.
 Man did eat the bread of the mighty :
 He sent them meat to the full.
 He caused the east wind to blow in the heaven :
 And by his power he guided the south wind.
 He rained flesh also upon them as the dust,
 And winged fowl as the sand of the seas :
 And he let it fall in the midst of their camp,
 Round about their habitations.
 So they did eat, and were well filled :
 And he gave them that they lusted after¹.'

'He rained down manna...', 'He rained flesh also...'. It may be doubted whether classical authors can furnish a complete parallel to the Hebrew tradition. There is, however, reason to think that the same naive belief in food, at first let fall by the sky-god, and later simply dropping from the sky, long haunted the imagination of Greeks and Romans alike.

W. H. Roscher², in a dissertation published half a century since, succeeded in proving two relevant points. In the first place, the Greeks and Romans, the Indians, the Germans, and the Finns all held that honey falls as a dew from the sky³ on trees and flowers, and consequently viewed it as a sort of celestial diet. In the second place, *ambrosía*, the gods' food, and *néktar*, the gods' drink (or *vice*

⁴ H. Guntert *Kalypso* Halle a. S. 1919 p. 161 ff. is dissatisfied with the solution of the problem advanced by Prellwitz and now commonly accepted ("Aber mit dem zweiten Kompositionsglied steht es nicht zum besten; man verweist auf ai. *-tarā-*, aw. *-lara-* "ubertreffend, besiegend," zu ai. *tīrati* "setzt über, gelangt hinüber, überwindet, rettet," oder auf ai. *āp-tīr* "die Wasser besiegend"; ich würde schon lieber auf ved. *-tid* "zerstehend" als zweites Kompositionsglied hinweisen, das im griechischen Auslaut als *-tar* erscheinen musste und von dieser Stellung aus verallgemeinert sein konnte. Aber auch der Zerlegung von *νέκταρ* in *νέκ-tar* "*necem superans*" haftet meines Empfindens etwas "Gemachtes" an, es fehlt ihr die innere Überzeugungskraft. Dazu kommt, dass die Silbe *-tar* nur durch Heranziehung weit entfernter Formen einigermaßen gedeutet werden kann"). Accordingly, he proposes a new and undeniably attractive explanation ("Ich möchte daher einen neuen Deutungsversuch vorlegen, der hinsichtlich der Bedeutung der Etymologie GRIMMS ebenbürtig ist, aber den Vorzug hat, nur mit im Griechischen selbst üblichen Wortformen auszukommen: ich will nämlich *νέ-κταρ* zerlegen. *νε-* = idg. **ne* ist die Vollstufe der Negation, die wir in so üblichen Formen, wie lat. *ne-scio*, *ne-fas*, *n-^ounquam*, *n-^onullus*, *ne-scius*, *ne-cessus*, *ne-cessarius*, *nēmo* aus **ne-hemo*. Im Griechischen selbst ist *ne-* erhalten bei vokalischem Anlaut, da sonst das alte *ne-* durch *ou* ersetzt wurde: vgl. *οὐ τις*, *οὐκ ἐθέλω*; lat. *nōlo*. In solcher Kontraktion aber war *ne-* nicht durch *ou* zu ersetzen, und so begegnet es in Fällen wie *νηλεής*, *νήνεμος*, *νηκεστός*, *νήγρετος*, *νώννεμος*, *νηλίπους*. ., *νημερτής*, *νήπιος*. Sonst kann *ne-* also nur in Wörtern mit undurchsichtiger Bedeutung von der Ersetzung durch *ou* verschont geblieben sein; ein solcher Fall ist meiner Ansicht nach *νέκταρ*, aus dem wohl schon die Griechen den Stamm *νεκ-* "Tod" in *νέκας*, *νέκος*, *νεκρός* herausgehört haben werden. Der zweite Teil dieses also sehr altertümlichen Kompositums, dessen eigentliche Bedeutung die Hellenen nachweislich selbst nicht mehr kannten, gehört in tiefstufiger Stammesgestalt nach dem Hauptton zu hom. *κρέεα* "Beigabe an Tote." Hesych. glossiert *κρέεα*: *νεκροί, καὶ ἀκτέριστοι οἱ ἄταφοι*. Ferner gehören hierher *κτερίζω*, hom. *κτερίζω τινά* "jem. die letzte Ehre erweisen,"

The facts on which these fancies rested are partly botanical, partly entomological. On the one hand, a sweet, sticky exudation, usually caused by a superfluity of sap, is to be found during hot weather, in small drops resembling dew, on the leaves of sundry trees and herbs¹, especially the oak², the ash³, the

κτερίσματα "Totenfeier, Leichenbestattung." Daher ist auch διά-κτορος, der Beiname des Hermes in seiner Eigenschaft als ψυχοπομπός heranzuziehen [*supra* ii. 384 n. o]. Ω 397 sagt der Totengott zu Hektor: πατήρ δέ μοι ἐστί Πολύ-κτωρ [*supra* ii. 384 n. o]. Dies ist also deutlich ein redender Name für Hades, dem alles Irdische anheimfällt, wie πολυδέγμων, πολυδέκτης usw. [*supra* ii. 1113 n. o (2)]. Wenn es an der Stelle weiter heisst: ἀφνειὸς μὲν ὃ γ' ἐστί, so erinnert man sich an Πλούτων [*supra* i. 503 f., ii. 385 n. o]. τὸ νέ-κταρ "Nicht-totsein" ist also mit ἀμβροσία völlig gleichbedeutend. ἀ-κτέρστοι sind ἀταφοί, solche, die nicht bestattet werden, über die der Hades also keine Macht hat, und dies Wort deckt sich mit ἀ-θάνατοι.

³ A. Kuhn *Die Herabkunft des Feuers und des Göttertranks*² Gutersloh 1846 p. 121 ventures to connect μέλι 'honey' with μελία 'ash-tree,' citing in support the Hesychian glosses μελία· μέλισσαι. ἡ δόρατα, ἡ λόγχοι and μελίη ὥσπερ μέλι· εἶδος δένδρου, ὅθεν τὰ μέλιτα. More weight attaches to a northern parallel. The ancient Scandinavian world-tree was an ash (*askr* *Yggdrasils*), from which trickled a bee-nourishing dew named 'honey-fall' (*humánsfall*). See K. Simrock *Handbuch der Deutschen Mythologie* Bonn 1878 p. 38,

Lydekker *The Royal Natural History* London 1896 vi. 198 'The sticky substance known as honey-dew, which is often spread in a shiny layer over the upper surface of leaves, is, in most cases, nothing but the liquid dropped by the crowds of plant-lice living above on the under side of other leaves.'

⁴ *The Encyclopedia Britannica*¹⁴ London 1919 xi. 715 'The exudation of a nectar-like or saccharine fluid is a function exclusively of flowers but may be found as a secretion or excretion on all parts of various plants which occur above ground. A sweet material, manna, is produced by leaves and stems of a species of ash, and nectar-secreting glands are found on leaves, petioles, stipules, bracts and even on the outer surfaces of corollas and calyces of various plant species. The origin of nectar-secretion manifested specially by flowers among the several parts of plants has been carefully considered by Darwin, who regards the saccharine matter in nectar as a waste product of chemical changes in the sap ... The secretions or excretions of nectar from parts of plants other than the interior of flowers are commonly called plant honey-dews.'

⁵ Another important source of sweet liquid for honey-bees is the excretions of many species of sucking insects, these being called insect honey-dews to distinguish them from normal plant secretions. Various orders of Hemiptera form this material which is eagerly gathered by bees, but only when no supplies of nectar are available....'

⁶ *Ib.* xi. 717 'HONEY DEW, a secretion consisting of exudations of sugar from the leaves of various trees under certain atmospheric conditions. It is usually the result of a superfluity of sap, but may also be produced by the puncture of certain insects (*Aphides*, q.v.)'

⁸ J. Grimm—W. Grimm *Deutsches Wörterbuch* Leipzig 1877 iv. 2. 1793 s.v. 'Honigthau' ('von blattlausen herrührt').

Country folk in the second century A.D., when they observed such honey-dew on the leaves, would say with a smile 'Zeus has been raining honey!'¹ And what they said in jest, their forefathers had said in earnest. Hence the curious belief that Dionysos was called *Hýes* because at his begetting 'Zeus rained ambrosia upon him'²—a point to which we shall recur³.

But if honey, why not honey-cakes? Why not dainties of all sorts? The comedians caught at the notion. Pherekrates⁴ in his *Persians* (towards the close of s. v B.C.⁵) imagines a happy land in which rivers of black broth with rich spice-nuts and best barley-bread shall flow from the springs of Ploutos, all ready to be ladled up,—

While Zeus rains wine, well-smoked and fine, in one tile-drenching sputter
(A bathman's souse), till every house massed grapes and cheese-cakes clutter,
And soup all hot and Lord-knows-what goes gurgling down the gutter.

Nikophon, a later contemporary of Aristophanes⁶, in his *Sirens* pictures a similar scene, but omits the name of Zeus:

Then let it snow with meal,
Drizzle with loaves, and rain with lentil-soup;
Let broth roll tit-bits all adown the streets,
And cake invite us to consume itself⁷.

From such classical Utopias it is not a far cry to the mediaeval

Kuhn) ἡ τῶν τροφῶν ἕλη πάσα μέχρι δέυρο διττοῖς γένεσι περιληφθεῖσα, τὸ μὲν ἑτερον αὐτῶν ἐκ φυτῶν εἶχε, τὸ δὲ ἕτερον ἐκ ζώων· ἐκατέρας δ' αὐτῶν ἀφώρισται τὸ μέλι. γίνεται γὰρ ἐπὶ τοῖς φύλλοις τῶν φυτῶν, ἔστι δὲ οὔτε χυλὸς αὐτῶν, οὔτε καρπός, οὔτε μόριον. ἀλλ' ὁμογενές μὲν ταῖς δρόσοις, οὐ μὴν οὔτε συνεχῶς οὔθ' ὁμοίως ἐκείναις γίνεται δαψιλές. οἶδα δὲ ποτε θέρους ὥρα πλείστον ὅσον ἐπὶ τοῖς τῶν δένδρων καὶ θάμνων καὶ τινῶν βοτανῶν φύλλοις εἰρηθῆναι, ὡς ὑπὸ τῶν γεωργῶν λέγεσθαι παιζόντων, 'ὁ Ζεὺς ἔβρεξε μέλι.' προηγήτο δὲ νῦν μὲν εὐψυχής, ὡς ἐν θέρει, (θέρους γὰρ ἦν ὥρα τηλικαύτα,) θερμὴ δὲ καὶ ξηρὰ κράσις αἶμος ἐπὶ τῆς προτεραιας. παρ' ἡμῖν μὲν οὖν σπανίως φαίνεται τοῦτο γινόμενον, ἐν δὲ τῷ ὄρει τῷ Λιβανῶν καθ' ἕκαστον ἔτος οὐκ ὀλίγον. ὥστε ἐκπεταννύντες ἐπὶ γῆς δέρματα καὶ σείοντες τὰ δένδρα δέχονται τὸ ἀπορρέον ἀπ' αὐτῶν καὶ χύτρας καὶ κεράμια πληροῦσι τοῦ μέλιτος. ὀνομάζουσι δ' αὐτὸ δροσόμελι τε καὶ ἀερόμελι (*supra* p. 496 n. 3). πρόδηλος μὲν οὖν ἡ ἕλη τῇ γενέσει τοῦ μέλιτος ὁμογενής τις οὔσα ταῖς δρόσοις. κ.τ.λ. *Supra* p. 261 n. 1.

Galen's statement that on Libanos men spread skins upon the ground to catch the honey-dew may throw some light on Judges 6. 36 ff., where Gideon says to God: 'If thou wilt save Israel by mine hand, as thou hast spoken, behold, I will put a fleece of wool on the threshing-floor; if there be dew on the fleece only, and it be dry upon all the ground, then shall I know that thou wilt save Israel by mine hand,' etc.

Similar fancies crop up here and there in much later verse (cp. T. Crofton Croker *The Popular Songs of Ireland* London 1839 p. 76 'Then let it, ye powers, | Rain whisky in showers,' or T. Hood's 'I've heard about a pleasant land, | Where omelettes grow on trees, | And roasted pigs run, crying out, | "Come eat me, if you please"').

Priebisch in the *Tijdschrift voor nederl. taal- en letterkunde* 1894 xiii. 185—191), where it rains flat cakes and pancakes (J. Poeschel in H. Paul—W. Braune *Beiträge zur Geschichte der deutschen Sprache und Literatur* 1878 v. 413).

In M. A. Le Grand's comedy *Le roi de Cogne* acte i scène 2 (composed in 1718, ed. Paris 1742 ii. 146) Bombance declares: 'Le pigeonneau farci, l'alouette rotie, | Nous tombent ici bas du Ciel comme la pluie.'

⁴ The earliest allusion occurs in one of the *Carmina Burana* (ed. J. A. Schmeller Stuttgart 1847 p. 254) entitled *Confessio Goliae*, which was written at Pavia c. 1162—1164 by a wandering cleric and addressed to Reinald von Dassel, Archbishop of Cologne (W. Giesbrecht in the *Allgemeine Monatschrift für Wissenschaft und Literatur* 1853 p. 364). The author states: 'Ego sum abbas Cucamensis et consilium meum est cum bibulis et in secta Deen voluntas mea est.' But the first detailed description is found in Boccaccio's *Decamerone*. G. Boccaccio *The Decameron* trans. J. M. Rigg London 1920 ii. 187 (Eighth day, Novel iii): 'Chiefly in Berlinzone, in the land of the Basques. The district is called Bengodi [sc. ubi bene gaudetur], and there they bind the vines with sausages, and a denier will buy a goose and a gosling into the bargain; and on a mountain, all of grated Parmesan cheese, dwell folk that do nought else but make macaroni and ravioli¹ (1 A sort of rissole.), and boil them in capon's broth, and then throw them down to be scrambled for; and hard by flows a rivulet of Vernaccia, the best that ever was drunk, and never a drop of water therein.' Dr H. Meier draws my attention to A. Bertarelli *L'imagerie populaire italienne* Paris 1929 pp. 50 fig. ('Le Pays de Cogne des femmes.' Rome. Taille-douce vers. 1650) and 51 fig. ('Description du Pays de Cogne.' Taille-douce coloriée au pinceau, de Remondini Bassano. xviii^e siècle).

Das Schlauraffenland.

In gegend heist Schlauraffenland
 Den sauren Lutter wol bekant
 Da sind die Heuser gedeckt mit Lachen
 Und fuchen die Hausfär und Lachen
 Den Sped fuchen Thulen und torn
 Du Tröm von Schwogen biaten sende
 Und eders Haus se ist ein Zaun
 Erflochten von Diarwürfen biau
 Von Malinastri se sind die Brunnen
 Kommen ein selbst ins Maul gerunnen
 Auf Wedern koppen die Eemmel siehn
 Darumt Dech mit Milch gehn
 Die fallen dann in Dach herab
 Das jeder man zu essen hab
 Auch gehn die Milch in den Lachen
 Beforen biaten gusht und baden
 Und gehn den dem Gistadi so nahen
 Lassen sich mit den Händen fahen
 Auch fliegen vnt müge ih glauben
 Gebiaren Hühner, Gens und Tauben
 Wer sie nicht facht und ist so faul
 Dnn flugen sie selbst in das maul
 Die Sete all Jar wol geraten
 Lauffen im Lande und sind gebiaren
 Jede ein Nieser hat ins Tack
 Damit ein jeder schmeckt ein Stück
 Dnn stekt das Nieser wider dich
 Greuch Küß wachen wir die Stien
 So wachen Darnen auf den barmen
 Nieser wie in unserm Land die Pflaumen

Dennes kring sind so fallens ab
 Jeder in ein par Eussel rab
 Wer Pferd hat wird ein reicher Nieser
 Dann sie legen gang köch vol Lier
 Das weg vil Sches man finden ist
 Ein Luch Dnn ist im Land alle frist
 Darinn verlungen sich die allen
 Viel kurtzweil man im Lande ihu halten
 So zu dem sel schiessen die Gest
 Der treiest vom blai geuind das best
 Auch ist im Lande gus Geli geuinnen
 Wer sehr faul ist und schleff darinnen
 Dem gub man von der stund ihren pfenig
 Er schlaff ih gleich viel oder wenig
 Ein fuch gilt ein Dinger heller
 Dnn größer einen Jochims Thaler
 Und welcher sein Vieh auch verspielt
 Jersach wann ihm das wider gibt
 Vntd welcher auch nicht gern jalt
 Wenn die schuld wird eins Jares alt
 Mus ihm ihener zu geben ein flog
 Vntd welcher wol trinken mag
 Dnn gub man von dem trund ein bayer
 Und welcher wol die Leut lau sayen
 Dnn gub man ein Plappart zu lohn
 Jar ein große Lüg ein Kron
 Doch muß sich da hüten ein man
 Aller vermisse frey müßig stan
 Der Sinn und Wig brauchen welt
 Dnn wird kein Mensch im Lande helds

Und wer gern arbert mit der hande
 Dem verbrut mans Schlauraffen Lande
 Wer jucht und erbarere bei lieb
 Dem siben man des Landis vertrib
 Wer wenig ist will nichts mit lehren
 Der Lunde im Land zu groffen essen
 Dann wer der sculst wird er kandi
 Verschlag ih König in dem Land
 Der weiß und will pünctlich ist
 Grob enuerstanden zu aller frist
 Auf dem macht man im Land ein Fästern
 Wer gern sich mit leber treuen
 Auf dem ein Ritter wurde gemacht
 Der schuldich ist und nichts mit acht
 Dnn essen trinden und vil schlaffen
 Auf dem macht man im Land ein Grosse
 Wer schipf ist und nichts mit kan
 Der ist im Land ein Edelman
 Wer also lebt reit obgemant
 Der ist gut ins Schlauraffen Lande
 Das von dem alten ist erdicht
 Zu strack der sugend zu gerichte
 Die grednich ist faul und gestressig
 Ungeschicht heles und nachtriffig
 Das man sie renk in Schlauraffen
 Damit ih schlachting renk zu ir asten
 Das sie haben auff Aibrot acht
 Wer faul wird nichts gures bracht

I add two recent examples. *The Daily Telegraph* Saturday 17 March 1934 p. 11: 'The inhabitants of Pistoia, a Tuscan hill town forty miles from the sea, were amazed to find red rain falling. It contained small fishes swept up from the sea by the gales.' The *Cambridge Daily News* Tuesday 13 March 1934 p. 1: 'Cambridge is still puzzling over the showers of fish which fell on the Market-place on Monday morning and Monday afternoon. On two distinct occasions it was found small fish of the stickleback breed, and anything up to two inches in size, were scattered about the cracks in the cobbles on Market-hill....At least one of the fish found on the Hill was alive this morning and browsing around in a jar in a private laboratory in the town. Others were taken away by passers-by or by interested students of natural phenomena. No one apparently saw

The Land of Cokaygne was represented, not merely by mediaeval tales¹ of a far country where viands of the choicest sort were to be had for the asking, but also by popular customs in which a determined effort was made to get there and feast to heart's content. Thus at Naples the name *Cuccagna*² was given to a yearly merry-

the fish actually fall, but when the sun dried up the water which filled the crevices between the cobbles after the heavy showers, it was found that a large number of small fish were lying there. Some were silver, some red, and some of an entirely different colour. With them was found a small quantity of vegetation. One stallholder recalled that three years ago he had a similar experience on the road between Foxton and Shepreth, when a multitude of small frogs suddenly descended. The Superintendent of the Cambridge Botanical Gardens also recollected a similar experience with minnows and tadpoles on the Bath—London road some years ago.

In speaking of fish, frogs, and meal as dropped from the sky, Athenaios and his sources used throughout, not the name *Zeús*, but the vaguer term *ó theós*. The Roman historians omit even that acknowledgement of the divine, when they record—

making, which has been traced back to the early part of the sixteenth century¹: on the last Thursday before Lent a pyramid stacked with poultry, sausages, and eatables of every kind was taken in procession through the streets and, on reaching the big market-place, was handed over to the mob, which scrambled for the prize. In Spain a similar celebration was called *Cucaña*²: comestibles and other things were fastened to the very top of a tall well-soaped pole, up which competitors clambered to the amusement of all. The same sport, which in Italy is known as the *Gioco della Cuccagna*³, was introduced into France in 1425, and thenceforward the *mât de cocagne* became a frequent feature of public festivities⁴. It seems never to have obtained much footing in Germany, where its equivalent was to be found in such rites as the thirteenth-century *Gral* at Magdeburg⁵. But it was certainly the ancestor of our own Greasy Pole⁶, still a favourite item on the programmes of provincial regattas. Indeed, it is not a little curious to reflect that a ceremony,

which began as a serious attempt to climb up into heaven and share the food of the gods, should end as a comic failure to carry off the coveted ham.

iv. Pyre-extinguishing rain.

On sundry occasions Zeus by means of a timely rain extinguished a pyre and saved the life of a victim.

A case in point is furnished by the myth of Alkmene, at least in its later and fully developed form. The Homeric *Nekyia* includes among the list of dead heroines Alkmene, the wife of Amphitryon, who became by Zeus the mother of lion-hearted Herakles¹. An excerpt from the Hesiodic *Catalogue of Women*, now serving as proem to the *Shield of Herakles*², gives further detail³. Amphitryon might not consort with his wife till he had avenged the death of her brothers, who had been slain by the cattle-raiding Taphians and Teleboans. Meantime Zeus quitted Olympos, and came by way of Typhaonion (the mountain of Typhon⁴; and the top of Phikion (the mountain of the Sphinx⁵) to Thebes, where he lay with Alkmene. The self-same night Amphitryon returned from the fighting, and likewise consorted with his wife. Thereafter she bore twins, Herakles the stronger to immortal Zeus, Iphikles the weaker to mortal Amphitryon.

Thus far the myth is a typical tale of Boeotian⁶ twins. The extra birth, abnormal and hard to understand, was regarded as due to the action of some god⁷. And since Amphitryon as king stood in a special relation to Zeus⁸ and even bore a name suggestive of the lightning⁹, it was natural to assume that the god in question was Zeus, and to view the superior twin as his son, the inferior¹⁰ as that of the human father.

¹⁰ *Supra* ii. 445 ff.

The story passed early into the repertory of the mythographical artist as well as into that of the mythological poet. The famous Chest of Kypselos, dedicated at Olympia not later than 582 B.C. when the dynasty of the Kypselidai came to an end¹, represented Zeus in the form of Amphitryon offering gifts to Alkmene. He, clad in a *chiton*, was bearing a cup in his right hand, a necklace in his left; she was taking hold of them both²—a simple, significant group³. Pindar *more suo* adds one glittering touch. The epiphany of the god at midnight was accompanied by a snow of gold⁴. Neither the gifts nor the snow-storm should be dismissed as meaningless adjuncts. *Hédna*, 'bride-presents,' in general were the proper preliminaries of an epic union, and this cup in particular was an heirloom of divine origin⁵. The golden downpour here, as elsewhere, betokens the advent of the impregnating sky-god.

But the theme lent itself to further elaboration. Apollodoros⁶,

in all probability¹ following Pherekydes of Athens (*floruit* 454/3 B.C.²), re-tells the story thus:

'Now before Amphitryon reached Thebes, Zeus had come by night and, making that one night three times its length³, had taken upon him the likeness of Amphitryon and bedded with Alkmene and related to her what had befallen the Teleboans. But Amphitryon, when he arrived and saw that he was not welcomed by his wife, enquired the cause. She told him that he had come the night before and slept with her; and he learned from Teiresias that her bedfellow had been Zeus. So Alkmene bore two sons, Herakles—the elder by one night—to Zeus, and Iphikles to Amphitryon.'

This tale was perhaps that dramatised by Sophokles in his *Amphitryon*¹, and it reappears with some variation in the works of later mythographers².

Euripides, the great innovator, substituted a more romantic version. Of his play, the *Alkmene*, we have little direct knowledge. A few tantalising fragments, like stray bits of a jig-saw puzzle, show us a dense growth of ivy with nightingales singing in it³—a pine-torch fetched by somebody from somewhere⁴—rescue from a desperate plight by the help of heaven⁵—day and dark night bringing many things to birth⁶—again a reference to the gloom of

The successive steps in this mythical extension appear to have been as follows:

- 1 Night = 1 night, longer than usual.
- 2 Night + Night = 2 nights.
- 3 Night + (Day) + Night = 3 nights.
- 4 Night + (Day) + Night + (Day) + Night = 5 nights.
- 5 Night + (Day) + Night + (Day) + Night + (Day) + Night = 7 nights.
- 6 Night + (Day) + Night + (Day) + Night + (Day) + Night + (Day) + Night = 9 nights.

The terms *τρεῖς περὶ*, *τρισέληνος* would be justified by the third step, when the sun ceased to shine for one day and so produced three continuous nights. See further A. Winter *Alkmene und Amphitryon* Breslau 1876 p. 34 ff. and K. Wernicke in Pauly—Wissowa *Real-Enc.* i. 1572 f.

I begin with the vases, since they are the earlier. A bell-*kratér*, found at Santa Agata dei Goti and now in the British Museum, was painted by the ceramic artist Python (c. 320 B.C.³) with the following

Amphitryon on the right and Antenor on the left are even now firing the logs with torches. But at the last moment Alkmene raises her hand to Zeus, whose figure, closely resembling that of Amphitryon, is visible in the upper air. In answer to Alkmene's cry Zeus sends an instant storm. have already fallen, one beside Amphitryon, the other at the feet of Antenor. Moreover, two Hyades from above are drenching the pyre with streams of water from their *hydriai*. And (a remarkable trait¹) the black air thick with white raindrops is spanned by a rainbow of reddish purple and white. The presence of Aeos, the dawn-goddess, who holds a mirror in the top right-hand corner, marks the time of day and seems to promise a fairer future. An *amphora* from Capua, also in the British Museum, repeats the scene with some modifications (fig. 323)². Alkmene on the altar raises both hands, appealing to Zeus, who is not seen. Antenor approaches with a torch in either hand: Amphitryon is omitted. Over both figures in the foreground extends a rainbow painted in three colours, red, white, and black, while the Hyades, as before, are employing their *hydriai* to extinguish the flames. These attendant nymphs furnish an interesting case of adaptation from an earlier art-type. Python, wanting to represent the extinction of a theatrical pyre, recalls the cremation of Herakles³ as shown in Satyric drama. An Apulian *kratér* from Ruvo, formerly in the Caputi collection (fig. 324)⁴, has Herakles in full vigour stepping on to the chariot of Nike, who will drive him up the slopes of Olympos. Above, the gods are represented by Aphrodite and Eros. Below, the blazing logs are drenched by three damsels, perhaps fountain-powers⁵. And a dancing Silenos sufficiently indicates that the scene is taken from some Satyr-play. A *pelike* at Munich (fig. 325)⁶ in the style of 'the Kadmos Painter' (c. 420—410 B.C.⁷) gives the fire consuming the

Arethousa¹ and Premnousia², are quenching the fire with their *hydriai*. Above, that is beyond³, the pile is Herakles himself, a youthful bay-wreathed form, borne off to Olympos in the chariot of Athena. Behind such a vase in turn lies the more serious representation of the myth. A late Attic *kratér* published by E. Gerhard (fig. 326)⁴ makes Philoktetes carry off the quiver and arrows from the pyre, while a mere handmaid⁵ does her best to put out the flames⁶. Above, Nike drives the hero up to the pillared palace of Olympos⁷. Hermes leads the way towards a seated Apollon, and Zeus—it must surely be he⁸—waits in the background to welcome his divinised son.

Cic. *de legg.* 2. 60). But the usage was certainly not a matter of mere luxury. Wine was presumably employed on account of its life-giving properties (*supra* ii. 1025 Dionysos Ἡλικεπαῖος = ζωοδοτήρ. Cp. our *whisky* for *usquebaugh* = Irish *uisge beatha*, 'water of life,' or the French *eau-de-vie*). Also its red colour would be a surrogate for blood (*supra* i. 58 n. 2, ii. 522 n. 2. See now E. Wunderlich *Die Bedeutung der roten Farbe im Kultus der Griechen und Römer* Giessen 1925 pp. 1—116 and a review by S. Eitrem in *Gnomon* 1926 ii. 95—102), and ashes steeped in it would in a sense be revitalised. Was this the reason why, even in palaeolithic times, skulls and other parts of skeletons were overlaid with iron oxide (G. Wilke s.v. 'Ockerbestattung' in Ebert *Reallex.* ix. 156 f.: 'Oder endlich—und diese Erklärung ist am wahrscheinlichsten—man wollte dem bleichen Toten durch den Ocker die Farbe und belebende Kraft des Blutes wiedergeben und ihm dadurch ermöglichen, als "lebender Leichnam" (s.d.) weiter zu existieren')?

⁷ *Supra* i. 114.

⁸ The dignified bearded figure with *chlamys* and *pétasos* has been variously explained. Gerhard *Ant. Bildw.* p. 275 says: 'hinter ihm ein Mann in Reisetracht zunächst für seinen Waffengeführten Iolaos uns gilt.' J. Roulez in the *Ann. d. Inst.* 1847 xiv. 271: 'Je préfère regarder ce personnage barbu comme la personification du mont Oëta, ou bien, avec M. Gerhard, comme Iolas.' Turk in Roscher *Lex. Myth.* iii. 2329: 'ein Berggott.' But a mountain-god pure and simple would rather have been recumbent (e.g. *supra* i. 116 n. 8 fig. 85, ii. 962 n. 2 with i. 134 fig. 100), or at least seated (F. Imhoof-Blumer in the *Jahrb. d. kais. deutsch. arch. Fig. 336.

So much for the evidence of the vases. They portray the crisis of the drama, when Alkmene appeals from Amphitruon to Zeus, and a helpful thunderstorm extinguishes the pyre. But Plautus' *Amphitruo* at once clears up the antecedents of the scene and provides it with a satisfying sequel. Hercules, returning in triumph to Thebes, first rebukes his wife for her chilling reception of him¹ and afterwards attempts to punish her for supposed infidelity by bursting into the house and killing her on the spot². Just in the nick of time Alcumena, already in travail with twins, calls on the gods to aid her; whereupon—

Roar, rumble, crash, and thunder :
Sudden, swift, strong the wonder³.

The whole house reels and glitters as though it were made of gold⁴. Iupiter has come to the rescue of Alcumena; and Amphitruo falls senseless to the ground. Finally, as *deus ex machina*, the god explains the situation and all ends well. Plautus' comedy, based of course on a Greek exemplar, almost certainly preserves the main outline of

f. no. 1 pl. 9, 20 a bronze coin of Skepsis, struck by Caracalla, which has the judgment of Paris taking place before a seated mountain-god): see further F. Wieseler 'Einige Bemerkungen über die Darstellung der Berggottheiten in der classischen Kunst' in the *Nachr. d. kon. Gesellsch. d. Wiss. Göttingen Phil.-hist. Classe* 1876 pp. 53—85. I fall back therefore on the view expressed a century since by F. G. Welcker in E. Gerhard *Hyperboreische Studien für Archäologie* Berlin 1833 i. 303 (=Welcker *Alt. Denkm.* iii. 300) 'der Gott auf der andern Seite scheint Zeus zu seyn.' Zeus is elsewhere represented with a *chlamys* (*supra* ii. 731 fig. 663, 744 fig. 682, 745 pl. xxxi, 746 figs. 685, 687, 689, 690 and pl. xxxii, 1), though hardly worn like this, and never with a *pétasos*. The peculiar garb implies some confusion with Hermes—perhaps a changed intention on the part of the vase-painter. Was the ground-line originally a *caduceus*?

Fig. 327.

In Sen. *Herc. Oct.* 1695 ff. the Chorus ask whether Hercules, when about to be burnt on the pyre, did not pray to the gods above or think of calling upon Iupiter. Philoctetes makes answer: 'iacuit sui securus et caelum intuens | quaesivit oculis, arce an ex aliqua pater | despiceret illum. tum manus tendens ait: | "quacumque parte prospicis natum pater, | te, te precor quem nocte commissa dies | quaesivit (*leg.* creavit *cp.* *supra* p. 508 n. 3. A. B. C.) unus, spiritum admitte hunc. precor, | in astra...vocat ecce iam me genitor et pandit polos" ...'

A. S. Murray in the *Journ. Hell. Stud.* 1890 xi. 227, after citing Apollod. 2. 7. 7 καιομένης δὲ τῆς πυρᾶς λέγεται νέφος ὑποστάν μετὰ βροντῆς αὐτὸν εἰς οὐρανὸν ἀναπέμψαι, shrewdly observes: 'One might say of him (*sc.* Herakles), "he came in a storm and went in a storm," and if that view of his life was current in antiquity we could understand the impulse of Euripides to do for the birth of Herakles what Sophocles had done for his death.'

the Euripidean *Alkmene*. Indeed, in another play Plautus actually uses Euripides' title as a synonym for a prodigious storm¹, and makes Labrax threaten to burn alive Palaestra and Ampelisca who have taken refuge on the altar of Venus².

Accordingly we may without reservation accept Engelmann's³ view that the argument of the *Alkmene* was as follows. Amphitryon, angered at the reception given to him by Alkmene, resolves to take vengeance on her. She flies for sanctuary to an altar, followed by him and his friend Antenor. Instead of dragging her away from the altar, they proceed to sacrifice her upon it. They build a pyre of wood in front of it and fetch torches to kindle it. Alkmene in her extremity appeals to Zeus, who comes to her aid, hurling his thunderbolts and sending a tempest of rain to put out the fire.

One further point. Vases and comedies alike prove that the original purpose of the golden shower, still discernible in Pindar's ode⁴, was completely misconceived by later Greeks and Romans. Pindar made Zeus come to Alkmene 'at midnight in a snow of gold,' just as he consorted with Danae⁵ or Himalia⁶. Python used the downpour merely as a convenient method of putting out the fire: his Hyades might be well-drilled members of a modern fire-brigade. Plautus, or his Greek source, transforms the procreative shower into a punitive thunderstorm, and works in the Pindaric gold as a touch of unearthly glamour.

Another example of a pyre extinguished by timely rain occurs in the story of Kroisos, king of Lydia. According to Herodotos⁷, when the Persians captured Sardeis, Kyros built a great pyre and

Séchan *Etudes sur la tragédie grecque dans ses rapports avec la céramique* Paris 1926 pp. 242—248 ('Alcmène') with pl. 5 and fig. 73. He holds with Preller—Robert *Gr. Myth.* ii. 614 that, in Euripides' version, Amphitryon's wrath was roused, not by the coldness of Alkmene, but by her all too apparent infidelity. He also insists, in view of Plaut. *rud.* 86, that the Euripidean thunderstorm was represented on the stage rather than reported by a messenger. And, with regard to the contention of N. Wecklein in the *Sitzungsber. d. kais. bayr. Akad. d. Wiss. Phil.-hist. Classe* 1890 i. 39 that, whatever Aischylos might have done, Euripides would not have tolerated an actual apparition of Zeus, he remarks: 'Zeus n'apparaît jamais, en effet, dans aucune tragédie subsistante d'Euripide non plus que, d'ailleurs, dans les œuvres conservées d'Eschyle et Sophocle. Mais ce peut être à un pur effet du hasard.' For Zeus on the *theologeion* in Aisch. *Ψυχοσθραγία* see *supra* ii. 734 n. 3, and for Zeus in Phrynich. *Ἠέροαι* (?) *supra* ii. 823 f. pl. xxviii.

placed upon it Kroisos bound with fetters and twice seven Lydian boys beside him. On hearing Kroisos recall the warning of Solon, Kyros repented of his purpose. But the fire was already kindled, and his servants tried in vain to stay the flames. Kroisos as a last resource called upon Apollon, 'and suddenly in a clear and windless sky clouds gathered and a storm burst and there was a deluge of rain insomuch that the pyre was put out.' Now this, though romantic enough and edifying to boot, was from a strictly theological standpoint all wrong. Apollon had no business to control the weather: that was the essential prerogative of Zeus¹. Herodotos' account, admittedly drawn from a Lydian informant², perhaps the logographer Xanthos (465—425 B.C.)³, has points in common with the narrative of Ephoros⁴ as preserved by Diodoros⁵ and was certainly the main⁶ source of the long rhetorical description given by Nikolaos of Damaskos⁷. Ktesias too, though he says not a word about the pyre, like Herodotos makes much of Apollon's aid⁸. Bakchylides, however, an older contemporary of Herodotos, in an ode which commemorates Hieron of Syracuse as victor in the chariot-race at Olympia (468 B.C.)⁹, puts a somewhat different complexion on the whole affair. Here it is not Kyros who dooms Kroisos to the pyre, but Kroisos who, on witnessing the sack of Sardeis, bids a pyre be built in front of his palace and of his own will mounts thereon with his wife and daughters. Here, again, Kroisos' appeal, though obscurely worded, is addressed to Zeus

rather than to Apollon: lifting his hands to the high heaven the king exclaims—

O Spirit of surpassing might,
Where is the gratitude of the gods,
And where is Leto's lordly son?¹

In the event it is Zeus who sends the saving storm:

He spake, and bade a softly-stepping thrall
Kindle the wooden pile. The maidens shrieked,
And up they threw their hands
To pray their mother's aid,
A fate foreseen being bitterest of all.
But, when the shining strength
Of that dread fire
Would spread apace,
Zeus brought a black cloud over it
And quenched the yellow flame².

After which we are told that Delos-born Apollon carried off the aged king to the Hyperboreoi and there caused him to dwell with his daughters as a reward for his generous gifts to Pytho³. So, even in the earlier version of Bakchylides, Apollon plays a noteworthy part, as was but fitting in view of the previous relations between Kroisos and the Delphic oracle⁴. Yet the actual rain-sender is Zeus—a fact remembered for centuries⁵. The famous *amphora* at Paris attributed to the painter known as Myson (fig. 328)⁶ carries the story

Apollon. The same is true¹ of an engraved gem in the cabinet of Monsieur le Comte Chandon de Briailles², of which by the courtesy of Mr C. T. Seltman I am enabled to figure an impression (fig. 329)³. According to the very late Vatican mythographers⁴, Kroisos subsequently boasted of his escape and was rebuked by Solon. The same night he dreamt that Zeus drenched him with water and that the Sun dried him. His daughter Phania explained the dream to mean that her father would be crucified and so exposed to the effects of rain and sun—a fate which ultimately overtook him at the hands of Kyros⁵.

Fig. 329.

A third case of a pyre opportunely extinguished by rain is to be found in the *Love Stories* of Parthenios⁶, who writes in the first century B.C.⁷ and is professedly quoting from local histories by Theagenes⁸ and Hegesippos⁹. Sithon, king of the Odomantoi, had a beautiful daughter Pallene, to win whose hand men came from far and near. At first Sithon bade each suitor take the girl and fight him—the unsuccessful fighter to be slain. In this way he slew many; but, when his strength failed him, he resolved to give his daughter in marriage. He bade two suitors, Dryas¹⁰ and Kleitos, fight each other—the successful fighter to receive both the kingdom and the bride. Now Pallene herself was in love with Kleitos, and an old servitor of hers bribed the charioteer of Dryas to omit the linchpins of his master's chariot¹¹. Thus Dryas was thrown, and slain

by Kleitos. Sithon, perceiving his daughter's guile, made a great pyre and placed upon it the body of Dryas. He was about to slay Pallene as well, when a divine apparition¹ was seen and a sudden deluge fell from the sky. Thereupon he changed his mind, gave a wedding-feast to all the Thracians present, and suffered Kleitos to marry his daughter. We are not here told that the rain was due to Zeus, the agency of the god being vaguely implied, not definitely expressed².

There were, therefore, mythical antecedents to a miracle recorded in the *Acts of Paul and Thekla*³. According to this romantic narrative—one section of a much longer document, the *Acts of Paul*, originally drafted by an Asian presbyter before the close of the second century A.D.⁴—Thekla the daughter of Theokleia, a woman of rank at Ikonion, was betrothed to a young noble named Thamyras, but becoming a convert to Paul was filled with zeal for virginity. The pyre-extinguishing rain recurs in a modified form at Nikomedeia in connexion with the martyrdom of SS. Adrian, Natalia, and others (304 A.D.). S. Baring-Gould *The Lives of the Saints*⁵ Edinburgh 1914 x. 116: 'According to the orders of Maximian, the bodies of the martyrs were placed on a pile of wood to be burnt, but they were so many that the burning was not perfectly carried out, and a heavy rain during the night having extinguished the smouldering pyre, the Christians were able to recover the remains of the martyrs before they were completely reduced to ashes.'

judgment-seat of the proconsul Kastelios, and, when Thekla would give no answer to his interrogation,

'her mother cried aloud "Burn the lawless girl, burn the unmarried maid in the midst of the theatre, that all the women taught by this man may be afraid." The governor, deeply moved, scourged Paul and cast him out of the city, and ordered Thekla to be burned. He then went straight to the theatre, and all the multitude came out to see Thekla. She, like a lamb in the desert looking round for its shepherd, sought to see Paul. In the crowd she saw the Lord seated in the guise of Paul and exclaimed "Lo, when I can endure no longer, Paul has come to behold me!" And she fixed her eyes on him, till he went up to heaven. But now the girls and virgins brought logs to burn Thekla. She came in stark naked, whereupon the governor burst into tears and marvelled at the power that rested upon her. The executioners strewed the logs for her to mount the pyre. She made the sign of the cross and set foot on the logs, while the attendants kindled them below. A great fire blazed up, but did not touch her. For God in his mercy caused an underground rumbling, and a cloud full of water and hail overshadowed her from above, and poured forth all its contents insomuch that many persons were like to be drowned, and the fire was extinguished, and Thekla was saved.'

Finally, a downpour, if not in time to save life, might at least indicate divine disapproval of the victim's death. When Britannicus, poisoned by Nero, was being carried to a pyre hastily built on the Campus Martius, so fierce a rain-storm fell that the common folk held it to portend the anger of the gods at a crime which most men were prepared to excuse. So Tacitus¹. Dion Cassius² adds lurid detail: Nero, to hide the ravages of the poison, had smeared the body with gypsum; but, as the procession passed through the Forum, the heavy rain washed off the gypsum and left the tell-tale discoloration for all to see.

In Egypt the place of Zeus the rain-god was taken, as we have had occasion to note³, by the Nile, which in Hellenistic times was actually worshipped as Neilos Zeus. Hence in the novel by Xenophon of Ephesos⁴ (s. ii or iii A.D.⁵), when the hero Habrokomes is condemned by the governor of Egypt to be burnt alive, the pyre in answer to his prayers is extinguished by a miraculous rise of the river Nile.

(g) Zeus *Ómbrios*.

Lykophron in his *Alexandra* speaks of Elis as—

the rock of Molpis,

Whose body was cut up for Zeus the Showery¹.

This enigmatic allusion is expounded as follows by the scholiast and by Tzetzes². Elis once suffered from a prolonged drought, till the inhabitants consulted an oracle and were bidden to offer Zeus a human sacrifice. The victim was to be a boy of noble parentage. Thereupon a young Elean named Molpis volunteered for the post. No sooner was he slain than a copious rain fell. So the Eleans in memory of the event set up a sanctuary of Zeus *Ómbrios*, 'the Showery,' in which was to be seen a statue of Molpis.

Is this to be taken as serious fact or sensational fiction? F. Schwenn³ in his monograph on human sacrifice among the Greeks and Romans simply ignores the case of Molpis. But the antiquarian lore of Alexandrine scholars was in general trustworthy, and we have already found traces of human sacrifice in the cult of Zeus at Lyttos in Crete⁴, of Zeus *Atabyrios* in Rhodes and Sicily⁵, of Zeus *Laphýstios* in Thessaly⁶ and Boiotia⁷, of Zeus *Ithomátas* in Messene⁸, and of Zeus *Lýkaivos* in Arkadia⁹. Indeed, it is precisely in connexion with Zeus that such primitive traits were likely to linger. For the rain-supply, vital to every early community, was given or withheld by him. It was on account of a persistent drought that Athamas proposed to sacrifice Phrixos and Helle, and after their escape was himself all but immolated at the altar of Zeus¹⁰. Again, it was when the crops failed and famine stared them in the face¹¹ that the Arcadians had recourse to human sacrifice at the sanctuary of Zeus *Lýkaivos*, whose priest was official rain-maker for

the district¹. It may well be, then, that in Elis too the same desperate means were on occasion adopted to propitiate the reluctant rain-god. And if in Arkadia King Lykaon was said to have served up his son or his grandson as a dish at the table of Zeus², we can hardly rule out the possibility that Molpis' body was likewise cut up in the rites of the Elean Zeus *Ómbrios*. His noble birth³ and his well-omened name⁴ would make him a most suitable victim. Perhaps in Elis, as in Arkadia⁵, blood-guiltiness was avoided by the expedient of a communal meal.

On Mount Parnes in Attike stood an altar at which sacrifices were made, sometimes to Zeus *Ómbrios*, but sometimes also to Zeus *Apémios*⁶, the god 'who Saves from Harm'. Mount Hymettos too had an altar of Zeus *Ómbrios*⁸. And a large round base of marble, found in 1900 on the site of the Agora at Corinth, still bears in late lettering part of an elegiac couplet in which one Heliodoros honours Zeus *Ómbrios*⁹. To these or other such monuments Plutarch is alluding, when he protests that the abolition of food would involve the abolition of agriculture, and asks what would then become of

the altars and sacrifices of Zeus Ómbrios, Demeter *Proërosta*, and Poseidon *Phytálmios*¹. Zeus Ómbrios here heads the list of agricultural deities: it was doubtless in that capacity that he was worshipped.

Gods that sent rain, wherever they were recognised, were apt to be identified with Zeus Ómbrios. Examples may be drawn from Phrygia, India, and Palestine.

Phrygia had a legend of the flood², which has come down to us in two somewhat different versions. Zenobios, who taught at Rome under Hadrian and published an epitome of the proverbs collected by Didymos (s. i B.C.³) and Tarraios⁴, states that 'the tears of Nannakos' was a phrase used of ancient happenings or of persons making loud lamentation—

'for Nannakos was a king of Phrygia, as Hermogenes asserts in his *Phrygian History*⁵, before the days of Deukalion. Having foreknowledge of the deluge that was to be, he gathered all men into the sanctuaries and made supplication with tears. Herodes⁶ the iambic poet says

"Though I should weep the tears of Nannakos⁷."

Stephanos of Byzantion (s. v A.D.) in his account of Ikonion pursues the story further:

'They say that there was a certain Annakos, who lived for over three hundred years. His neighbours asked an oracle how long his life would last. The answer

given was that, when he died, all men would be destroyed. The Phrygians hearing it made great lamentation. Hence the proverb "to cry as in the days of Annakos" used of those who mourn overmuch. When the flood came in Deukalion's time, all were destroyed. But when the ground was dry again, Zeus bade Prometheus and Athena to make images of clay, and calling upon the winds he bade them to breathe upon all these and so bring them to life. The place got its name *Ikónion* from the fact that the "images" were designed there¹.

It seems probable that neither of these versions was wholly independent of Jewish tradition. Indeed, Buttmann² more than

a century since concluded that *Annakós*, who lived for over three hundred years, was none other than *Enoch*, who reached the age of three hundred and sixty-five³. And it is easy to surmise that the nasalised form of the name, *Nánnakos*, arose under the influence of *Noah*. Be that as it may, the popularity of the Hebrew story is sufficiently established by the remarkable coins of Apameia Kibotos⁴

issued by Septimius Severus (fig. 330)¹, Macrinus (fig. 331)², and Philipppus Senior (figs. 332, 333)³. The design unites two consecutive scenes. On the right, an ark inscribed *NOE* floats on the waters of the flood. Its lid is open, and from it Noah and his wife look out. Upon the lid perches the raven, and towards it flies the dove with an olive-twigg in its claws. On the left, Noah and his wife stand on dry ground, uplifting their hands in gratitude to God for their escape. This pictorial type⁴ presupposes some famous original, perhaps a frescoed Stoa⁵, perhaps an illustrated Pentateuch⁶.

it remains at least possible that the Jews had there fastened on native names and myths, adopting or adapting them to suit their own tradition. The town was called Kibotos, apparently the Grecised form of some Phrygian name, whose significance escapes us¹. Another coin of Apameia, struck by Hadrian, shows (figs. 334—337)² Marsyas with *cornu copiae* and flutes seated in a rocky grotto: beneath him water streams from an inverted vase; above him are several chests and the legend *kibotoi*. F. Imhoof-Blumer³ cites this coin-type in support of G. Hirschfeld's⁴ conjecture that Apameia was nick-named Kibotos on account of its commercial importance⁵. To me it seems more likely that *Kibotoi*

was the name of some local festival⁶. But, whatever be the explanation, Jewish settlers would be quick to discover an allusion to their own ark and would probably claim that it had grounded on some neighbouring mountain⁷. Again, we may conclude that

a genuine Phrygian flood-myth underlies the story of Priasos, which Nonnos¹ relates as follows. When Zeus *Hyétios* flooded the plain of Phrygia with his showers and submerged both oak-trees and thorn-brakes, Priasos left his water-logged home and went off to the land of Aonia (*sc.* Boiotia), avoiding the deadly rain of Zeus. But amid strangers he ever shed tears as he thought of the Sangarios and longed for his familiar spring. At length Zeus *Hýpatos* quelled the flood and drove the waters back from the peaks of Sipylos, while *Ennosígeios* with his trident turned the whole stream into the depths of the sea. Then Priasos hastened to quit the soil of Boiotos and hied him back to his native land. His strong arm supported his aged father in the flood, and Zeus the Great in return for his piety brought him in safety from a watery grave—Zeus whom men call *Brómbios*. The meaningless title brings us up with a jerk. It is taken by C. F. Graefe, H. Köchly, and A. Ludwich from the manuscripts' *Brónbios*. But there can be little doubt that Count de Marcellus was right in restoring the appellative of Zeus *Ómbrios*, 'the Showery.'

Strabon² states that, according to 'the historians' (Kleitarchos?)³, the Indians revered Zeus *Ómbrios*, the river Ganges, and local divinities. He is presumably fitting a Greek name to Indra, son of Dyaus, who fought *Vrtra*, the demon of drought, and released the waters pent up by him⁴.

In this connexion space must be spared for a few words regarding the Zeus-types of early Indian coinage. Diodotos ii, satrap of Baktriane, *c.* 261—250 B.C. struck for his suzerain Antiochos ii Theos of Syria both gold *statères* and silver tetradrachms (fig. 338) bearing as obverse type his own portrait, and as reverse his canting badge—Zeus fulminant¹. The god strides from right to left with a thunderbolt in his uplifted hand, an *aigis* on his outstretched arm, and an eagle at his feet. On attaining independence, *c.* 250 B.C.,

Diodotos ii continued to issue gold and silver coins of the same types (figs. 339 and 340), but of course substituted his own name for that of Antiochos². The Zeus-type proved popular and

The type itself was a Hellenistic modification of the old Hellenic striding Zeus⁴. By displacing the eagle on the hand of the god it had found room for the *aigis*, which in those days of intensive

The same subject, but without the *aigis*, is already found on the Gigantomachy-*amphora* with twisted handles, from Melos, now in the Louvre (no. S 1677) (bibliography *supra* ii. 435 nn. 4 and 5, iii. 56 n. o). This handsome vase, attributed by Furtwangler to the Talos Painter (Furtwangler—Reichhold *Gr. Vasenmalerei* ii. 193 ff. pls. 96 (=my pl. vii) and 97), is referred by Beazley to the post-Meidian period (J. D. Beazley *Attic Red-figured Vases in American Museums* Cambridge Mass. 1918 p. 184), but even so must be more than two centuries earlier than the Pergamene frieze.

Vase and frieze presuppose a common original, perhaps the Pheidias painting inside the shield of Athena *Parthénos* (*supra* ii. 435 n. 5).

On a terrace south of the Akropolis at Kyrene the Italians, in Aug. 1915, excavated the ruins of a temple overthrown by an earthquake in the second half of s. iv A.D. The temple, a tetrastyle prostyle building of the Corinthian order (20^m long × 12.50^m wide), contained the remains of an oblong mosaic pavement and a large statue-base (3.60^m wide × 1.50^m deep) set against the back-wall of the *cella*. On the pavement lay the figure of Zeus, broken but almost all there. The same site, in 1861, had yielded two female figures, a Hera (?) and an Athena (R. Murdoch Smith—E. A. Porcher *History of the Recent Discoveries at Cyrene* London 1864 p. 106 nos. 120 and 121). The three together appear to have formed the favourite Capitoline triad (*supra* i. 45 fig. 14, 60 f. fig. 35, 78 f. fig. 566). Zeus now stands in the Museo di Bengasi (E. Ghislanzoni *loc. cit.* p. 211 fig. 11); his partners, in the British Museum (A. H. Smith in the *Brit. Mus. Cat. Sculpture* ii. 255 nos. 1478 and 1479).

Zeus, an imposing statue (2.18^m high) in cry-talline Parian marble, wears his *aigis* like a *chlamys* over the left shoulder. His raised left hand rests on a long sceptre; his lowered right held a thunderbolt, as attribute rather than weapon. A tree-trunk (oak?) at his side and an eagle at his feet complete the figure, which should be regarded as an original of late Hellenistic times. Two inscriptions were found on the statue-base. One, of 138 A.D., occupies the broad side with a dedication to Hadrian and Antoninus Pius: *αὐτοκράτορι Καίσαρι, Θεοῦ Τραϊανοῦ Παρθικοῦ | υἱῷ, Θεοῦ Νερῶνα νικητῷ. Τραϊανῷ Ἀδριανῷ Σεβαστῶν, | αὐτοκράτορι τὸ β', ἀρχιερεὶ μεγίστῳ, δημαρχικῆς ἐξουσίας κβ', ὑπάτῳ τὸ γ', πατρὶ πατρίδος, | σωτῆρι καὶ κτίστη, καὶ αὐτοκράτορι Τίτῳ Αἰλῶ Καίσαρι Ἀντωνεινῷ, υἱῷ Ἀδριανοῦ Σεβαστοῦ. | ἡ Κυρηναίων πόλις κοσμηθεῖσα ὑπ' αὐτοῦ | καὶ τοῖς ἀγάλμασιν* (E. Ghislanzoni *loc. cit.* p. 197 fig. 1 gives a photographic facsimile, cp. *ib.* p. 205 fig. 8. G. Bagnani *loc. cit.* p. 238 has an inaccurate transcription). The other, on the narrow end of the base, reads *Ζηνίῳν | Ζηνίῳνος* (E. Ghislanzoni *loc. cit.* p. 200 fig. 2)—sculptor? magistrate? priest? in any case a well-omened name (cp. *supra* ii. 921 n. o). Bagnani *loc. cit.* p. 241 concludes: 'My own theory is that when the temple of the Capitoline Triad was built or extensively restored by Hadrian, the people of Cyrene took as cult images a Zeus and an Athena of

² A splendid Arabian sardonyx of two layers, whitish grey on opaque black, found at Ephesos towards the close of the eighteenth century, is now preserved in the Archaeological Museum of the Ducal Palace at Venice. It shows a majestic bust of Zeus, in three-quarter position, wearing oak-wreath and *aigis*. Furtwangler noted the Scopaeic character of the design, but reached the right conclusion—'Ein herrliches Werk gewiss hellenistischer Zeit.' This is borne out by the abundant curling tresses of the head, its expression of

round his head and an *aigis* over his left shoulder. Even the

inward effortless triumph, and the pictorial quality of the whole (Müller—Wieseler *Denkm. d. alt. Kunst* ii. 2 f. pl. 1, 5, Müller—Wieseler—Wernicke *Ant. Denkm.* ii. 1. 36 pl. 3, 7, Overbeck *Gr. Hardly less remarkable is a cameo of mottled green malachite, now in my collection and here published for the first time (pl. xliiv: scale $\frac{1}{2}$). Zeus appears as a noble full-face head, again wearing an oak-wreath (with three acorns) and a scaly *aigis* (in deeper green). This masterpiece may be placed somewhat later in the Hellenistic age than the sardonyx

above recorded, though earlier than such degenerate works as the mask from Otricoli in the Rotunda of the Vatican (Overbeck *op. cit.* Zeus p. 74 ff. no. 1 Atlas pl. 2, 1 f.), the bust from Pompeii in the Museum at Naples (*id. ib.* p. 82 f. no. 13 Atlas pl. 2, 3 f.), or the colossal head at Florence (*id. ib.* p. 86 f. no. 17 Atlas pl. 2, 5 f.). Malachite, obtained from mines between Suez and Sinai, was known to the Egyptians at a very early date (G. F. Kunz *The Curious Lore of Precious Stones* Philadelphia & London 1913 p. 97), and amulets made of it have been widely credited with protective and curative powers (S. Seligmann *Der bese Blick und Verwandtes* Berlin 1910 ii. 30, 11. *Die magischen Heil- und Schutzmittel* Stuttgart 1927 p. 261, cp. p. 282. W. M. Flinders Petrie *Amulets* London 1914 p. 52, Sir E. A. Wallis Budge *Amulets and Superstitions* Oxford 1930 p. 318). Pliny speaks of it as highly prized for making seals (Plin. *nat. hist.* 37. 114), though extant examples seem to be of the greatest rarity. Possibly malachite, like 'plasma' (*supra* i. 357 n. 4), was a rainy stone and as such deemed appropriate to Zeus.

Later still (s. ii B.C.?) and of much less merit is a grandiose circular sardonyx of three layers, now at Petrograd, which represents Zeus as a profile head with exaggerated frontal furrow and occipital curve: oak-wreath (one acorn) and *aigis* as before (Overbeck *op. cit.* Zeus p. 243 ff. human Zeus was not complete without at least some hint of the *aigís*¹.

Demetrios i, the son and successor of Euthydemos i, expanded the kingdom of Baktria to include the Indus valley². About 190 B.C. he struck silver tetradrachms (fig. 350)³ bearing on the obverse his own bust, on the reverse Zeus standing with thunderbolt and sceptre. The Greek legend of the one side is translated by the Kharoshthī legend of the other. And it is at least possible that the

figure of Zeus the storm-god was intended as the Greek equivalent of the ancient⁴ native god Indra. The reverse subject was repeated half a century later on the silver coins of Heliokles, both those struck in Baktria with a Greek legend and a purely Greek type

It should be added that all three cameos owe something to the ever-popular type of Alexander, especially the thick neck, the upward glance, and the leonine hair above the forehead. If Alexander was figured in the likeness of Zeus (*supra* i. 57, 279), Zeus in turn borrowed an occasional trait from Alexander (see e.g. the Alexander-like Zeus in the *Casa dei Vettii* (*supra* i. 57 n. 4)). The ancients played on the parallel (*supra* i. 6 f.).

associated Bactrian rulers, Agathokles and Pantaleon. Agathokles has for reverse design Zeus holding Hekate as a torch-bearer on his extended right hand and leaning on a spear with his left (fig. 361)¹. Pantaleon has Zeus holding the same Hekate and leaning on the same spear, but seated on a throne (fig. 362)². Now the combination of Zeus with Hekate, though occasionally met with in the classical area³, is hardly to be explained from Greek sources⁴. It is far more likely that we have here to do with the Hellenised version of a native Indian cult. Indra as a storm-god controlled both fire and water. Fire in the Vedic religion is Agni, and according to the *Çatapatha Brāhmaṇa*⁵ Agni had three

Further proof that in the upper Kābul valley Zeus was but another name for Indra may be had from the coinage of Eukratides and his successor Antialkidas. Certain square coppers of Apollodotos i Soter, re-struck by Eukratides c. 165 B.C., show the king's bust with a Greek legend on the obverse, a seated Zeus with a Kharoshthī legend on the reverse (fig. 363)¹. Fortunately for our understanding of the scene, the Apolline figure is expressly named *Marnas* (or more often *Marna*), and Sir G. F. Hill⁸ has made out a strong case for regarding this divine pair as Marnas, the young Cretan Zeus, who—be it remembered—was himself a hunter⁹, with Britomartis, a Cretan form of Artemis¹⁰. The pair bore names of kindred origin and significance; for if *Marnas* recalls the Cretan *marna*, 'virgin'¹¹, and denotes simply 'young man,' *Brito-martis* is said to have been a Cretan term for 'sweet maid'¹². Consorts could hardly have been

¹³ The point is contested (K. Preisendanz in Pauly-Wissowa *Real-Enc.* xiv. 1899 f.). Sir G. F. Hill *Some Palestinian Cults* p. 16 f. concludes 'that the two deities, looking like Apollo and Artemis, in the temple at Gaza, are Marnas and his consort Britomartis,

Markos Diakonos¹, writing c. 420 A.D.², tells how in 395 the people of Gaza ascribed a two months' drought to the presence in their midst of Saint Porphyrios. They therefore offered sacrifices and prayers to Marnas, whom they took to be 'lord of showers' and identified with Zeus³, or more particularly with Zeus *Kretagenés*⁴. For a week they continued reciting hymns and resorting to a place outside their city called the place of prayer. But, when nothing happened, they gave up the attempt to coerce their god and returned to their usual avocations. The Christians then, men, women, and children, to the number of 280 came together and besought Saint Porphyrios to go out with them and pray for rain. He agreed to do so, proclaimed a fast, and bade all keep a night-long vigil in the Holy Church. This they did, with thirty prayers and as many genuflexions, not to mention choruses chanted and the lessons read. At dawn they took the standard of the Cross and, the saint at their head, proceeded with hymns to the Old Church, founded by Bishop Asklepas, on the west of the city, where again they offered the

the Cretan Zeus and the Cretan Artemis, connected in name in the same way as Zeus and Dione; and that the name Marnas is probably Cretan in origin, its Syrian appearance being fortuitous.' Contrariwise Prof. S. A. Cook *op. cit.* p. 182 ff. argues that *Marna*, primarily a Semitic name, was later etymologized to suit the Cretan *Marnas*. However, that the god was really of Cretan extraction seems clear, not only from the statements of Epiphanius (*ancor.* 106 (n. 209 Dindorf) καὶ Μαρνᾶς δοῦλος Ἀσπερίου τοῦ Κρητὸς παρὰ Ταΰταις), Markos Diakonos (*infra* p. 553 n. 1), and Stephanos of Byzantion (*supra* i. 149 n. 1), but also from other mythological evidence (Gruppe *Gr. same number of prayers. Then on to the shrine of the martyr Timotheos, which contained also the relics of the martyr Maior and the confessor Thea. Once more they offered the same number of prayers and genuflexions. After which they returned to the city, with three prayers and three genuflexions on the way. But here a hitch occurred. They found the city-gates closed against them by the jealous heathen, and a two hours' wait ensued. Thereupon God, beholding their patience, in his mercy stirred up a strong south wind. The sky clouded over, lightnings and thunders began at sundown, and so heavy a rain fell that it looked more like hail. Sundry Greeks, beholding these marvels, believed and opened the gates. They joined the Christians, shouting: 'Christ alone is God—He alone has conquered.' The saint had them into the Holy Church, where he baptised 78 men, 35 women, and 14 children of whom 5 were girls. That night and the next day rain fell in such abundance that all men feared the collapse of houses, most of which were of crude brick. 'Our Lord Jesus Christ'—we read¹—'spent from the 8th to the 10th of Audynaïos (January 3—5) in raining,' and on the 11th his followers celebrated the Epiphany with hymns and thanksgivings. Indeed, the same year witnessed the accession of another 105 to their numbers.

The sequel is too long to quote in detail. But it appears that Porphyrios was vexed with the ungodly conduct of the idolaters; for at Gaza they still dealt in divinatory dreams, especially at the Marneion². So he wrote a letter of protest to Ioannes Chrysostomos, Bishop of Constantinople, who informed Eutropios the Chamberlain, who in turn brought his influence to bear upon Arkadios. The upshot was an edict that the temples of Gaza be closed and the traffic in divination stopped. Hilarios, an imperial commissioner, was sent to Gaza to carry out this decision. He did close the temples in general and overthrew their idols. But, in return for a substantial bribe, he allowed the traffic of Marnas to continue. Porphyrios then went in person to visit Ioannes the metropolitan of Kaisareia in Palestine; and together they repaired to Rhodes, where the anchorite Prokopios informed them that Chrysostom was not a *persona grata* at court and commended them to Amantios, Chamberlain of the Empress Eudoxia. The two Bishops reached Constantinople on 7 January 401. Eudoxia received them favourably

and herself broached the matter to Arkadios, who at first was unwilling to take action. The Bishops, however, prayed that Eudoxia, then pregnant, might bear him a son; and she promised that, if this should befall, she would do all they wanted and further found a Christian church in the heart of Gaza. And so it fell out. Theodosios ii was born, and Arkadios, moved by gratitude, granted the Christian petition. The Bishops returned *viâ* Rhodes, reached Gaza on 1 May 401, and were followed ten days later by the arrival of the commissioner Kynegios and a large body of troops. These at once set about the task of demolishing the eight idolatrous temples of Gaza—those of Helios, Aphrodite, Apollon, Kore, and Hekate, the Heroeion, the Tychaion of Tyche, and, most famous of all, the Marneion of Zeus *Kretagenés*¹. But the priests of Marnas, getting wind of this attack, barricaded the doors of the inner temple with big stones, brought all valuables down into the *adyta*, concealed there also the effigies of the gods, and themselves escaped through the same *adyta* by a variety of ways leading upwards². The attackers thus repulsed turned their attention to the other temples, overthrew some, fired others, and plundered all their treasures. Saint Porphyrios, however, strictly forbade the Christians to partake in such looting. For ten days the crowd laid waste the temples. There was some doubt as to the fitting treatment of the Marneion—should it be demolished? should it be burnt? should it be purified and consecrated as a church?—till the Bishop proclaimed a fast and a solemn evening service. At this a boy, seven years old, who stood there with his mother, suddenly cried aloud: 'Burn the inner

Proklos the neo-Platonist, who held that the philosopher should be the hierophant of all mankind, composed a special hymn in honour of Marnas (Marin. *z. Procl.* 19 δηλοῖ δὲ ἡ τῶν ὕμνων αὐτοῦ πραγματεία, οὐ τῶν παρὰ τοῖς Ἑλλήσι μόνον τιμηθέντων ἐγκώμια περιέχουσα, ἀλλὰ καὶ Μάρναν Γαζαῖον ὕμνουσα καὶ Ἀσκληπιὸν Λεοντοῦχον Ἀσκαλωνίτην καὶ Θυανδρίτην ἄλλον Ἀραβίους πολυτίμητον θεὸν καὶ Ἰσὺν τὴν κατὰ τὰς Φίλας ἐπὶ τιμωμένην καὶ τοὺς ἄλλους ἀπλῶς ἅπαντας. καὶ γὰρ πρόχειρον ἐκείνο εἶχεν αἰεὶ καὶ ἔλεγεν ὁ θεοσεβέστατος ἀνὴρ, ὅτι τὸν φιλόσοφον προσήκει οὐ μᾶς τινὸς πόλεως οὐδὲ τῶν παρ' ἐνίοις πατριῶν εἶναι θεραπευτὴν κοινῇ δὲ τοῦ ὅλου κόσμου ἱεροφάντην).

² Hence Hieron. *epist.* 107. 2 iam et Aegyptius Serapis factus est Christianus; Marnas Gazae luget inclusus et eversionem templi iugiter pertremiscit. Cp. *cund. comment. in Isaiam prophetam* 17 (xxiv. 241 Migne) Serapion Alexandriae et Marnae templum Gazae in ecclesias domini surrexerunt.

temple down to the ground, for many dreadful things have happened there, and, most dreadful of all, the sacrifices of men! Burn it on this wise. Bring liquid pitch and sulphur and pigs' lard. Mix the three and anoint therewith the doors of bronze. Then set fire to them, and so the whole temple is burnt: otherwise, it cannot be. But leave the outer temple with its precinct. And after the burning purify the place and there found a Holy Church¹. This inspired utterance he repeated, first in the Syrian tongue, later in Greek. The Christians, accordingly, with the help of Kynegios and the magistrates followed the boy's advice and burnt the Marneion to the ground. The conflagration, which lasted many days, was succeeded by a house-to-house search for idols and books of magic used in the idolaters' initiatory rites². So the great pagan temple was utterly destroyed in June 402, and a Christian church, which took five years to build, was erected on the site of it. Some advised the preservation of the old circular plan; but Porphyrios, accepting the plan furnished by Eudoxia, preferred a cruciform structure and dedicated the same on Easter Day 407, calling it Eudoxiane after its illustrious patroness.

Incidentally we learn various details about the old Marneion. It was circular, it was surrounded by two concentric colonnades, and it had by way of centre an elevated dome³. It had also a veneer of marble incrustations, which were regarded as sacred and restricted

All this, and more, in the Syrian tongue. Porphyrios adjured the boy's mother to tell him whether the utterance was due to any trickery. She most solemnly denied it and suggested that the saint should examine the boy with threats. So the Bishop had a whip fetched and the boy hoisted up, while the whip-holder bade him confess or be beaten on the spot. The boy at first remained silent, but suddenly repeated exactly the same advice in the Greek language, which neither he nor his mother had learned!

to a place that no man, and certainly no woman, might enter: Porphyrios set them in the pavement outside the new Church on purpose that they might be trodden under foot, not only by men, but by women, dogs, pigs, and cattle—an outrage which offended the idolaters more deeply than the burning of their temple; indeed most of them, particularly the women, thenceforth refused to walk on those marble slabs¹. Within the precinct were certain wells, one of considerable depth, equipped with buckets, ropes, and a wooden top, being at the west end of the Christian Church².

Finally, it is tempting to conclude that this round building, with concentric colonnades, underground chambers, and secret means of egress, dedicated moreover to Zeus *Kretagenés* in whose service human victims were slain, really did—as we have already suggested³—bear a significant resemblance to the Cretan Labyrinth. Gaza *Minóa* presupposes Minos⁴.

Be that as it may, Marnas was admittedly equated with Zeus. A stone embedded in a modern wall at Kanatha (*Kanaawât*) in the *Haurân* reads:

'Annelos, son of Kamasanos, made this for Zeus Marnas the Lord⁵.'

Further, it is on record⁶ that a certain Septimius Arabianus (whose name points to his nationality), a man notorious for alleged thefts but set at liberty by Heliogabalus, once came among the senators

to salute Alexander Severus. The indignant Emperor cried out: 'O Marnas, o Iupiter, o gods immortal, Arabianus is not only alive, but actually ventures into the Senate and, like as not, hopes to get something out of me: does he deem me such a fatuous fool?' The combination '*O Marna, o Iuppiter*' amounts—as Friedländer¹ saw—to a virtual identification. It is probable that Marnas, like other oriental deities², had a cult-centre as far west as Ostia. An inscription³ found at Portus Traiani states that the men of Gaza, at the bidding of their ancestral god, were honouring their benefactor the Emperor M. Antonius Gordianus Pius Felix by the hand of Ti. Claudius Papirius custodian of the sanctuary.

Marnas as 'lord of showers' must also have been a god responsible for the fertility of the land and for the very life of its

Zeus *Kretagenés* was conceived sometimes as an infant⁶, sometimes as a youth⁷, sometimes as a full-bearded god⁸. Marnas too had his variations of type. On coins of Gaza from the time of

Hadrian to that of of Geta (figs. 374, 375)¹ he is a youthful hunter. Under Gordianus Pius (fig. 376)², though still youthful, he approximates more closely to the normal aspect of Zeus; for, while raising his right hand, he holds a thunderbolt on his left arm and sometimes has an eagle at his feet³ or else is crowned by Nike standing on a column behind him. On bronze pieces issued c. 250—150 B.C. (fig. 377)⁴ he appears as a mature man half-draped in a *himation* and uplifting a wreath. On other bronze pieces struck in s. ii or i B.C. (fig. 378)⁵ a laureate head with a bushy beard is aptly described by Sir G. F. Hill as 'Zeus, that is to say Marnas.'⁶

The same god is represented on a colossal scale by a figure found near Gaza in 1879 and now in the Imperial Museum at Constantinople (fig. 379)⁷. In a sand-dune known as *Tell el Ajoul* ('Hill of the Calf') on the left side of the *Wadi Gasse*, some two hours to the south-west of Gaza, Arab masons had dug up certain well-cut blocks of stone and sold them in the town. a statue in white crystalline marble. The god is seated on a throne with no elbow-rests but a high back adorned at its base with two large rosettes. He wears a *himation* in Olympian fashion over his left shoulder and round his legs, which were carved in a separate block. His right arm, to judge from its mortise, held out some attribute, probably a thunderbolt or a *phidie*, hardly a Nike. His left was raised and the hand must have rested high up on a long sceptre. The head has abundant but irregular locks of hair and a full beard. The forehead is marked by two deep furrows, and the eyes are sunk beneath troubled brows. G. Mendel, after a careful analysis of the style, concludes that we have here mediocre work of s. ii A.D. No doubt the sculptor aimed at being impressive and, with that end in view, sought to combine a Pheidias arrangement of the drapery with Scopas eyes and post-Lysippan hair. But above all he—like his predecessors of Pergamon or Rhodes—relied on sheer size. The actual height of the fragment is c. 3'20", and it must rank as at least the largest of all extant statues of Zeus.

It is possible that before this fusion of the Philistine Marnas with the Greek Zeus there had been an earlier *rapprochement* of the Philistine god with the Hebrew Jehovah. The famous quarter-shekel of the Philisto-Arabian series, which represents *jahu* as a solar Zeus on a wheeled and winged seat, places in his hand a hawk(?) instead of an eagle (*supra* i. 232 f. fig. 171, *b* and pl. xxi)¹. And a hitherto unpublished coin of the same series, struck at Gaza in s. v B.C., shows for obverse design the profile head of a grave bearded god wearing a wreath, and for reverse a hawk and an olive-spray (fig. 380)². Have we here, in this obvious copy of Athenian

of this cult is unknown, but the appellative is already found in a Dionysiac context as early as the first half of the sixth century B.C. F. Dümmler¹ many years ago published a Corinthian *kratér*, found at Caere and now preserved in the Louvre², which illustrates two successive scenes (fig. 381, *a* and *b*) from a Dorian farce³. The other scene gives the sequel²—the two misdemeanants confined in the wine-cellar, with their ankles in fetters and their heads in a sort of cangue or pillory (*xýlon*, *kýphōn*), dependent for their food on the services of a small handmaid. Laconian *deikeliktai* are known to have represented fruit-stealers³ or the like⁴; and there can be little doubt that H. Schnabel⁵ was right in claiming a ritual origin for such burlesque. If so, the master of the wine-bin began by representing Dionysos and naturally continued to bear his name⁶.

Finally, we may note that in Kypros the part of Zeus *Ómbrios* was played by a goddess, not a god. An interesting terra cotta sketched by Cesnola at Salamis (fig. 382)⁷ portrays a naked and nymph-like female kneeling on her left knee as she empties a large pitcher borne on her shoulder. Behind her is a rock with a lion's-

Payne *Necrocorinthia* Oxford 1931 p. 122 n. 3 pronounces to be 'the only reasonable suggestion'! But Miss Frankel admits that the mis-shapen Corinthian dancers are in general daemonic ('Ein sicheres Ergebnis der Forschung ist gleichfalls, dass jene Vorbilder der attischen Schauspieler dämonischer Natur sind, da sie auf mehreren Darstellungen mit mythischen Personen gruppiert werden') and that the performers represented on this exceptional vase are drawn and costumed in their likeness ('Und damit ergibt sich überraschender Weise, dass der Dummle'sche Krater ein Zwischenglied bietet zwischen der korinthischen Dämonenwelt und den attischen Schauspielern. i. The Ox-driving of Zeus *Hyétios* at Didyma.

Alkiphron³ informed us that Attic villagers in time of drought presented Zeus *Hyétios* with a ram, or a he-goat, or it might be a boar; failing these, a cake or even a pinch of incense would serve. But admittedly the most desirable victim for him was a bull.

This squares with a couple of inscriptions from Didyma near Miletos, which describe one Theon, son of Theon, a personage of importance, as 'driver of the ox to Zeus *Hyétios*⁴.' The official in question cannot have been prior to the first century B.C.⁵; but by the help of other inscriptions from the district B. Haussoullier has shown that the ceremony of 'ox-driving' at Didyma was an institution of earlier date, and has made it probable that it was an old rite celebrated before a statue or altar of Zeus *Hyétios* in the precinct of Zeus *Sotér*—a rite which had fallen into neglect and had been restored subsequently at some date impossible to determine with accuracy but hardly before the second century B.C.⁶

then been renewed by Nikagoras and Lykaithos, who had also at the same time made up the sacrificial arrears (so W. Dittenberger *ad loc.*).

the twentieth day of the spring month Batromios there was a sacrifice to Zeus *Polieús*. The victim was an ox chosen the previous day with due solemnity. Seven and twenty oxen, given by the nine subsections of each of the three Dorian tribes, were led in procession to the market-place. Here nine of the beasts were set apart and mixed before presentation. A table was placed, presumably in the precinct of Zeus, whose priest sat beside it with the sacrificial attendants near him. He had or held something sacred; but what it was we do not know for certain, because unfortunately the text at this point is illegible. The most probable conjecture makes him dressed in a sacred garment. Each tribe in turn then presented three of the nine oxen to the priest. First the Pamphyloi drove up the three finest; next the Hylleis, another three; lastly the Dymanes, the remaining three. If none of these were chosen, the process recommenced; and so on, till the whole number of twenty-seven oxen had been driven up to the table. If all these proved unsatisfactory, a further selection of nine oxen, one from each of the three sections of each tribe, was made. These were mixed with the rest and driven up to the table as before, when the final choice took place. The ox that bowed its neck (and so signified its willingness to die¹) was sacrificed to Hestia by a priest described as the 'prerogative-bearer² of the kings,' that is, of the tribal kings³. The ox chosen for Zeus was brought by the heralds into the market-place, where its owner or his representative declared: 'I present the ox to the Coans; let the Coans pay the price thereof

Zeus *Machaneús* is here associated with Athena *Μαχανίς*. At Argos near the tomb of Pelasgos was a vessel of bronze supporting archaic figures of Artemis, Zeus, and Athena: Lykeas took the second figure to be that of Zeus *Μηχανεύς* and said that the Argives who went to Troy had here sworn to capture the city or die in the attempt. Others declared that the vessel contained the bones of Tantalos (*Ins.* 2. 22. 2. See further *supra* ii. 1144 n. 2, but observe that the words ἀνέχει δὲ αὐτὸ ἀγάλματα ἀρχαῖα κ.τ.λ. are ambiguous. The meaning *may* be that the χαλκεῖον was itself supported by archaic figures of the three deities, in which case cp. the tripods with anthropomorphic supports discussed by P. Gardner in the *Journ. Hell. Stud.* 1896 vi. 275—280). An inscription found at Argos in 1905 contains the last few paragraphs of a treaty concluded c. 450 B.C. between the two Cretan towns Knossos and Tylissos. Both had clearly been colonised by settlers from Argos, and the fifth of the extant sections provides that, when sixty rams are sacrificed to *Machaneús*, a leg of each victim should be reserved for Hera, obviously as the paramount Argive goddess (W. The meaning of *Μαχανεύς* as an appellative is uncertain. Lykeas' attempt to connect it with *μάχεσθαι* (Paus. 2. 22. 2) involves a false quantity. The usual rendering 'Goit der Belagerung (?)' (Preller—Robert *Gr. Myth.* i. 142 n. 5, W. Dittenberger in *Hermes* 1881 xvi. 164 ff., W. Sontheimer *loc. cit.*) assumes a relation to *μηχαναί*, 'engines of war,' which could hardly be earlier than s. iv B.C. Gruppe *Gr. Myth. Rel.* p. 1215 thought that Zeus derived his title from Athena 'die Erfinderin auf dem Olympos': this would at least square with Pindar's conception of Zeus as patron of the arts, cp. Pind. *frag.* 57 Bergk⁴, 57 Schroeder *ap.* Dion. Chrys. *or.* 12 p. 239 Dindorf *Δωδωναίε μεγάθυες ἀριστοτέχνα πάτερ* (*id.* *Pylh.* i. 41 ἐκ θεῶν γὰρ μηχαναί πάσαι βροτέαις ἀρεταίς), and with Pausanias' explanation of Athena *Μαχανίτις* (Paus. 8. 36. 5 cited *supra*). But Pausanias elsewhere gives a broader sense to Aphrodite *Μαχανίτις* (Paus. 8. 31. 6 cited *supra*) as 'Contriver' of devices and wiles; and E. Maass *De Aeschyli Supplicibus commentatio* Gryphiswaldiae 1890 p. xxviii, aptly citing *h. Herm.* 436 *μηχανιώτα*, holds that an allusion to the Argive cult of Zeus *Μαχανεύς* underlies Aisch. *suppl.* 594 τὸ πᾶν μῆχαρ, οὐρίος Ζεὺς and 1072 καὶ δίκαι δίκας ἔπεσθαι ξὺν εὐχαῖς ἐμαῖς λυτηρίους μηχαναῖς θεοῦ πάρα. Personally I incline to think that the title is an old one, 'Contriver' in the sense of 'Crafty' (note Aisch. *P. v.* 989 f. οὐκ ἔστιν αἰκισμὸς οὐδὲ μηχανήμ' ὅτῳ | προτρέψεται με Ζεὺς γεγωνῆσαι τάδε), and very possibly goes back to the early belief in Zeus as a magician (cp. the myth of Zeus and Metis or the epic tag *μηρίετα Ζεὺς* (*supra* i. 14 n. 1, ii. 1147)).

should be grouped two or three other cults from the same district of Karia. A bronze coin of Stratonikeia, struck by Septimius Severus and Iulia Domna, has for its reverse type a very similar rite (fig. 385)¹. A humped bull of its own accord approaches a garlanded altar or platform, on which stands a man wearing a short *chiton*, a *chlamys*, and *endromides*. This personage in his left hand holds a sceptre, in his right a dagger, which he is about to plunge into the neck of the bull. Other coins of Stratonikeia, issued by the same imperial couple or by their immediate successors Caracalla and Geta, show Zeus himself attired in the self-same costume

(figs. 386, 387)². I infer, therefore, that the sceptre-bearing slayer of the bull was a priestly king, who acted the part of the god. It will be noticed that the rite takes place in front of a fine spreading oak, the sacred tree of Zeus. An interesting confirmation of this coin-type may be read in an inscription from Panamara. It appears that on one occasion, during the procession of the Panamareia³, the free ox went before the priest to the council-chamber at Stratonikeia and actually showed him the way⁴.

Again, at Halikarnassos the cult of Zeus *Askraíos*, who—as we have already seen¹—was likewise essentially related to the oak, involved a strictly analogous sacrifice. A herd of goats used to be driven up to a certain spot in front of the god's sanctuary. Prayer was offered, and on its conclusion one of the goats under no constraint advanced to the altar. The priest thereupon took hold of it and slew it as being an acceptable sacrifice².

Not unlike the ritual of Zeus *Askraíos* at Halikarnassos was that of Zeus at Pedasa. Here the custom was that a great concourse of people assembled to witness a strange procession. A goat bound with a cord and followed, not led, by the priest passed through the midst of the crowd and, turning neither to right nor to left, went straight along the road to its destination seventy furlongs away³.

It seems, then, that the 'ox-driving' of Zeus *Hyétios* at Didyma finds its explanation, not as an attenuated form of 'Minoan' bull-grappling sports⁴, but as a rite analogous to those of Zeus *Policiús* and Zeus *Machaneús* in Kos, Zeus at Stratonikeia, Zeus *Askraíos* at Halikarnassos, and Zeus near Pedasa. Further, these Carian cults may be found to throw light on that mysterious service, the Athenian Bouphonia. For it is known that the Carian Zeus had some foothold in Attike⁵; and it is to be observed that the nearest

Jedenfalls ist dies eine der frühesten Nachrichten von einem eingeführten orientalischen Kulte, nicht ein Überbleibsel einer "karischen" Urbevölkerung, deren Vorhandensein übrigens auf andere Weise gesichert scheint.' C. T. Seltman *Athens its History and Coinage before the Persian Invasion* Cambridge 1924 p. 88 f. would find a trace of the Isagorean cult on certain Eupatrid coins, which he believes to have been struck by Tisandros (*ib.* pl. 4, P 66, P 67) and by Isagoras during his brief supremacy at Athens (*ib.* pl. 14, P 260, P 261). These coins, didrachms and tetradrachms respectively, show on their reverse the facing head of a panther—the sacred beast of Zeus *Kápios* (cp. *supra* ii. 575 fig. 483, 599 n. 2).

On the other hand it must be borne in mind that Attike was ravaged by Carians before Kekrops' foundation of the dodecapolis (Philochoros *frag.* 11 (*Frag. hist. Gr.* i. 386 Muller) *ap.* Strab. 397). The akropolis of Megara was called *Kapía* after Kar, son of Phoroneus (Paus. 1. 40. 6, Steph. Byz. s.v. *Kapía*): on it stood a roofless temple of Zeus *Kápios* (L. C. Valckenaeer *ej. Kporiov*, Welcker *Gr. Gotterl.* 1. 642 n. 75 *ej. κωρίον* 'kegel-formig, metae modo,' K. F. verbal parallel to the *Bouphônia* of Athens is the *Taurophônia* of Mylasa in Karia¹, a possible stepping-stone between the two localities being Anaphe in the Kyklades².

ii. The Ox-slaughter of Zeus *Polieús* at Athens.

On the Akropolis at Athens, north of the north-eastern angle of the Parthenon³, stood the altar and statue of Zeus *Polieús*; and close to it, another statue of Zeus, by the sculptor Leochares⁴. The form and fashion of these two statues can hardly be determined with certainty. But Otto Jahn has made it at least probable that both of them were represented on the bronze coinage of Athens⁵. The relevant types are as follows.

Of coins issued during the Hellenistic age, from c. 322 B.C. onwards, one group, and that the most numerous, shows Zeus as a nude figure striding forward with his left foot in advance: his right hand is uplifted and brandishes a bolt; his left is thrown out before him as if to secure balance (figs. 388—390)⁶. If we stress the analogy of bronze statuettes made during the early decades of the

fifth century¹, it is tempting to suppose that the statue here portrayed had originally an eagle poised on its left arm. Indeed, this would account well for the fact that many of the coins add an eagle seated at the god's foot (figs. 391, 392)², and some an eagle actually resting on his outstretched arm (fig. 393)³. Zeus as omnipotent antagonist might be thought to need both thunderbolt and lightning-bird. Nevertheless the eagle was hardly an essential adjunct⁴, and the evidence of the coins, on the whole, tells against it.

A second group represents Zeus in milder mood. He no longer strides forward against the foe, but stands erect with left foot less advanced. Instead of brandishing the bolt, he merely holds it in his lowered right hand. This leaves his left arm extended in a rather meaningless manner (fig. 394)⁵ and beneath it the die-sinker found room for a variable symbol—an owl (fig. 395)⁶, an ear

If this group too, as seems probable, shows an actual statue of bronze still existing on the Akropolis at the time of issue, that statue must have been a later and somewhat clumsy modification of the old militant figure, and may perhaps be assigned to the second or third decade of the fifth century B.C.³

outstretched hand is better employed in holding a *phiale*(?) over a conspicuous altar. One specimen (fig. 403)¹ shows an eagle on the extended arm—another case of intrusive adjunct, but useful as serving to connect the latest with the earliest statue.

I gather that the three series of coins represent three successive statues of Zeus *Polieús*, the third being Leochares' improvement, not—as Jahn² supposed—upon the first, but—as Overbeck³ saw—upon the second. If so, we have to recognise in Zeus *Polieús* a development at once external and internal, aesthetic and ethical, to be compared with that which transformed the sixth-century *Pallás* advancing with uplifted lance⁴ into the fifth-century *Parthénos* standing with lance at rest.

⁴ Whether this was the type of Athena *Polias* is a moot point. O. Jahn *De antiquissimis Minervae simulacris Atticis* Bonnæ 1866 p. 10 ff., citing both literary and monumental evidence, pronounced in favour of the fully armed fighting goddess in the so-called 'Palladian' pose, and his verdict has been accepted by the majority of subsequent critics (see e.g. Farnell *Cults of Gk. States* i. 332 ff., E. Petersen *Die Burgtempel*

Sundry dedications to Zeus *Polieús* are on record. A base on throne of Pentelic marble found on the Akropolis was put up for him by a member of the deme Paiania¹. And a silver bowl belonging to him was kept among the treasures of Athena².

The importance of his cult at Athens may be judged from the fact that in the theatre his priest occupied a marble throne immediately adjoining the splendid central seat of the priest of Dionysos *Eleuthereús*³.

The festival of the god⁴ was known by a variety of names as

der Athenaia Berlin 1907 p. 40 ff.). Others, however, have argued cogently in favour of a seated figure (e.g. E. Gerhard *Über die Minervendole Athens* Berlin 1844 pp. 4—6 ('Athena Polias') pl. 1, *id. Auserl. Vasenb.* iv. 6 ff. pl. 242. 1. R. Schöne *Griechische Reliefs aus athenischen Sammlungen* Leipzig 1872 p. 12 pl. 2. 1. A. Furtwangler in Roscher *Lex. Myth.* i. 687 ff.), and A. Frickenhaus 'Das Athenabild des alten Tempels in Athen' in the *Ath. Mitth.* 1908 xxxiii. 17—32 has proved from inscriptions that for some thirty years in the course of the fourth century B.C. the goddess of the ἀρχαῖος νεώς wore a στεφάνη, πλάστρα ('ear-rings'), ὀχθομβος ἐπὶ τῷ τραχήλῳ or περὶ τῷ τραχήλῳ ('necklace'), ὄρμοι πέντε, γλαυῆ χρυσῇ, αἰγίς χρυσῇ, γοργόνειον (χρυσοῦν?), φιδάλη χρυσῇ ἐν τῇ χειρὶ—a continuity of garb which allows us to suppose that it was an old traditional costume and is at least compatible with the monumental evidence for a seated weaponless Athena. Accordingly G. von Brauchitsch *Die panathenaischen Preisamphoren* Leipzig—Berlin 1910 pp. 167—180 ('Das Bild der Athena') concludes that the standing armed goddess was the Athena of Peisistratos, the cult-statue of the Hekatompedon, to whose care Athens was entrusted during the Persian invasion, when the older and more sacred seated goddess, Athena Πολιάς, was temporarily withdrawn from her sanctuary in the then existing Erechtheion.

contends that the old dative Δι Πολιεὺς gave rise to the form Διπολῖεια, which was subsequently changed into Διπολῖεια to suit the later dative Δι Πολιεὺς. He holds that in like manner the *Δισωτήρια became the Δισωτήρια. The earlier form may be inferred from the name of the god's temple Δισωτήριον (Bekker *anecd.* i. 91, 6 f. Δισωτήριον καλοῦσιν Ἀθήνησι τὸν ναὸν τοῦ Σωτήρος Διός, ἔστι δὲ Ἀττικὸν τὸ σχῆμα. Διπόλῖα γοῦν καλεῖται ἑορτή. κ.τ.λ.): the later form naturally occurs in the inscriptions, which are all of Hellenistic date. As to the successive terminations Διπολῖεια, Διπόλῖεια, Διπόλῖα Wackernagel *loc. cit.* p. 481 compares the series ὑγεία, υγεία, ἰγία (F. Blas, *Pronunciation of Ancient Greek* trans. W. J. Puiton Cambridge 1890 pp. 18, 61, K. Meisterhans *Grammatik der attischen Inschriften*³ Berlin 1900 p. 49 n. 362, G. Meyer *Griechische Grammatik*³ Leipzig 1896 p. 132 n. 2, A. Thumb in K. Brugmann *Griechische Grammatik*⁴ München 1913 p. 76).

E. Curtius *Attische Studien* Göttingen 1862 i. 247 proposed to connect Διπόλῖα with the root πελ- and to regard it as the festival of the Διπόλοι or 'Zeus-worshippers.' But the term Διπόλοι is nowhere found.

Harrison *Proleg. Gr. Rel.*² p. 111 n. 2 would render 'the festival of the Plough Curse' (*ib.* p. 23 διο- for δισο=δισο-). But she later abandoned this derivation.

That the Βουφόνια was, to speak strictly, a definite rite which took place at the festival of the Διπολῖεια, is recognised by J. Toepfler *Attische Genealogie* Berlin 1889 p. 149, P. Stengel in *Hermes* 1893 xxviii. 489, in the *Rhein. Deubner *Attische Feste* Berlin 1932 p. 158 f., and the great majority of modern scholars. Mommsen *Fests. Stadt Athen* p. 512 (cp. *ib.* p. 517 n. 1) thought that the festival might have been called Διπολῖα in official language, Βουφόνια in popular parlance. H. von Prott in the *Rhein. Mus.* 1897 lii. 197 inferred from Ail. *loc. cit.* 'dass zwei Berichte über zwei Feste zusammengeworfen sind.' U. von Wilamowitz-Moellendorf *Der Glaube der Hellenen* Berlin 1932 ii. 172 (cp. *ib.* p. 353) 'die altattischen Διπολῖα, Μαιμακτήρια, Βουφονία' is doubly inexact.

The ritual of the Dipolieia is known to us primarily from passages in Porphyrios¹ and Pausanias². Porphyrios appears to be

¹ It will be convenient here to print the passages *in extenso* as they stand in the Teubner text (ed. A. Nauck) and further on to discuss particular points.

quoting *verbatim* from Theophrastos' treatise *On Piety*¹ (c. 332 B.C.); and Pausanias writes (c. 170 A.D.) as one who has visited the Akropolis and taken a personal interest in its cults. The following account is in the main that of Porphyrios², words enclosed in square brackets being additions from Pausanias:—

[Barley and wheat³,] made up into semi-solid porridge and solid cakes⁴, were placed on the bronze table [or altar of Zeus *Polieús*⁵].

Hitzig c). ἀφείθη ἐς θάλασσαν) κριθεὶς καὶ ἐς τόδε ἀνὰ πᾶν ἔτος κρίνεται. *Infra* p. 583 n. 5.

¹ That Porphyrios is transcribing from Theophrastos *περὶ εὐσεβείας*, was detected by J. Bernays *Theophrastos' Schrift über Frommigkeit* Berlin 1866 p. 122 ff.

² H. von Protz in the *Rhein. Mus.* 1897 lii. 187 ff. contends that Porph. *de abst.* 2. 30 is citing from Theophrastos, not the ritual of the Athenian Dipolieia, but that of some Ioman, probably Delian, cult; (*infra* (β) Sopatros). And this 'ionische Hypothese' has met with some measure of approval. Nils-son *Gr. Feste* p. 14 accepts it outright. So did P. Stengel in the *Rhein. Mus.* 1897 lii. 399 ff., but later withdrew his support (*id. Opferbrauche der Griechen* Leipzig—Berlin 1910 p. 204 f.) and ended by definite denial of von Protz's contention (*id.* in Pauly—Wissowa *Real-Enc.* Suppl. iii. 330). C. Robert also in the *Gott. gel. Anz.* 1899 clii. 526 rejected the idea, and so does L. Deubner *Attische Feste* Berlin 1932 p. 167. F. Schwenn *Gebet und Opfer* Heidelberg 1927 p. 100 regards the rite as Attic, and at most will say: 'Es ist möglich, dass ein solches Fest auch an anderen jonischen Orten stattfand.'

To me it would seem that to accept von Protz's hypothesis is practically to charge Porphyrios, a very learned and honest man, with incredible ignorance or deliberate misrepresentation of the facts. For he had himself lived and studied at Athens under Apollonios and Longinus, so that he certainly ought to have known the ritual of one of the chief Athenian festivals, and he asserts in perfectly explicit terms ἀπὸ δ' ἐκείνου μέχρι τοῦ νῦν αἰ τοῖς Διοσπολίοις Ἀθήνησιν ἐν ἀκροπόλει οἱ εἰρημένοι τῶν αὐτῶν τρόπων ποιοῦνται τὴν τοῦ βοῦς θυσίαν. I cannot, therefore, adopt von Protz's assumption that Porphyrios is contaminating Attic with non-Attic elements.

³ Paus. 1. 24. 4 κριθὰς· μεμιγμένας πυροῖς, described in the sequel as τῶν σπερμάτων. Cp. Porph. *de abst.* 2. 10 τῶν καρπῶν, subsequently called τοῦ ἱεροῦ πελάνου.

⁴ Porph. *de abst.* 2. 30 πελάνον καὶ ψυστά, cp. *ib.* 2. 29 πελάνον τε καὶ τῶν θυλημάτων. The word πελάνος (on which see P. Stengel in *Herm.* 1894 xxix. 281—289 ('ΠΕΛΑΝΟΣ'), 1896 xxvi. 477 f. ('Nachtrag zu ΠΕΛΑΝΟΣ'), *id.* in the *Berl. philol. Wch.* Juni 21, 1902 p. 780 ff., Aug. 24, 1907 p. 1063 f., *id. Opferbrauche der Griechen* Leipzig—Berlin 1910 pp. 66—72 ('ΠΕΛΑΝΟΣ')). Harrison *Proleg. Gk. Rel.* 2 p. 88 ff.) is used of the same offerings by Porph. *de abst.* 2. 10, schol. Aristoph. *pax* 419, schol. Aristoph. *nub.* 985—Soud. s.v. Βουφόρια *his*, Favorin. *lex.* p. 385, 20 ff., Hesych.

s.v. Διπολῖεια, *et. mag.* p. 275, 4. A more substantial cake is implied by Hesych. s.v. Βουφονία... πόπανον... οἶον πλακούντιον ἐξ ἄρτου. Πόπανον is the word also in schol. Aristoph. *nub.* 985 (ἄλλως) = Soud. s.v. Βουφόνια, Θαύλων, Favorin. *lex.* p. 385, 23 ff. See further O. Band *De Diipoliorum sacro Atheniensium Halae Saxonum* 1873 p. 19 n. 14.

⁵ Porph. *de abst.* 2. 30 ἐπὶ τῆς χαλκῆς τραπέζης (cp. *ib.* 2. 29 ἐπὶ τῆς τραπέζης), but Paus. 1. 24. 4 ἐπὶ τῶν βωμῶν. (1) P. Stengel in *Hermes* 1893 xxviii. 492 n. 1 denies that there is any incongruity, since the altar would have been covered with a bronze plate: this was commonly done by way of preparation for burnt-offerings, and always in the case of valuable altars—see Lolling in *Ἀθηνά* 1891 p. 595. The same view is taken by Mommsen *Feste d. Stadt Athen* p. 519. But H. von Prott in the *Rhein. Mus.* 1897 lii. 193 n. 1 justly objects that such an altar would not be called τραπέζα. Stengel *Offerbrauche der Griechen* Leipzig—Berlin 1910 p. 208 n. 1 is content to conclude: 'Die χαλκὴ τράπεζα wird sich freilich von einem βωμός wenig unterschieden haben; τράπεζαι

Fig. 404.

sind grosse altarformige massive Basen (Bruckner, Ornament und Form der att. Glastelen 1 f.). Die Form beider geht ineinander über (Pfehl, *Athen. Mitt.* xxviii. 336).’ (2) H. von Prott himself *loc. cit.* regards the discrepancy as evidence that Pausanias is describing an Attic, Porphyrios, or rather his source Theophrastos, a non-Attic cult. But see *supra* p. 578 n. 2. (3) H. Mischkowski *Die heiligen Tische im Götterkultus der Griechen und Römer* Königsberg i. Pr. 1917 pp. 1—3 (‘Das Verhältnis von Tisch und Altar’) holds that table and altar served the same purposes and ends by asserting: ‘Wie in der Darstellung so werden auch in der Sprache die beiden Kultgegenstände miteinander vermengt. βωμός—ara bezeichnete mehr den allgemeinen Zweck, τράπεζα—mensa die besondere Form.’ But his premises are far from secure. He thinks that the Naples vase noted below (fig. 404) represents two tables, on one of which a fire is burning; that the use of a table for animal burnt-offerings is proved by Diog. Laert. 4. 56 = Cougny *Anth. Pal. Append.* 5. 37. 7 ff. ὁ πολλὰ χλευάσας βροτοῦς, ὅσοι θεοῖς ἔθνον, οὐ μόνον ἐσχάρης ὑπὲρ βωμῶν τε καὶ τραπέζης | κνίσθ, λῖπει, θυλήμασιν θεῶν ἔδαισε ρίνας; that the silver βωμός of Paus. 2. 17. 6 and the bronze βωμός of Loukian. *de dea Syr.* 39 were really metal τράπεζαι; etc. etc.—a string of highly disputable contentions. (4) I have elsewhere urged that an altar for the presentation of vegetable offerings was normally shaped like a table and called τράπεζα, whereas an altar for the burnt-sacrifice of animals was a solid structure called βωμός (*Class. Rev.* 1895 ix. 370 ff.). If so, it is natural to suppose that

the barley and wheat were set out *ἐπὶ τῆς χαλκῆς τραπέζης* (Porph. *de abst.* 2. 30), while the ox was slain *ἐπὶ τοῦ βωμοῦ* (Paus. 1. 28. 10). Zeus Πολιεύς, in short, like Zeus Λύκαιος (Paus. 8. 30. 2), had both kinds of altar, doubtless close together—perhaps even in actual contiguity (cp. the *τράπεζα + βωμός* of Dionysos on a volute-*amphora* from Ruvo, now at Naples (Heydemann *Vasensamml. Neapel* p. 282 ff. no. 2411, O. Jahn in the *Ann. d. Inst.* 1860 xxxii. 5 ff., *Mon. d. Inst.* vi pls. 37 and 38 = Reinach *Rép. Vases* i. 154, 1 and 2, E. Saglio in Daremberg—Saglio *Dict. Ant.* i. 349 fig. 417. My fig. 404 is an extract from Jahn's pl. 37, illustrating the juxtaposition of the cult-statue with both types of altar)). On this showing the statement that the cereals were placed *ἐπὶ τὸν βωμόν* (Paus. 1. 24. 4) is inexact.

I take this opportunity of publishing (fig. 405) a votive table in terra cotta, found in the Kabeirion near Thebes and now in my collection. Oblong top, $4\frac{3}{8} \times 2\frac{5}{8}$ inches; legs

Fig. 405.

(one restored), $1\frac{1}{2}$ inches high. The clay is covered with a white slip, which shows many traces of paint: the table itself was yellow, the offerings on it were red. In the centre is a *phidole omphalotós*. In each corner is a cake (or cup?—*μαστός*, *μαστῖον* *supra* ii. 346 n. o) shaped like a female breast with central nipple. Smaller circular cakes, some of which may be meant for fruit, are scattered about. And there are two slices of meat (eels?). For Egyptian, Assyrian, Syro-Phoenician, Persian, and Hittite parallels see K. Galling *Der Altar in den Kulturen des alten Orients* Berlin 1924 p. 9 f. ('Altartische') pl. 2 figs. 14–17, p. 49 f. ('Der löwenfüssige Altartisch') pl. 10 fig. 24, p. 50 f. ('Die privaten Altartische') pl. 10 fig. 25, a–p, pp. 64 f. ('Der Tischaltar'), 77 ('Tischaltare: 1–26'), p. 83 ff. ('Der Tischaltar') pl. 15 figs. 9–15, 16–19, p. 92 ff. ('Der chettische Tischaltar') pl. 15 figs. 8, 11, pl. 16 fig. 12. Recently W. Deonna in a clearly conceived and admirably illustrated article ('Mobilier Délien' in the *Bull. Corr. Hell.* 1934 lviii. 1–90 with 61 figs.) has traced the whole evolution of 'la table d'offrandes' from earliest pagan beginnings up to latest Christian usage. His series includes food set out on the bare soil or mound or rock; the platter; the platter with low feet; the platter with legs; the table; the table with rings or hollows; the table with vases and viands in relief; etc.

Oxen assigned for the purpose¹ were then driven round², and the ox

One piece of evidence must be examined with special care. In the eastern frieze of the temple of Athena Nike (Lebas—Reinach *Voyage Arch.* p. 127 Archit. pl. 9, A, B = Reinach *Rép. Reliefs* i. 15 nos. 1, 2) the central group of assembled deities (fig. 406) comprises, from left to right, Poseidon seated and Athena standing, balanced by Zeus enthroned and, in front of his footstool, certain traces on the background of the relief. B. Sauer 'Das Gottergericht über Asia und Hellas' in *Aus der Anomia* Berlin 1890 p. 96 ff., relying on a sketch by Gilliéron, took these traces to represent a 'Zahltsch' like that on the Dareios-vase (*supra* ii. 853 pl. xxxviii). Furtwangler *Masterpieces of Gk. Sculpt.* p. 449 saw in them, not a table for votes, but a table for wreaths to indicate the victory bestowed by Zeus 'Ελευθέριος. 'It was,' he says, 'a sacred table, like that brazen trapeza which stood in front of Zeus Polieus on the Akropolis, and upon which the

Fig. 406.

sacrificial ox was offered at the Bouphonia.' Now if the said traces were really those of a table, they might indeed have been identified as the table of Zeus Πολιεύς. But the two legs, when photographed from a cast, appear rather to be human and, if so, are better explained by C. Blumel *Der Fries des Tempels der Athena Nike* Berlin 1923 p. 12 f. pl. i—iii (part of which = my fig. 406) as those of a winged Nike standing before the seated Zeus (again cp. the Dareios-vase). L. Ross—E. Schaubert—C. Hansen *Die Akropolis von Athen nach den neuesten Ausgrabungen* i. *Tempel der Nike Apteros* Berlin (1839) p. 12 pl. 11, c had long since suggested Ganymedes, and R. Forster in the *Bull. d. Inst.* 1870 p. 39 f. and in the *Arch. Zeit.* 1874 xxxii. 102, with much less likelihood, a goat-legged Pan.

¹ Porph. *de abst.* 2. 30 τοὺς καταμεμηθέντας βοῦς. P. Stengel in Pauly—Wissowa *Real-Enc.* iii. 1056 translates (after J. Bernays) 'sattgeweidete Stiere,' full-fed oxen. But Mommson *Feste d. Stadt Athen* p. 516 n. 2 with more reason prefers 'die zugewiesenen Rinder.'

² This part of the ceremony—a moment of tense anticipation—is, if I am not mistaken, represented on two Attic vases of late black-figured style, very probably the work of the same artist: (1) An *amphora* at Berlin (Furtwangler *Vasensamm.* Berlin i. 367 f. no. 1882, Gerhard *Auserl. Vasenb.* iv. 8 pl. 242, 3 (= my fig. 407) and 4. Reinach *Rép. Vases* ii. 122. 7 and 8) shows a rectangular altar, surrounded by four oxen, with an olive(?) tree

that [drew near the altar and¹] tasted of the meal was slain. Minute regulations were observed in connexion with its slaughter. Chosen virgins called *Hydrophóroi* or 'Water-carriers' brought water, with which certain men whetted an axe and a knife. This done, another man handed the axe. Another [, named the *Bouphónos*, used the axe and²] struck the ox. Yet another slit the animal's throat³, presumably with the knife. After that, it was flayed. Its flesh was distributed to all and tasted by all. Next they sewed up the skin, stuffed it with hay, raised up the would-be ox, and yoked it to a plough as though it were alive again and at work. [Meantime the *Bouphónos*, having struck the first blow, dropped his axe beside the altar, left it there and fled the country. The axe was at once tried (presumably in the Prytaneion⁴) and definitely acquitted⁵.] At the

in the background. One of the oxen, seen against the black altar, is necessarily painted white. Two others, emerging to right and left, face outwards. A fourth, on the far side of the altar, is by the law of early perspective raised above it, though not completely so. (2) An *oinochóe* at Munich (Jahn *Vasensamml. München* p. 366 f. no. 1335, G. Micali *Storia degli antichi popoli italiani* Firenze 1832 iii. 173 no. 3, *id. Monumenti per servire alla storia degli antichi popoli italiani*² Firenze 1833 Atlas pl. 98, 3 (= my fig. 408)) has an almost identical group, except that the white ox seen against the altar is on a slightly smaller scale, while those to right and left of it are differently disposed. The same trick of perspective makes the feet of the furthest ox disappear behind the altar. We must not, of course, assume with Jahn that the first ox was merely painted on an oblong pedestal or that the last ox was actually standing upon it.

¹ Paus. i. 24. 4 ὁ βοῦς δέ, ὃν ἐς τὴν θυσίαν ἐτοιμάσαντες φιλάσσουσιν, ἄπτεται τῶν σπερμάτων φοιτῶν ἐπὶ τὸν βωμόν. I should endorse the opinion of L. Deubner *Attische Feste* Berlin 1932 p. 159 n. 4: 'Dabei wird weniger daran zu denken sein, dass man ihn hungern liess (Protz, Rh. Mus. 52, 1897, 194), als an die ubliche Sauberung und Schmuckung des Opfertieres. Der griechische Ausdruck ἐτοιμάζειν setzt eher eine positive Handlung voraus.' It is, however, possible that in Pausanias' day the finest ox was at the critical moment induced to come forward, apparently of its own accord.

² The neatest mend of this defective passage (*supra* p. 577 n. 2) is certainly A. Michaelis' insertion of <ὃς κτείνας τὸν βοῦν> after the word *βοιφόνον*. This was an improvement on F. Sylburg's <οὔτος ἐπὶ τοῦ βωμοῦ τὸν βοῦν κτείνας>. Michaelis also suggested ἐπὶ τὸν βωμόν. <τοῦτον δὲ κτείνας ὁ Βουφόνος> (καλοῦσι δὲ τινὰ τῶν ἱερέων *βοιφόνον*) καὶ ταύτη κ.τ.λ. All attempts to fill the *lacuna* must, of course, rely on Paus. i. 28. 10 (*supra* p. 577 n. 2).

³ Porph. *de abst.* 2. 30 ὁ δ' ἐπάταξε τὸν βοῦν. ἄλλος δ' ἔσφαξεν. So in *Od.* 3. 447 ff. Thrasymedes struck (ἤλασεν) the ox for sacrifice with an axe, and Peisistratos then cut its throat (σφάζεν) and let the blood run out, so that it died; after which it was cut up, etc.

trial all that had shared in the bad business were charged with bloodshed and forced to plead in defence of their action. So the Water-carriers blamed the men that whetted the axe and knife. The men that whetted the axe and knife blamed the man that handed the axe. The man that handed the axe blamed, not indeed the man that first struck the ox¹ (for he had left his axe and fled), but the man that completed the slaughter with his knife. The man that completed the slaughter with his knife blamed the knife. Finally the knife, since it could not say a word in its own defence, was condemned as guilty of the bloodshed and cast into the sea². It thus appears that the real culprits, the man that first struck the

παραντίκα ἀφείθη κριθείς καὶ ἐς τὸδε ἀνὰ πᾶν ἔτος κρίνεται. Mommsen *Feste d. Stadt Athen* p. 514 n. 2 justly remarks that ἀφείθη must here mean 'was acquitted' because a few lines before, in the clause πρὶν ἢ Θησεὺς ἀφείθη, Pausanias had used the same word in that sense. B. Tamaro also in the *Annuario della r. scuola di Atene e delle missioni italiane in oriente* 1921—1922 iv.—v. 5 (cp. *id.* 'La Bouphonia' in the *Cronaca delle Belle Arti* 1920 p. 10 f.) accepts that meaning. Even H. von Prott, who holds that the axe was really cast out of the country, does not deny that Pausanias meant 'the axe was acquitted' and is reduced to supposing that he must have misunderstood his authority (*Rhein. Mus.* 1897 lii. 194 n. 1). L. Deubner *Attische Feste* Berlin 1932 p. 159 f., while admitting that von Prott's solution is possible, inclines to adopt an emendation proposed by E. Pottier in Daremberg—Saglio *Dict. Ant.* ii. 270 n. 24 and printed in the text as a certainty by H. Hitzig ἀφείθη <ἐς θάλασσαν> (cp. Paus. 1. 3. 1 ἀφίεις Θησεὺς ἐς θάλασσαν Σκίρωνα). But this expedient confuses the axe with the knife and misses the whole point of the situation.

¹ In Porph. *de abst.* 2. 30 (context *supra* p. 577 n. 1) ὦν δὴ αἱ μὲν ὑδροφόροι τοὺς ἀκονήσαντας αὐτῶν ἠτιῶντο μᾶλλον, οἱ δὲ ἀκονήσαντες τὸν ἐπιδόντα τὸν πέλεκυν, οὗτος δὲ τὸν ἐπισφάζαντα, καὶ ὁ τοῦτο δράσας τὴν μάχαιραν, καθ' ἧς οὕσης ἀφώνου τὸν φόνον κατέγνωσαν the text is sound. A. Nauck wanted to read οὗτος δὲ <τὸν πατάξαντα, ὁ δὲ πατάξας> τὸν σφάζαντα and J. Bernays printed οὗτος δὲ <τὸν πατάξαντα, ὁ δὲ> τὸν ἐπισφάζαντα. But obviously ὁ πατάξας could not blame anybody, for he had made good his escape. In fact Pausanias says: οἱ δὲ ἄτε τὸν ἄνδρα ὃς ἔδρασε τὸ ἔργον οὐκ εἰδότες ἐς δίκην ὑπάγουσι τὸν πέλεκυν (1. 24. 4). P. Stengel in *Hermes* 1893 xlviii. 494 takes this to mean that the bystanders did not know where the doer of the deed was to be found. But, strictly speaking, we can only render the phrase, as H. von Prott in the *Rhein. Mus.* 1897 lii. 198 insists, 'not knowing the man that had done the deed.' Probably Mommsen *Feste d. Stadt Athen* p. 514 is right in saying: 'Die ubrigen Versammelten thun so, als wenn sie den, der das Rind erschlagen, nicht kennen, und fuhren das am Orte gebliebene Beil vor Gericht.' Yet Stengel *Opferbrauche der Griechen* Leipzig—Berlin 1910 p. 205 is dissatisfied: 'Der Erklärung Mommsens „steht das ἄτε entgegen: man wird zu verstehn haben, sie wissen weder den Namen noch sonst etwas Naheres von dem Mann, der plötzlich erscheint, den Stier todet und sofort wieder verschwunden ist.'

² Porph. *de abst.* 2. 30 (context *supra* p. 577 n. 1) πληρώσαντες δὲ τὴν βύρσαν, δταν πρὸς τὴν κρίσιν ἀχθῶσιν, κατεπόντωσαν τὴν μάχαιραν. J. Bernays cj. καταποντούσι; but H. von Prott *loc. cit.* p. 195 ingeniously suggested that the aorist κατεπόντωσαν, like the preceding aorist κατέγνωσαν, was taken over from the text of Theophrastos. L. Deubner *Attische Feste* Berlin 1932 p. 169 agrees.

ox and the axe with which he did it, both escaped, the blame being transferred from them to the knife. Why the Athenians took such elaborate precautions to ensure the safety of the assailant and his tool, is a question that must be considered in due course¹.

Those that took part in the ritual of the Dipolieia belonged to three sets of persons known from their respective duties as the *Boutýpoi* or 'Ox-strikers,' the *Kentriádai* or 'Goad-men,' and the *Daitroí* or 'Carvers.' Theophrastos seems to have described them as *géné*, 'clans'². But Photios speaks of the *Kentriádai* as 'a *patriá* of Kerykes'³; and this may well be taken to mean 'a family of the clan Kerykes'⁴. Further, as J. Toepffer pointed out⁵, the Kerykes are said on good authority to have performed the solemn functions of *Mágeiroi* (another name for *Daitroí*⁶) and *Boutýpoi*. Hence in all probability A. Mommsen is right, when he contends that the *Boutýpoi*, *Kentriádai*, and *Daitroí*, who discharged the priestly duties connected with the cult of Zeus *Polieús*, were three families all belonging to the great clan of Kerykes⁷.

The *Boutýpos*, then, was a priest, whose business it was to strike

Baunack in Collitz—Bechtel *Gr. Dial.-Inscr.* ii. 718 ff. no. 2561, A 26 n., Dittenberger *Syll. inscr. Mus.* 1897 lii. 195, 197 was mistaken in regarding *πατριά* as necessarily an Ionic word for *γένος* (on the strength of Hdt. 2. 143, 3. 75). H. S. Jones' new ed. of Liddell and Scott p. 1348 distinguishes the two uses of the term as 'clan' and 'family,' but unfortunately assigns the Labyadaí inscription to the former, not the latter, heading.

⁷ Mommsen *Feste d. Stadt Athen* p. 521 f. J. Toepffer *op. cit.* p. 149 ff. had supposed that the three γένη of Porph. *de abst.* 2. 30 were merely three 'classes' of officials taking part in the Bouphonia. But H. von Prott in the *Rhein. Mus.* 1897 lii. 195 f. points out that this view is incompatible with the use of ἀπό in Porphyrios' sentence (*supra* n. 2).

the first blow¹. It follows that he must be identified with the *Bouphónos*²; for he, as Pausanias informed us³, was a priest who struck the ox with his axe. It seems likely that *Boutýpos* was a euphemistic equivalent of *Bouphónos*. The one meant 'Ox-striker'; the other, 'Ox-slaughterer.' However that may be, we have inscriptional evidence of *Boutýpoi* both early and late. A narrow *stéle* of white marble, found by R. Chandler built into a wall at Athens and now preserved in the British Museum (fig. 409)⁴, mentions a *Boutýpos* in connexion with the Dipolieia⁵. To judge from its lettering, this important fragment must be dated as far back as the seventh century B.C.⁶ Fully eight hundred years later, in the decade 190—200 A.D., one Lakrateides son of Eutyichides the Azenian is thrice recorded as *Boutýpos* priest and *Kosmetés* or 'Marshal' of the Athenian *épheboi*⁷. The tenacity with which Athens clung to its old-world rite—a rite already antiquated in the time of Aristophanes⁸—is indeed remarkable. Doubtless the *Boutýpos* was an impressive

Nevertheless the cause of his longevity is to be sought, not in his stirring of the artistic imagination, but in his appeal to deep-seated religious instincts, than which nothing on earth is more permanent.

Archaising hieratic reliefs frequently represent deities, heroes, priestesses, etc. on tip-toe (e.g. *supra* ii pl. xi the Chigi base). This peculiarity is explained by Overbeck *Gr. Plastik*⁴ i. 261 f. as 'eine sehr mangelhafte und durchaus manierirte Nachbildung des eigenthümlich gebundenen Rhythmus der Bewegungen echt alterthümlicher Kunstwerke.' Mr C. D. Bicknell tells me (20 December 1934) that he too views the tip-toe attitude as a stilted and stagey attempt to reproduce the old-time stiffness, which struck a later, looser age as mere affectation. E. Schmitt *Archaische Kunst in Griechenland und Rom* München 1922 pp. 23, 29 speaks of 'Zehengang' as a processional gait characteristic of a late period, and *ib.* p. 35 suspects that a step devised for dancing (cp. *supra* i. 150 figs. 116, 117) became fashionable for quieter persons also (cp. *supra* i. 767, 769 figs. 556—563). Probably a variety of causes contributed to produce the mannerism, in the vogue of which the popular figure of the Βουτύπος may have played its part.

¹ In the eighth century of our era the Christianised Parthenon had in the conch of its apse a famous mosaic of the Virgin, which had taken the place of Pheidias' chryselephantine Athena and was known by the titles of that goddess—Γοργώ and Ἐπήκοος. The Virgin was in fact Athena herself to all intents and purposes: indeed, on late leaden seals she is often described as ΜΡ ΘΥ Η ΑΘΗΝΑΙΑ ΓΟΡΓΟΕΠΗΚΟΟΣ or ΜΡ ΘΥ Η ΑΘΗΝΙΩΤΙΣΣΑ (K. Michel and A. Struck 'Die mittelbyzantinischen Kirchen Athens' in the *Ath. bull. The costume of the celebrant recalls that of the official who slew a humped bull in an analogous rite at Stratonikeia¹. And the sign of the Crab, above the bull, denotes the hottest time of year².

Whether the *Boutýpos* should be identified with the priest of Zeus *Polieús*, is a moot point³. On the one hand, according to Porphyrios the first man that ever slew an ox was Diomos, a priest of Zeus *Polieús*, sacrificing at the Dipolieia⁴. On the other hand, *Boutýpos* is beyond question a synonym of *Bouphónos*⁵, and Pausanias describes the *Bouphónos* as 'one of the priests⁶'. Is this description suitable to so exalted a personage as the priest of Zeus *Polieús*, who in the second century B.C. sat in the forefront of the Athenian theatre next to the priest of Dionysos himself⁷? On the whole I conclude that, whatever may have been the case in the Hellenistic age, originally and in good Hellenic days the *Boutýpos* or *Bouphónos* was one and the same with the priest of Zeus *Polieús*.

Still more puzzling is a gloss of Hesychios, which states that the performer of the *Bouphónia* was known as *Boútes*, the 'Ox-herd⁸'. If, as it seems reasonable to suppose, this *Boútes* is to be identified with the *Boutýpos* or *Bouphónos*, then—inasmuch as the Boutypoi were a family of the clan Kerykes⁹—he cannot be connected with the hero Boutes¹⁰, from whom the clan Eteoboutadai traced their descent. If, conversely, we start by assuming that this *Boútes* was a member of the Eteoboutadai, we must regard him as a priest, or priest's attendant, distinct from the *Boutýpos* or *Bouphónos*; and in that case it will not be easy to find a Bouphonic function that he can appropriately discharge¹¹. The first horn of the dilemma is, I think, the less precarious. A priest armed with a double axe or

³ J. Toepffer *Attische Genealogie* Berlin 1889 p. 159 identifies the priest of Zeus *Πολιεύς* with the *Βουφόνος*, but regards the *Βουτύπος* as an underling. H. von Prott in the *Rhein. Mus.* 1897 lii. 197 n. 2 identifies the *Βουτύπος* with the *Βουφόνος*, but distinguishes the *Βουφόνος* from the priest of Zeus *Πολιεύς*. L. Deubner *Attische Feste* Berlin 1932 p. 161 f. sides with von Prott: 'Der *βουτύπος* ist nicht mit dem Priester des Zeus *Πολιεύς* identisch, sondern ein Gehilfe von diesem. 590 Myths of the Dipolieia: Sopatros

*boupléx*¹ might perhaps, for shortness' sake, be called *Boútes*. But, again, Hesychios, or our manuscript of his work, may be blundering².

(β) Myths of the Dipolieia: Sopatros.

To account for the singular ritual of the Dipolieia various tales were told. They are attached to three names—those of Sopatros, Diomos, and Thaulon.

According to Theophrastos³, time was when men offered to the gods the fruits of the earth and abstained from sacrificing, or even eating, animals. But once, during a common sacrifice at Athens, a certain Sopatros⁴—an alien occupying a farm in Attike—had set out barley-meal and cakes for the gods on a table-altar, when one of his oxen came in from the field and partly ate, partly trampled on his oblation. Sopatros in anger caught up an axe, which was being whetted near by, and struck the ox a fatal blow. On his anger abating he realised what an impious deed he had done, buried the ox, and fled as a voluntary exile to Crete⁵. At home a drought ensued, and the land yielded no crops⁶. Thereupon men consulted the Delphic oracle. They were told that the exile in Crete would put an end to their evil plight and that, when they had taken vengeance on the slayer and raised up the dead in the very sacrifice⁷ in which he had been killed, it would be better for them to taste of the dead and not refrain⁸ from so doing. Search was made therefore, and the guilty party was discovered⁹. Thinking

that he might be rid of his offence with its attendant curse, if all acted in common, Sopatros told those who had come to fetch him that an ox must be cut up by the city. And, when they could not say who should strike the beast, he undertook to do it himself, provided they would make him a citizen and so take their share in the slaughter. They agreed, and, on returning to Athens, arranged the ceremony, which has been performed there ever since.

This story is undeniably constructed with ancient materials. In particular, the treatment of the ox as sacrosanct and the alleged necessity for common action in the slaying of it are features that look backwards to a very remote past¹. Nevertheless the story as

Frazer *Golden Bough*: Spirits of Corn and Wild II. 6. n. 1 (cp. his *Pausanias* II. 304) suggests that 'Varro's statement may be merely an inference drawn from the ritual of the *bouphonia* and the legend told to explain it.' So, no doubt, may be the allusion of Aratos, to judge from the schol. *ad loc.* But the tradition concerning the Pythagorean taboo is of a different order and certainly implies the sanctity of the ploughing ox and the ram. Further evidence of that sanctity may be found in Plin. *nat. hist.* 8. 180 socium enim laboris agrique culturae habemus hoc animal tantae apud priores curae ut sit inter exempla damnatus a populo Romano die dicta, qui concubino procaci rure omassum edisse se negante occiderat bovem, actusque in exilium tamquam colono suo interempto, if not also in Porph. *de abst.* 2. 11 παρὰ γοῖν Αἰγυπτίους καὶ Φοινίξι θάττον ἂν τις ἀνθρωπεῖων κρεῶν γεύσαιο ἢ θηλείας βοῦς. αἰτίων δὲ ὅτι χρήσιμον τὸ ζῶον ὃν τοῖτο ἐσπανίεν παρ' αὐτοῖς. διὸ ταύρων μὲν καὶ ἐγείσαντο καὶ ἀπηρξάντο τῶν δὲ θηλειῶν φειδόμενοι τῆς γονῆς ἐνεκα, ἐν μύσει τὸ ἀφασθαι ἐνομοθέτησαν. a whole is unsatisfactory. The circumstances of the original ox-slaying do not tally with those of the ritual that they ought to explain. Sopatros slew his ox in a fit of passion, on his own responsibility, and apparently without witnesses. The occasion, too, is described in the vaguest of terms, no mention being made of Zeus *Polieús* from start to finish. Besides, the burial of the ox in the story has no counterpart in the ritual. Again, why did Sopatros, who *ex hypothesi* was an alien, flee into voluntary exile, thereby behaving as though he had slain a member of his own tribe or city¹? Finally, is it likely that a sacrilegious metic would be trusted to arrange the ritual of Zeus *Polieús*, the very god whose service he had himself profaned? No doubt strangers as such could claim divine protection², and perhaps special virtues were ascribed to foreigners fetched from Crete³. Also, the principle that the doer of a deed is best able to undo the same will assuredly explain much⁴. Still, these considerations can hardly be stretched to cover the present case; for Athenian law expressly ordained that the alien, even if he were made into a citizen by a formal vote of the people, should not hold any office as priest, though the embargo was removed from his children⁵. These objections are serious and suffice to justify the opinion expressed by J. Toepffer⁶, P. Stengel⁷, and L. Deubner⁸, *viz.* that the tale of Sopatros as told by Theophrastos was a moralising version, which aimed at showing that in the good

old days men and gods alike were content with vegetables and abstained from animal food. Further, I think we may infer that the philosopher, or his unknown authority, anxious to explain a bizarre custom of immemorial age, and aware perhaps that axe and bull played an important part in ancient Cretan Zeus-cults¹, hazarded the conjecture that the Bouphonia had been introduced into Athens from Crete².

(γ) Myths of the Dipolieia: Diomos.

A second aetiological tale is given by Porphyrios in the following form³. The first man to slay an ox was Diomos, a priest of Zeus *Polieus*. The Dipolia was being held, and the fruits of the earth had been prepared in accordance with ancient custom, when the said ox drew near and tasted the sacred barley-meal. Diomos then⁴ took all that were present as partners in his deed, and killed the ox.

This recital is one of four, which profess to explain how the pig, the sheep, the goat, and the ox came to be sacrificed⁵. Klymene struck a pig unintentionally and killed it: her husband, wishing to avoid the consequences of this unlawful act, consulted the oracle at Pytho and obtained the sanction of the god⁶. Episkopos, a descendant of the Theopropoi, was minded to offer up the

² H. von Prott in the *Rhein. Mus.* 1897 lii. 193 ff. urged that the Sopatros-tale of Porph. *de abst.* 2. 29 f. should be connected with some Ionian cult, probably that of the εἰσεβῶν βωμός in Delos, which had been actually mentioned *ib.* 2. 38 θεωρησάι δὲ ἔστιν ἐκ τοῦ περὶ Δήλον ἐπὶ νῦν σφρομένον βωμοῦ, πρὸς δὲ οὐθεὶός προσαγομένου παρ' αὐτοῖς οὐδὲ θουμένον ἐπ' αὐτοῦ ζῶσι εἰσεβῶν κέκληται βωμός. Von Prott (p. 200 n. 2) recalled the fact that the Delians had a festival Σωπατρεία (T. Homolle in the *Bull. Corr. Hell.* 1882 vi. 144 = Dittenberger *Syll. inscr. Gr.* 2 no. 588, 54 φιάλας |||| ἃς ἔφασαν παραδοθῆναι ἐπὶ ταμῶν Τληπολέμον καὶ Νικάρχου · ο · Εὐεργεσιων, Φιλεταιριων, Σωπατρείων, Πατακείων. ὁ(κῆ) ΓΗΗΗΗ). This combination is, however, more ingenious than probable, involving as it does the assumption that the worthy Porphyrios was either a fool or a knave (*supra* p. 578 n. 2). J. Schmidt in Pauly-Wissowa *Real-Enc.* iii A. 1000 thinks rather that the Attic Sopatros gave rise to the Delian, or else that the two were accidental homonyms.

firstlings of his flock, and was permitted to do so with all due caution by the oracle, which said :

It is not right, son of the Theopropoi,
For thee to slay the sheep, a faithful breed ;
But that which bows the head of its own accord
Towards the lustral water sacrifice,
Episkopos,—'twill be a righteous deed¹.

A goat was killed first in the Attic deme Ikaria, because it cropped a vine². The story of Diomos must have been added to this series by some *quasi*-philosophical writer ; for it exhibits the same moralising tendency that we have noticed in the story of Sopatros.

Again, J. Toepffer³ has drawn attention to the fact that the tale of Diomos and the ox bears a suspicious resemblance to another *attion*, in which Diomos figures with better right. He was the favourite of Herakles and eponym of the Attic deme Diomeia, where a famous festival of the like name was held in Herakles' honour⁴. According to the lexicographers, Diomos was once sacrificing on a hearth to Herakles, when a white dog came and caught up the thigh-pieces and carried them off to a certain place. Diomos in alarm consulted an oracle. The god bade him build an altar to Herakles on the spot where the dog had deposited the flesh. This was done, and the place called *Kynosarges*, the place 'of the White Dog,' in memory of the event⁵. Toepffer concludes that the name Diomos has made its way into the Bouphonia-tale from that of the Kynosarges.

This conclusion, though challenged by subsequent investigators⁶,

seems to me to be essentially sound¹. Indeed, I am disposed to go a step further in the same direction. Bearing in mind that the Bouphonia-tale shows traces, on the one hand of vegetarian doctrine, on the other of Kynosarges tradition, I would infer that it emanated originally from Antisthenes or some other teacher of the Cynic school². The inference becomes stronger still, when we look into the parallel case of sheep-sacrifice connected with the Theopropoi³. For Menedemos of Eretria, a member of that noble clan⁴, was scorned by his fellow-citizens as a Cynic⁵ and, like the Cynics, was a free-thinker in matters of religion⁶.

Thaulon, and that the Diomeies gave up the cult of Zeus to the Thaulonidai at a comparatively late date, when they themselves took over the cult of Herakles. But this hypothesis involves more than one improbable assumption, notably that the cult of Herakles at Diomeia was of recent importation, and that a long-standing and popular cult such as that of Zeus Πολλεύς could be transferred from clan to clan. See further L. Deubner *Attische Feste* Berlin 1932 p. 162.

H. von Prott in the *Rhein. Mus.* 1897 li. 191 ff. (followed by G. Wissowa in Pauly—Wissowa *Real-Enc.* v. 832) denies the resemblance between the two aetiological tales told of Diomos. In his view Diomos is the rightful priest of Zeus Πολλεύς and the original hero of the Bouphonia-story, which marks the change from a bloodless to a bloody sacrifice at the Dipolieia. The name Δίωμος, a derivative of Zeus, Διός, suits the connexion between the priest and his god. The derivation here propounded was already recognised by Byzantine scholars: Cramer *anecd. Oxon.* i. 83, 1 ff. ('Ομήρου ἐπιμερισμοί, on which see L. Cohn in Pauly—Wissowa *Real-Enc.* vi. 180) ἀνὴρ ἀνέρος ἀνδρός, ἀνδρομός, καὶ ἐν ἐτέρᾳ παραγωγῇ κτητικῇ ἀνδρόμεος, ὡς παρὰ τὴν Διὸς γενικὴν Δίωμος (sic) ὁ ἦρως ὁ πατὴρ Ἡρακλέους, ἀφ' οὗ Διόμεια ἐορτὴ· κ.τ.λ., *el. mag.* p. 102, 44 ff. ἀπὸ τοῦ ἀνδρός ἀνδρομος, ὡς Διὸς Δίωμος, κυρίως ὁ πατὴρ Ἡρακλέους, καὶ ἐν ἐτέρᾳ παραγωγῇ κτητικῇ ἀνδρόμεος, *ib.* p. 177, 24 ff. Δίωμος· ὄνομα κύριον ἦρως Ἀθηναίου ἀφ' οὗ Διομεΐας ἐορτὴ· παρὰ τὴν Διὸς γενικὴν Δίωμος, ὡς ἀνδρός ἀνδρόμεος (A. Meineke *Analecta Alexandrina* Berolini 1843 p. 177 f. c). παῖς, in the sense of παιδικά, for πατήρ). Further Usener *op. cit.* p. 213 n. 110 remarks that there was a cult of Zeus Διομέης (Eustath. in *Il.* p. 444, 21 ἐκ τοῦ Διομεύς Zeus Διομέως τὰ Διόμεια).

Diomeia the deme lay, not to the east (A. Milchhofer in Pauly—Wissowa *Real-Enc.* v. 830 f.), but to the south of Athens (W. Judeich *Topographie von Athen*² München 1931 p. 169 f. with fig. 14 map).

¹ When, however, Toepffer proposes to substitute Θαύλων for Δίωμος in the text of Porph. *de abst.* 2. 10 (*supra* p. 577 n. 1), I can no longer follow him: see E. Maass *loc. cit.* p. 828.

² Antisthenes not only taught in the gymnasium of Kynosarges (Diog. Laert. 6. 13) and took Herakles for his 'patron-saint' (E. Zeller *Socrates and the Socratic Schools*³ trans. O. J. Reichel London 1885 p. 307), but also—like other Cynics—lived ordinarily on a simple vegetarian diet (*id. ib.*³ p. 318 n. 3) and treated the popular religion with considerable freedom (*id. ib.*³ p. 328 ff.). Such an one may well have been the author of our tale.

596 Myths of the Dipolieia: Thaulon

(δ) Myths of the Dipolieia: Thaulon.

We come now to the third version of the Bouphonia-legend, that associated with the name of Thaulon. Our earliest source is Androtion, the author of a fourth-century *Atthis* or 'History of Attike' much quoted in antiquity¹. He states that once on the occasion of the Diipoleia an ox ate the cake prepared for sacrifice and that thereupon a certain Thaulon, just as he was, killed the beast with his axe². Soudas, drawing from the same source, says that Thaulon killed it with his own axe³.

Sundry other details we owe to Agallis⁴, a learned lady of Korkyra, who is known to have expounded Homer in the third century B.C.⁵ *À propos* of the shield made by Hephaistos for Achilles she argued that Hephaistos, being the father of Erichthonios, represented on the said shield a whole series of scenes drawn from the early history of Attike. Following out this whimsical notion, she maintained that the two cities portrayed on the shield were Athens and Eleusis. The ploughing and harvesting took place in the neighbourhood of Eleusis; and the king, who sceptre in hand watched the reapers and binders at their work, was Triptolemos. We are bidden to note that some copies of the text insert an extra line describing

The crops of Eleusinian Demeter,
Giver of bright gifts⁶.

¹ He is probably to be identified with the Athenian orator of the same name (E. Schwartz in Pauly—Wissowa *Real-En.* i. 2173 ff.).

And lastly, when the poet goes on to tell how

Heralds apart beneath an oak made ready
A feast and sacrificed a mighty ox¹,

Agallis has once more a local interpretation: 'Here first, they say, Thaulon sacrificed an ox after his exile².' Agallis, then, was aware that Thaulon had been in exile—a point in which his tale recalls that of Sopatros³. Further, the whole context shows that she connected Thaulon with Eleusis and the harvest of the Eleusinian plain. And, since her allusion to him comes in by way of comment on the action of the Homeric *kérykes* or 'heralds,' it is highly probable that she regarded him as a member of the great Eleusinian clan *Kérykes*.

Indeed, thanks to Agallis, it seems possible to define Thaulon's relation to the *Kérykes* even more closely. We have already seen that three families belonging to this clan—the *Boutýpoi*, the *Kentriádai*, and the *Daitroí*—performed the rites of the Athenian Dipolieia. If Thaulon, as Agallis states, was the first man to sacrifice an ox, he must have been, as A. Mommsen⁴ surmised, the ancestor of the *Boutýpoi*. In short, the *Boutýpoi* are to be identified with the *Thaulonídai*, a noble clan resident at Athens⁵. This identification, in which L. Deubner⁶ concurs, is supported by a curious and apparently mutilated gloss of Hesychios⁷: 'Βούτυπον, a base at Athens <on which stood the *Boutýpos*> appointed by the clan 'Thaulonidai.'

over-hasty in saying 'The only interest of the interpolation is its obvious Attic origin. Its purpose is to supply for ἡμῶν [of line 551] an object.'

⁷ Hesych. Βούτυπον· πυθμὴν Ἀθήνησιν ἐκαλεῖτο, ἐκ τοῦ θαυλωνιδῶν γένους καθιστάμενος (cod.), for which J. Toepffler *Attische Genealogie*, Berlin 1889 p. 156 proposed Βούτυπον· πυθμὴν Ἀθήνησιν ἐκαλεῖτο, <οὗ ἔθηκε ὁ ἱερεὺς ὁ> ἐκ τοῦ θαυλωνιδῶν γένους καθιστάμενος. H. von Prott in the *Rhein. Mus.* 1897 lii. 198 improved upon this by reading <οὗ τὸν βούν ἐκτενε ὁ Βούτύπος ὁ>. But he wrongly supposed that πυθμὴν was a pit into which the body of the stricken ox was flung. Adopting von Prott's insertion, I should rather take πυθμὴν to have been a base like that in use at Stratonikeia (*supra* p. 568 fig. 385). L. Deubner *op. cit.* p. 161 prefers the suggestion of M. Schmidt that the words Ἀθήνησιν—καθιστάμενος are properly the end of the next gloss, which should read βουτύπος· ὁ βούν

598 Myths of the Dipolieia: Thaulon

It would seem, then, that the Dipolieia was properly a clan-festival belonging to and jealously guarded by the Kerykes of Eleusis. Tradition told of a war between Eumolpos king of Eleusis and Erechtheus king of Athens, in which the former had been defeated by the latter: peace was made on condition that the Eleusinians should perform the mysteries by themselves, but should in all other respects be subject to the Athenians¹. In historical times Eleusis, though treated as one of the Attic demes, continued to be called a *pólis*². It is therefore reasonable to conclude that the cult of Zeus *Polieús* was brought by the Kerykes from Eleusis to Athens³. Nor shall we be disconcerted if on the Athenian Akropolis itself we find traces of an analogous but yet different cult—a cult essentially connected with the foremost clan of Athens, not Eleusis⁴.

(ε) Purpose of the Dipolieia.

Before taking leave of the Dipolieia we have yet to ask what meaning the festival had for its original celebrants. It would be tedious and, I think, needless here to discuss the whole welter of opinions held by critics ancient and modern with regard to this much-debated business⁵. But, for convenience' sake, I add in a footnote⁶ a conspectus of recent views concerning its most im-

καταβάλλον - Ἀθήνησιν ἐκαλεῖτο. ἐκ τοῦ Θαυλωνιδῶν γένους καθιστάμενος -. So far well and good. But when Deubner goes on to contend that the remainder of the first gloss-*βουτύπον· πινυμένην* is complete in itself, *πινυμένην* being the root-end of a tree used as a cudgel to fell the ox, I am filled with mild surprise. Has he forgotten the *πέλεκυς*, a far more effective implement?

³ Hesych. *Κεντριάδαι· τῶν περὶ τὰ μυστήρια* and the schol. Aristoph. *nuh.* 985 τὰ δὲ Βουφόνια παλαιὰ ἑορτή, ἣν φασὶν ἄγεισθαι μετὰ τὰ μυστήρια (*supra* p. 595 n. 2) both possibly point towards Eleusis, though the latter involves a direct mis-statement since the Bouphonia took place in Skirophotion, the Eleusinian Mysteries three months later in Boedromion (*supra* i. 691 fig. 511). But see *infra* p. 602 n. 9.

One wonders whether any buphonic traits still linger in the folk-beliefs of the district. When E. D. Clarke in 1801 played Verres and attempted to carry off the marble *κιστοφόρος* known as St Demetra, an ox butted the statue and ran bellowing into the Eleusinian plain, nor would the villagers be appeased till the priest of Eleusis in full canonicals struck the first blow with a pickaxe (*supra* i. 173 n. 11). Coincidence, or survival?

⁴ *Infra* p. 606 ff.

⁵ Such discussion may be found e.g. in P. Stengel *Opferbräuche der Griechen* Leipzig—Berlin 1910 p. 209 ff., W. W. Hyde 'The Prosecution of Lifeless Things and Animals in Greek Law' in the *Am. Journ. Phil.* 1917 xxxviii. 159 ff., L. Deubner *Attische Feste* Berlin 1932 p. 170 ff.

⁶ (1) W. Robertson Smith *Lectures on the Religion of the Semites* London 1927 p. 304 ff. treated the Bouphonia as a typical case of totemic ritual. 'In the totem stage of society each kinship or stock of savages believes itself to be physically akin to some

natural kind of animate or inanimate things, most generally to some kind of animal. Every animal of this kind is looked upon as a brother, is treated with the same respect as a human clansman, and is believed to aid his human relations by a variety of friendly services' (*ib.* p. 124)... 'precisely this kind of respect and reverence is paid to domestic animals among many pastoral peoples in various parts of the globe. They are regarded on the one hand as the friends and kinsmen of men, and on the other hand as sacred beings of a nature akin to the gods; their slaughter is permitted only under exceptional circumstances, and in such cases is never used to provide a private meal, but necessarily forms the occasion of a public feast, if not of a public sacrifice' (*ib.* p. 296). Robertson Smith was followed by Farnell *Cults of Gk. States* i. 88 ff., S. Reinach in the *Revue scientifique* 13 octobre 1900 (= *id.* *Cultes, mythes, et religions* Paris 1905 i. 18 f.), and Harrison *Themis*² p. 141 ff. But 'it is not yet certain that the Aryans ever had totemism' (Frazer *Golden Bough*³: Spirits of Corn and Wild ii. 4, cp. *id.* *Totemism and Exogamy* iv. 12 ff.), and Robertson Smith's theory of sacrifice has been severely handled (W. Schmidt *The Origin and Growth of Religion* trans. H. J. Rose London 1931 p. 108 f.).

(2) H. von Prott 'Buphonien' in the *Rhein. Mus.* 1897 lii. 187 ff. held that the ox slain at the Bouphonia was an animal surrogate for a man. 'Ich sehe nur eine Möglichkeit: der Stier ist an die Stelle eines Menschen getreten.... In der heissen, den Unterirdischen geweihten Jahreszeit nach der Ernte ist in alter Zeit dem Stadt-schirmer Athens ein Mensch erschlagen¹ (1 Wahrscheinlich vom Zeuspriester, wie die Dioskolegende ja auch keinem *φούρος* kennt) und in eine Grube geworfen worden. Der Priester muss mit Blutschuld beladen fliehen, die That wird im Prytaneion untersucht .. Als für das Menschenopfer wie in so vielen Fällen das Thieropfer eintritt, dauert die alte Sitte in Athen fort, der Stier wird als Mensch behandelt' (*ib.* p. 202). B. Laum *Das Eisengeld der Spartaner* Braunsberg 1924 p. 47 goes further in the same direction, maintaining that originally a mystic garbed as a *ταῦρος* was killed and eaten. Such views receive some support from the Tenedian cult of Dionysos *Ἀνθρωποποσίτης* (*supra* i. 659 f.), the Chian and Tenedian cult of Dionysos *Ἀνάνιος* (*supra* i. 656), the Ephesian cult of Poseidon served by human *ταῦροι* (*supra* i. 442), etc. and hardly merit the curt dismissal of L. Deubner *Attische Feste* Berlin 1932 p. 171 'Prott's Deutung schwebt ganz in der Luft und ist fast allgemein abgelehnt worden.'

(3) W. Mannhardt *Mythologie he Forschungen* Strassburg 1884 p. 68 ff., arguing that the date of the festival (Skiraphion 14: *supra* p. 576) corresponded with the close of threshing in Attike, took the ox killed at the Bouphonia to be the 'Vegetationsdämon' in animal form. His interpretation has been widely accepted, e.g. by Nilsson *Gr. Feste* p. 27 ('Wenn nun das Stieropfer an Zeus Sosipolis [*supra* i. 717 n. 2] mit Recht durch das kotsche Opfer an Zeus Polieus [*supra* p. 564 ff.] mit dem Stieropfer der Buphonien in Verbindung gebracht worden ist, kann man sich doch zuletzt gegenüber den widerstreitenden Meinungen über dieses Fest entscheiden; denn wenn der Stier des Zeus Sosipolis ein Korngeist ist, muss der des Zeus Polieus es auch sein') and Frazer *Golden Bough*³: Spirits of Corn and Wild ii. 6 ff. ('The ox sacrificed at the *bouphonia* appears to have embodied the corn-spirit.' 'The mode of selecting the victim suggests that the ox which tasted the corn was viewed as the corn-dentity taking possession of his own'... 'The time of the Athenian sacrifice, which fell about the close of the threshing, suggests that the wheat and barley laid upon the altar were a harvest offering; and the sacramental character of the subsequent repast—all partaking of the flesh of the divine animal—would make it parallel to the harvest-supper of modern Europe, in which the flesh of the animal who stands for the corn-spirit is eaten by the harvesters. Again, the tradition that the sacrifice was instituted in order to put an end to drought and famine is in favour of taking it as a harvest festival. The resurrection of the corn-spirit, enacted by setting up the stuffed ox and yoking it to the plough, may be compared with the resurrection of the tree-spirit in the person of his representative, the Wild Man¹ (1 See *The Dying God*, p. 208). Still more clearly, perhaps, does the identification of the corn-spirit with an ox come out in the sacrificial ritual which the Greeks of Magnesia on the Maeander observed in honour of Zeus Sosipolis, a god whose title marks him as the equivalent of Zeus

Polieus'). H. von Prott, however, in the *Rhein. Mus.* 1897 lii. 200 rejects Mannhardt's hypothesis as 'unhaltbar, weil das Fest gar nicht in die Ernte- oder Dreschzeit fällt', cp. P. Stengel *Opferbräuche der Griechen* Leipzig—Berlin 1910 p. 210 n. 2; and L. Deubner *Attische Feste* Berlin 1932 p. 171 will have none of it ('Auch hier fehlen alle zwingenden Analogien: namentlich erscheint das Töten des Vegetationsdamons nie als eine bedenkliche Angelegenheit. Die Parallele des Sosipolis-festes in Magnesia kann nichts beweisen. Denn einmal ist es keineswegs gesichert, dass es sich hier wirklich um das Töten und Verzehren eines Vegetationsdamons handelt, zum zweiten aber lässt sich wegen der wesentlichen Verschiedenheit der beiden Feste keine Brücke vom einen zum anderen schlagen, auch nicht auf dem Wege über das Zeusfest in Kos').

(4) P. Stengel *Opferbräuche der Griechen* Leipzig—Berlin 1910 p. 212 f. held that the change from an old-established bloodless cult of Zeus Πολιεύς to the ritual of animal-sacrifice was an innovation demanding at least a make-believe punishment. He laid weight on Hesych. Διὸς θᾶκοι καὶ πεσσοὶ τινὲς γράφουσι ψῆφοι. φασὶ δὲ ἐν τῇ τῶν Ἀθηναίων διαψήφισει, ὅτε ἡμφισβήτην Ἀθηνᾶ καὶ Ποσειδῶν, τὴν Ἀθηνᾶν Διὸς δεσθῆναι ὑπὲρ αὐτῆς τὴν ψῆφον ἐνεγκεῖν καὶ ὑποσχέσθαι ἀντὶ τούτου τὸ τοῦ Πολιεύς ἱερεῖον πρῶτον θύεσθαι ἐπὶ βωμοῦ (= Favorin. *lex.* p. 515, 56 ff.), cp. Soud. 157. Διὸς ψῆφος· οὕτως καλεῖται, ἐν ᾧ Ἀθηνᾶ καὶ Ποσειδῶν ἐκρίθησαν. Κρατῖνος Ἀρχιδόχοις· ἐνθα Διὸς μεγάλου θᾶκοι πεσσοὶ τε καλοῦνται. ὁ γὰρ τόπος, ἐν ᾧ ἐκρίθησαν, Διὸς ψῆφος καλεῖται. τάττεται δὲ ἡ παροιμία ἐπὶ τῶν ἱερῶν καὶ ἀθλητῶν (*supra* i. 147). *Id.* *Die griechischen Kulturaltetümer*¹ München 1920 p. 249 adheres to his opinion ('Der Sinn der eigentümlichen, schon im 5. Jahrhundert als sonderbar empfundenen Zeremonie, ist wohl, dass es einer besondern Entschuldigung, einer fortgesetzten wenigstens scheinbaren Bestrafung dafür bedurfe, dass man einen Kult, der nach alter Überlieferung unblutige Opfer verlangte, in einen blutigen umgewandelt hatte').

(5) K. F. Hermann *Lehrbuch der gottesdienstlichen Altertümer der Griechen*² Heidelberg 1858 p. 420 f. falls back on the Varronian idea (*supra* p. 591 n. 1) that the ox was sacrosanct as *socius hominum* and thinks that the Βουφονομία 'die Heiligkeit des Acker-tieres als des wesentlichsten Gehulfen zum Landbaue symbolisch zu veranschaulichen bestimmt waren.' Similarly G. F. Schoemann *Griechische Altertümer*³ Berlin 1902 ii. 250: 'Das Schlachten des Pflug-tiers, des Gehulfen des Menschen bei der Bearbeitung des Feldes, war vor Alters verboten, und dass man auch nachher dazu nicht ohne Gewissensscrupel geschritten, sprechen einige alterthümliche hier und da übliche Opfergebräuche aus.' Etc. But the most persuasive exponent of this somewhat sentimental view is U. von Wilamowitz-Moellendorf *Euripides' Heracles* Berlin 1889 i. 60: 'der mensch, der sich zu der hohen culturstufe des ackersmanns erhoben hat, empfindet eine innere scheu, den stier, seinen arbeitsgenossen, zu schlachten und zu essen, den er doch als jager und hirt ohne anstand getötet hatte, und er kann und will doch den genuss des rindfleisches nicht entbehren. wir mögen nur daran denken, dass wir unsere naher-stehenden gefahrten, ross und hund, auch nicht essen mögen, und auch ein hund, das uns als individuum wert geworden ist, schwerlich für unsern tisch schlachten lassen möchten. aus diesem widerstreit der empfindungen entsteht der ritus der Buphomen, die symbolische ceremonie, entsteht die geschichte vom ersten rindeschlachter Thaulon, auf den die befleckung des mordes abgewalzt wird.' Cp. *id.* *Der Glaube der Hellenen* Berlin 1931 i. 296. The same explanation contents Mommsen *Feste d. Stadt Athen* p. 12 f. and even L. Deubner *Attische Feste* Berlin 1932 p. 172.

(6) F. Schwenn *Gebet und Opfer* Heidelberg 1927 p. 99 ff. takes his stand on the firmer ground of anthropology. Primitive man commonly dreads a great strong beast that he has killed, because he thinks it may still harm him after death. Accordingly he makes elaborate attempts to appease it and in some cases even flees into hiding and is mourned as if he were himself dead (J. Spieth *Die Religion der Eweer in Süd-Togo* Leipzig 1911 p. 139 ff. [Fraser *Golden Bough*⁴: *Spirits of Corn and Wild* ii. 228 ff., 244]). 'Wenn die Eweerpriester den Schuldigen scheinbar suchen, um an ihm für das Tier, für "unseren Vater," die Strafe zu vollziehen, so verurteilen die Athener das Beil, das den Stier getötet hat, und werfen es ins Meer; der Tater selbst aber muss in Afrika wie in Athen

pressive feature, the bizarre ritual of the Bouphonia. I shall approach the problem from a somewhat different angle, endeavouring to keep in mind the probabilities and improbabilities of the various contentions.

The statues of Zeus *Poliεύς*, if I am not mistaken, represented him as a storm-god, at first with uplifted bolt and impetuous advance, later with lowered weapon and in milder mood¹. Close by was the remarkable group of Ge beseeching Zeus to rain upon her, 'either,' says Pausanias, 'because the Athenians themselves needed rain, or because there was a drought all over Greece².'

vor dem Zorn des Tieres fliehen. Die Grundgedanken sind beidemal dieselben' (Schwenn *op. cit.* p. 108). The parallel is certainly striking, and Schwenn goes on to explain that the setting up of its stuffed hide was an admirable means of propitiating the dead beast (*op. cit.* p. 109). He supposes that the tasting of the corn originally aimed at strengthening of the creature's magic powers (p. 110 f.), that the communal feast enabled the participants to absorb those powers into themselves (p. 109), and that the whole procedure was later attached, appropriately enough, to the cult of the sky-god Zeus *Poliεύς* (p. 111). Schwenn, in fact, has put together a hypothesis which explains much. At the same time we should do well to note the judicious comment of Deubner *op. cit.* p. 171: 'Er musste freilich zugeben, dass diese historische Stufe im Ritus des Zeusfestes, das mit dem Ackerbau zu tun hat, nicht mehr sichtbar sei, und nahm daher an, das der Bouphonienochse ursprünglich ein Jagdtier gewesen sein müsse [Schwenn p. 109]. Auf diesen schwachen Punkt der Beweisführung hat denn auch Nilsson mit Recht hingewiesen und die Erklärung Schwenns abgelehnt' (*Deutsche Lit.-Zeit.* 1928, 1748 f.). I doubt whether this 'weak point' is really fatal to Schwenn's hypothesis. The same difficulty besets the earliest phase of the 'Minoan' bull-fights, which may likewise have originated in the hunting stage of the community (*supra* i. 497).

¹ *Supra* p. 570 ff.

² Paus. i. 24. 3 f. (*supra* ii. 21 n. 4). Not much is known concerning this group. C. Lenormant in the *Ann. d. Inst.* 1832 iv. 60—68, *Mon. d. Inst.* i pl. 44, a, b, attempted to connect it with the statuette of a kneeling woman in Parian marble brought by Blouet from Mykonos and now in the Louvre (Reinach *Rep. Stat.* ii. 682 no. 2). H. Heydemann in *Hermes* 1870 iv. 380 ff. (followed by Harrison *Myth. Mon. Anc. Ath.* p. 414 ff.) assumed that there was a half-length statue of Ge emerging from the ground in front of the rock-cut inscription Εἷς Καρ ποφόρου | κατὰ μα(τι)ν τελαρ (*Corp. inscr. Furtwangler *Masterpieces of Gr. Sculpt.* pp. 468—471 reverts to Heydemann's view of a half-length figure of the goddess rising out of the rocky ground. He cp. the impression of a seal on a little pyramid of terra cotta, which came from Athens to Berlin (Antiquarium, T. C. inv. 6787) and may belong to s. iv or iii B.C. It shows (fig. 185 = my fig. 413) the upper part of an undraped female form bending backwards and looking up to heaven with raised hands and dishevelled hair: her body rises from a car covered with cut grass, corn, or the like and drawn by an old-fashioned wheel. Furtwangler supposes that this singular vehicle was used for country processions and supplications in time of drought, being a more advanced analogue of the bronze car at Krannon (*supra* ii. 831 ff. figs. 788—792).

O. Jahn¹, C. Robert², and G. F. Schoemann³ infer from the proximity of this monument that by means of the Dipolieia men sought to propitiate Zeus as the god who sent rain and dew with their attendant fertility.

But more certain indications may be drawn from the date of the festival. It was celebrated during the very hottest days of the year⁴ at a season when, according to modern meteorological observations, the dewfall is at its minimum⁵. In this respect it resembled the *Arrhephoria* or 'Dew-bearing,' which appears to have been a ceremony intended to fertilise Mother Earth⁶. The same intention undoubtedly accounts for the Skirophoria⁷, which took place on the twelfth of Skirophorion⁸, two days before the Dipolieia⁹, and on the calendar-frieze of the Panagia *Gorgopekeos* (*supra* figs. 410, 411) is represented by a young man holding a couple of corn-ears¹⁰. To judge from these data, it would seem that the Dipolieia probably aimed at enabling the Sky-father to impregnate the Earth-mother aright by ensuring an adequate dewfall and rainfall at a critical time of year.

That we are on the right track in adopting this explanation will appear from a further consideration of the *personnel* and ritual of the feast. Those that took an active part in it belonged, as we have seen¹¹, to the Kerykes of Eleusis. The Kerykes of Eleusis claimed that Keryx the founder of their clan was a son of Hermes by

Aglauros, daughter of Kekrops¹. Androtion, however, the fourth-century historian who linked the Dipolieia with Thaulon², made Keryx the son of Hermes by Pandrose³; and so did the grammarian Polydeukes in the time of Commodus, except that he gave the mother's name its usual form Pandrosos⁴. Whether Keryx was the son of Aglauros or of Pandrosos makes little difference, for we have already found that *Áglauros*, 'the Sparkling One,' and *Pándrosos*, 'the All-bedewed,' were but successive names of the Earth-mother fertilised by the dew⁵. Such being their lineage, the *Boutýpoi*, *Kentriáddai*, and *Daitroí* were better qualified than any other Athenians to obtain from heaven 'the nurturing dewes of Kronos' son⁶. Indeed, Thaulon the forefather of the *Thauloníddai* or *Boutýpoi*⁷, bears a name which stands in obvious relation to that of Zeus *Thaúlios*⁸, and seems, as we have conjectured⁹, to denote 'the Dew-man' and nothing more sinister.

The ritual of these moisture-makers was complex. The beginning and the end of it appear to have been magical rather than religious ceremonies.

Virgins called *Hydrophóroi* brought water, ostensibly for the sharpening of axe and knife¹⁰. But this may have been an after-thought or later interpretation. The only other *Hydrophória* that took place at Athens had a very different significance. Soudas¹¹ describes it as 'A mourning festival, which, according to Apollonios, was celebrated over those that perished in the deluge.' The funereal aspect of this *Hydrophória*¹² suggests comparison with the sepulchral *loutrophóroi*¹³, which we traced back to the vogue of a primitive rain-charm¹⁴. If the *Hydrophória* too was a rain-charm, associated

in the popular mind with Deukalion's downpour, we can better understand certain circumstances attending Sulla's capture of Athens in 86 B.C. He entered the city on the Kalends of March, at a time when, as Plutarch¹ says, the Athenians 'do many things to recall the disastrous deluge of rain and the destruction that it caused, believing that the flood happened just about that time of year.' It has been conjectured with much probability that the rites here referred to were those of the *Hydrophória*². Shortly after Sulla's entry, when Aristion on the Akropolis capitulated through thirst, 'heaven at once gave a portent. On the very day, and at the very hour, when Curio was bringing him down, the clouds gathered in a clear sky and there descended such a quantity of rain that it filled the Akropolis with water³. Now, if we may argue from the *Hydrophória* to the *Hydrophóroi*, it seems at least likely that the opening rite of the Dipolieia was the fetching of water by way of a rain-charm. The water so fetched was poured over an axe and a knife. A civilised age of course jumped to the conclusion that the water was required simply for the sharpening of the tools. But I shall venture to read a deeper meaning into the ceremony. May we not fairly surmise that the axe—a double axe, as the frieze of the Panagia *Gorgoepékoos* shows⁴—was the weapon of the storm-god Zeus, was in fact an Attic counterpart of the *labrys*⁵? Perhaps, after all, the Sopatros-legend, which spoke of the Bouphonia as introduced from Crete⁶, was not so wide of the mark as some have supposed⁷. To wet such an axe with water would be a method of

⁷ B. Tamaro in the *Annuario della r. Scuola archeologica di Atene e delle missioni italiane in Oriente* 1921—1922 iv—v. 1 ff. regards the Bouphonia as a rite originating in the Mycenaean age. F. Damit können wir dann, neben anderen Stierprozessionen und Stiertötungen, z. B. dem oben erwähnten *βοὺς τοῦ Ἱπώος* in Delphi, auch die Buphoniengeremonien in Athen in die minoische Epoche zurückführen.' *Id. ib.* p. 131: 'Der Buphoniestier in Athen diente zunächst nur dem Schutz der Ackerbestellung, aber da zum Gedeihen der Saaten auch der Segen des Himmels notwendig war, wurde die Stiertötung schon in vorgriechischer Zeit mit dem Dienst des Himmelsgottes verbunden—wurde sie zum Opfer für den Herren des

obtaining a rain-storm quite in accordance with the recognised rules of magic¹.

An Attic counterpart of the Cretan *lábrys* would be of course an object of special sanctity—a 'holy axe' as Pindar² called it. An example of the sort, found near Athens a few years ago and now in my possession, is decorated with all the resources of Hallstatt art³. Accordingly, at the Bouphonia the utmost pains were taken to transfer the guilt of bloodshed from the axe to its accomplice the knife, while all present agreed to ignore the escape of the axe-bearing priest. Even the knife, when condemned, was not, like any ordinary inanimate object that had caused death, flung beyond the frontier⁴, but was sunk at sea⁵—presumably one more rain-charm to complete the performance.

(ξ) Zeus as an ox; Zeus *Ólbios*.

It remains to consider the central act of this yearly drama—the real death and simulated resurrection of an ox among worshippers who partake of his flesh.

The ox is throughout treated as divine. Nothing short of this will fully account for the ritual rule that the *boûs* must be a voluntary victim as it were consenting to his own death, for the feeling of

Himmels,' L. Malten in the *Jahrb. d. Deutsch. Arch. Inst.* 1928 xlvii. 138 is convinced: 'Dabei ist an einer Reihe von Einzelkulten beobachtet worden, wie in ihnen der Stier ursprünglich noch Liegestalt war, dann aber dem Vater Himmel zuwuchs. Einen Eckpunkt bilden die attischen Buphonen, die mit ihren Wurzeln in vorgriechische Zeit zurückreichen; in ihnen unterliegt der "Mord" an dem Stierdämon einer besonderen Sühne, wobei das Doppelbeil eine Rolle hat.' Another convert is B. Schweitzer in the *Gott. gel. Anz.* 1928 cxc. 17: 'So sind die Buphonen ein vorgriechisches Bauernfest.'

L. Deubner *Attische Feste* Berlin 1932 remains dissatisfied: 'Bei der Beurteilung der Zeremonie des Zeusfestes ist nicht zu übersehen, dass dieses keineswegs in das graueste Altertum hinaufreichen kann. Es sollte doch klar sein, dass Zeus Polieus auf der Burg von Athen unbedingt jünger sein muss als Athena und erst später zu dieser hinzugetreten sein kann; und auch dann erhielt er nur einen Altar. Ich glaube nicht, dass man mit seinem Kult über die archaische Zeit hinaufgehen kann.' But Deubner ignores the possibility (which I hold to be the truth) that the cult of Zeus *Πολιεύς* came to Athens in archaic times from Eleusis, where with its peculiar *personnel* and ritual it had survived the passage from Mycenaean to post-Mycenaean conditions.

Since the decoration of this specimen consists in *pent.* designs of a four-spoked wheel, a bridled and branded horse, a waterfowl, and a man—symbols all suggestive of a solar interpretation (*supra* i. 333 ff.)—it is probable that we have here a sacred axe, and remotely possible that it once belonged to a *Bouphónos*, who wielded it at some forgotten Bouphonia when the sun was at its hottest (*supra* p. 588).

utter guilt that drove the actual *Bouphónos* into immediate exile, and for the solemn communion of those who together devoured the sacred flesh and so—at Athens as in Crete¹—absorbed into their own bodies the very substance and virtues of the divine beast. When we remember that in Mesopotamia, in Asia Minor, and all round the shores of the Levant the sky-god with his bellowing thunder and his fertilising rain has been from time immemorial conceived as a bull², we cannot but conclude that the ox of the *Dípolieia* was one more example of this universal concept³, in a word was the embodiment of Zeus *Polieús* himself—slain that he might live again in younger and more vigorous form, stuffed with hay and yoked to a plough that he might work as of yore for the benefit of his *pólis*.

A plough on the Akropolis-rock seems *déplacée*. Yet Plutarch⁴ in his *Advice to Bride and Groom* goes some way towards explaining it :

‘The Athenians,’ he says, ‘observe three sacred ploughings : the first at Skiron, in memory of the most ancient of sowings : the second in Raria ; and the third near the base of the Akropolis, the so-called *Bouzygíos*.’

Bouzyges, ‘Yoker of Oxen,’ was an old-time Athenian, the first who ever ploughed with such a pair⁵. In token of his achievement the plough that he used was dedicated on the Akropolis⁶. And he himself may be seen using it on a red-figured bell-*kratér*, said to

have been found in pieces near *Vari* and now in the collection of Professor D. M. Robinson at Baltimore (pl. xlv)¹. This interesting vase, which has been attributed to 'The Painter of the Naples Hephaistos Krater²' and may be dated *c.* 430 B.C., shows Bouzyges successfully driving his yoke of oxen in the presence of two spectators. One of these, wearing *stepháne* and Doric *péplos*, is characterised as Athena by the spear in her right hand and the olive-tree at her side. But she holds in her left hand six³ ears of corn and turns to encourage the ploughman. So does a bald-headed white-bearded man, who stands in the background, wearing a *himátion* and leaning on his staff. He has been called *Kekrops*⁴ or *Boutes*⁵; but neither appellation is probable and we must be content to leave him anonymous. It is of more importance to note that the whole vase-painting was designed for an Eleusinian, not an Athenian, myth. Compare it with the Berlin *skýphos* illustrated *supra* i. 224 fig. 165 and you will realise that Athena and Bouzyges are simply adaptations from Demeter with her corn-ears and Triptolemos with his plough. Or set it beside the Palermo *kratér* *supra* i. 218 pl. xviii and you perceive that Athena and the elderly male spectator have been substituted for Demeter and Keleos, or possibly for Persephone and Hippothon. In short, the Baltimore *kratér* drops more than one broad hint that behind the Athenian ploughman at the base of the Akropolis lurks a half-obliterated figure, his Eleusinian predecessor on the Rarian Plain. Athena holding corn-ears at a plough-scene is quite unconvincing unless we see that she has stepped into the shoes of Demeter and that the type appropriate to the earlier discovery of the thrice-ploughed

field¹ had been borrowed to depict the later discovery of the yoked oxen. The transference from Demeter to Athena as ploughman's patroness² was perhaps eased by a knowledge of such cults as that of Athena *Boarmía* in Boiotia³ and that of Athena *Boúdeia* in Thessaly⁴. The former appellative is said to have meant 'She who fits the Oxen' to yoke and plough; the latter, 'She who binds the Oxen' to plough and yoke.

I pass on to observe that Bouzyges was the eponymous ancestor of a noble Athenian clan, the Bouzygai⁵, who dwelt on the

Akropolis¹ and were entrusted with the discharge of several sacred duties. It is said that the priestess of Athena was drawn from their number². More certainly, they provided the priest of Zeus *Téleios*³, who as a marriage-god yoked man and wife together⁴. They also furnished the priest of Zeus *at the Palladion*⁵. In Roman times both these functionaries had seats reserved for them in the theatre. And on one occasion the latter, at the bidding of the Pythian Apollon, had a new image of Pallas made at his own expense and dedicated to the gods and to the city⁶. Why the cult at the Palladion should have been in the hands of the Bouzygai appears from a story told by Polyainos⁷:

'Demophon received the Palladion in trust from Diomedes and took care of it. When Agamemnon asked it back, Demophon gave the genuine image to an Athenian named Bouzyges to take to Athens, but made another of the same size and shape and kept it in his tent. When Agamemnon attacked him with a strong force, Demophon for a long time put up a great fight and so created the impression that he was defending the genuine image. But when many men had been wounded, the followers of Demophon gave way, and Agamemnon seized the false Palladion and, falling into the trap, went off with it.'

We gather from other writers that Demophon was the first person tried by the court at the Palladion, which dealt with cases of involuntary homicide, though several versions of his crime are extant⁸. The noteworthy point is that the name Demophon again directs our attention to Eleusis, where he was Demeter's nurseling even before Triptolemos⁹. We are not, therefore, surprised to find

that ultimately the Bouzygai were responsible for keeping the sacred oxen that ploughed at Eleusis¹. Probably J. Toepffer² is right in his contention that, when the Eleusinian state ceased to be an isolated priestly power, all three ploughings passed into the control of the Attic Bouzygai. O. Gruppe³ too attributes these changes to political movements in progress at the end of s. vii and during the first half of s. vi B.C.—the temporary predominance of Megara and the permanent union of Eleusis with Athens. Indeed it is likely enough that the original home of the Bouzygai was not Athens, but Eleusis. The Eleusinians, says Pausanias⁴, 'assert that the Rarian Plain was the first to be sown and the first to bear crops, and therefore it is their custom to take the sacrificial barley and to make the cakes for the sacrifices out of its produce.'

Not only Eleusis, but Crete also is involved in the legend of Bouzyges. A tradition which goes back to Aristotle⁵ boldly declared that Bouzyges was none other than Epimenides, the famous Cretan prophet who is known to have visited Athens c. 500 B.C.⁶ That is a very remarkable identification, which—so far as I can see—must have been propounded by somebody bent on tracing an analogy between the sacred ox of Athens and the sacred bull of Crete. We have already⁷ insisted on the resemblance of the communal feast at the Bouphonia to the communal feast in Crete. And we can hardly help wondering whether there had ever been at Eleusis, as there certainly was in Crete, an earlier phase of bovine

⁵ At first sight it seems tempting to detect a faded trace of it in the story of Demophon, the infant child of Keleos and Metaneira, whom Demeter 'hid by night like a brand in the blazing fire' (*h. Dem.* 239) and would have made immortal had not his mother by an untimely shriek broken the spell (*supra* i. 211). This appears to have been an aetiological myth used to explain an actual custom (J. Ómbrios in Elis¹, that of Zeus *Lýkaïos* in Arkadia², and that of Zeus *Eilapinastês* or *Splanchnotómos* in Kypros³ look ominously like it.

A further point of doubtful significance may here be set down. Pausanias⁴, describing the statues on the Akropolis, says:

'There is Athena rising from the head of Zeus. There is also a bull dedicated by the council of the Areiopagos for some reason or other. one might make many guesses on the subject, if one cared to do so.'

This 'bull on the Akropolis' was of bronze and passed into a proverb for a thing to be admired⁵. It has, as Pausanias anticipated, given rise to a whole crop of more or less plausible explanations, none of which however can pretend to certainty⁶. More *ad rem* is a possible, indeed probable, vase-painting of the bull itself. The facts are as follows. E. Gerhard in 1858 published a black-figured *hydria* of c. 500 B.C., which he had found in possession of the

The Religion of Ancient Palestine in the light of Archaeology London 1930 p. 29 n. 2), the phrase *ὁ ἀφ' ἐστίας μνηθείς* would take on a very sinister meaning. But that is obviously an unjustifiable assumption.

Nor can human sacrifice be invoked to account for the *Βαλλητύς* or 'Stone-throwing,' by which the Athenians commemorated Demophon (Hesych. *Βαλλητύς*. *ἐορτὴ Ἀθήνησιν, ἐπὶ Δημοφῶντι τῷ Κελεοῦ ἀγομένη*, cp. dealers Basseggio and Depoletti at Rome. This noteworthy painting (fig. 414)¹ shows Athena *Polías*² seated on the left with helmet, spear, *phidre*, and attendant snake. In front of her³ is a blazing altar with Ionic volutes and a *próthysis* or wide base. Between them stands a priestess, barefoot like her goddess and holding an olive-branch. She looks toward Athena, but raises her hand to salute a stately bull, the forepart of which is seen standing apparently on the stylobate of a flat-roofed Doric structure⁴. Gerhard after mooting various possibilities was disposed to identify this bull with the votive gift of the Areiopagos⁵, which—he thought—might have some connexion with the city-goddess and perhaps also with the Zeus of the Bouphonia. Gerhard's interpretation was taken up and carried further by over-zealous followers. Miss J. E. Harrison⁶, in discussing the Dipolieia, ventured the view 'that the sacred ox, about whom so much ado was made, may have had a sort of shrine on the Acropolis, or that he may have lived in a shrine belonging to Zeus Polieus.' She went on to suggest 'that the votive gift of the Areopagus may have been connected with this Polieus hieron, and that the much-disputed naos mentioned by Pausanias may have been a small shrine set up in connection with the Bouphonia.' Thirty-seven years later Miss Harrison⁷ had dropped Zeus overboard. 'Now it is,' she says, 'of course impossible

⁵ *Supra* p. 612. T. Bergk in the *Zeitschrift für die Alterthumswissenschaft* 1845 iii. 979 ff. held that the Bronze Bull of the Akropolis was of colossal dimensions. Gerhard *op. cit.* iv. 123 f. says that O. Jahn, like himself, was inclined to view the bull on the *hydria* as 'ein Standbild.' T. Panofka too in the *Arch. Zeit.* 1852 iv. *Arch. Anz.* p. 158 decided that the bull in question must be meant for 'ein ehernes Weihgeschenk' and compared it with the small bull standing on a pedestal to be seen on tetradrachms of Selinous struck c. 466—415 B.C. Panofka thought that the Athenian bull, like the Selinuntine, might have been a votive offering to avert plague, grouped with the seated figure of Athena *Ἰγία*. Failing that, he suggested a 'Standbild des Stier-Dionysos oder des Achelous.'

to be certain that we have here the ox of the Bouphonia. What is certain is that we have a holy ox, holy on his own account with a sanctuary of his own, and that this holy ox is associated with not Zeus, but Athena. Whatever Olympian was dominant at the moment would take over the intrinsically holy beast.' F. Schwenn, who held that the Bouphonia was later attached to the cult of Zeus *Polieús*¹, likewise regards the bull as the essential centre of the rite and assumes that a bronze effigy of it was set up to perpetuate the blessings believed to stream from it².

Without attempting further to investigate the prehistory of the Bouphonia—a task for which the evidence available is hardly sufficient—we may at least admit that Greeks of the classical and post-classical periods commonly recognised the bull as an animal form of Zeus³. They were familiar from their youth up with the story of him and Europe. The Hellenic age loved to portray the god metamorphosed into a bull and bearing his venturesome rider across the sea⁴, in the west from left to right⁵, in the east from

(1) An archaic metope from temple 'F or S' at Selinous, which was at first dated as far back as the end of s. vii or the beginning of s. vi (A. Salinas 'Nuove metope arcaiche Selinuntine' in the *Mon. d. Linc.* 1889 i. 958 ff. pl. 1, T. Homolle in the *Bull. Corr. Hell.* 1896 xx. 670, J. Escher in Pauly—Wissowa *Real-Enc.* vi. 1296 f.), but is now more reasonably placed c. 560 (Perrot—Chipiez *Hist. de l'Art* viii. 488 ff. fig. 248, D. S. Robertson *A Handbook of Greek & Roman Architecture* Cambridge 1929 p. 325) or even c. 540 B.C. (W. J. Anderson—R. P. Spiers *The Architecture of Ancient Greece* rev. by W. B. Dinsmoor London 1927 p. 193). The bull combines profile body with full-face head, horn ear and knee breaking the framework to convey a sense of motion. His back is unduly depressed to secure approximate isocephaly. His tail is too long, but serves to lend interest to the flat monotonous flank. The whole effect is awkward, since Europe's far hand grasps the near horn of her mount: if he turns his head, she will be pulled off his back. Two dolphins below the group betoken the sea (Brunn—Bruckmann *Denkm. der gr. und rom. Sculpt.* pl. 288, b=my fig. 415). The metope is carved in 'tufo bianco di Menfi' (Salinas *loc. cit.*).

Harrison—D. S. MacColl *Greek Vase Paintings* London 1894 p. 14 pl. 4, 2 (=my fig. 416)), has given rise to several misconceptions. L. Stephani in the *Compte-rendu St. Pét.* 1863 p. 135, on account of 'die Rebzweige' by which she is surrounded, took the bull-rider to be a Maenad, not Europe at all. But

right to left¹. The Hellenistic age, tiring a little of this hackneyed

id. ib. 1866 p. 106 no. 3 remarks that the said 'Rebzwige' are laden with white fruit, not grape-bunches, and concludes, on account of the fish in the water and the rocks on either side of it, that after all Europe must be meant. G. Minervini *loc. cit.*, followed by O. Jahn *Die Entführung der Europa auf antiken Kunstwerken* Wien 1870 p. 21, supposed that the rocks in question were merely high-flung waves and quoted *Il.* 13. 29 γῆθοσόνη δὲ θάλασσα δίστατο of a similar scene. Overbeck *loc. cit.* hedges. Returning to sanity, we note the impression of speed given by the five dolphins hurrying in the opposite direction to the bull, the daring though unsuccessful attempt to show the bull's legs underwater, Europe's hand thrown up in astonishment at sight of the further shore even at the risk of letting go that horn—together a brilliant little picture. The apple-tree need be no more than a conventional background, though Stephani *loc. cit.* 1866 p. 119 may be right in regarding it as a substitute for a flower held in the hand: Europe was certainly a tree- and flower goddess (*supra* i. 525 ff.).

(3) A late black-figured *oinochoë* with trefoil mouth, now in the possession of Mr C. T. Seltman and as yet unpublished, shows on a red panel Europe, draped, riding to right (cp. *Brit. Mus. Cat. Vases* ii. 242 no. B 486). Her left hand grasps the bull's horn; her right hand is empty. Behind her is seen the apple-tree with white fruit. Beneath her the sea is rendered by a wash of thinned glaze with white curved lines to indicate the waves—an early example of naturalism in colour (cp. *supra* i. 335 figs. 267, 268, where the undulations are in thinned glaze without white contour).

(4) A red-figured *amphora* at Petrograd (*supra* i. 531 fig. 405), attributed by Hoppin *Red-fig. Vases* i. 288 no. 98 to Douris, by J. D. Beasley *Attische Vasenmaler des rotfigurigen Stils* Tübingen 1925 p. 108 no. 3 to 'Der Maler der munchener Amphora 2303.'

(5) The famous Europe-*kýlix* at Munich (*supra* i. 526 n. 1 with col. pl. xxxii), on which alone the bull was inscribed $\text{IEV}\Sigma$, details were gilded, and the sea was simply ignored—the result being a simultaneous appeal to our interest in mythology, our appreciation of splendour, and our imaginative powers. As often as the *kýlix* was filled at feast or festival, the god and his glittering consort would be visible, an appropriate group, in the midst of a wine-dark sea.

(6) The red-figured fish-plates at Petrograd (*supra* i. 547 with fig. 414) supply the anticlimax. The galloping bull and the floating Europe, with her train of fish, dolphins, and sea-powers, would all be literally submerged in the brine that formed a popular sauce (γάρος).

¹ (1) By far the earliest example of this arrangement is found on a 'Caeretan' *hydria* in the Louvre (*supra* i. 471 fig. 327), produced by a brilliant Ionic artist in some Asia Minor town c. 550 B.C. (Pfuhl *Malerei u. Zeichnung d. Gr.* i. 180 f., M. H. Swindler *Ancient Painting* Yale Univ. Press 1929 pp. 126, 163 fig. 256 (detail of trees, hare, etc.)).

(2) Next in order of seniority is the group that appears c. 500 B.C. on the oldest *statēr* of Phaistos. Of this crude and dumpy coin only one specimen has been published

which shows some features of the obverse more clearly. The reverse has an incuse square containing a lion's scalp surrounded by the inscription Α Μ | ρ Δ Ο | [Τ Μ Ο Ψ Τ] | Μ ρ Δ Ο (Φαῖστιον τὸ φάσμα). Analogous types occur on the oldest coins of Gortyna; but on these the bull more often moves towards the right. Sundry specimens on which the movement is towards the left seem to be of slightly later date (*Brit. Mus. Cat. Coins* Crete etc. p. 37 pl. 9, 4, J. N. Svoronos *op. cit.* p. 158 no. 4, p. 159 no. 8 pl. 12, 24, no. 9 pl. 12, 25. Babelon *op. cit.* ii. 3. 979 ff. no. 1621 pl. 255, 2, no. 1622 pl. 255, 3 assigns these coins to Phaistos: on their reverse the legend surrounding the lion's scalp has either been replaced by a border of dots or disappeared altogether). For further light on the relations between the series of Gortyna and Phaistos we await the forthcoming study of the subject by Mr E. J. P. Raven.

(3) The terra-cotta plaque here published (pl. xlvī, 1) is said to have formed part of a frieze from a tomb at Hadra, the eastern suburb of Alexandria, which passed into the collection of Florence Lady Ward and thence into mine. Excavations carried on at a great depth in 1898–1901 led to the discovery of two cemeteries, 'that of Hadra on the east of the city containing Hellenic graves, and that of Gabbari on the west, which is late Hellenistic and Roman' (R. C. Bosanquet in the *Journ. Hell. Stud.* 1901 xxi. 351 f. See further E. Breccia *Alexandrea ad Aegyptum* Bergamo 1922, and for details *id.* 'Fouilles de Hadra' in the *Municipalité d'Alexandrie. Rapport sur la marche du service du musée* 1912 pp. 15–33 pls. 10–22, *id.* 'Nuova esplorazione nella necropoli di Hadra' in the *Bulletin de la société archéologique d'Alexandrie* 1914 xv. 56–58, A. H. Tubby—H. E. R. James 'An account of excavations at Chatby, Ibrahimieh, and Hadra' *ib.* 1918 xvi. 79–90 pl. 3). Height 5½ ins., width 4¾ ins. There is one hole for attachment. The relief is throughout covered with a delicate white slip, on which Europe's mantle is touched in with light blue pigment. The design shows a magnificent bull turned towards the left and pawing the ground, on which flowers are springing. Couched on his back in an easy attitude is Europe, looking towards the right. Her feet are crossed, and her body is half-draped in a light wrap which she holds as a sail with either hand. The forms of the bull, the spacing of Europe's breasts, the rendering of the flowery meadow, are all characteristic of the fourth century B.C. and suggest a fine original dating from the period of Ptolemy I Soter or, at latest, Ptolemy II Philadelphos.

Mr A. D. Trendall, however, draws my attention to a bronze mirror (pl. xlvī, 2) now in the possession of Mr Bisset in Rome. This mirror, which measures 15^m by 16^m (or 19^m, if the handle be included) is said to have been found at Athens, where it was bought from a dealer in February or March 1935. The design of its relief is obviously identical with that of the terra-cotta plaque.

How is this identity to be explained? Is the plaque a forgery, or the mirror, or both? Or should we point to the fact that a bronze mirror-case of c. 300–250 B.C. at Paris (M. Collignon in the *Bull. Corr. Hell.* 1885 ix. 322 ff. pl. 7), no. 1355 in the Bibliothèque Nationale, is similarly duplicated, or at least closely paralleled, by a terra-cotta mould found in the Peiraieus and now at Berlin (Babelon—Blanchet *Cat. Bronzes de la Bibl. Nat.* p. 544 f. no. 1355 fig.)?

(4) The type recurs, with some exaggeration, on bronze coins of Gortyna attributed to the third (*Brit. Mus. Cat. Coins* Crete etc. p. 42 pl. 11, 5, J. N. Svoronos *op. cit.* p. 171 f. pl. 15, 20, *McClellan Cat. Coins* ii. 497 pl. 240, 15, *supra* i. 529 fig. 400, *Head Hist. num.*² p. 467) and second century B.C. (*Brit. Mus. Cat. Coins* Crete etc. p. 45 pl. 11, 11 (cp. *supra* i. 472 fig. 328), J. N. Svoronos *op. cit.* p. 173 f. pl. 15, 26, 27, 28, *McClellan Cat. Coins* ii. 498 pl. 240, 16).

of interest into the scene¹, or changed the time of action by showing the bull still on *terra firma* while the meadow broke into flowers at his feet². Europe, fully draped to begin with³, then semi-draped⁴, and finally in Roman art frankly naked⁵, was from first to last

¹ Basket (*supra* i. 530 n. 2 fig. 402, i. 531 fig. 405), Asterion (*supra* i. 531 fig. 405, i. 547 fig. 414), Erotes (*supra* i. 547 fig. 414, *infra* n. 2 (1) pl. xlvii, p. 627 n. o (3) pl. xlviii), sea-powers (*supra* i. 547 fig. 414, *infra* p. 627 n. o (3) pl. xlviii), etc.

A good example of the sort is a 'Lucanian' *amphora* in the British Museum (*Brit. Mus. Cat. Vases* iv. 95 no. F 184), which has for its main design Europe on the bull riding towards the left. The sea is indicated by a dolphin (mostly repainted), a fish, a lobster, and a cuttle, seen above a rocky bottom on which are sea-urchins and seaweed. Behind

Fig. 418.

Europe flies Eros with a *tainia*, and on the shore she has quitted stands a bearded male figure with bay-wreath, embroidered *himation*, and staff—presumably Phoinix or Agenor (J. V. Millingen *Peintures antiques et inédites de vases grecs tirées de diverses collections* Rome 1813 p. 44 f. pl. 25 (=my fig. 418), Reinach *Vases Ant.* p. 105 f. pl. 25, Lenormant—de Witte *El. mon. chr.* i. 60 ff. pl. 27, Overbeck *Gr. Kunstmyth.* Zeus p. 438 f. (no. 19) Atlas pl. 6, 11, J. A. Hild in Daremberg—Saglio *Dict. Ant.* ii. 863 fig. 2847). The suggestion of Overbeck *op. cit.* p. 439 that the bearded figure is Zeus strikes me as a little tactless. Zeus should at least be advancing towards his bride's arrival (cp. *supra* i. 531 fig. 405, i. 547) rather than speeding her departure.

² A small group of South-Italian vases combines this representation of Zeus as a bull with that of Zeus *in propria persona*:

(1) An Apulian *amphora*, found in 1851 in a rich rock-cut grave at Canosa (E. Gerhard in the *Arch. Zeit.* 1857 xv. 56 ff. pl. 104, 2 shows the tomb) and now at Naples (Heydemann *Vasensamml. Neapel* p. 495 ff. no. 3218), has the upper zone of its body decorated with two scenes in which Zeus plays a part: (A) Europe and four of her companions are playing at ball in a flowery meadow, watched by an old *paidagogós*, when the great bull, yellow above and white below, appears in their midst and kneels at the feet of Europe. One Eros on his back urges him forward, another holding a *tainia* hovers above her. A dove brings

up a wreath as omen of successful love. And four stars indicate the sky, which is the true home of the metamorphosed god (G. Minervini in the *Bull. Arch. Nap.* 1853 ii. 46 ff., 57 ff., O. Jahn *Die Entführung der Europa auf antiken Kunstwerken* Wien 1870 p. 1 ff. pl. 1, a (=my pl. xlvii). Overbeck *Gr. Kunstmyth.* Zeus p. 434 ff. (no. 16)). Overbeck *op. cit.* p. 435 n. μετώπῳ. (B) Zeus, half-draped in a *himation*, with a bay-wreath on his head and shoes on his feet, is seated on a rock, holding an eagle-sceptre in his left hand, a *phiale* in his right. This he extends towards Eros, who stands in a four-horse car. The horses are led by Hermes, with *caduceus* and palm-branch. He is preceded by a small horned Pan, who shoulders his *lagobolon* with the right hand and holds his *styrina* with the left, turning his head to glance at Hermes. Before both, leaning on a rock over which his *chlamys* is thrown, stands a young man with horns, wearing a broad band round his head: he holds a *lagobolon* in his right hand, a *phiale* in his outstretched left (*quis*? Heydemann *op. cit.* p. 499 n. 8 suggests 'Diopon im Gegensatz zum kleinen Aigipan?' and quotes in support O. Benndorf in the *Ann. d. Inst.* 1866 xxxviii. 111 ff. Better, perhaps, Pan as opposed to Aigipan, cp. *supra* i. 375 fig. 287). Below, flowers and grasses. Above, four stars. The significance of the scene is doubtful. But the recurrence of these four stars justifies us, I think, in linking the reverse (B) with the obverse (A). L. Stephani was perhaps on the right tack when in the *Compte-rendu St. Pé.* 1866 p. 121 he wrote: 'in einem dritten Gemälde derselben Vase sieht man Zeus, umgeben von anderen Gottheiten, auf seinem Throne sitzen und daneben ein Viegespann, auf welchem er sich wahrscheinlich nach Kieta begeben wird.'

a vegetation power¹ and as such associated with flowers and fruit. The fertilising god must needs have a fertile bride.

The Greek type of Europe with her flowers seated on the back of the bull Zeus seems to have originated in the Hittite type of Chipa with her flowery kirtle standing on the bull of Tešub², and

(from a tracing of the original) = my fig. 419, Alinari's photo no. 35731 = my fig. 420). Europe stoops to attach a cord to the horns of the submissive bull (cp. *Ov. met.* 2. 867 f., *Anth. Lat.* cod. Salmas. 14. 17 f. (i. 1. 49 Riese). while one of her playmates holds him by the tail. The bull is painted white. Eros with a *tainia* and a flower in his left hand extends his right with a wreath towards Europe. The rest of the figures are divine, and correspond with those on the reverse of the preceding vase. On the left Aphrodite, uplifting a mirror, leans over a pillar to watch the scene. On the right Hermes, with *pétasos*, *chlamys*, *caduceus*, and wreath, awaits the issue in his favourite attitude of the supported foot (*supra* ii. 479 n. 6, *infra* p. 706). Finally, seated at a higher level and half-draped in a fine *himátion*, with a wreath in his hair, is the bridegroom looking towards his bride. The sceptre in his hand marks him as Zeus. Jahn *loc. cit.* speaks of it as crowned with an eagle. Overbeck too calls it an 'Adlersepter' and figures it as such, though in the modern photograph the bird is hard to trace. Jahn further describes Zeus as 'unbartig.' Overbeck says 'in seltener Erscheinung jugendlich' and compares Zeus as a beardless lover on an *Io-amphora* of the Coghill collection (Lenormant—de Witte *El. mon. chr.* 1. 55 ff. pl. 26, Overbeck *op. cit.* Zeus p. 466 f. (no. 1) Atlas pl. 7, 7, *infra* p. 638 n. o fig. 435); but Overbeck's own tracing shows that the god's face is modern and Gori *op. cit.* pl. 163 gives it a beard!

(3) A South-Italian *kratér* (*hydria*?), likewise in the Museo Gregoriano, simplifies the scene (O. Jahn *op. cit.* p. 5, Overbeck *op. cit.* Zeus p. 437 (no. 18) Atlas pl. 6. 13 (from a tracing of the original) = my fig. 421). Europe hurries forward to caress the white bull, which stands erect before her on the flowery plain. Her old nurse (?) turns away with a gesture of astonishment. Above Europe is seen a *tainia*. Above the bull's head, a long-winged Eros with mirror and dulcimer. On a higher level, left and right, sit two deities facing each other—Zeus with *phiale* and long sceptre, Aphrodite with mirror and toilet-box.

An Apulian *kratér* in the Louvre represents a slightly earlier moment in the action and gives no hint of Zeus in human shape (Overbeck *op. cit.* Zeus p. 434 (no. 15) Atlas pl. 6. 12 (from a tracing of the original) = my fig. 422). The treatment is interesting and was perhaps inspired by some such painting as that described in Ach. Tat. 1. 1 *ἐκόμα πολλοῖς ἀνθεσιν ὁ λειμῶν· δένδρων αὐτοῖς ἀνεμέμικτο φάλαγξ καὶ φυτῶν· συνεχῇ τὰ δένδρα, συνηρεφῇ τὰ πέταλα· συνῆπτον οἱ πτόρθοι τὰ φύλλα. καὶ ἐγένετο τοῖς ἀνθεσιν ὄροφος ἡ τῶν φύλλων συμπλοκή. ἔγραψεν ὁ τεχνίτης ὑπὸ τὰ πέταλα καὶ τὴν σκιαν·. ἔδωκε δὲ κατὰ μέσον ἔρρει τοῦ λειμῶνος τῆς γραφῆς, τὸ μὲν ἀναβλύζον κάτωθεν ἀπὸ τῆς γῆς, τὸ δὲ τοῖς ἀνθεσι καὶ τοῖς φυτοῖς περιχεόμενον. Here too in the midst of the meadow is a spring welling from a hollow rock, on which sits Europe beneath two overarching trees. On the left a swathed woman bears a large pitcher. On the right a great bull, coloured white and red, lowers his head before Europe, who looks longingly at him and toys with her veil. Higher up Aphrodite is seated, with Eros standing beside her. And above the horizon are seen a male and a female (? two females) conversing together.*

¹ A possible Europe—we can hardly rate the evidence higher—hails from the *tholos*-tomb at *Dendra*, near Midea on the Argive Plain, excavated by A. W. Persson in 1926 and dated by him and A. J. B. Wace c. 1400—1350 B.C. (A. W. Persson *The Royal Tombs at Dendra near Midea* Lund 1931 pp. 67, 143). Among its rich contents were eight metope-like plaques of glass paste, six light blue, two violet in colour, but all bearing a design in relief described as follows by their discoverer: 'An animal with head borne

times¹—a total duration of nearly two thousand years. The theme

high moves swiftly towards the right; on its back sits a woman (there is a fastening hole on each side of her waist) with both legs at one side, the knees very much bent... The representation naturally recalls those dating from a later period, showing Europa on the bull, especially that on the archaic metope from Selinus, with a beading on the upper edge [*supra* p. 616 fig. 415]—our plaques have one also on the lower edge. On the small glass plaques from Midea we have the first illustration of the Europa legend, an illustration of the Mycenaean period* (Persson *op. cit.* pp. 36, 65 fig. 43, pl. 25, 1 (part of which = my fig. 423: scale $\frac{2}{3}$) and pl. 26, 2). Origin of Greek Mythology Cambridge 1932 p. 33. But U. von Wilamowitz-Moellendorf *Der Glaube der Hellenen* Berlin 1931 p. 112 ('Bronzerelief') and A. Roes in the *Journ. Hell. Stud.* 1934 liv. 25 call for caution. If the plaques in question really represent Europe, this is by far the earliest trace of her myth on Greek soil, and the bull—as we should have anticipated (*supra* p. 615)—moves from left to right. But Europa, though the likeliest, is not the only possible bull-rider. What of Artemis Ταυροπόλος (*supra* i. 417 n. 7, 538 fig. 409, ii. 729 n. o. 955 n. o. 1214 (?)²) Or, for that matter, what of Chippa herself?

¹ Roman wall-paintings and floor-mosaics of Europa are listed by Helbig *Wandgem. Camp.* p. 36 ff. nos. 122—130, p. 454. Sogliano *Pitt. mur. Camp.* p. 22 f. nos. 79—82, Remach *Rép. Peint. Gr. Rom.* p. 11 no. 4, p. 12 nos. 1—3, p. 13 nos. 1—6, p. 14 nos. 1—6. One painting and a couple of mosaics will serve to illustrate the range and variety of these later representations:

(1) The finest of the wall-paintings was found in a house at Pompeii (*Reg.* ix. 5. 18, room f on the plan by A. Mau in the *Bull. d. Inst.* 1879 p. 22 pl.) and is now at Naples (A. Sogliano in the *Guida del Mus. Napoli* p. 303 no. 1296, G. Rodenwaldt *Die Komposition der pompejanischen Wandgemälde* Berlin 1909 p. 69 ff. fig. 11, Herrmann *Denkm. d. Malerei* pl. 68 (= my fig. 424) Text p. 89 f., L. Curtius *Die Wandmalerei Pompejis* Leipzig 1929 p. 289 f. pl. 4 (a good reproduction in colours), O. Elia *Pitture murali e mosaici nel Museo Nazionale di Napoli* Roma 1932 p. 37 no. 47 fig. 12). Europa, half-draped in a violet *himation* with sea-green border, is seated, not to say enthroned, on the back of a splendid brown bull, which stands steady though his eye is turned seaward and he is already thinking of the perilous transit. The heroine's right hand raises her mantle; her left is laid on the bull's head and holds a red ribbon (?to twine about his horns, cp. *Ov. met.* 2. 867 f.). Of Europa's playmates, in wine-red, golden yellow, and greenish blue, the first stoops to embrace the bull, the third has set down her pitcher—a detail which implies the proximity of a spring (*supra* p. 622 n. o fig. 422), as perhaps does the squared structure on the right. The landscape background shows a wooded mountain, cleft by a ravine in which are seen a stately fir-tree (?) and before it a tall sacred column

to indicate that this is holy ground. The whole composition, with its clear-cut contours and sharp sculptural qualities, belongs to Mau's Third Style of mural painting (25 B.C.—50 A.D.). But the mysterious glow, which lights up the rock-face, the column, the further

legs of the bull, and glints on the breasts of Europa, is a light-and-shade device already heralding the advent of the Fourth Style (50—79 A.D.). The work in general presupposes a good Greek original of the Hellenistic age, to which the Roman copyist has added a conventional background and accessories.

The bull (white, shaded with brown) is already in the sea, escaping towards the left, with Europe scantily draped in a *himation* (deep orange, shaded with red) on his back. Her adventure is watched with astonishment and interest by two female figures (local Nymphs?) on the sea-shore. Above are seen five of Europe's playmates fleeing in alarm towards the right. Some of them look back as they run. And finally from behind a rock advances a grave bearded man in a *himation* (red) with a long staff (yellow) in his hand. Overbeck *op. cit.* p. 456 would see in him Zeus, at whose sudden appearance the nearest of the maidens is collapsing in a swoon! Jahn *op. cit.* p. 8 had more sensibly taken him to be Agenor the father of Europe or Kadmos her brother. Helbig *Führer*² p. 395 f. notes that, apart from minor injuries and repairs, there is something wrong about the whole composition. Europe's companions are not looking at the elopement, but forwards or backwards; nor is Europe herself being carried off from their midst. All would be well, if the mosaic were bisected and rearranged with its lower half on the left, its upper half on the right (fig. 426). Accordingly he conjectures that the original design was an oblong fresco, which the Praenestine craftsman compressed into a square (0.82^m) to fill a given space. The lively attitudes and the fine colouring point to an artist of marked ability. We are thus led towards the conclusion that this mosaic is a modified copy of the famous painting by Antiphrilos, a rival of Apelles, whose 'Kadmos and Europe' was to be seen in the Porticus Pompeia at Rome (Plin. *nat. hist.* 35. 114, cp. Mart. *ep.* 2. 14. 3, 5, 15 ff., 3. 20. 12 f., 11. 1. 11). See further A. Reinach *Textes Peint. Anc.* i. 385 n. 2.

(3) Of almost equal interest and of even greater beauty is the mosaic found in 1860 near the Cathedral at Aquileia on the estate of Count Cassis and thence removed on rollers to his Museum in the Castle of Monastero (O. Jahn *op. cit.* p. 52 ff. with pl. 10 (=my pl. xlviii) from a coloured drawing carefully executed on the spot by the painter Agujari under the direction of von Steinbuechel, Overbeck *op. cit.* Zeus p. 456 f. Atlas pl. 7, 23. O. Fasiolo *I mosaici di Aquileia* Roma 1915 pl. 1, 2, Reinach *Rép. Peint. Gr. Rom.* p. 12 no. 2). The divine bull is here figured as a sea-beast, brown to grey in colour: his forefeet plunge in the brine; his hindquarters end in two fish-tails flung aloft as he frisks along. Europe, wearing a blue fillet on her blond hair, but otherwise stark naked, sits gracefully on his back, resting one hand on his head, the other on his flank. Eros, with short wings coloured blue and red, leads the way, holding a flowery halter in his right hand and a burning torch in his left. Lastly, Poseidon, a wreath of green weed on his dark brown hair, rides on a big grey dolphin and is followed by a second of smaller size as he accompanies the bridal *cortège* and calms the sea for his brother. His right arm is seen, as if swimming, through the clear water (cp. Nonn. *Dion.* 1. 74 f.)—an effect made possible by a clever use of blue glass *teserae*. The mosaic, badly cracked and damaged, must have seen service for many years before Attila captured Aquileia in 452 A.D. Indeed, von Steinbuechel and Jahn assigned it, reasonably enough, to the palmy days of the town under Trajan and Hadrian. Jahn poses the question whether this ruler on a marine bull might not have been meant for Aphrodite or some Nereid, say Galateia, rather than for Europe (Nonn. *Dion.* 1. 57 ff.; cp. *supra* p. 133 f. figs. 52, 53), but decides rightly for the last; and even Overbeck says 'eine sichere Entscheidung ist nicht möglich.' I do not share their hesitation. The obvious intention to represent a wedding train and the general agreement with other pictures of Europe really leave no room for doubt, not to mention such confirmatory details as those recorded by Ach. Tat. 1. 1 'Ερως εἴλκε τὸν βοῦν Ἐρως, μικρὸν παιδίον, ἠπλώκει τὸ πτερόν. ἐκράτει τὸ πῦρ· ἐπέστραπτο δὲ ὡς ἐπὶ τὸν Δία καὶ ὑπεμεΐα, ὥσπερ αὐτοῦ καταγελῶν, ὅτι οὐ αὐτὸν γέγονε βοῦς.

¹ The only allusion to Europe in the Homeric poems occurs in the Διὸς ἀπάτη (*Il.* 14. 321 f. οὐδ' ὅτε Φοῖνικος κοῦρης τηλεκλειτοῖο, ἥ τέκε μοι Μίνω τε καὶ ἀντίθεον Ραδάμανθυν). This bowdlerizing (?) episode omits the actual name of the heroine and ignores the bull.

prose-writers¹ also. And I suggest that its long-lived appeal implies a deep-seated belief among the Mediterranean peoples that the sky-god could and on occasion did take shape as a bull. If so, it may well be that—as we conjectured above²—the ox of the Dipolieia was originally held to be the visible form or embodiment of Zeus *Policús* himself.

Here we may pause to note a partial parallel from northern Greece. A *stéle* of Proconnesian marble, found at the village of *Kavak* between *Panderma* (Panormos near Kyzikos) and *Gunen* and acquired in 1908 by the Imperial Ottoman Museum, is shaped like a chapel with gable and *akrotéria* (fig. 427)³. The gable is adorned with an ox-head, round which is a garland tied between the horns. In the chapel stands Zeus *Ólbios*⁴. He wears a *chitón*

and a *himátion*. His left hand grasps a sceptre, the lower end of which disappears behind an eagle with spread wings. His right hand holds a bossed *phiale*, from which he is pouring a libation above the flame of a small altar. But the most noteworthy feature of the design is that the head of the god with its full beard and long hair combines two bovine horns¹. Below the figure of Zeus is a sacrificial scene. In the centre is a flaming altar. Before it, and represented on a small scale so as not to conceal the altar, a man with a double axe is about to strike a bull, whose head is bound by a cord to a ring fixed in the ground². On one side stand a boy and a man. Their raised right hands held objects of an oval shape (fruit?)³. The boy's lowered left hand is holding a bunch of grapes. On the other side stand a girl and a woman. The girl carries in her left hand a dish of fruit and flowers⁴. The woman has fillets in her left hand, and raises her right with open palm in a gesture of invocation.

Zeus *Ólbios*, the god 'of Welfare⁵', was evidently a giver of fertility; and his bovine horns were due, not to a late confusion with other deities⁶, but to an early conception of him as tauromorphic.

If this were certain we should have the figure of a priest impersonating a bull-god, which would be of singular interest.' It would indeed (cp. *supra* i. 490 ff. fig. 354, 496). But the assumption is too precarious. Edhem Bey in the *Bull. Corr. Hell.* 1908 xxxii. 521 says merely 'la tête barbue, à long (sic) cheveux flottants sur le cou, est surmontée de deux cornes, recourbées comme celles d'un bovidé,' and Mendel *Cat. Sculpt. Aischylos in the first of his extant plays makes the chorus of Danaïdes at Argos appeal to Zeus *Ólbios* as the god who had touched Io and thereby become the forefather of their race¹. But it was in the form of a bull, as the same play shows², that Zeus came into contact with Io, who from that time forward is figured³ as a heifer⁴

Dass schon vor Äschylus die menschliche Bildung der Io bestanden haben kann, ist wegen der Gleichung mit der ägyptischen Isis zuzugeben. Wenn man aber bedenkt, dass der Wechsel in der Darstellungsweise der Io chronologisch genau mit dem Dithyrambus (Kuhform), den Supplices (Kuh mit menschlicher προτομή) und dem Prometheus des Aischylus (βοῦκερως παρθένος) zusammenfällt, und dass weder ein monumentales, noch ein literarisches direktes Zeugnis für einen anderen Entwicklungsgang vorhanden ist, dann wird man sich doch genötigt sehen, die nachgewiesene Abänderung, die mit den Bedürfnissen der Tragödie übereinstimmt, auch als durch die Tragödie veranlasst, anzunehmen'). A red-figured *hydria* by 'the Girgenti Painter' c. 475 B.C., formerly in the Pascale collection at Santa Maria di Capua and now at Bryn Mawr, has a finely painted design of Argos, with eyes all over his body (even one between the straps of his right boot and another under his left boot), leopard-skin cape, fur *pilos*, club, and sword, pursued by Hermes (wreath, *petasos*, *chlamys*) in the act of drawing his sword. Io as a heifer bounds away to the left. The Doric column, the altar, and the priestess with temple-key and poppy-headed sceptre, mark the scene as taking place in the Argive Heraion. The four small bushes are its sacred grove (Apollod. 2. 1. 3 says of Argos οὗτος ἐκ τῆς Ἑλλάδας ἐδέσμευεν αὐτήν, ἦτις ἐν τῷ Μυκηναίῳ ὑπήρχεν ἄλσει). ¹ R. Engemann in the *Jahrb. d. kais. deutsch. arch. Inst.* 1903 xviii. 38 ff. fig. 1 (= my fig. 432) was the first to publish and discuss an important vase at Boston, on which Io appears as a heifer with human face. This red-figured *oinochoë* came from south Italy and is described as 'wahrscheinlich apulisch, in direkter Nachahmung attischer Ware aus der Mitte des V. Jahrhunderts.' Engemann adds: 'Meiner Meinung nach dürfte man mit der Zeitbestimmung noch etwas höher hinaufgehen.' The vase represents a beardless Hermes, with *chlamys*, *pteros*, *caduceus*, and sword, advancing against Argos, who wears *chiton*, ox-hide cape (*supra* i. 458 f.), leather cap, and brandishes a club as he turns to face his pursuer. Io moves off towards the right: her body is that of a heifer, but her head has bovine horn and ear combined with the features of a maiden, and a veil the folds of which serve to conceal the ungainly combination. Engemann acutely remarks that the same *quasi*-oriental 'Mischbildung' is presupposed by the earliest of the extant Aeschylean tragedies (Aisch. *suppl.* 565 ff. Wilamowitz *βορροί δ' οἱ γὰρ τὸν ἥσαν ἐννοοῖ χλωρῷ δέματι θιμὸν | πάλλουρ*, ὅψιν ἀήθη βύσκημ' ὁρῶντες δισχερὲς μειζόμενρον, | τὰν μὲν βοός, | τὰν δ' αὖ γυναικός. τέρας δ' ἐθάμβουσι). But S. Eitrem in Pauly—Wissowa *Real-En.* ix. 1739 replies: 'Aber Aischylos braucht ja nicht absolut an ein solches Mischwesen zu denken. I[o] mag auch in den Hik[etides] nur als kuhhornig gedacht worden sein, um als ein "wunderbares Mischgeschöpf" bezeichnet zu werden.'

² The exact date of Aischylos' *Prometheus Bound* is not easy to fix (W. Christ *Geschichte der griechischen Literatur*⁶ München 1912 i. 296 f.), and W. Schmid after repeated examination of the evidence (W. Schmid *Untersuchungen zum Gefesselten Prometheus* (Tub. Beitr. ix) Tübingen 1929 (Aisch. *P.* 2. is the work of an unknown poet writing between 458 and 445 B.C.), *id.* 'Epikritisches zum Gefesselten Prometheus' in the *Berl. philol. Woch.* Feb. 14, 1931 p. 218 ff.) can roundly declare: 'Der Gefesselte Prometheus ist weder von Aischylos noch zu dessen Lebzeiten verfasst' (W. Schmid—O. Stählin *Geschichte der griechischen Literatur* München 1934 i. 2. 193, cp. W. Morel in the *Jahresbericht über die Fortschritte der klassischen Altertumswissenschaft* 1932 ccxxxiv. 84 f.). This is not the place to argue the point. In any case S. Eitrem *loc. cit.* is right in saying: 'Die gehornete Jungfrau wurde nämlich die beliebteste Erscheinungsform der verwandelten I[o] in der Kunst, und auch in der Literatur wird die *βοῦκερως παρθένος* seit Aisch. Prom. 586 [*ἄλυσ φθέγμα τὰς βοῦκερως παρθένους*], vgl. 673 K. [*κερατὶς δ', ὡς ὀπαρ'*] häufig erwähnt.'

A good example of Io with cow's horns and cow's ear is the Jatta *kratēr* already figured (*supra* i. 459 n. 5 with fig. 318), of which Overbeck *Gr. Kunstmyth.* Zeus p. 480 (no. 19) says: 'Den Mittelpunkt bildet Io, welche als kuhgehornte und daneben, als

einziges Beispiel, auch kuhohrige Jungfrau dargestellt ist und durch einen langen Schilfstengel, den sie in der Rechten halt, sehr passend als Tochter des Flusses Inachos bezeichnet wird.'

Fig. 432.

Antefixes of terra cotta, semi-elliptical in shape and adorned with the head of Io in relief, have been found in some numbers at Tarentum. The British Museum has two, one certainly, the other possibly, from that town (*Brit. Mus. Cat. Terracottas* p. 415 no. D 665 Tarentum 1884 (height $6\frac{3}{8}$ ins.), p. 419 no. D 692 Towneley collection (height $7\frac{1}{4}$ ins.)). The Museum of Fine Arts at Boston has other specimens of the same sort

(*Annual Report* Boston 1901 p. 63 n.). There are several in Berlin, and many in the Tarentine Museum (A. Furtwangler in the *Jahrb. d. kais. deutsch. arch. Inst.* 1888 iii. 223 n. 1 = *id. Kleine Schriften* Munchen 1913 ii. 216 n. 1). One of the Berlin examples, found at Tarentum, is figured by R. Engelmann in the *Jahrb. d. kais. deutsch. arch. Inst.* 1903 xviii. 55 no. 34 fig. 8. I add one of the same type, likewise found at Tarentum in 1919, and now in my collection (fig. 433: height $7\frac{1}{4}$ ins., breadth 8 ins.). It represents Io *en face* with budding horns and bovine ears. Between her horns is seen part of a veil (Engelmann

Fig. 433.

loc. cit. says 'Zwi-chen den Hornern Binde'; and Walters *loc. cit.* D 692, 'over the forehead, indications of cow's hide (?)'). and from her ears hang earrings of one drop. Lastly, round her throat is a necklace of fourteen pendants. She is in fact figured as the beloved of Zeus in full bridal array. Furtwangler *loc. cit.* remarks: 'Der stilistische Charakter dieses Typus auf den Stirnziegeln. ist derjenige der Zeit gegen 400.' I agree. But I dissent from his further contention, that we have here a goddess—say Artemis *Taurophos*—rather than the heroine Io. It must not be forgotten that Io, as priestess of Hera, was herself in some sense divine (*supra* i. 453 ff.). I am disposed therefore to think that these antefixes came from a sanctuary of Hera, whose head with transparent veil (*Ταφανιδιον*), earring, and necklace appears c. 340—c. 302 B.C. on the splendid gold coinage of Tarentum (M. P. Vlasto in the *Journ. Intern. d'Arch. Num.* 1899 ii. 303 ff. pls. IE', 1—9, 17 f. 15', 1—5, C. Seltman *Greek Coins* London 1933 p. 195 f. pl. 45, 11, 12, 15).

³ Bovine ears, an unnecessary deformation, are discarded in most representations of Io as a horned maiden, e.g. on a red-figured *krater* from Ruvo in the Barone collection (*supra* ii. 379 f. fig. 287), and as time goes on even her horns tend to be minimised (*supra* i. 237 n. 3) until they are scarcely, if at all, discernible (*infra* figs. 434, 438 f.).

Fig. 434.

Nikias of Athens, the famous contemporary of Praxiteles (Plin. *nat. hist.* 35. 133), is known to have painted a large picture of Io (*id. ib.* 35. 132). Pliny, describing his *technique*, says that he 'devoted special attention to women, was careful in his treatment of light and shade, and took particular pains to make his figures stand out against the background' (*id. ib.* 35. 130 f.). This *inter alia* justifies W. Helbig *Untersuchungen über*

die campanische Wandmalerei Leipzig 1873 pp. 113, 140 ff. in his conjecture, now commonly accepted, that the fresco of Io in the 'House of Livia' on the Palatine (G. Perrot in the *Rev. Arch.* 1870—1871 i. 387 ff. pl. 15 (=my fig. 434), Overbeck *Gr. Kunstmyth.* Zeus p. 483 (no. 20) Atlas pl. 7, 11, A. Mau in the *Ann. d. Inst.* 1880 lii. 136 ff., *Mon. d. Inst.* xi col. pl. 22, A. Reinach *Textes Peint. Anc.* i. 288 n. 5, Reinach *Rép. Peint. Gr. Rom.* p. 16 no. 3, Pfuhl *Malerei u. Zeichnung d. Gr.* ii. 753, iii. 316, fig. 708, H. Bulle 'Untersuchungen an Griechischen Theatern' in the *Abh. d. bayer. Akad.* 1928 Philos.-philol. Classe xxxiii. 309—311, M. H. Swindler *Ancient Painting* Yale Univ. Press 1929 p. 279 fig. 448 (from photo), L. Curtius *Die Wandmalerei Pompejis* Leipzig 1929 p. 258 ff. with figs. 62 (wall), 154 (head of Io from photo), 155 (whole picture from photo) is in its essentials a copy of Nikias' work. Io, with the faintest indication of horns on her brow, sits in dejection at the foot of a pillar, on which stands the effigy of a sceptre-bearing Hera. The background is occupied by a big rock. On the right Argos, a young man equipped with spear, sword, and spotted panther-skin (in lieu of extra eyes), leans forward in the favourite Lysippian attitude of the supported foot (*supra* p. 622 n. o (2), *infra* p. 706) gazing intently at Io. On the left Hermes (his name is given in Greek lettering), with *caduceus*, winged *pétasos*, and *chlamys*, approaches to carry out the behest of Zeus. The theme was popular, for it occurs not only in this picture, which is of Mau's 'Second or Architectural Style' (s. i. B.C.), but—with omission of Hermes and Hera—in sundry Pompeian paintings (Helig *Wandgem. Camp.* p. 38 f. nos. 131—134, Reinach *Rép. Peint. Gr. Rom.* p. 15 nos. 4 and 6, p. 16 no. 2), of which the best are one from *Reg.* ix. 7. 14 in the 'Third Style' (c. 25 B.C.—c. 50 A.D.) (Herrmann *Denkm. d. Malerei* Text p. 67 f. fig. 16, L. Curtius *op. cit.* p. 258 ff. fig. 156) and one from the Macellum in the 'Fourth Style' (c. 50—79 A.D.) (Herrmann *op. cit.* pl. 53 Text p. 67 f., L. Curtius *op. cit.* p. 260 ff. fig. 157). Pictures of the sort were certainly known to Propertius (1. 3. 19 f. sed sic intentis haerebam fixus ocellis, | Argus ut ignotis cornibus Inachidos), if not also to Statius (*Theb.* 6. 276 f. Io post tergum, iam prona dolorque parentis, | spectat inocciduis stellatum visibus Argum).

Nikias' masterpiece exerted a powerful influence over the vase-painters of South Italy, who borrowed its main features and used them, inappropriately enough, to express the happy ending of Io's sad story—the moment when in far-off Egypt Zeus at long last would by his touch restore her to her senses and claim her as his bride (Aisch. *suppl.* 310, *P. v.* 848 ff. Wilamowitz). A red-figured *amphora* of 'Lucanian' style, found at Anzi, Basilicata, and later in the Coghill collection (J. Millingen *Peintures antiques des vases grecs de la collection de Sir John Coghill* Rome 1817 pl. 46, T. Panofka *loc. cit.* pp. 20 ff., 47 col. pl. 4, 1 (=my fig. 435), Lenormant—de Witte *El. mon. céer.* i. 55 ff. pl. 26, Overbeck *Gr. Kunstmyth.* Zeus p. 466 f. (no. 1) Atlas pl. 7, 7, Muller—Wieseler *Denkm. d. alt. Kunst* ii. 19 f. pl. 3, 37, Muller—Wieseler—Wernicke *Aut. Denkm.* i. 73 ff. pl. 7, 12, Reinach *Rép. Vases* ii. 16, 2), shows Io after her wanderings seated on the altar of Hera, while Eros empties his perfume above her. On the right, Zeus, beardless (? originally bearded, but repainted: cp. *supra* p. 622 n. o (2) fig. 419) and half-draped, draws near, holding his eagle-sceptre. On the left, Hermes, with supported foot, watches the issue. Behind Hermes, an olive-tree. Behind Zeus, a Satyr (? Pan, repainted) with pan-pipes. The scene is repeated and amplified on another 'Lucanian' vase, a red-figured *hydria* from Anzi, now at Berlin (Gerhard *Aut. Bildw.* p. 366 ff. pl. 115, T. Panofka *loc. cit.* pp. 22 ff., 47 col. pl. 4, 2 (=my fig. 436), Lenormant—de Witte *El. mon. céer.* i. 47 ff. pl. 25, Overbeck *Gr. Kunstmyth.* Zeus p. 467 ff. (no. 2) Atlas pl. 7, 8, Furtwangler *Vasensamm.* Berlin ii. 873 ff. no. 3164), which makes Io sit on the pedestal of the goddess (here treated as Artemis with bow and wheel-torch: cp. *supra* i. 408 f. fig. 304) holding a casket and lotos-fillet. These are the love-gifts of Zeus, who approaches coyly from the right, shouldering a long lotiform sceptre. On the left, Hermes, his foot supported as usual, rests one hand on a club and holds tablets in the other. Behind Hermes is Hera in person, now reconciled to her rival. Behind Zeus, dove on finger, stands Aphrodite, present to bless the lovers. Eros, with hoop and hoop-stick, spreads his pinions above them. Trees, plants, a tripod, and a *hydria* mark the spot as a sacred precinct, while

Fig. 435.

Fig. 436.

Artemis' fawn in the foreground shows to whom that precinct belongs. Finally, in the top right hand corner, partly concealed by a hill, is Pan with his pipes, a frequent adjunct on South-Italian vases (e.g. *supra* i. 222 pl. xix, i. 375 fig. 287, ii. 416 with fig. 322).

On comparing these two vases with the Palatine copy of Nikias' painting it becomes clear that they have taken over much from the Athenian original—(a) the central figure of Io herself, seated, half-draped, and with budding horns on her brow; (b) the statue of Hera on a pillar or pedestal, unsuitable to its new Egyptian context and therefore transformed into a more barbaric Artemis; (c) the helper Hermes on the left, who having now slain Argos is free to appropriate his attitude—an exchange the more pardonable because that attitude had belonged to Hermes in fifth-century art (*supra* ii. 738 fig. 668) long

Fig. 437.

before it was borrowed by Argos. On this showing we shall not agree with H. Bulle *loc. cit.* that the statue of Hera on a pillar was a stagey addition due to the Roman copyist, nor with L. Curtius *loc. cit.* that Hermes (carefully inscribed, remember, in Greek letters) was merely 'eine Zutat des Malers des zweiten Stils.' Curtius is, however, right in contending that in other Pompeian frescoes representing Io, Argos, and Hermes (Helbig *op. cit.* p. 39 f. nos. 135 and 137, Curtius *op. cit.* p. 263 f. figs. 158 and 159) the figure of Io was copied or modified from the type first devised by Nikias. Modification has gone further and fared worse in paintings of her arrival in Egypt (Helbig *op. cit.* p. 40 f. nos. 138 and 139, Curtius *op. cit.* p. 215 ff. figs. 127 and 129).

The popularity of this seated Io may be gauged from the fact that she is found as an isolated and purely decorative figure, surrounded by a fantastic floral arabesque, on a *hydria* from Basilicata now at Naples (Overbeck *Gr. Kunstmyth.* Zeus p. 487 f. (e). Heydemann *Vasensamml. Neapel* p. 443 no. 2922, O. Hofer in Roscher *Lex. Myth.* ii. 279 with fig. (=my fig. 437)).

A cornelian signed by Dioskourides, the supreme glyptic artist of the Augustan age (Plin. *nat. hist.* 37. 8, Suet. *Aug.* 50, cp. Dion Cass. 51. 3), shows a deep-cut head of Io, again with budding horns, earrings, and necklace. This gem, admittedly the loveliest of his works, is said to have been found in 1736 on the estate of the Duca di Bracciano, from whose possession it passed into the Poniatowski collection. In 1839 that collection was sold in London, and the present owner of the gem is unknown (S. Reinach in the *Chronique des Arts* jan. 5 and 12, 1895, pp. 2 and 11, E. Babelon in Daremberg—Saglio *Dict. Ant.* ii. 1478 n. 1). Publications include Overbeck *Gr. Kunstmyth.* Zeus p. 486 (b)

Copies of this masterpiece have, of course, been made in modern times (A. Furtwangler *loc. cit.*). But ancient copies also exist. One such is a sard from Kalchedon, formerly in the Tyszkiewicz collection and now in that of Mr E. P. Warren (J. D. Beazley *The Lewes House Collection of Ancient Gems* Oxford 1920 p. 94 f. no. 113 pl. 6). Another, which came to me in 1926 from Mr A. P. Ready and was previously in the Evans collection, is a clouded cornelian, very deeply cut and still set in its ancient gold bezel (fig. 439 : scale $\frac{2}{1}$). Common to these two stones is the unusual depth of the *intaglio* and the series of straight cuts by which the bust is terminated below.

Auch auf dem Bilde der Casa del citarista [(2)] ..kann ich keine Kuhhorner bei Io entdecken.'

I append a brief summary of their conclusions with regard to the temple of Zeus.

On a limestone plateau in southern Kilikia, which rises to a height of 1100^m or more (J. T. Bent in the *Journ. Hell. Stud.* 1891 xii. 222 says 3800 ft. above sea-level), there is an impressive pile of ruins known as *Uzundja Burdj*, 'Tall Tower.' It gets its name from a Hellenistic five-storeyed fortress (built c. 200 B.C. and restored c. 150—100 B.C.), which is represented apparently on a bronze coin of Olba struck in the time of Hadrian (*Brit. Mus. Cat. Coins Lycaonia* etc. p. 124 no. 21 pl. 22, 8) and still dominates the scene. It was there to protect the oblong *témenos* of Zeus Ólbios, whose temple has been identified from an inscription on the back wall of its western *stoa* recording repairs to the *stoa*-roof c. 60—50 B.C. (fig. 440=part of Herzfeld's sketch in *Mon. As. Min.* 1931 iii. 50 fig. 71. cp. Heberdey—Wilhelm *loc. cit.* p. 85 no. 166=Michel *Recueil d'Inscr. gr.* no. 1231 ἀρχιερεὺς με[γ]ας τεύκρος ζηνοφάνους [τοῦ] | τεύκρου δι' Ὀλ[β]ῖου τὰς [σ]τέγας ἐκαίνωσεν | [τὰς] πρότερον γ[ε]γ[ε]νημένας ὑπὸ βασιλέω[ς], Σελεύκου Νικάτορος). The *témenos*-wall and the temple itself, to judge from the style of their architecture, were erected under Seleukos i Nikator (312—281 B.C.). The temple is remarkably well preserved (fig. 441 is from the photograph in *Mon. As. Min.* 1931 iii pl. 24, which shows the temple as seen from the S.W.). Its thirty-two Corinthian columns are all standing, though only four of them retain their capitals (fig. 442=Herzfeld's elevation and sections

in *Mon. As. Min.* 1931 iii. 47 fig. 67). The rest were removed in Christian times, when the walls of the *naós* were demolished, the columns of the *peristasis* built in, and an apse added to transform the temple into a fifth-century church (fig. 443 = Herzfeld's plan in *Mon. As. Min.* 1931 iii. 49 fig. 68).

The temple was the main sanctuary of *Ὀλβη* or *Ὀλβα* (*Ura*), which lay on lower ground a few miles to the east and was connected with it by means of a plastered and partly rock-cut road running between ancient tombs—one of many cases in which the local *hierón* was at some distance from its town. But little by little the *hierón* of Olba

Fig. 441.

grew to be a town in its own right, till at length—probably in the reign of Vespasian—it acquired, as we infer from an inscription found by W. Bauer on the north front of the town-gate, the name Diokaisareia (*Mon. As. Min.* 1931 iii. 44 l. 71 no. 73. 1 fl. ἐπὶ τῆς εὐτυχαστά[της βασιλείας τῶν δεσποτῶν τῆς οἰκουμένης Φλαβίου] Ἀρκαδίου καὶ Φλαβίου) Ὀν[ο]ρίου τῶν ἐωνίων] Αἰγ[ού]στιων τὸ πᾶν ἔργον | τὸ ἐπὶ τῆς Διοκ[ε]σαρ[είας] ἐν θεμελίῳ ἐ[πι]κατεσκευ[ε]ν[ά]σθη | ἀρχο[ν]τος τοῦ λαμπροτάτου [κ]η θαν[μα]σινοτάτου κόμητος πρ[ώ]του τάγ[μ]ατος | κη δου[κ]ὸς Ἰσαυρίας Φλαβίου Λεοντίου]. The first three words of line 3 might also be restored as τοῦ [τί]χους τῆς or τοῦ[το πύλης τῆς], but the general sense is clear).

The cult is said to have been established by Aias, son of Teukros; and the whole district was ruled in historical times by priestly dynasts, most of whom were named Teukros or Aias (Strab. 672). This is largely borne out by epigraphic evidence. An inscription, in letters of the third century B.C., built into a fortress of polygonal masonry, on which is carved the *triskelēs* symbol, at a place variously called *Kanidiwan* or *Kanideli* (Kanytelis: see W. Ruge in Pauly—Wissowa *Real-Enc.* x. 1886) three miles from the

coast at *Ayash* (Elaioussa Sebaste: W. Ruge *ib.* v. 2228 f. and J. Keil—A. Wilhelm in *Mon. As. Min.* 1931 iii. 220 ff.), has been claimed as the oldest Cilician document yet discovered: E. L. Hicks in the *Journ. Hell. Stud.* 1891 xii. 226 no. 1 with cut (my fig. 444) = Michel *Recueil d'Inscr. gr.* no. 1230 Διὶ Ὀλβίῳ | ἱερεὺς Τεύκρος | Ταρκυάριος ('son of Tarkyaris'). Other inscriptions of the sort, collected by J. Keil—A. Wilhelm in *Mon. As. Min.* 1931 iii. 67 ff. nos. 63—71, include p. 69 no. 68 pl. 34 a limestone base from the valley of tombs at *Uzun-İsa Burdj* reading Ὀλβέων ὁ δῆμος καὶ Καννᾶται Ζηνοφάνην Τεύκρου τοῦ Ζηνοφάνου | ἀρχιερεῖα μέγαν Διὸς Ὀλβίου ἀρετῆς ἐνεκεν καὶ εὐνοίας ἧς ἔχων εἰς | αὐτοὺς διατελεῖ. The name Zenophanes, which occurs repeatedly in these inscriptions, was of excellent omen for a priest of Zeus (cp. Ζᾶς as priest of Zeus at the Corycian cave (*Class. Rev.* 1903 xvii. 418 n. 2) and *supra* ii. 921 n. ο).

The name Aias, son of Teukros, is further attested by the coinage of Olba. The earliest coins, referable to the end of s. i B.C., have a throne as their obverse, a winged thunderbolt as their reverse type (*Brit. Mus. Cat. Coins* Lycaonia etc. pp. lii, 119 pl. 21, 7). Later coins, struck from 10/11 A.D. onwards by Aias, son of Teukros, high-priest and toparch of Kennatis and Lalassis (ΑΙΑΝΤΟΣ ΤΕΥΚΡΟΥ || ΑΡΧΙΕΡΕΩΣ ΤΟΠΑΡΧΟΥ ΚΕΝΝΑΤ· ΛΑΛΑΣΣ etc.), have *obv.* head of Aias as Hermes with cap, ear-ring, *chlamys*, and *caduceus*, *rev.* *triskelēs* (*ib.* pp. lii f., 119 pl. 21, 8, *McClean Cat. Coins* iii. 291 pl. 327, 1 f., *supra* i. 304 fig. 234) or winged thunderbolt (*Brit. Mus. Cat. Coins* Lycaonia, etc. p. 120 pl. 21, 10) or inscription (*ib.* p. 120 pl. 21, 12); or *obv.* *triskelēs* (*ib.* p. 119 pl. 21, 9) or thunderbolt (*ib.* p. 120 pl. 21, 11), *rev.* inscription. Similar types occur with *obv.* head of Augustus (*ib.* p. 120 f. pl. 22, 1—3, *McClean Cat. Coins* iii. 291 pl. 327, 3), Tiberius (*Brit. Mus. Cat. Coins* Lycaonia, etc. p. 122 f. pl. 22, 4 f.), and M. Antonius Plemo (*ib.* p. 123 f. pl. 22, 6 f.).

Imperial coins of Diokaisareia, apart from variations of such types as the head of Hermes with *caduceus* (*ib.* p. 71 pl. 12, 11), the thunderbolt (*ib.* p. 71 f. pl. 12, 13), and the throne (*ib.* p. 73 pl. 13, 1), make some positive additions to our knowledge of the cult. Bronze pieces issued by Septimius Severus (*ib.* p. 72 pl. 12, 14 = my fig. 445 from a cast) show *obv.* the emperor's bust wearing cuirass and *paludamentum* (countermarks: eagle and winged thunderbolt), *rev.* the hexastyle temple of Zeus Ὀλβιος, with a *bucranium* in its pediment, two Νίκαι (?) as *akroteria*, a thunderbolt upright in the central intercolumniation, and on the left an altar in front of a tree (or possibly a tree in a square vase, cp. the shrub in a pot beside the temple of Hera on a coin of Samos struck by Gordianus Pius (*Brit. Mus. Cat. Coins* Ionia p. 382 no. 294. Fig. 446 is from a specimen in my collection) and the storax-trees of Selge (*supra* ii. 492 n. ο figs. 378—381)). The remarkable coins of Iulia Domna showing a winged thunderbolt erect on a high-backed throne have been already illustrated (*supra* ii. 810 fig. 773 f.), and I have ventured to infer from their leonine arm-rests that Zeus had here taken over the throne of the Anatolian mother-goddess or her consort. The inference may be strengthened by the fact that other coins, struck by Philippus Senior, represent the city as a veiled and

turreted goddess seated towards the right, while Tyche—her second self—with *kálathos*, rudder, and *cornu copiae* stands before her, and a river-god swims at her feet (*Brit. Mus. Cat. Coins* Lycaonia, etc. p. 74 f. pl. 13, 3 = my fig. 447 from a cast). Substantial remains of the Tychaion (E. L. Hicks in the *Journ. Hell. Stud.* 1891 xii. 264 no. 50 'Οππίος 'Οβρίμου καὶ Κυρία Λεωνίδου ἡ γυνὴ 'Οππίου τὸ Τυχαῖον τῇ πόλει), a temple dating from the second half of s. i A.D., are still to be seen at *Uzundja Burdj* (*Mon. As. Min.* 1931 iii. 56 with pl. 29 and figs. 80, 83).

It seems likely that the temple of Zeus at Olba, founded by Aias, son of Teukros, was a filial of the earlier and more famous temple of Zeus at Salamis in Kypros, founded by Teukros himself (Tac. *ann.* 3. 62 exim Cyprii tribus <de (ins. Bezenberger)> delubris, quorum vetustissimum Paphiae Veneri auctor Aerias, post filius eius Amathus Veneri Amathusiae et Iovi Salaminio Teucer, Telamonis patris ira profugus, posuissent). Not much is known of the Salaminian Zeus. Ampelius, drawing from some Alexandrine source (G. Wissowa in Pauly—Wissowa *Real-Enc.* i. 1880), mentions among the wonders of the world a Cyprian colossus of the god (Ampel. 8. 20 Cypro signum Iovis Olympii aereum, facies ex auro, quem fecit Phidias † in (C. H. Tzschucke cj. *altum*) cubitis centum quinquaginta et latum cubitis sexaginta); but nobody is likely to believe him—confusion (Overbeck *Schriftquellen* p. 134 no. 738) and exaggeration are all too obvious. E. Assmann (ed. 1935) assumes a conflation of Ampelius' text (Cypro <signum * * * > aereum, facies ex auro, <altu> m cubitis centum quinquaginta et latum cubitis sexaginta) with a marginal list of the seven wonders (signum Iovis Olympi quem fecit Phidias). Justin in his third-century abridgement of Pompeius Trogus (whose *historiae Philippicae*, written under Augustus, were in all probability the Latin version of a Greek original by Timagenes, itself based on the *Φιλιστικά* of Theopompos and on other historical works by Ephoros, Timaios, Kleitarchos, Polybios, Poseidonios, Deinon, etc.: see W. S. Teuffel—L. Schwabe *History of Roman Literature* trans. G. C. W. Warr London 1891 i. 532 f., M. Schanz *Geschichte der römischen Literatur*² München 1899 ii. 1. 278 f.) tells how Elissa, after her husband Acerbas had been murdered by her brother Pygmalion, fled from Tyre to Cyprus and was there joined by the priest of Jupiter, who bargained that he and his descendants should hold the priesthood in perpetuity (Iust. 18. 5. 1—3 primus illis adpulsus terrae Cyprus insula fuit, ubi sacerdos Iovis cum coniuge et liberis deorum monitu comitem se Elissae sociumque praeiuit, pactus sibi posterisque perpetuum honorem sacerdotum. condicio pro manifesto omine accepta). Ammianus Marcellinus, writing shortly after 383 A.D. (M. Schanz *op. cit.* München 1904 iv. 1. 90), notes the fame of Jupiter's shrines at Salamis and Venus' temple at Paphos (Amm. Marc. 14. 8. 14 Cyprum itidem insulam inter municipia crebra urbes duae faciunt claram, Salamis et Paphus: altera Iovis delubris, altera Veneris templo insignis). A curious legend told about Epiphanius, bishop of Salamis, who died an old man in 403 A.D. (R. A. Lipsius in Smith—Wace *Dict. Chr. Biogr.* ii. 152), proves that in Christian times the temple of Zeus, though closed and of evil repute, was still standing and known as the 'Security' (or 'Strong Room') of the god, apparently because it contained much treasure within sealed doors. The story, which exists in a longer (Polybios v. *Epiphan.* 53 in Dindorf's ed. of Epiphanius Lipsiae 1859 i. 58 f.) and shorter form (v. *Epiphan. epit.* 53 in Dindorf's ed. v. xx), is to this effect. Once during a sore famine a certain rich man named Faustinianus sold wheat and barley to the people. Epiphanius begged him for corn to feed the hungry poor and undertook to repay him for it. Faustinianus bade him go and ask his God to supply their need. So Epiphanius went out one night, as was his wont, to pray among the tombs of the martyrs and besought God to succour the needy. Now there was an ancient temple called the Security of Zeus, and people believed that, if any man approached it, he would be promptly carried off by death. But while Epiphanius prayed God's voice was heard saying: 'Go to the temple called the Security of Zeus, and the seals of the doors shall be loosened, and entering in thou shalt find gold in abundance. Take it and buy all the wheat and barley of Faustinianus, and give food to the needy.' Thereupon Epiphanius went to the temple and, as he approached it, the seals fell, the doors flew open, and he found gold enough to buy up

all the corn that Faustinianus possessed. The longer version of this narrative says ἦν δὲ ναὸς ἐκεῖνος ἀρχαῖος, ὅστις ἐκαλεῖτο Διὸς ἀσφάλεια, τοῦτω δὲ τῷ ναῷ εἰ ποτὲ ἤγγισεν τις τῶν ἀνθρώπων, ἐλέγγοτο εὐθὺς ὑπὸ θανάτου λαμβάνεσθαι and again ἀπελθε ἐν τῷ ναῷ τῷ καλουμένῳ Διὸς ἀσφάλεια, καὶ ληθίσονται αἱ τῶν θυρῶν σφραγίδες, καὶ εἰσελθὼν εὐρήσεις χορσίον

πολύ. The *eritonic* would explain away the difficult name by writing ἦλθεν αὐτῷ ἐν μᾶ φωνῇ οὐρανόθεν, κατελθεῖν ἐν τῷ Ἑλληνικῷ ναῷ τῷ ἐπιλεγόμενῳ τοῦ Διὸς ὄντος ἐν ἀσφαλείᾳ πολλῇ. καὶ δι' ἀπελθόντος αὐτοῦ ἀοράτως τὰ κλειθρα διηνοίγῃ ὑπὸ θεοῦ. καὶ εἰσελθὼν εὐδοκίαν εἶναι χρυσῖνον πολύ. But ἀσφάλεια is probably concrete, cf. He-y-ch. 5.7. κλειθρα: μοχλοῖ. ἀσφάλεια (ἀσφαλείας cod.). πύλαι = Favorin. *loc. cit.* p. 1062, 52. There can be little doubt

that the building in question was the old heathen temple of Zeus *Σαλαμίνιος* (E. Oberhammer in Pauly—Wissowa *Real-Enc.* i A. 1842), not the much later tomb still extant as the 'Prison of Saint Catharine' (on which see J. L. Myres in *Archaeologia* 1915 lxvi. 179—194 with fig. 1 and pl. 21 f.).

The remains of the old temple have not yet been found. But a large oblong precinct, first located in 1882 by M. Ohnefalsch-Richter (*Ágpros* p. 23 ff.) and partially excavated

For a fragmentary plaque of white marble, built into some masonry at its south-eastern angle, records in lettering of *s. iii* or perhaps *s. ii* the dedication of a slave to the service of Zeus, no doubt with a view to his emancipation (*ib.* pp. 78, 119, 193 f. no. 48 fig., F. The excavators comment (*loc. cit.* p. 78 f.): 'Until further evidence of a more conclusive nature can be obtained these indications may serve to give a name to the temple. But important as the site is, lying as it does at the very heart of the city's life, there is no reason as yet to identify the presumptive Zeus Olympios with the chief deity of Salamis, Zeus Salaminios', (ib. p. 120) 'The temple is probably still hidden under the sand, but its western wall may be that which has been spoken of hitherto as the eastern column-wall. Beneath it the eastern limestone-wall may be the remnant of an older temple. The peristyle would then be an annexe, comparable in some respects to the Atrium Vestae in the Roman Forum.'

Less uncertainty attaches to the art-type of the Salaminian Zeus, who appears on imperial coins of Kypros as an erect bearded god, clad in *chiton* and *himation*, holding a *phiale* in his outstretched right hand and resting his left on a short sceptre, with an eagle perched on his left wrist (*Brit. Mus. Cat. Coins Cyprus* pp. cxvii f., 73 pl. 14, 4 Augustus, 75 pl. 14, 9 Drusus Iulius Caesar, 77 ff. pl. 15, 5, 6 (=my fig. 452), 10 (=my fig. 453), and 11 Vespasian, 79 f. pl. 16, 1 and 3 Titus, 81 pl. 16, 5 Domitian, 83 pl. 16,

10 (=my fig. 454) Trajan, Head *Hist. num.*² p. 746). His effigy, on pieces struck by Drusus Iulius Caesar, usually stands side by side with the cone of the Paphian Aphrodite, thus combining in one the two most famous cult-figures of the island (*Brit. Mus. Cat. Coins* Cyprus pp. cxxi, 74 pl. 14, 6 and 7, *McClellan Cat. Coins* ii. 313 pl. 331, 38 and pl. 332, 1. Figs. 455 and 456 are from specimens in my collection).

Salamis in Kypros was said to have been founded by Teukros son of Telamon (so first Pind. *Nem.* 4. 45 ff. μέλος πεφλημένον | Οἰνῶνα (sc. Pat. 1. 1. 1. Tac. *ann.* 3. 62 (cited *supra*), Paus. 8. 15. 7, Dictys Cretensis 6. 4), who arrived in or about 1202 B.C. (*marm. Par.* ep. 26 p. 10 Jacoby) and presumably brought the cult of Zeus with him from his former home in Salamis the island. Since this island was in mythical times colonised by the Aiakidai of Aigina (see e.g. J. Topffer in Pauly—Wissowa *Real-Enc.* 1. 923 ff.), where the cult of Zeus bulked big (J. P. Harland *Prehistoric Aigina* Paris 1925 pp. 81—88 ('The cult of Zeus Hellenios')), it seems certain that the Salaminian Zeus was of Achaean extraction (cp. Strab. 682 εἰρ' Ἀχαιῶν ἀκτῆ, ὅπου Τεῦκρος προσωμίσθη πρῶτον ὁ κτίσας Σαλαμίνα τὴν ἐν Κύπρῳ, κ.τ.λ.). More than that it would be unsafe to say. But it is at least curious to note that, in tracing backwards the Cilician cult of Zeus *Ólbios*, we have come within easy reach of Argos where the Danaides appealed to the self-same god (*supra* p. 631).

The prehistory of Aias and Teukros is a very tangled business, which cannot be unravelled here. Recently the tendency has been to regard both of these heroes as faded gods. P. Girard 'Ajax fils de Télamon' in the *Rev. Ét. Gr.* 1905 xviii. 1—75 would have us believe that Αἴας τελαμώνιος was in Mycenaean times a sacred pillar (τελαμών) humanised and equipped with a large shield, to be seen e.g. on the gold rings from Mykenai (*supra* ii. 47 fig. 18) and Knossos (*supra* ii. 48 fig. 19) or on the painted *lárnax* from *Milato* (*supra* ii. 49 with fig. 20): 'Voilà donc le *Telamonien* sorti tout armé du Pilier, portant le bouclier du démon, son ancêtre, qui devient entre ses mains l'arme énorme que l'on sait,' etc. (Girard *loc. cit.* p. 74). A. J. Reinach 'Itanos et l'Inventio Scuti' in the *Revue de l'histoire des religions* 1909 lx. 161—190, 309—351, 1910 lxi. 197—237 discusses at length the evolution of shield-worship and argues that the shield attached to a pillar by degrees took to itself arms and wings, the *paládion* being ultimately transformed into *Pillias*, but he expressly dissociates himself from much of Girard's article (Reinach *loc. cit.* 1909 lx. 328 n. 1). Farnell too in his *Greek Hero Cults* p. 282 is definitely adverse ('This is certainly ingenious, but much that is ingenious is not worth saying'). Nilsson *Min.-Myc. Rel.* p. 349 ff., after shrewdly criticising the views of both Girard and Reinach, concludes: 'the evidence is not sufficient for the assumption that the shield was a cult object in the Minoan age and that it was anthropomorphized and became a war goddess. Neither is the assumption necessary in order to explain the existence of armed gods' (Nilsson *op. cit.* p. 353). J. Vurtheim *De Aiace origine, cultu, patria* Lugduni Batavorum 1907 pp. 1—134 sums up as follows: 'Demonstrare conatus sum Aiace, quales in carmine epico depinguntur, ab origine fuisse unum Aiace, locrensem, non hominem. sed daemonem quandam gigantum a natura non absimilem. Coniecimus hunc daemonem, cum formam humanam induisset et notitia eius ad sinum Saronicum pervenisset, ibi factum esse Aiace maiorem, sed apud Locrenses remansisse illum, qui, cum altero comparatus, minora ob facta minorem ob gloriam, utpote intra parvae regionis fines coercitum, ipse quoque minor haberetur .. neque reticimus opinionem nostram Teucrum quoque tertiam figuram ex Aiace primario esse ortum et ipsa quidem in Locride, ubi iuxtaponebantur heros arcitenens et heros hastifer... Deinde indagavimus Telamonis veram naturam atque patriam, impugnativimus sententiam eorum, qui e scuti balteo hunc heroem provenisse pro re haberent explorata, argumentis haud debilibus eo ducti sumus, ut statueremus hunc Telamonem, quasi alterum Atlantem,

numen fuisse marinum circa Salaminem cultum' (H. Steuding in the *Woch. f. klass. Philol.* Okt. 9, 1908 p. 1105 applauds: O. Gruppe in the *Berl. philol. Woch.* Mai 30, 1908 p. 686 ff. is also, with some reservations, favourable). A useful sequel to this work is J. J. G. Vürtheim *Teukros und Teukrer* Rotterdam 1913 pp. 1—44 (summarised by J. Schmidt in Roscher *Lex. Myth.* v. 427—429). The same author here argues that the Teukroi were a historical folk, probably of Lelegian stock. Pushed southwards by tribes entering Greece from the north, they occupied both Troas and Lokris, left traces of themselves here and there on the coast of Asia Minor, and passed from Kilikia to Kypros. Their eponym Teukros, according to one tradition, came to Troy from Crete; according to another, from Attike. Again, a Teukros who wandered from Troy to Kypros was later confused with Teukros son of Telamon. Teukros' son Aias founded the cult of Zeus and a priestly dynasty at Olbe in Kilikia. *Teúkros* is the Hellenised form of *Tarku*, a god of the Leleges in Asia Minor, whose name was borne by his priests likewise. The oldest stratum of the *Ilud* was Locrian-Thessalian in origin and recognised a triad of Locrian heroes, the two Aiantes and Teukros. Homer knows nothing of Teukros' banishment to Kypros; but later writers extend his wanderings to Egypt (Eur. *Hol.* 89 ff.), Phoinike (Verg. *Aen.* 1. 619 ff. and Serv. *ad loc.*), and even Spain (Asklepiades of Myrleia *frag.* 5 (*Frag. hist. Gr.* iii. 301 Muller) *ap.* Strab. 157; Iust. 44. 3. 2 f., Sil. It. 3. 368, 15. 192 f.; Philostr. *v. Apoll.* 5. 5 p. 167 f. Kayser). Of this and other such reconstructions F. Schwenn in Pauly—Wissowa *Real-Enc.* v A. 1124 remarks rather grimly: 'das meiste bleibt hier stark hypothetisch.' Cp. Oldfather *ib.* xiii. 1172. It is, however, commonly admitted that, at least in Asia Minor, *Teúkros* was the Hellenised form of *Tarku*, the name of a native (? Hittite) deity. Frazer *Golden Bough*³: Adonis Attis Osiris¹ p. 62 f. says: 'Teucer (*Teukros*) may be a corruption of Tark, Trok, Tarku, or Troko, all of which occur in the names of Cilician priests and kings. At all events, it is worthy of notice that one, if not two, of these priestly Teucers had a father called Tarkuaris, and that in a long list of priests who served Zeus at the Corycian cave, not many miles from Olba, the names Tarkuaris, Tarkumbios, Tarkimos, Trokoarbas, and Trokombigremis, besides many other obviously native names, occur side by side with Teucer and other purely Greek appellations [E. L. Hicks in the *Journ. Hell. Stud.* 1891 xii. 243 ff. no. 27, Michel *Recueil d'Inscr. gr.* no. 878]. In like manner the Teucrids, who traced their descent from Zeus and reigned at Salamis in Cyprus, may well have been a native dynasty, who concocted a Greek pedigree for themselves in the days when Greek civilisation was fashionable.' *Id. ib.*¹ p. 65: 'If, as many scholars think, Tark or Tarku was the name, or part of the name, of a great Hittite deity, sometimes identified as the god of the sky and the lightning, we may conjecture that Tark or Tarku was the native name of the god of Olba, whom the Greeks called Zeus, and that the priestly kings who bore the name of Teucer represented the god Tark or Tarku in their own persons.' *Id. ib.*¹ p. 78: 'On that hypothesis the Olbian priests who bore the name of Ajax embodied another native deity of unknown name, perhaps the father or the son of Tark.' Similarly E. Herzfeld in the *Jahrb. d. kais. deutsch. arch. Inst.* 1909 xxiv Arch. Anz. p. 435 observes that the names of priests in the list from the Corycian Grotto include *Ταρκυμβίης, Είανβίης, Τροκοάρβας, Τανζάρβας*, and comments: 'Dass die ersten Halften dieser Namen, Tarku und Jan, auch den Namen Teukros und Aias zugrunde liegen, ist deutlich.' H. Hirt *Die Indogermanen* Strassburg 1905 i. 56, ii. 569 further compares the Etruscan *Tarcna, Tarchna, Tarquenna, Tarchu, Tarquitis, Tarcotius*, and the Latin *Terquinius*. F. Schachermeyr in Pauly—Wissowa *Real-Enc.* iv A. 2348 says of *Tarquinius*: 'Der Name geht letzten Endes zurück auf den des kleinasiatisch-agaischen Gottes Tarku (so im östlichen Kleinasien; vgl. [J.] Sundwall Die einheimischen Namen der Lykier nebst einem Verzeichnisse kleinasiatischer Namenstämme [Leipzig 1913] [Klio Beiheft 11, 1913] 213 ff.), der uns in Lydien als *Zeús Ταργηνός*, auf Kreta als *Ταρκομν* entgegentritt. Von den aus Kleinasien nach Italien einwandernden Etruskern wurde der Gott nach Etrurien verpflanzt. Hier trat er als Tarchon...immer mehr zurück und wurde schliesslich nur mehr als Heros verehrt' etc. Zeus *Ταργηνός* is attested by two inscriptions of s. i. A.D. (J. Keil—A. v. Premmerstein in the *Denkschr. d.*

Akad. Wien 1910 ii. Abh. p. 26 f. no. 37 with fig. 17 (=my fig. 457) the lower part of a white marble *stèle* from Philadelphia in Lydia (*Alashehir*) Διὶ Ταργυηνῷ ἐπηκδω | Φιλο-

(ἐϋχῆν), but his appellative is merely the local epithet (-*ηνός*: *supra* ii. 1228) of Tarigya
or Targya, a township of which substantial remains exist in the fruitful basin of Ak Tash,
half an hour east of *Ideli* (J. Keil in Pauly—Wissowa *Real-Enc.* iv A. 2320). R. Blumel
in *Glotta* 1927 xv. 78 ff. would extend the 'lykisch-etruskischen Wortfamilie' to include
the Homeric *ταρχύειν*, which he regards as a Lycian word (cp. *Il.* 16. 455 f.): he argues
that *ταρχυ* meant 'einen Mann, der weit über die gewöhnlichen Sterblichen erhaben ist'
and *ταρχύειν* 'wie einen Gott oder (königlichen) Heros oder Helden, also prächtig be-
statten' (Pfister *Rel. Gr. Rom.* 1930 p. 119). As to the alternation of the names Aias
and Teukros at Olba, Sir W. M. Ramsay in the *Journ. Hell. Stud.* 1918 xxxviii. 131
n. 10 put forward a rival hypothesis, which he repeats in his *Asiatic Elements in Greek
Civilisation* London 1927 p. 47 'that these two names represent respectively the sons of

Yavan (the early Ionian settlers on the south coast) and the older race of Tarku (the worshippers and people of the Hittite and old Anatolian god Tarku). It is obvious that the genealogical relationship is the ancient expression of an agreement by which the hieratic power was divided between the older race of Tarku and the Ionian sailor-settlers.

One other point in connexion with Teukros and the Cypriote Zeus is of out-standing interest. Lactantius c. 305—311 A.D. states that Teukros offered a human sacrifice to Zeus in Kypros and so started a custom which was abolished in the reign of Hadrian (Lact. *div. inst.* i. 21 apud Cyprios humanam hostiam Iovi Teucus immolavit idque sacrificium posteris tradidit; quod est nuper Hadriano imperante sublatum, *inst. epit.* 18. 1 Iovi Cyprio, sicut Teucus instituerat, humana hostia mactari solebat). We have no sufficient ground for doubting Lactantius' statement. The Cypriote custom stands first and foremost in his list of human sacrifices, and less than two centuries had elapsed since its formal abolition. Gruppe *Gr. Myth. Rel.* p. 335 n. 15 compares the Cypriote cult of Zeus Εἰλαπναστής and Σπλαγχνοτόμος (*supra* i. 654 n. 4)—appellatives which to Greek ears would have a euphemistic, not to say ogreish, sound. Gruppe also thinks it possible that there was a Cypriote Zeus Κεράστης (cp. *supra* ii. 1023 Pan as Ζεὺς ὁ κεράστης), perhaps connectible with the poetic names of Kypros Κερασός (Nonn. *Dion.* 5. 614) or Κεραστιάς

Hypanis¹, whence his cult spread still further afield², even to central Italy³ and Germany⁴.

(Steph. Byz. s.v. Κύπρος), Κεραστία (Menandros of Ephesos *frag.* 7 (*Frag. hist. Gr.* iv. 448 Muller) and Xenagoras *frag.* 8 (ib. iv. 527) *ap. schol.* and Tzetz. *in Lyk. He recalls Ovid's allusion to the horned Cerastae of Amathus, who used to sacrifice a stranger to Jupiter *Hospes* (i.e. Zeus *Ξένιος*) till Venus in indignation transformed them into savage bulls (Ov. *met.* 10. 222 ff. illos, gemino quondam quibus aspera cornu | frons erat, unde etiam nomen traxere Cerastae. | ante fore horum stabat Iovis Hospitis ara; | ignarus sceleris (so J. F. ¹ B. Latyshev *Inscriptiones antiquae orae septentrionalis Ponti Euxini* Petropoli 1885 i. 61 ff. no. 24 assigns to the reign of Septimius Severus (193—211 A.D.) a slab of grey marble framed by Corinthian pilasters and a pediment, which contained the relief of a man on horseback, his horse held by a naked boy. The inscription below is a decree in honour of a public benefactor, Kallisthenes son of Kallisthenes, who is described thus: 16 ff. λέγων τὰ ἄριστα καὶ πρῶτων τὰ συμφέροντα πατρί ἀπεδείχθη τῆς πόλεως· ἱερεὺς δὲ γενόμενος τοῦ προστάτος τῆς πόλεως ἡμῶν θεοῦ Διὸς Ὀλβίου [καὶ . . .] οὐσίας (E. the *Journ. Hell. Stud.* 1903 xxiii. 36—39 and E. H. Minns *Scythians and Greeks* Cambridge 1913 p. 476. Professor Minns remarks: 'Evidently Zeus Olbios was the god of Olbia and the giver of Olbos; especially in the form of a good harvest. The two ideas were inextricable. Surely it was in the temple of this Zeus that the council met and before it the open space into which Dio's hearers crowded [Dion Chrys. *or.* 36 p. 53 Dindorf]. A priest of his in Roman times made a dedication to Achilles Pontarches' (*Trans. Od. Soc.* xxvii. *Minutes*, p. 11). *Id. ib.* p. 456 (with plan on p. 450 fig. 331): 'The opening up of the walls described above gives us the position of the acropolis and the limits of the Roman town. In the middle of the triangle have been found the remains of a considerable building apparently a temple, and further work may tell us where were the temples [*sic*] of Zeus Olbios and the chapel of Achilles Pontarches.'

Zeus Σωτήρ is represented at Olbia by three inscriptions, one of s. iv B.C. (Latyschev *op. cit.* i. 25 ff. no. 12 a decree granting 1000 gold pieces and a statue to Kallinikos son of Euxenos and ending with the words ὁ δῆμος Διὶ Σωτῆρι), another of s. ii A.D. (Latyschev *op. cit.* i. 124 f. no. 91, 1 ff. ἀ[γ]αθῆ[ι] τύχ[η] | [Δ]ιὶ Σωτῆ[ρι] εὐχαρισ[τήριον] | [ὕπερ

Another fragment, assigned by Latyschev to the first half of s. iii, by Miss Hirst to s. iii, and by Professor Minns to s. iv B.C., is from a dedication to Zeus Ἐλευθέριος (Latyschev *op. cit.* 1901 iv. 299 f. no. 458 [ὁ δεῖνα Ἰκ[ε]σιον | [. Ἐκα]τε[ω]νος Διὶ Ἐλευθερί[ω]).

A large statue-base in veined grey marble, which had probably supported an equestrian figure, was originally, in s. iii B.C., dedicated to Zeus Βασιλεῖς (Latyschev *op. cit.* i. 137 no. 105 [ὁ δῆμος] Εὐρησίβιον Δημητρίου Διὶ Βασιλεῖ | [ἀρετῆς] ἔνεκεν καὶ εὐνοίας τῆς εἰς αὐτόν), but was later, perhaps in s. ii A.D., used for a long decree passed ἐπὶ ἀρχόντων τῶν περὶ Ὀμφάλακον Εὐρησιβίου (*id. ib.* i. 52 ff. no. 21, cp. 94 ff. no. 58). See further E. H. Minns *op. cit.* Index p. 697 s. v. 'Heuresibius.'

A tower built in s. ii A.D. was dedicated to Zeus Πολιάρχης and the Demos (*Corp. inscr. Gr.* ii no. 2081. Latyschev *op. cit.* i. 134 f. no. 101 with facsimile (=my fig. 458) ἐπὶ ἀρχόντων τῶν περὶ | Σωσιπατρον | Νικηράτου | Αναξιμένης | Ποσιδῆον μετὰ τῶν ἀδελφῶν ἐποίησεν | τὸν π[ύ]ργον Διὶ | Πολιάρχῃ καὶ τῷ | δήμῳ ἐπ' εὐτυχίᾳ).

As to Zeus *Ἀραβύπιος*, see *supra* ii. 925 n. α.

Zeus appears occasionally on the bronze coins of Olbia, usually as a bearded head in profile to the right, with a sceptre or more often an eagle on the reverse (*Ant. Münz. Berlin Taurische Chersonesus*, etc. i. 22 nos. 63—65, 27 nos. 125—127, *Ant. Münz. Nord-Griechenlands* i. 1 pl. 11, 3—6 (=my figs. 459—461), E. H. Minns *op. cit.* p. 476 n. 8 pl. 3, 12 f.), rarely in imperial times as a seated figure holding a sceptre, with Tyche erect grasping *cornu copiae* and rudder on the reverse (B. de Koehne *Description du Musée de feu le Prince Kotschoubey* St.-Petersbourg 1857 i. 88, *Ant. Münz. Berlin Taurische Chersonesus*, etc. i. 28 no. 134 fig. (=my fig. 462) 'Sitzender Apollo,' *Ant. Münz. Nord-Griechenlands* i. 1 pl. 11, 22 (=my fig. 463). Miss Hirst in the *Journ. Hell. Stud.* 1903 xxiii 39 n. 103: 'If the attribution to Zeus is accepted, might it be considered as a representation of Zeus *Ὀλβιος*, in consideration of the reverse type?').

It is undeniably curious that Zeus *Ὀλβιος*, as namesake and paramount deity of the Greek town, does not bulk bigger on its coinage. I am tempted to suggest a further possibility. E. H. Minns *op. cit.* p. 478 f. writes: 'The commonest coins of Olbia, coins which were issued for many generations to judge by the varieties of style, bore on their obverse a horned head with long rough hair and sometimes ox ears (Pl. III. 4, 5). There has been some doubt whom this might represent: the Russian peasants recognise the Devil and call the place where they are mostly picked up the Devil's Dell; others find him, as they put it, like a Scythian or a Russian peasant; to others he is Poseidon. But no doubt he is really a river god Hypanis or Borys-thenes. It is a less crude version of such an idea as the god Gelas on the coins of that city.' However, it is a far cry from Sicily to Sarmatia, and a much closer analogy is at hand. A 'horned head with long rough hair' is precisely what we saw on the *stèle* found near Kyzikos (*supra* p. 629 fig. 427), which was fortunately inscribed with the name of Zeus *Ὀλβιος*. I conjecture, therefore, that the horned head on the Olbian coins (e.g. *Ant. Münz. Nord-Griechenlands* i. 1 pl. 9, 26—29, E. H. Minns *op. cit.* pl. 3, 4 f., *McClean Cat. Coins* ii. 155 f. pl. 159, 12—15. My figs. are from *Ant. Münz. Nord-Griechenlands* i. 1 pl. 9, 26 (=my fig. 464), 27 (=my fig. 465),

(η) Zeus struck with a double axe. The birth of Athena.

The bovine form of Zeus familiar to us from the myths of Europe and Io, together with the semi-bovine type of Zeus *Ólbios*, suffice to prove that Zeus as a god of fertility might be represented by an ox, not only in prehistoric times, but far on into the classical period. Yet, fully to justify our reading of the *Dipolieia*, more is needed than that. In the Attic rite the divine ox was struck by the *Bouphónos*, who thereupon dropped his double axe and fled for his

29 (= my fig. 467), from *McClellan Cat. Coins* ii. 155 pl. 159, 12 (= my fig. 466), and from two other specimens in the Fitzwilliam Museum (= my figs. 468 and 469) is after all not a river-god but Zeus *Ólbios* himself, partly human, partly bovine in type.

² Inscriptions from the vicinity of Kyzikos have been noted *supra* p. 628 n. 4. Two more dedications θεῶ *Óλβιῳ* were found at Sestos (Marcopoulois in the *Μουσείον καὶ Βιβλιοθήκη τῆς Εὐαγγελικῆς Σχολῆς ἐν Σμύρνῃ* Smyrna 1878 ii. 12 f. nos. 206 and 204 = A. Dumont *Mélanges d'archéologie et d'épigraphie* Paris 1892 p. 456 no. 111^{c11} a sepulchral relief inscribed θεῶ *Óλβιῳ*, Φλάβιε Τυ . . . | εὐχαρισστηριον (*sic*) and no. 111^{c12} a similar dedication θεῶ *Óλβιῳ*, Εὐτυχος ὑπὲρ ιδίας σ[ω].τηρίας καὶ τῶν βοῶν (*sic*) εὐχαρισ[τήριον]. Hence J. H. Mordtmann in the *Ath. Mitth.* 1881 vi. 264, 1882 vii. 257 attributes to Sestos an inscription from the Thracian Chersonese (correctly copied but incorrectly emended in the *Corp. inscr. Gr.* ii no. 2017) Καμίσ(α)ος ὑπὲρ τοῦ | υἱοῦ Ἀλεξάνδρου Διὶ | *Óλβιῳ* εὐχαριστήριον = A. Dumont *op. cit.* p. 431 no. 100%. Eutycho's thankoffering for his cattle would have special point, if Zeus *Ólbios* at Sestos also was *quasi-bovine*.

life. Can we really suppose that at Athens, the chief centre of Hellenic civilisation, Zeus *Polieus* himself was conceived as struck by a double axe? Or that the sacrilegious striker, after poleaxing his god, was allowed to flee from the spot and escape into safety?

Pausanias emboldens us to answer Yes. For no sooner has he described the ceremony of the Dipolieia than, in the very next sentence, he goes on to say: 'All the figures in the gable over the entrance to the temple called the Parthenon relate to the birth of Athena¹'. And it may be shown that the birth of Athena as there represented involved exactly the situation stated above—Zeus *Polieus* struck with the double axe, the escape of the striker, and the acquiescence of the bystanders.

The middle group of the figures in question is lost beyond hope of recovery. But its main features are in all probability preserved by the relief-frieze of a marble *puteal* or 'well-mouth' in the Madrid collection (fig. 470, 1 and 1*a*), and partly also by a marble *replica* of its left end formerly in the Palazzo Rondinini (fig. 470, 2 and 2*a*) and by another of its right end found in the Villa Palombara—both now transferred from Rome to the Schloss Tegel near Berlin (fig. 470, 3)². The *puteal* as a whole portrays Zeus sitting quietly upon his throne. He is draped in a *himation* and holds a sceptre in

¹ Paus. i. 24. 5.

² These reliefs were published together and discussed in detail by R. Schneider *Die Geburt der Athena* Wien 1880 pp. 32—45 pl. 1, 1, 1^a, 2, 2^a, 4 (=my fig. 470, 1, 1^a, 2, 2^a, 3). Further references in Reinach *Rep. Reliefs* ii. 193 no. 5 and ii. 87 f. nos. 6—8.

The *puteal* was for long in the Moncloa near Madrid, where sunk deep in the ground it served as a flower-pot for the Royal Gardens. Previously, it had belonged to the Dukes of Alba. Earlier still, its history is uncertain: Schneider thinks that it was originally found in Italy, probably at Rome, that it formed part of the collection owned by Queen Christina of Sweden (1626—1689), and that it was purchased by Philip V of Spain to adorn his castle (1724)—see E. Hulmer *Die antiken Bildwerke in Madrid* Berlin 1862 p. 14. In consequence of these vicissitudes it had received some injuries and had at one time—perhaps in the seventeenth or eighteenth century—been prepared for restoration. It was virtually rediscovered by J. de Dios de la Rada y Delgado, director of the Museo Arqueológico Nacional, and published with good illustrations by J. de Villaamil y Castro 'Puteal griego encontrado en la Moncloa' in the *Museo español de antigüedades* Madrid 1875 v. 235—246 pl. 1 f. There is a cast in the Museum of Classical Archaeology, Cambridge, and another at Berlin (Friedrichs—Wolters *Gipsabgüsse* p. 735 f. no. 1862). Height 0.99^m.

The two slabs from the collection of the Marchese Rondinini belong together and were still one when published by G. Winckelmann *Monumenti antichi inediti*² Roma 1821 ii. 5 with Frontispiece. Subsequently they were sawn in two and separately framed as a pair of mural reliefs. They passed into the possession of W. von Humboldt (1767—1835) and are now in his castle at Tegel. See further G. F. Waagen *Das Schloss Tegel und seine Kunstwerke* Berlin 1859 p. 13. The restorations, which can be well seen in the *Einzelaufnahmen* nos. 2988 (Zeus) and 2989 (Prometheus) with Text s. 90 by W. Amelung, include Zeus—left forearm, most of left leg, front part of right foot, most of footstool;

his raised left hand, a thunderbolt in his lowered right. His head has just been cleft with the double axe; for behind him a youthful god or demi-god, still grasping his weapon, starts to flee from the scene of his sacrilege and yet in the very act of flight looks back to note the marvellous issue of his blow. In front of Zeus Athena, already full-grown and clad in her panoply, speeds forth into the world, but as she goes glances towards the sire from whose head she has sprung. Nike, hovering between them, presents her with a victor's wreath. Adjoining her are the three Fates.

Prometheus—forehead, nose, mouth, half the right forearm with the right hand, front parts of both feet. There are casts at Berlin (Friederichs—Wolters *op. cit.* p. 736 no. 1863 f.). Height 0·685^m.

The remaining slab, of a different marble and in a finer style, was discovered about 1770 in the Villa Palombara behind the church of S. Maria Maggiore at Rome, and in 1809 was sold by its possessor, Prince Massimi alle Colonne, to Frau von Humboldt, who handed it over to A. B. Thorvaldsen and C. D. Rauch to be patched up and made presentable. Rauch in 1816 had the luck to find the head, breast, and left hand of the seated Fate, which had been treated as a medallion and set in a gilded frame, in the studio of the sculptor A. Malatesta at Rome. The fragments are now reassembled at Tegel. See further G. F. Waagen *op. cit.* p. 16, *Einzelaufnahmen* no. 2990 with Text x. 90 f. by W. Amelung. Modern parts: right arm, right hip, and lower body of the seated Fate; nose and part of the right upper arm of her neighbour; fingers of right hand and lower left arm of the third figure together with roll, globe, and pillar. There is a cast at Berlin (Friederichs—Wolters *op. cit.* p. 736 f. no. 1865). Height 0·73^m.

F. Hauser in the *Jahresh. d. oest. arch. Inst.* 1903 vi. 79—107 attempts to combine these slabs (figs. 46—48) with neo-Attic fragments of reliefs, now in Rome, Florence, and Munich, representing the three Horai and the three Agraulides (pl. 5—6). Since all the fragments were found, though at different times, in the Villa Palombara, and since they all correspond in size or nearly so, he holds that the whole composition was a series of four oblong altar-reliefs, copied from a fine work of the Attic school to be dated near the end of s. iv B.C. Lastly, he conjectures that they were copies of bronze reliefs by the younger Kephisodotos, which—he thinks—adorned the altar of Zeus *Sôteir* and Athena *Sôteira* in the Peiraeus. See, however, the objections raised by P. Arndt and G. Lippold in the *Einzelaufnahmen* vi. 44, W. Amelung *ib.* x. 90.

J. N. Svoronos in the *Journ. Intern. d'Arch. Num.* 1902 v. 169—188, 285—377 (= *id.* *Tà κειμήλια τῶν Μουσείων μας* Athens 1904 pp. 9—40) and again in his *Ath. Nationalmus.* pp. 179—236 nos. 215—217 pls. 30, 1 f. and 31, 1 ventures another combination, arguing that the design of the Madrid *puteal* and the Tegel reliefs, incomplete towards the right, can be completed by that of the Apollon-and-Marsyas slab from Mantinea. The resultant frieze (fig. 134 and fig. 140 = my fig. 471) representing the musical victory of Apollon once decorated the front of a *thymèle* or platform for singers assumed to have stood in the *orchestra* of the local theatre. The two remaining slabs from Mantinea with their six 'Praxitelean' Muses could then have formed the two sides of the same platform (figs. 141, 142 = my fig. 472). The whole to be dated c. 250—150 B.C. On this showing, the Fates (the three missing Muses (p. 206)) foretold the doom of Marsyas, while Zeus watched the issue from afar and Nike with her wreath flew to crown the victorious Apollon (cp. the *pelike* from Ruvo figured *supra* i pl. xii); 'Prometheus' was a second Satyr (? 'ein Quelldamon' (p. 213 f.)) equipped with an axe and inserted as a sympathiser with Marsyas; and Athena, a figure identical with the Athena of the Finlay vase (Svoronos *Ath. Nationalmus.* p. 136 ff. no. 127 pl. 26, Collignon *Hist. de la Sculpt. gr.* i. 466 with fig. 242, Harrison *Myth. Mon. Anc. Ath.*

660 Zeus struck with a double axe

The only uncertainty in this design relates to the axe-bearing figure. Orthodox writers from Pindar downwards said that the head of Zeus had been cleft by Hephaistos¹; and such was the

p. 408 with fig. 29. G. M. A. Richter *The Sculpture and Sculptors of the Greeks* Yale Univ. Press 1929 p. 157 with fig. 586). was hastening to warn Marsyas of his fate. Svoronos finally completes the embellishment of his hypothetical *thymele* by adding a back-frieze (fig. 143 = my fig. 473) formed of Hauser's *Ilorai* and 'Agraulides' (? Hyades) arranged left and right of a Pan between two dancing Nymphs (? Hyades) taken, with variation of order, from a slab in the Lateran (O. Benndorf—R. Schoene *Die antiken Bildwerke des lateranensischen Museums* Leipzig 1867 p. 123 no. 202 pl. 4, 3, A. Rapp in Roscher *Lex. Myth.* i. 2721 f. fig., Reinach *Rép. Reliefs* iii. 280 no. 1).

Reconstructions of this sort are undeniably ingenious and come within the pale of possibility. But unfortunately they leave so large a part to mere conjecture that they seldom carry conviction. In any case, whether they are right or wrong, we should be justified in assuming that the Madrid *pulcal* and the Tegel reliefs were adaptations, mediate or immediate, of the Parthenon pediment. Even Svoronos is forced to admit that his axe-bearing Satyr was 'von dem Hephaistos oder Prometheus des Pheidias kopiert' (*Ath. Nationalmus.* p. 215).

tradition followed by the vase-painters of the sixth and fifth centuries B.C.¹ Others, including Euripides, ascribed the blow to Prometheus²—the first, according to Pliny, who ever felled an ox³. A poem that passed under the name of Eumolpos⁴ or Mousaios⁵ called the striker Palamaon. Lastly, Sosibios, a Lacedaemonian scholar of the third century B.C., spoke of him as Hermes⁶; and some early artists, as might be seen for example in the sanctuary of Athena *Chalkioikos* at Sparta, represented Hermes, axe in hand, standing beside Zeus⁷.

But, whatever name we give to the axe-bearer on the *Madrid puteal*, it is clear that the Athenians even of the Periclean age were prepared to tolerate the conception of Zeus as struck on the head by an axe—a 'holy axe'⁸ said some, an 'ox-striker'⁹ said others. This they would never have done, unless behind the myth there

had been some ritual practice of immemorial sanction; and it is difficult to resist the conclusion that the practice concerned was that of the *Dipolieia*.

The matter calls for careful investigation. Fortunately we know that the subject of Pheidias' pediment was no new thing. Rather it was the last term of a whole series, which, mainly by the help of numerous extant vase-paintings, can be traced back to the early part of the sixth century B.C. Our business therefore is to classify the vase-paintings and, adducing any collateral evidence that is found, to consider how far they may be based upon underlying cults either at Athens or elsewhere.

(θ) The birth of Athena in art.

Vases representing the birth of Athena fall into five groups¹, according as they depict (1) Zeus in labour helped by the *Eileithyiai*; (2) Athena emerging from the head of Zeus, which has been cleft by Hephaistos; (3) a fusion of these two types—Zeus attended

¹ R. Schneider *Die Geburt der Athena* Wien 1880 p. 8 ff. distinguishes four types: (a) the moment of birth; (b) the moment before birth; (c) the moment after birth; (d) a later moment. These correspond with my types as follows: (a) = (2) + $\frac{(3)}{2}$; (b) = (1) + $\frac{(3)}{2}$; (c) = (4); (d) = (5). Schneider's useful list of vases and Etruscan mirrors (*op. cit.* pp. 9—16) is extended by P. Baur 'Eileithyia' in *Philologus* 1899—1901 Suppl. viii. 503 (= P. V. C. Baur 'Eileithyia' in *The University of Missouri Studies* 1902 i. 4. 78), who adds a fine, though fragmentary, black-figured *pinax* belonging to my type (3), found on the Akropolis at Athens (F. Studniczka in the 'Eφ. 'Apx. 1886 p. 117 ff. pl. 8. 1 (=my fig. 484), Graef *Ant. Vasen Athen* iv. 251 f. no. 2578 pl. 109), and a black-figured vase of my type (4), now in the Museo Municipale at Orvieto (G. Karo in the *Journ. Hitt. Stud.* 1899 ix. 140 n. 3). The most important *addendum* to the lists of Schneider and Baur is the black-figured vase of my type (1) lately found in Rhodes (*infra* fig. 475).

the Vatican (pl. lii)¹, there is but a single Eileithyia. And once, on a second vase in the same collection (pl. liii)², the approaching birth is heralded by the appearance of a small owl which has the temerity to perch on the very sceptre of Zeus.

A similar scene is shown on a marble slab found in 1900 at *Haidar-pacha* near *Kadi-Keni* and now preserved in the Museum at Constantinople (fig. 479)³. The relief, surmounted by a dedication in lettering of 550—500 B.C.⁴, portrays Zeus seated on a high-backed throne and facing—an unusual circumstance—towards the left. An Eileithyia standing behind him places her right hand on

his head, her left on his left shoulder. Another Eileithyia standing before him apparently clasps both his hands with hers. The group is flanked by two further figures. A female personage on a somewhat smaller scale holds out her hands on the left: another female.

The throne of Zeus has its back ending in a swan's-head and its seat resting on a small draped male. The god's left hand grasps a sceptre with curved top, to which a small owl is clinging. Eileithyia in patterned *peplos* gesticulates before him. Behind Zeus stand Poseidon and Hermes (?); behind Eileithyia stands Ares.

still smaller, raises her right hand to her head on the right. S. Reinach, who first published this monument, observed that *Kadi-Keui* occupies the site of Kalchedon, a colony of Megara¹, and that Pausanias mentions a sanctuary of the Eileithyiai at Megara itself². Hence he inferred that the relief was an *ex-voto* dedicated to the Eileithyiai, whose cult had been carried by the colonists from Megara to Kalchedon. Reinach indeed contended—and his contention is *prima facie* plausible—that the type of Zeus *accouché* by the Eileithyiai originated in connexion with their cult and ultimately hails from Megara. Other evidence cited by him will be

mentioned later³. Meantime it may be conceded that in general a definite art-type does pre-suppose a definite belief and not infrequently a definite cult.

vase, which J. D. Beazley dubs 'the best of all little-master cups¹', was found at Vulci in 1867, passed from the Durand into the Blacas collection, and is now to be seen in the British Museum². It is signed by the maker Phrynos, one of the minor Athenian artists at work in the middle of s. vi B.C.³ Zeus in a purple *chiton* and an embroidered *himation* is seated, facing to the right, on a decorated throne. Its back ends in a swan's head, its legs are leonine, and its arm is supported by four small Doric pillars. The god, as J. Overbeck pointed out, has dark hair but a grey beard—an indication of old age most unusual in the case of Zeus⁴. His long locks are bound by a fillet. He raises both arms, brandishing a lotiform bolt⁵ in his right hand and making the gesture of delivery⁶ with his left. Before him a male figure, clad in a short purple *chiton* and *endromides*, starts to make his escape, but looks backward as he goes. He raises his right hand with open palm⁷ and holds in his left the double axe, with which he has just cleft the head of Zeus. From the cleft emerges the upper half of Athena, a long-haired goddess wearing a purple *chiton* and armed with lance⁸ and shield.

The birth of Athena as here portrayed has, if I am not in error, been strongly influenced by the ritual of the Dipolieia⁹. Zeus with uplifted bolt is Zeus *Policus*¹⁰. The axe-bearer with double axe, short *chiton*, and *endromides* is the *Boutypos*¹¹, who—armed with just this weapon and clad in just this costume—struck the sacred ox and then fled for his life¹². This is indeed no mere starting back in terror or surprise: other vase-paintings show Hephaistos running off as fast as his legs will carry him¹³. And, if the Dipolieia was celebrated to ensure an adequate dew-fall and rain-fall, it must not

be forgotten that in the Rhodian myth Zeus sent a shower of golden snow-flakes, when his head was cleft by the bronze axe of Hephaistos for Athena's birth¹. Whether our vase-painter was conscious of any relation between the scene he has given us and the ritual of the Bouphonia, is questionable. But is it merely by accident that he has placed upon Athena's shield a blazon which it nowhere else exhibits²—an ox-head in relief with projecting horns?

(3) Thirdly, the type of Zeus delivered by the Eileithyiai was fused with that of Zeus delivered by Hephaistos. This fusion was effected in the early part of s. vi B.C.—hardly earlier³—and thence-

³ H. G. G. Payne *Necrocorinthia* Oxford 1931 p. 142 cites an Argive-Corinthian relief from Delphoi (P. Perdrizet in the *Fouilles de Delphes* v. 2. 124 pl. 21 (part of which = my fig. 481)), which he calls 'late Protocorinthian' in style, as 'by far the earliest representation' of the birth of Athena. But the Argive-Corinthian bronze strips in low relief, of which this is a very characteristic example, have been hitherto assigned with confidence 'to the second and third quarters of the sixth century' (W. Lamb *Greek and Roman Bronzes* London 1929 p. 120). The relief in question forms a square metope in a quasi-architectural frame. Zeus with long hair and pointed beard sits to the left on a throne, the back of which ends in a swan's head (?). He is clad in a long *chiton* and *himetion* (?) and holds in his right hand a lotiform bolt with twisted spike (*supra* ii. 779 f.).

forward remained the dominant type for Athenian vase-painters¹. It was perhaps first brought about by some Megarian resident in Athens; for S. Reinach² has given reasons for thinking that the names painted on the two oldest specimens of it imply a knowledge of the Megarian alphabet and dialect³. The said specimens are here

Behind him stands a similarly draped Eileithyia, raising her left hand with open palm to his head—a gesture repeated by Zeus with his extended left hand. Before him a male god (Hephaistos?), wearing a cap and a short *chiton*, departs towards the left, but turns to face Zeus. He too holds his left hand with open palm, but downwards—perhaps another variety of the same gesture. His right hand was raised and may have held the axe, though this is uncertain as the relief here passes beyond the limits of the metope. T. Homolle was the first to recognise the scene as the birth of Athena. Payne *op. cit.* p. 142 n. 2 says 'the figure of Athena is almost obliterated': but is she there at all?

Kleanthes of Corinth (?early in s. vi B.C.: M. H. Swindler *Ancient Painting* Yale Univ. Press 1929 p. 144 f.) is known to have painted a 'Birth of Athena,' which was preserved in the temple of Artemis 'Αλφειορία near the mouth of the Alpheios (Strab. 343). But our only clue to his treatment of the theme is the obtuse remark by Demetrios the antiquarian of Skepsis (c. 180—140 B.C.) that in it *Προσειδὼν πεποιήται θύνον τῷ Δι προσφέρων ὠδίνοντι* (Demetr. Skeps. frag. 5 ed. R. Gaede (Gryphiswaldiae 1880) ap. Athen. 346 B—C)—of course a mere attribute as often on black-figured vases (A. Reinach *Textes Peint. Anc.* i. 67 n. 7).

The theory advanced by G. Kaibel in the *Ann. d. Inst.* 1873 xlv. 112 and by G. Loeschke in the *Arch. Zeit.* 1876 xxxiv. 110 (cp. H. B. Walters in the *Journ. Hell. Stud.* 1898 xviii. 284), viz. that the Attic vase-painter was copying Corinthian models, on which $\text{Ze}\upsilon\varsigma$ was spelled ΔBVM and $\text{K}\epsilon\lambda\lambda\eta\rho\iota\omicron\varsigma$ had an initial Ϙ, makes shipwreck—as P. Kretschmer *Die griechischen Vasenschriften* Gutersloh 1894 p. 103 points out—on the fact that the Corinthians said $\text{Ze}\upsilon\varsigma$, not $\Delta\epsilon\upsilon\varsigma$. Two of the archaic inscribed *pinakes* found in 1879 at *Pente Skouphia* near the Akrokorinthos and referable to a date c. 600 B.C.

True, Megarian inscriptions too give the forms $\text{Ze}\upsilon\varsigma$, $\text{Z}\epsilon\upsilon\pi\upsilon\omicron\varsigma$, $\text{Z}\epsilon\upsilon\iota\omicron\varsigma$, $\text{Z}\epsilon\upsilon\tau\iota\chi\omicron\varsigma$, etc. (cp. A *pinax*-fragment found on the Akropolis at Athens preserve the head of Zeus, the body of Athena, and the hands of Eileithyia (F. Studniczka in the *Εφ. Ἀρχ.* 1886 p. 117 fl. pl. 8. 1). Graef *Ant. reproduced, because they illustrate the two possible forms of compromise between the Megarian and the Athenian type, according as Athena is, or is not, visible.

The first is a 'Tyrrhenian' *amphora* from Caere, now at Berlin (fig. 485 and pl. liv)¹. Zeus in a *chiton* and patterned *himation* is seated on a throne of which the back ends in a swan's head, the legs in lion's claws. In his left hand he grasps a thunderbolt. From his head emerges Athena armed with a lance, a circular shield, and a high-crested helmet. Hephaistos, then, has already struck his blow:

indeed he is to be seen hurrying off on tip-toe² towards the left³. Nevertheless two birth-goddesses are still standing, Eileithyia behind Zeus, Demeter⁴ before him, and are lifting their hands with

³ A cameo published by A. L. Millin *Pierres gravées inédites* Paris 1817 i pl. 56 (= Reinach *Pierres Gravées* p. 128 f. no. 56 pl. 122) shows Hephaistos with his mallet standing still to watch Athena received by the hands of the two Eileithyia. But E. Braun in the *Arch. Zeit.* 1849 vii. 112 pl. 6, 1 justly pronounced the gem to be a forgery.

⁴ G. Kaibel in the *Ann. d. Inst.* 1873 xlv. 107 takes this figure to be a second Eileithyia, and refers the name [ΔΕ]ΜΕΤΕΡ to the fragmentary figure next to it on the right. But on this vase most of the names are well towards the right of the persons named. Moreover, the fragmentary figure is certainly male, and holds an object with a long handle—presumably Poseidon with his trident.

open palms as though they would conjure the new-born maiden to appear. Other deities are present. To the left of the central group, and separated from one another by the rapidly retreating figure of Hephaistos, are Dionysos and Hermes. The former wears an ivy-wreath and holds a *kántharos*. The latter, in festal attire, bears a *caduceus* of unusual form and announces his presence with the naive remark—'I am Hermes of Kyllene.' To the right of Zeus and his attendant goddesses is a god, probably Poseidon¹, conversing with a goddess, probably Aphrodite², while behind them stands Apollon with bow and arrow in his hands³.

Fig. 486.

¹ So G. Loe-schcke in the *Arch. Zeit.* 1876 xxxiv. 109, R. Schneider *Die Geburt der Athena* Wien 1880 p. 9, and with a query Reinach *Rép. Vases* i. 197. The mutilated word]VMEL[is probably an appellative of Poseidon; Furtwangler *loc. cit.* says 'am ehesten wol Εὐρημέδων wenn man ein schiefgestelltes Δ zula-st,' cp. O. Jessen in *Pauly-Wissowa Real-Enc.* vi. 1334. Less likely is θ]υμέλ[η—there is not much room for one. More improbable still, Wilamowitz' reading Γαν]υμέδ[ης. Quite impossible, a hovering Τυέναιος.

² Furtwangler *loc. cit.* proposes 'Α(μ)φ[ιρπ[ι]ρη, which is accepted, again with a query. by Reinach *loc. cit.* But Poseidon is more than once paired with Aphrodite (*Gruppe Gr. Myth. Rel.* p. 1145 n. 4 f.), and the initial 'Αφ[— is beyond question.

³ Noteworthy variations on the theme of this vase include the following.

(1) A black-figured *amphora* from Vulci, now in the British Museum (Gerhard *Auserl. Vasenb.* i. 6 ff. pl. 2, 1, Lenormant—de Witte *El. mon. chr.* i. 196 f. pl. 58, *Brit. Mus. Cat. Vases* ii. 155 no. B 244 with fig. 21 on p. 11, Reinach *Rép. Vases* ii. 20. 3—5, H. B. Walters *History of Ancient Pottery* London 1905 ii. 16 fig. 113), which J. D. Beazley in the *Journ. Hell. Stud.* 1927 xlvii. 78 f. fig. 16 f., 82 attributes to his 'Antimenes painter' c. 530—520 B.C. My pl. lv is from the official photograph. Zeus and Athena are flanked by a pair of Eileithyiai with Hermes on the left and Hephaistos on the right.

(2) A red-figured *hydria* from Nola, now in Paris (*De Ridder Cat. Vases de la Bibl. Nat.* ii. 337 ff. no. 444 fig. 74 (= my fig. 486), Pfuhl *Malerei u. Zeichnung d. Gr.* ii. 542 ('karikaturenhafte Schlankheit') iii. 196 fig. 518), which J. D. Beazley assigns to his

manneristic 'Nausikaa painter' c. 470 B.C. (*Attic Red-figured Vases in American Museums* Cambridge Mass. 1918 p. 122 no. 9, *Attische Vasenmaler des rotfigurigen Stils* Tübingen 1925 p. 253 no. 13, Hoppin *Red-fig. Vases* ii. 213 no. 8). This gives Zeus an unexpected *phéile* and makes Athena jump the wrong way to the manifest surprise of Hephaistos and the two Eileithyiai. De Ridder names the figures from left to right Iris (?), Hera (?), Zeus, Athena *Prómachos*, Hermes, 'Déesse (?)'.

Fig. 487.

(3) A red-figured *pelike* from Vulci, now in the British Museum (Gerhard *Auserl. Vasenb.* i. 6 ff. pl. 3—4, P. W. Forchhammer *Die Geburt der Athene* Kiel 1841 with pl., Lenormant—de Witte *Él. mon. chr.* i. 211 ff. pls. 64 and 65, *Brit. Mus. Cat. Vases* iii. 2561, no. E 410, Reinach *Rép. Vases* ii. 20, 6), which is attributed either to Hermonax c. 465—455 B.C. (Hoppin *Red-fig. Vases* ii. 31 f. no. 12, but see Leonard in Pauly—Wissowa *Real-Enc.* viii. 901) or to a painter closely resembling him (J. D. Beazley *Attische Vasenmaler des rotfigurigen Stils* Tübingen 1925 p. 304 no. 1). My pl. Ivi is from the official photographs, cp. *infra* fig. 526. Zeus, enthroned *en face*, makes the gesture of delivery with his right hand as Athena rises from his head. Eileithyia and Artemis on the right are balanced by Hephaistos and Poseidon on the left. The design is then

amplified by the addition of other immortals. Under the left handle Nike hastens towards the right followed by a draped youthful male wearing a wreath (Apollon?), Dionysos, a bald and bearded deity also wreathed (Hades??), and a white-haired

Fig. 488.

personage resting on a staff (Nereus??). The identification of the last two figures is quite uncertain: provisionally I follow Gerhard. For other guesses see R. Schneider *Die Geburt der Athena* Wien 1880 p. 11 f.

Etruscan mirrors, under the influence of imported red-figure vases (W. Lamb *Greek and Roman Bronzes* London 1929 p. 129 f.), repeat the design with additions and subtractions:

(1) A mirror from Arezzo, now at Bologna (*supra* ii. 709 ff. pl. xxix), shows *Tina* delivered by *Thanr* and *Thalna*, while *Sethlans* with his double axe stands aloof.

Fig. 489.

(2) Another, from Palestrina, now in London (R. Kekulé in the *Ann. d. Inst.* 1873 xlv. 129, *Mon. d. Inst.* ix pl. 56, 3, C. L. Visconti in the *Bull. Comm. Arch. Comun. di Roma* 1874 n. 94, A. Klugmann in Gerhard *Etr. Spiegel* v. 12 pl. 6 (= my fig. 487), *Brit. Mus. Cat. Bronzes* p. 91 f. no. 617), gives the central group only. *Tinia* attended

by *Thanr* and *Ethausva*—the former fastening a bandage round his head, the latter laying her hands on his head and shoulder—gives birth to an armed *Menerva*. All the goddesses more *Etrusco* (*supra* p. 665 n. o) are winged. On *Thanr* see C. Pauli in Roscher *Lex. Myth.* v. 527—529. On *Thalna*, C. Pauli *ib.* v. 459—463, cp. 442, E. Vetter in *Glotta* 1924 xiii. 146—148, Eva Fiesel in Pauly—Wissowa *Real-Enc.* v A. 1227—1230. On *Ethausva*, W. Deecke in Roscher *Lex. Myth.* i. 1390, E. Samter in Pauly—Wissowa *Real-Enc.* vi. 717. It must be remembered that Strab. 226 says of

Fig. 490.

Pyrgoi, the port of Caere: ἔχει δὲ Εἰληθίας ἱερόν, Πηλασγῶν ἱδρυία, πολούσιόν ποτε γενόμενον, λ. τ. λ.

(3) A third, now at Berlin (no. 2979) (E. Braun in the *Ann. d. Inst.* 1851 xxiii. 141 ff. pl. G—H, Gerhard *Etr. Spiegel* iv. 12 f. pl. 284. 1 (=my fig. 488), A. Fabretti *Corpus inscriptionum Italicarum* Aug. Taurinorum 1867 p. ccxv no. 2478. C. Pauli in Roscher *Lex. Myth.* iii. 2933 f.), has *Timia* sitting on a throne with lowered bolt and *Menfa* in armour rising from his head. Left and right of him, leaning on the back of his throne, are *Thalna* and *Uni* (Iuno)—both appropriate as birth-goddesses. These in turn are flanked by two young warriors described as *Lalan* and *Preale*. *Lalan* is an obvious slip for *Laran*, the Etruscan Ares (W. Deecke in Roscher *Lex. Myth.* ii. 1866 f.). *Preale* occurs here only, but must be a deity akin to Mars (C. Pauli *loc. cit.*). Finally, in

The second form of compromise between the Megarian and the Athenian type is exemplified by another 'Tyrrhenian' *amphora* from Caere, now in the Louvre (fig. 491)¹. Zeus, clad in a white *chiton* and a red *himation*, is seated on a throne—carefully inscribed as such²—with swan's-head back and lion's-claw legs. His left hand holds the thunderbolt, his right a lotos-topped sceptre. His feet rest on a footstool, upon which stands one of the birth-goddesses with a wreath in her uplifted right hand. Her fellow, definitely named Eileithyia³, stands behind the throne of Zeus and

the background is seen a temple-front with four Ionic columns, which is hardly to be identified with the newly built Parthenon (J. Roulez in the *Ann. d. Inst.* 1861 xxxiii. 318), but suggests that the scene is being enacted in Olympos (Gerhard p. 17).

(4) Very similar is the design of another mirror, now in London (Gerhard *Etr. Spiegel* iv. 13 f. pl. 284, 2 (=my fig. 489). A. Fabretti *op. cit.* p. ccxiv no. 2471 bis, *Brit. Mus. Cat. Bronzes* p. 116 no. 696). *Tinia* and *Menrfa* are again supported by *Thalna* and *Uni*. On the left is *Laran*, on the right a bearded *Maristiusta* (so H. B. Walters, who thinks he 'may be meant for Poseidon.' C. Pauli in Roscher *Lex. Myth.* iii. 2933 f. reads *maris. .usta* and, with more probability, assumes some relationship to Mars). In the background, as before, is a temple-façade with four Ionic columns (cp. also Gerhard *op. cit.* iv. 14 f. pl. 285, 1).

(5) Yet another mirror, formerly in the Museo Campana, now in the Louvre (J. Roulez in the *Ann. d. Inst.* 1861 xxxiii. 314 ff., *Mon. d. Inst.* vi pl. 56, 1, Gerhard *Etr. Spiegel* iv. 16 f. pl. 285 A (=my fig. 490). De Ridder *Cat. Bronzes du Louvre* ii. 52 no. 1738), makes *Tinia* beardless and surrounded by three goddesses—one with wings (Thanr or Uni (Roulez) rather than Nike (Gerhard, De Ridder)), a second with Phrygian cap (Thalna (Roulez), Artemis (Gerhard), Artemis? (De Ridder)), a third with veil (Iuno (Gerhard) or Hera? (De Ridder) rather than Venus (Roulez)). A sketchy pediment still marks the background.

³ ΗΙΛΕΙΟΥΦ.

raises both arms to his head. Athena is not yet born¹; but owing to the fusion, or rather confusion, of types Hephaistos with his double axe is already making off to the extreme right of the spectator. Left of the central scene is a group of interested deities—Dionysos with a garland of vine-leaves, Aphrodite draped and veiled, Ares with lance and shield, and lastly Leto. Right of the central scene appear other deities—Poseidon leaning on his trident(?) as he talks to Amphitrite, and a nude bearded god, perhaps meant for Hermes, who holds a long-handled *caduceus*(?) with one hand and gesticulates with the other.

(4) The fourth type, which represents Athena standing—a half-grown maiden—on the knees of Zeus, is again but a special application of a much older mother-and-child *motif*². As applied to Zeus and Athena, it occurs on several black-figured *amphorae* and one red-figured *pelike*.

The earliest of the black-figured vases is an *amphora* in the style of Amasis noted by G. Karo in 1899 as being then in the Museo Municipale at Orvieto³. It seems probable that this is the vase published by Miss E. H. Hall (Mrs Dohan) as 'excavated from an Etruscan tomb at Orvieto in 1907 [*sic*] by Mr A. L. Frothingham' and now in the University of Pennsylvania Museum at Philadelphia (fig. 492)⁴. It has been to some extent repainted, but the original parts can be well made out from the official line-drawing. Zeus, holding a lotiform bolt, sits stiffly erect on a throne towards the right. Its back ends in a ram's head. Its seat rests on a Nike with spread wings and gesticulating hands. On his lap stands Athena in her panoply. Before Zeus is Eileithyia with ex-

¹ So Pottier *loc. cit.* S. Reinach *loc. cit.* supposes that the female figure on the footstool is Athena. But F. Durrbach *loc. cit.* justly observes that on a black-figured *amphora* from Chiusi representing the same scene (Lenormant—de Witte *Él. mon. chr.* i. 194 f. pl. 57) one of the Eileithyiai is carrying a wreath. Besides, the figure on the footstool has no attribute distinctive of Athena.

² A gold ring from one of the later tombs at Thisbe in Boiotia, published by Sir A. Evans *The Palace of Minos at Knossos* London 1930 iii. 470 ff. and by him assigned at latest to 'a Mainland-Mycenaean phase equivalent to L. M. III a,' shows a draped goddess sitting on a throne with a nude boy standing on her knees. Behind the throne is a small female attendant; in front of it, two armed worshippers approach with offerings.

³ G. Karo in the *Journ. Hell. Stud.* 1899 xix. 140 n. 3: 'Zeus with the new-born Athena on his knee, between two Eileithyiae.'

⁴ E. H. Hall in *The Museum Journal* 1912 iii. 68 ff. figs. 33 (photo of whole), 34 (= my fig. 492), and 35 (drawing of reverse). The date 1907 is possibly a slip for 1897. It is in any case inconsistent with Miss Hall's statement in the same paragraph that A. Furtwangler saw the vase at Philadelphia in 1904 and, upon his return to Europe, made a report of it to the Munich Academy of Science [see the *Sitzungsber. d. kais. bayr. Akad. d. Wiss. Phil.-hist. pressive fingers. Behind him, Apollon with *kithára* and *pléktron*. On the right, Ares in full armour is accompanied by a hound¹. On the left are traces of Poseidon(?). Finally a few blanks are filled by a couple of soul-birds and sundry meaningless inscriptions. Another *amphora*, now in the Musée d'Art et d'Histoire at Geneva, is included in the Genevan series of Giraudon's photographs². A third, here given (fig. 493)³, was found at Vulci and passed from

the Feoli collection to Würzburg. Zeus is seated on a stool, which has decorated legs and a central support in the shape of a bearded and draped male figure. The god holds a thunderbolt in his right hand, and uplifts his left with open palm. On his lap stands Athena, not yet fully grown, but armed with *aigis* and shield. Before Zeus, with one hand raised and open, the other lowered and shut, stands a birth-goddess, presumably Eileithyia. Behind him Apollon with

kithára and *pléktron* makes music. To the right of all stands a bearded and draped god, perhaps Poseidon—though no attribute is visible; to the left, a bearded and nude god with a peaked and pointed *pétasos*—probably Hermes, but possibly Hephaistos.

² It may be noticed in passing that this mother-and-child motif was applied by Athenian vase-painters not only to Zeus and Athena, but also to Zeus and Dionysos. A black-figured example of the latter has already been given (*supra* ii. 273 n. 3 with fig. 177, which having suffered an accidental exchange of right for left is here replaced by the more correct fig. 495): in it Zeus kept his own thunderbolt and sceptre, 'Zeus' boy' brandished torches, and the original Eileithyia was transformed into Hera. A red-figured bell-krater found, full of ashes and small vases, in tomb no. 311 of the Val di Trebbia necropolis near Comacchio (A. Negri in the *Not. Scavi* 1927 p. 166 pl. 16 (= my fig. 496), M. I. Rostovtzeff *Mystic Italy* New York 1927 Frontispiece, C. Dugas in the *Rev. Et. Gr.* 1929 xlii. 89 fig. 5) has a noble long-haired Zeus sitting on a high-backed chair. He wears an olive (?) wreath, a tagged or embroidered chiton, and a plain himation. But the painter has given him a distinctly Dionysiac character by making him shoulder a thyrsos by way of sceptre and use a fawn-skin as his antimacassar, while he supports the infant Dionysos already equipped with ivy-wreath, vine-stem, and kantharos. In this

(5) The fifth and final type, in which Athena has reached her full stature, is attested by a couple of vases, a black-figured *hydria* from Vulci now at Würzburg and a red-figured *stámnos* from Vulci now in the Vatican.

The *hydria* (fig. 497)¹ shows Zeus seated on a throne, facing towards the left. He holds a sceptre with a curious Janiform head² in one hand, but no thunderbolt in the other. Athena, armed and fully grown, stands before him. She has issued from him, as we might infer from the position of her feet, but she turns her face

Fig. 497.

directly towards him while adjusting her high-crested helmet. To either side of this group stand the two Eileithyiai, and beyond them Poseidon and Hermes. Hephaistos is not there.

The *stámnos* (fig. 498, *a* and *b*)³, regarded by J. D. Beazley as

case the two Eileithyiai have become stately Nymphs holding flowers or clothing for the new-born god.

It is possible, though not certain, that Dionysos borrowed the type from Athena, who—to judge from our few examples—appears to have been first in the field. In any event his adoption of the scheme was very understandable: it is but a step from some vase-illustrations of Dionysos emerging out of his father's thigh (*supra* p. 81 fig. 25 and pl. xiii, 1—3) to these of Dionysos standing upon it.

² The conjoined profiles are respectively bearded and beardless (cp. *supra* ii. 387 ff. on the differentiation of the sky-god's faces), and two arms are attached to the common torso. But Ulrichs *loc. cit.* says: 'ein Scepter, worauf ein Doppelgesicht (modern?).'

hand as if to greet the hasty arrival of Nike from the left. Nike presumably brings tidings of Athena's birth. And meantime Athena herself, armed and fully grown, stands holding out her helmet behind Hera's back. In short, a complete rearrangement of the traditional scheme. No less wilful is the artist's treatment of

the reverse. The divine witnesses are not relegated to the left and right as flanking figures, but are paired off as conversing couples—Poseidon with Hermes(?)¹, Kore(?)² with Hades(?)³.

The fifth type of vase-painting leads up to⁴ and culminates in the great complex of sculptural decoration employed by Pheidias for the eastern pediment of the Parthenon. The ultimate dependence of this complex on actual cults may be seen from the following diagram:

The foregoing enquiry has brought us to the threshold of a difficult, not to say dangerous, enterprise. If Pheidias' design was indeed the climax of certain pre-existing ceramic types, which can

be determined and arranged in an intelligible series, we are thereby encouraged to play Childe Roland and, undeterred by the fate of our predecessors, once more attack that Dark Tower of Athenian archaeology—the time-honoured problem of reconstructing the eastern pediment of the Parthenon.

Two factors in the situation make the attempt less foolhardy nowadays than it was a century since in the time of Christopher Wordsworth¹. On the one hand, R. Schneider² in 1880 justly emphasized the importance of the Madrid *puteal*³ and inferred from it that Pheidias' Zeus was seated in profile⁴ to the right with the axe-bearer behind him and Athena before. On the other hand, B. Sauer⁵ in 1890—1891 published and discussed the first minutely accurate chart of the *Standspuren* or actual traces left by the sculptures on the floor of the gable⁶. His investigation corrected Schneider's idea that Zeus occupied the middle of the pediment⁷

¹ C. Wordsworth *Athens and Attica* London 1836 p. 116 'The attempt to infer the treatment and details of the attorilievo groupe which once occupied the eastern pediment from the fragments of it which remain, would be as futile an enterprise as that to reconstruct an Athenian Tragedy from a few broken lines.'

² R. Schneider *Die Geburt der Athena* Wien 1880 p. 42.

³ *Supra* p. 657 ff. Others have attached little or no weight to the *puteal*, on the ground that its figures were neo-Attic—'eine Compilation alterer Typen' (P. Arndt in *Einzelabnahmen* nos. 1724—30 Text vi. 42 ff.) or 'klassizistische Einzeltypen' (E. Pfuhl in the *Jahrb. d. kais. deutsch. arch. Inst.* 1926 xli. 170). Thus, for example, W. Amelung *Die Basis des Praxiteles aus Mantinea* München 1895 p. 13 ff. maintains that the Fates of the *puteal* were taken from fourth-century prototypes closely resembling the Muses of the Mantinean base, and that they are therefore non-Pheidias in character and post-Parthenonian in date—a view sufficiently refuted by Rhys Carpenter in the *Am. Journ. Arch.* 1925 xxix. 123 ff. Most critics, however, would admit that the *puteal*-groups, even if they were mediate rather than immediate copies of the pediment, are yet highly relevant to a reconstruction of their lost originals (*supra* p. 660 n. o).

⁴ This would not necessarily preclude the slightly oblique position assigned to the throne and body of Zeus by K. Schwerzek *Erläuterungen zu dem Versuch einer Rekonstruktion des östlichen Parthenongiebels* Wien 1904 p. 17: 'Wegen der geringen Tiefe des Giebels ist es nämlich aus technischen Gründen ganz unmöglich, die Zeus-Statue in der reinen Vorder- oder Seitenansicht anzuordnen.'

⁶ Rhys Carpenter in the *Am. Journ. Arch.* 1925 xxix. 130 ff. fig. 7 and pl. 3, A was still operating with Sauer's floor-plan, but in 1931—thanks to the great scaffoldings erected by M. Balanos—he was able to pay repeated visits to the actual floor and in various points to control or supplement the observations of his predecessor (*Hesperia* 1933 ii. 2—12 with pls. 1 (photograph of floor-blocks 19—11) and 2 (=my pl. lviii. 2. restoration of pediment and revised plan of floor)).

⁷ R. Schneider *Die Geburt der Athena* Wien 1880 p. 42 'Zeus—alle übrigen Figuren an Grosse überragend—in der Mitte, rechts die neugeborne Tochter, links der Geburtshelfer' etc. J. Six 'Die Mittelgruppe des östlichen Parthenongiebels' in the *Jahrb. d. kais. deutsch. arch. Inst.* 1894 ix. 83—87 with fig. adopts this solution of the problem in a restoration justly dented by A. Furtwängler *Intermezzo* Leipzig—Berlin 1896 p. 23 f.

by showing that the central marks required, not one colossal figure, but two large-sized figures of about equal weight¹. E. Pfuhl² in 1926 improved upon this by arguing from a fresh consideration of the same *data* that, of the two central figures, the left was 'heavier than the right and apparently rectangular in plan.

It will be observed that the citation of the *Standspuren* was by no means fatal to the relevancy of the Madrid *puteal*. Indeed it

Rhys Carpenter, deaf to denision, revives Six' central group in the *Am. Journ. Arch.* 1925 xxix. 132 f. pl. 3. A with a drawing which E. Pfuhl in the *Jahrb. d. kais. deutsch. arch. Inst.* 1926 xli. 168 n. 2 condemns as incompatible with the floor-traces 'und auch sonst unmöglich'. Unperturbed by hard words, Rhys Carpenter returns to the charge in *Hesperia* 1933 ii. 1, 34—39 with fig. 7 and pl. 2 (= my pl. lviii, 2), where he still advocates a colossal Zeus sitting in *quasi*-profile to the right on a central throne 'not set quite parallel to the tympanon but at this slight angle of about 3°. By this minute turn the throne was swung sufficiently to suggest that the pose was not a pure profile, and the torsion in the upper body of Zeus was made more natural. The narrowness of the pediment prevented a more thoroughgoing displacement. On the Madrid puteal relief the throne of Zeus is drawn with exactly this slight but indispensable obliquity.'

Many of the older authorities assumed a central Zeus enthroned *en face* with Athena either emergent above his head (R. Schneider *op. cit.* pl. 2 Quatremère de Quincy, pl. 3 E. Gerhard) or in close proximity to him (*ib.* pl. 5 C. R. Cockerell, pl. 6 L. Drossis). The model exhibited in the Metropolitan Museum of New York is of this latter type (W. H. Appleton in *Art and Archaeology* 1916 iv. 11 with pl. on p. 20).

¹ Rhys Carpenter in *Hesperia* 1933 ii. 30—39 discusses in great detail the floor-marks of the pediment, which he regards as pointing clearly and unmistakably to the existence of a single central statue of formidable weight—Zeus enthroned to the right as on the Madrid *puteal*. This arrangement is plausible and, I suppose, possible. But it suffers from three serious drawbacks. It involves a grave discrepancy with the scheme of the western pediment, which had two central figures, not one. It makes Zeus bulk too big in a temple that belonged to Athena. And it is eked out by a grouping of the Fates, etc., which to me at least is very unconvincing (see *esg.* the criticisms of C. Picard in the *Rev. Arch.* 1933 i. 272).

A. Furtwängler *Intermezzi* Leipzig—Berlin 1896 p. 22 f. had likewise disputed Sauer's conclusion, arguing that the two stout iron bars converging on block 13 were intended to support the plinth of a heavy central figure. He proposed to find that figure in the 'torso Medici' of the École des Beaux Arts at Paris. But later (*Aegna* München 1906 i. 330 f.) he confessed himself convinced by further argumentation on the part of Sauer (*Der Weber-Laborde'sche Kopf und die Giebelgruppen des Parthenon* Giessen 1903) and reverted to his original view that the 'torso Medici' is a copy of the so-called 'Promachos' of the Akropolis.

² E. Pfuhl in the *Jahrb. d. kais. deutsch. arch. Inst.* 1926 xli. 169 f. 'Der Gedanke, dass beide Barren (*sc.* embedded in the central *gelson*-block no. 13) die gleiche Last trugen, steht im Widerspruch mit allen Analogien beider Giebel. Diese lehren, dass die lange und die quadratische Randbank zum linken Barren, der kleine Randbankansatz vorn rechts neben der langen Randbank zum rechten Barren gehört. Folglich liegt hier, fast genau in der Mitte des Giebels, die Grenze zwischen zwei Statuen. Die Standplatte der rechten Statue zeichnet sich durch Leere, Randbanke und zwei Dubel, die ein Vorkippen verhinderten, deutlich ab; zu ihr gehört ein Stabloch vor dem Barren. Dieser nahm dem Gelsonblock 13 das Gewicht der von 14 her auf ihn übergreifenden Statue ab, denn 13 war von 12 her schwer belastet. Dem entspricht der grosse Barren gleich rechts auf 12: er trug an derselben schweren Last mit. Wir haben also jederseits der Mitte zwei ungleiche Gestalten; die linke war schwerer und allem Anschein nach gerade und rechtwinklig begrenzt.'

was with an eye to both sources of evidence that the sculptor K. Schwerzek¹ in 1904 produced the first really satisfactory filling of the central space—Zeus enthroned to the right, Athena moving away from him but facing left, and Nike hovering between them wreath in hand. A. Prandtl² in 1908, following the *puteal* with more absolute fidelity, went further in the same direction. He plotted in, not only Zeus, Athena, and Nike³, but also the axe-bearing god

Fig. 499.

behind the throne of Zeus. Moreover, taking a hint from Sauer, he added next to Athena the extant torso of a god starting back in surprise or alarm⁴. This fine figure on the right aptly balances the retreating axe-bearer on the left.

² A. Prandtl 'Fragmente der Giebelgruppen des Parthenon' in the *Ath. Mitth.* 1908 xxxiii. 1 ff. fig. 1 (=my fig. 499). Prandtl would recognise, among the fragments attributed to the Parthenon pediments, the right heel of the axe-bearer, the left hand and part of the drapery of Zeus, also two fragments from the right wing of Nike.

Frag. 36 in A. H. Smith *The Sculptures of the Parthenon* London 1910 p. 23 pl. 14 A (fig. 500), a right male thigh, to the knee (height 0.41 m), is on a scale large enough to suit this axe bearer.

³ E. Pfuhl, like B. Sauer, regards a hovering Nike as 'undenkbar' and postulates at most a Nike held in the god's hand (*Jahrb. d. kais. deutsch. arch. Inst.* 1926 xli. 170).

⁴ A. H. Smith *The Sculptures of the Parthenon* London 1910 p. 22 pl. 13, 11, M. Collignon *Le Parthénon* Paris s.a. p. 31 pl. 52, 11 and 11¹.

Fig. 500.

Approaching the matter by a different route Sir Cecil Smith¹ had in 1907 arrived at substantially similar results, at least in so far as the three central figures were concerned. He based his argument on the acute observation that Attic vases painted within a decade or so of the erection of the pediment 'are full of suggestions of motives directly or indirectly borrowed from the Parthenon.' In parti-

Fig. 501.

cular he referred to the magnificent *kratér* of the Villa Giulia (*supra* ii. 737 with fig. 668) as evidence that Pheidias filled the central space by Zeus seated towards the right, Athena standing before him, and Nike with a wreath hovering between them in the apex (fig. 501)².

¹ C. Smith 'The Central Groups of the Parthenon Pediments' in the *Journ. Hell. Stud.* 1907 xxvii. 242—248 with figs. 1 (= my fig. 501), 2, 3.

² He contends that the types of Zeus and of Athena (with her crested helmet and gorgéous *péplos*) are precisely what we should expect of Pheidias, that a hovering Victory

He also cited the polychrome *pelike* from Jüz Oba (*supra* ii. 258 ff. pl. xvi) as another vase reminiscent of the Parthenonian design.

We may take it, then, that this disposition of the central group is so highly probable as to be practically certain. But, before attempting to extend it right and left, I would draw attention to one or two details.

It is surely hard to believe that Pheidias would have left, as on the Madrid *putel*, a large blank rectangle beneath the throne of Zeus. K. Schwerzek in his reconstruction (pl. lvii, 3) tries to minimise

Fig. 502.

this objectionable feature by inserting a cross-bar and a sunk panel between the legs of the throne. The effect is not good: Zeus appears to be seated on a pile of boxes. It occurred to me¹ that a simple

would admirably fill the apex of the pediment, and that the vase-painter observing the statuary-group from below might well indicate, as he has done, the under-surface of the throne of Zeus. The last of these arguments is, I think, the weakest: the drawing of the throne may be merely an effect of pseudoperspective (see *supra* p. 92 with fig. 33 and e.g. Pfuhl *Malerei u. Zeichnung d. Gr.* ii. 604 f., Furtwangler—Reichhold—Hauser *Gr. Vasenmalerei* iii. 145 ('Was ganz besonders auffällt, ist die stark betonte Unteransicht verschiedener Gegenstände, z. B. sieht man unter die Kline, unter Laomedons Chiton hinein, von dem Schemel sogar sämtliche Querleisten seiner Unterfläche')).

¹ I first put forward my reconstruction in a paper read to the Hellenic Society on 13 Feb. 1917 (*Journ. Hell. Soc.* 1917 xxxvii p. xlv ff.). But years afterwards I found that already in 1912 J. N. Svoronos had hit upon the same solution of this particular problem (*Journ. Intern. d'Arch. Num.* 1912 xiv. 274 pl. 10¹) and had sought to justify it by sundry parallels drawn from coin-types (e.g. Gnechi *Medagl. Rom.* ii. 15 no. 53

way out of the difficulty would be to place an eagle below the throne. There were ancient religious reasons for fixing an eagle in the pediment of a temple¹, and it seemed natural to put the lightning-bird in immediate juxtaposition with the thunderbolt of Zeus. My conjecture was confirmed by the design of another *puteal* (fig. 502)², clearly a later variation on the Pheidias theme, which transposes left for right but retains the bird beneath the throne.

A second detail in regard to which I should differ from Sauer, Schwerzek, and E. A. Gardner³ is that they all make Athena hold her lance in the right hand. But, thus held, it endangers the well-meaning Nike; or, if Nike be absent, at least it interposes a weapon

But, apart from the fact that Athena is moving in the wrong direction, her right arm should then have been raised to hold the spear. These critics were misled by the presence of the olive and the snake—variable attributes, which, like the owl, were useful for filling a blank on the circular field of the coin.

⁴ J. N. Svoronos in the *Journ. Intern. d'Arch. Num.* 1912 xiv. 273 pl. 15', 2 and 1 (= *id.* *Les monnaies d'Athènes* Munich 1923—1926 pl. 92, 3 Athens and 4 A. Romanos) thinks that certain rare Athenian bronze coins of imperial date, which represent Zeus enthroned towards the right with a sceptre in his right hand and an eagle on his left, were likewise copied from the Zeus of the eastern pediment. He modifies his restoration accordingly (*Journ. Intern. d'Arch. Num.* 1912 xiv pl. 10'), but is inconsistent enough to accept the sceptre in the god's right hand while he rejects the eagle on his left as 'προσθήκη τοῦ σφραγιστοῦ τύπου.' It seems wiser to follow throughout the pattern of the *puteal*.

The central group thus determined is flanked by the axe-bearer starting to escape behind the throne of Zeus and a male deity recoiling in astonishment from Athena. If the axe-bearer was Hephaistos or Prometheus, some other name must be found for this god. Following Furtwangler³, I have identified him with Poseidon⁴ and restored him in an attitude somewhat resembling that of Myron's Marsyas⁵. I do so with some confidence, partly because

⁴ Note that Poseidon occupied a similar position to the right of the central group in several of the vase-paintings already considered (*supra* figs. 485, 491, 493 (?)), though in others he was placed on the left (*supra* figs. 492 (?), 497).

J. N. Svoronos in his restoration (*Journ. Intern. d'Arch. Num.* 1912 xiv. 283 f. pl. 10') completes this figure as Ares carrying a trophy—a numismatic type for which he would have done better to substitute Ares the shield-bearer (*supra* fig. 477 and pl. lxx. Cp. Reinach *Rép. Vases* i. 116, 3, ii. 20, 1).

⁵ Furtwangler *Masterpieces of Gk. Sculpt.* p. 465. His observation *ib.* n. 3 'Only the right arm was lifted up, not both as is generally stated. The difference in the marking of the muscles on back and breast between the two sides shows this indubitably' is traversed by K. Scherzke *Erläuterungen zu dem Versuch einer Rekonstruktion des ostlichen Parthenongiebels* Wien 1904 p. 25 'beide Achseln zeigen, dass die Arme erhoben waren. der rechte Arm viel höher kommt als der linke, obgleich beide fast gleichmassig in die Höhe streben.' The question is one for anatomists to decide.

Among the extant fragments attributed to the pediments by A. H. Smith *The Sculptures of the Parthenon* London 1910 p. 22 ff. I have found two (figs. 514, 515) which may fairly be referred to this Phaidiac Poseidon. One (*frag.* 34 pl. 13) is part of a colossal right hand (Smith inadvertently says 'left'), held up, thrown back, and spread open. The other (*frag.* 39 pl. 14 A) is part of a colossal right foot, of which Smith justly remarks: 'The hinder part of the foot seems to have been slightly raised from the ground.' Both fragments are of the right size to form the extremities of that splendid body, which we commonly call Torso H. They help to assure me that H does not spell Hephaistos. And here I part company with my friend Mr Smith, who in the *Brit. Mus. Cat. Sculpture* i. 111 attributed the torso to Hephaistos or Prometheus, adding: 'Perhaps both hands held an axe above the head, as if about to strike.' That was a plausible suggestion, but surely mistaken; for not one of our vase-types showed Hephaistos in act to strike—he was always consistently running away with lowered axe. Eighteen years later in *The Sculptures of the Parthenon* p. 22 Mr Smith modified his opinion: 'It is probable that

the west pediment also places a Marsyas-like¹ Poseidon next to an impetuously moving Athena—the result being a sort of echo from front to back of the temple—and partly because the Finlay relief on a vase of Pentelic marble now at Athens combines the Athena of the east pediment with Marsyas himself in a Hellenistic reproduction of Myron's group². It may be added that energy and movement, actual or potential, is thoroughly characteristic of Poseidon in all periods of Greek art³.

Continuing our reconstruction we next note that immediately beyond Hephaistos on the left and Poseidon on the right broad iron bars were set askew in, or rather just over, the floor of the gable. These, as Sauer pointed out⁴, were meant to support (on the cantilever principle⁵) two heavy seated figures; and, *ceteris paribus*, it may be presumed that the said figures faced towards the centre in three-quarter position, *i.e.* along the lines of the supporting bars⁶.

Fig. 514.

Fig. 515.

the figure was represented as drawing back, after the stroke by which the cleaving of the head of Zeus was accomplished.⁷ It is more probable still that Torso H was Poseidon, not Hephaistos at all.

They probably sat on rocks¹, not on thrones²; for the presence of other thrones would inevitably have detracted from the majesty of Zeus.

But have we definite evidence as to the name and nature of any such figure? I make bold to maintain that we have. In 1901 C. Waldstein³ (Sir Charles Walston) published two marble statuettes, which had been bought at Rome in 1892 for the Dresden Albertinum. They are of the same uncommon dimensions⁴; and, since they were bought together, they had in all probability been found together—a couple of figures from the pediment or pediments of a small-sized shrine. One of them is a free copy of the reclining god ('Ilissos' or 'Kephisos') from the west pediment of the Parthenon, not uninfluenced by the corresponding figure ('Theseus') of the east pediment. The other (fig. 516)⁵ represents a goddess half-draped in an ample *himátion*, which, as the folds at the back indicate, covered her head behind like a veil and was drawn upwards by her right hand. Beyond all question she is an Aphrodite, and an Aphrodite of Pheidias type⁶. We need not,

⁶ The broad treatment of the body with its widely-spaced breasts, the easy yet dignified pose, the simple, harmonious drapery, and the action necessarily attributed to the right hand, all go to prove the Pheidias character of this little figure. It is, therefore, of considerable interest as evidence of a semi-draped Aphrodite in the fifth century B.C.

After my paper to the Hellenic Society (*supra* p. 693 n. 1) I received a letter (Feb. 19, 1917) from my friend Mr (now Sir George) Hill containing the politest of demurrers: 'Are you sure about the semi-nude Aphrodite? It looks to me, fine as it is, far too sensuous, not to say sensual, to be a Pheidias type. Is there any other case as early, except under Oriental influence, of a semi-nude Aphrodite? It struck a jarring note to me in what was otherwise a concord of sweet sounds. And how do you reconcile her with the Aphrodite of the frieze? Are those statuettes genuine??'

It has not, I think, been noticed that evidence for half-draped female figures in Attic sculpture at least as early as 425—423 B.C. (the date of the play: see G. H. Macurdy *The Chronology of the extant Plays of Euripides* Lancaster, Pa 1905 pp. 5, 40 ff., cp. W. Christ *Geschichte der griechischen Litteratur*⁶ München 1912 i. 361 n. 2) may be drawn from

therefore, hesitate to accept Waldstein's contention that she has preserved to us one of the missing figures from the east gable of the Parthenon. And, since she is seated on a rock in precisely the position that we require, I have restored her¹ as occupying the block adjacent to Poseidon². We have already seen a probable case of Aphrodite ranged next to Poseidon in the right-hand half of a

² C. Waldstein *loc. cit.* p. 18 originally gave her a different position: 'I should place her in the left half of the eastern pediment of the Parthenon, immediately following the extant figure of Iris, the body turned towards the Iris, the head towards the centre and I should call her Aphrodite.' But this position will not suit the marks in the gable-floor, which at that point demand two standing figures, not one seated figure. Later, in the *Journ. Hell. Stud.* 1913 xxiii. 295 fig. 20, Waldstein was willing to accept my restoration of the goddess, whose head he thought to identify with the 'Aphrodite' of Holkham Hall—a notion promptly and properly scouted by G. vase-picture showing the birth of Athena¹; and it will be granted that this association of the foam-born goddess with the sea-god was reasonable enough. The amount of rock visible at her left side makes it likely that here, as on the frieze, she was grouped with an Eros² standing at her knee.

As a counterpoise to Aphrodite we need another figure seated on a rock in three-quarter position towards the right. A suitable personage would be Hera, who in sundry vase-illustrations of the birth appears behind the throne of Zeus³, and is expressly mentioned

by Philostratos of Lemnos (born c. 190 A.D.¹) in a rhetorical description of the scene as portrayed in a picture-gallery at Naples². Schwerzek has restored her as enthroned in the right place³. But we want a rock-seat, not a throne. And it so happens that on the east frieze of the Hephaisteion ('Theseion'⁴), a temple whose sculptures owe much to direct imitation of the Parthenon⁵, we find Hera sitting on a rock in just the requisite attitude. I have transferred her bodily from Sauer's drawing of the 'Theseion' frieze⁶ to my restoration of the Parthenon pediment⁷, not of course as a certain, but at least as a possible or even probable, figure in the composition⁸.

⁸ Again I would draw attention to three fragments of the pedimental sculptures extant at Athens (figs. 519–521).

Fig. 519.

One is a large female head (height 0·35^m), which J. Six in the *Journ. Hell. Stud.* 1911 xxi. 66 f. fig. 2 described as 'a nearly formless block.' That is a bit too severe. A. H. Smith in the *Brit. Mus. Cat. Sculpture* i. 198 no. 339. 2 and in *The Sculptures of the Parthenon* London 1910 p. 22 frag. 15 pl. 14 had been content to say 'much defaced.' Points deserving of emphasis are these. It was certainly a veiled female head. It appears to have worn a head-band or *stephane*. And in both respects it resembles the Hera of the Hephaisteion ('Theseion').

At this point prudence would perhaps pause, content with probabilities, for in what follows the element of conjecture is necessarily larger. Nevertheless a bow drawn at a venture has before now hit the mark. So I proceed with as much circumspection as the facts allow.

Between Hera and the first of the extant figures from the southern angle is a gap, which—as the floor-traces suggest—was once filled by two standing persons. But, since these persons have entirely disappeared, how are we to identify and restore them? Our only clue will be the fact noted above¹, that Attic vases painted within a few decades from the completion of the pediment are full of motives derived from the Parthenon. Now a splendid *kratér* at Petrograd (fig. 522)², attributed by J. D. Beazley to his 'Kadmos

The other two fragments possibly derived from the same figure are a left breast (height 0.185^m) with close-fitting *chiton* (*Brit. Mus. Cat. Sculpture* i. 202 no. 339, 29, *The Sculptures of the Parthenon* p. 24 frag. 87 pl. 14 B) and the front part (width 0.35^m) of a sandalled right foot (*The Sculptures of the Parthenon* p. 23 frag. 40 pl. 14 A).

Fig. 520.

Fig. 521.

So far as I can judge, these three fragments fall well into place on my drawing, which was—I may say—completed before I began my search for confirmatory remnants. On the other hand, *Six loc. cit.* p. 66 claims that the veiled head was found by Ross before the western front of the Parthenon. If that be so, it of course tells against the assignment of frag. 15 to my seated Hera. But the statements of Ross himself are not quite so explicit and leave some room for doubt (L. Ross *Archaeologische Aufsätze* Leipzig 1855 i. 89 f. 'Die Ausgrabung ist jetzt (sc. 1835) schon bis an die Mitte der Westseite [des Unterbaus] des Tempels fortgeführt. . Die Menge der gefundenen Bruchstücke von Bildhauerarbeit und Inschriften ist gross.... Unter den übrigen Bruchstücken sind noch viele sehr schöne, namentlich ein Paar Fragmente von Köpfen, die aber wohl nicht (A. Michaelis *Der Parthenon* Leipzig 1871 p. 196 on nos. 8 and 9 asks: 'warum nicht?') zu den Figuren des Giebsfeldes gehören mochten; von einer der Metopen der Südseite ist ein sehr schön erhaltener Centaurenkopf ausgegraben worden,' etc.). Such a dump of fragments as he reports, some sculptured, others inscribed, may well have yielded a stray piece from any part of the building. Smith in the British Museum publications simply ignores the alleged find-spot.

Fig. 522.

Painter'¹ (c. 420—410 B.C.²), depicts the judgment of Paris in terms, so to speak, of the eastern pediment. The scene is flanked by two *quadrigae*. In the centre an armed Athena stands before her judge. To the right is a seated Aphrodite grouped with Eros; to the left, a seated Hera with Hebe standing behind her. I submit that in Pheidias' design too Hebe stood behind Hera. And, if so, her companion was almost certainly Herakles, whose presence at the birth of Athena is attested by vases of our first³ and third⁴ types. This conjecture is strengthened by the fact that on the *kratér* of the Villa Giulia⁵, which demonstrably borrowed its three central figures⁶ and very possibly borrowed all its figures from the eastern pediment of the Parthenon, Herakles and Hebe stand side by side. In my restoration I have adopted from that *kratér* the gesture of Hebe's right hand, which may be characteristic as it occurs in another vase-representation of her⁷, and also the entire figure of Herakles⁸, including his club and lion-skin⁹.

Beazley *Attische Vasenmaler des rotfigurigen Stils* Tubingen 1925 p. 451 no. 1).

⁸ In order to make Herakles approach from the left, not from the right, I had a racing of the vase-figure turned back for front.

⁹ *Frag.* 51 in A. H. Smith *The Sculptures of the Parthenon* London 1910 p. 23 pl. 14 A (fig. 523) is perhaps part of Herakles' left thigh (height 0.26^m).

¹⁰ One interesting result of this procedure is that we obtain a Pheidias prototype of the Lansdowne Herakles (*Specimens of Ancient Sculpture*, selected from different collections in Great Britain by the Society of the Dilettanti London 1809 i pl. 40, Clarac *Mus. de Sculpt.* v. 14 pl. 788 fig. 1973, cp. pl. 802 G fig. 1973 A (reversed), Brunn—Bruckmann *Denkm. der gr. und rom. That famous statue portrays the hero in a very similar pose and with very similar proportions. Critics have regarded it sometimes as a Lysippean (A. Michaelis *Ancient Marbles in Great Britain* Cambridge 1882 p. 451 f., P. Gardner in the *Journ. Hell. Stud.* 1903 xxxiii. 126 ff., 1905 xxv. 234 ff., W. W. Hyde *Olympic Victor Monuments and Greek Athletic Art* Washington 1921 p. 298), sometimes as Scopas (B. Graef in the *Rom. Myth.* 1889 iv. 189 ff., Furtwangler *Masterpieces of Grk. Sculpt.* p. 296 f. fig. 125, M. Collignon *Scopas et*

Fig. 523.

The gap between Aphrodite and the extant marbles from the northern angle is wider, and requires three figures to fill it. At first sight this might seem a yet more hopeless task. But in point of fact we are here much helped by the floor-traces and by certain *à priori* reasonings. The traces in the floor appear to show¹ that the two blocks behind Aphrodite were occupied by one figure standing and another advancing from right to left. The remaining block was covered by a mass of marble supporting a third figure, which probably faced right, since the drawing attributed to Carrey and now preserved in the Bibliothèque Nationale has the head of the nearest seated goddess turned towards the left as if in conversation² (pl. lvii, 1).

Now the vase-paintings regularly represent two witnesses of the birth for whom room has not so far been found—Hermes holding his *caduceus* and Apollon playing his *kithára*. Several modern critics accordingly have suggested that Hermes should be installed next to the extant figures on the north: he would thus balance the hasting female ('Iris') on the south. To this position he has been relegated by A. Furtwängler³, E. A. Gardner⁴ (pl. lvii, 2), K. Schwerzek⁵ (pl. lvii, 3), J. N. Svoronos⁶ (pl. lviii, 1), and Rhys Carpenter⁷. It has not, however, been noticed how admirably the Hermes of the Villa Giulia vase is adapted to fill the space.

Praxitéle Paris 1907 p. 34. cp. F. P. Johnson *Lysippos* Duke Univ. Press 1927 pp. 53 f., 208 ff. pl. 41). But Lysippos, as P. Gardner *loc. cit.* has urged, was alike in style and in date closer to Skopas than is commonly assumed. And both sculptors appear to have been influenced strongly and permanently by the Parthenon marbles. It is therefore by no means improbable that the Lansdowne Herakles is a Lysippean or Scopaeic modification of an original to be sought among the missing figures of the east pediment. If we may judge from the Villa Giulia vase on the one hand and the Lansdowne statue on the other, the Phedias Herakles turned his head towards the *Standöem*, whereas the Lysippean or Scopaeic modification looked towards the *Spelbeim*. But that is a change characteristic of the transition from fifth-century to fourth-century sculpture in general.

¹ *Longe aliter* Rhys Carpenter in *Hesperia* 1933 ii. 68 ff., 81. He holds that on block 17 was a standing Muse, on block 18 a seated Apollon (both recoverable, the latter with a right-for-left turn, from the Mantinean base), and on block 19 probably a Hermes (less probably an Iris) running or moving rapidly towards the right.

If the painter of that vase was indeed, as we have supposed¹, copying the recently erected Parthenon pediment, then it follows that the beautiful device of giving wings to Hermes' head—a device with a future before it²—must be ascribed to Pheidias himself³. Again, it has long been known that the restful attitude of the supported foot, a favourite motive with Lysippos⁴, is found in the west frieze of the Parthenon, where twice over a youth wearing a *chlamys* is seen raising his left foot on a rock to tie his shoe-string or fasten his sandal-strap⁵. But now we perceive that Lysippos, who employed the same stance for his wonderful multifacial Hermes⁶, was inspired not by a Pheidias relief but by a

Klein's results were accepted by E. von Mach *A Handbook of Greek and Roman Sculpture* Boston 1905 p. 249 ff. pl. 238 a, b, but by nobody else (see e.g. Furtwangler *Glyptothek zu München* p. 294 n., *ib.*² p. 312 f. n., F. Pheidias sculpture in the round, not by the *épheboi* of the west frieze but by the Hermes of the east pediment¹. The abiding influence of Pheidias' representation may be judged from the fact that in the pediment of Domitian's Capitoline temple a similar figure of Mercurius occupied almost the same relative position².

The two blocks next to Aphrodite were filled, we have said³, by one figure standing and another advancing from the right. If the former was Apollon *kitharoidós*, the latter was presumably Artemis. Brother and sister thus formed a good pendant to the pair of lovers, Hebe and Herakles, in the opposite wing of the gable. They are restored in this position by Schwerzek⁴ (pl. lvii, 3) and in the corresponding position behind Zeus by Furtwängler⁵.

Apollon would almost certainly have been wearing the long *chiton* customary with *kithára*-players. His type is, I believe, preserved with slight modifications by the Munich statue of Apollon *kitharoidós*⁶, which Furtwängler attributed to Agorakritos, the pupil

It may be observed that one copy of the sandal-fastening Hermes, a statuette in the Vatican (Clarac *Mus. de Sculpt.* pl. 814 fig. 2047), makes the god stand towards the right and raise his left foot. But this inversion of the established pose can hardly be viewed as a survival of the Parthenon motive.

¹ Of the actual statue one possible portion (fig. 524) remains, two fragments at Athens which together make the right knee and leg of a male figure suitable in size (height 0.58m) (A. H. Kerch and now at Petrograd, which represents his contest with Marsyas (fig. 525)¹ and obviously borrows most of its ideas from the eastern pediment of the Parthenon.

For Artemis we must depend on a red-figured *pelike* from Vulci, now in the British Museum (fig. 526 and pl. lvi)². This handsome vase, attributed by Ducati³ to Hermonax and by Beazley⁴ to a painter akin to Hermonax, should be dated c. 460 B.C.⁵. Its Artemis cannot, therefore, have been copied from the pediment, but may well, I conceive, preserve for us the type adopted by Pheidias. The goddess is seen advancing hastily from the right towards the central group: she raises her right hand in surprise and holds a bow with her left. This type in the course of the fifth century made its way from painting to sculpture. For the Artemis Colonna at Berlin⁶—to mention but one out of many replicas⁷—gives the goddess approximately the same attitude and is regarded by Furtwängler⁸, Bulle⁹, Kekulé¹⁰, and more recently by Schröder¹¹, as a fifth-century creation¹². L. R. Farnell¹³ says of her: 'The pose and action are

somewhat difficult to explain. She is hurrying forward, with both arms partly stretched out; the right hand certainly held nothing, but the left was grasping something that must have been either a torch or a bow.' He suggests 'that she has just discharged an arrow...and that the action of the archer still lingers, so to speak, in the hands.' I should prefer to think that the original type, taken over by Pheidias from the painters' tradition, represented Artemis hastening to greet the new-born goddess.

We come now to the extant marbles—a topic less precarious but almost equally problematic. And first for the maidenly figure ('Iris') escaping towards the left. Iris she cannot be; for, as A. H. Smith¹ points out, she has neither the wings nor the regular costume of that goddess. Besides, her action is not that of a steady flight through the air, but rather that of a person starting aside in alarm. Latterly the opinion has been gaining ground that she is Eileithyia. This was conjectured in 1876 by G. Loeschcke², and was for some time maintained by A. S. Murray³. J. Overbeck⁴ was inclined to follow suit, but doubted whether Eileithyia could be so juvenile in appearance. W. R. Lethaby⁵, to whose restoration of the figure I am much indebted, speaks of her as 'Ilithyia?' What, to my thinking, makes this identification practically certain is the fact that the vase-paintings of Athena's birth show two and only two persons flying from the scene. One is Hephaistos; the other, Eileithyia (fig. 526)⁶. If, then, Pheidias designed his gable with reference to the existing ceramic tradition, an escaping female figure *must* be Eileithyia. Overbeck's objection that this figure is too youthful loses its force when we remember that, according to Homer, Hesiod, Pindar, and half a dozen later writers⁷, Eileithyia was the daughter of Hera, indeed—if we may argue from the Hesiodic genealogy—was younger even than Hebe⁸.

The naming and restoring of the two seated goddesses beyond Eileithyia is an easy task, thanks to F. Studniczka and G. Dickins. Studniczka¹ in 1904 showed that the goddesses are sitting, not on stools or low thrones, but on square hinged chests, so that they must be identified, not as P. O. Bröndsted² in 1830 suggested with Pindar's 'well-throned Horai',³ but with Demeter and Persephone on their mystic boxes (*kibotai*)⁴. Dickins⁵ in 1906—1907 after a brilliantly successful⁶ restoration of Damophon's group at Lykosoura observed that the Messenian sculptor's Demeter and Despoina were direct adaptations of the seated goddesses in the Parthenon pediment⁷. This discovery not only enables us to decide with regard to the Parthenon pair that Demeter is the goddess on our left, Persephone the goddess on our right, but further justifies us in restoring Persephone with a long sceptre. Enough of Demeter's right hand remains to make it certain that she was not grasping a torch but, at most, holding a bunch of corn-ears and poppies as in the Chiaramonti statuette⁸. Damophon, transforming the pediment-group to a cult-monument, put a long torch into the hand of Demeter in order that it might balance the long sceptre in the hand of Persephone. I have given Persephone corn-ears in her right hand rather than a basket (*ktiste*) like that of Despoina because I conceive that Despoina's basket was the equivalent of the box on which Persephone is sitting. Damophon had to make his

Despoîna, in accordance with her cult-title, a 'Queen' seated on a throne, he therefore found room for the sacred receptacle on her lap and *ipso facto* displaced the corn-ears of his original. The restoration of the Parthenon Persephone with corn-ears in her right hand and a sceptre in her left is supported by the existence of a similar type on the imperial bronze coinage of Athens (fig. 527)¹.

The reclining god next to Demeter is Dionysos. This identification, first mooted by F. G. Welcker² in 1817, doubted by W. M. Leake³ in 1821, but re-affirmed by E. Gerhard⁴ in 1840, admitted with a query by A. Michaelis⁵ in 1871, and then more definitely established by E. Petersen⁶ in 1873, is accepted nowadays by most critics and has in fact become the official view⁷. The main reasons advanced on its behalf are that the skin over which the young god has spread his mantle appears to be a panther-skin not a lion-skin⁸, that the soft seat and comfortable sandals suit a lover of ease⁹, and that Dionysos occurs in a very similar pose on a dramatic relief from the Peiraieus¹⁰, on the choragic monument of

Lysikrates¹, on a moulded *askós* in the British Museum², and as a recumbent figure forming the lid of a Roman sarcophagus in the Louvre³. It should further be noticed that vase-painters introducing Dionysos into the scene of Athena's birth regularly place him at⁴, or towards⁵, the extreme left of their composition. I have restored him with a *thyrsos* in his right hand and nothing in his left, partly because the muscles of the left fore-arm, so far as it is preserved, suggest an attitude of simple repose and are inconsistent *e.g.* with his holding a *phiale* as on the Peiraieus relief, and partly because this type for the god passed into the *répertoire* of later ceramic art (fig. 528)⁶. No doubt analogous types were used by the die-sinkers of Magna Graecia *c.* 400 B.C. to represent Herakles at Kroton⁷, Herakleia⁸, and Tarentum⁹, and to represent Pan at Pandosia¹⁰.

But we have seen reason to put Herakles elsewhere in the pediment; and Pan is a god who never appears in vase-paintings of Athena's birth. The claims of Dionysos to be identified with 'Theseus' are indeed so strong that we may fairly dispense with a detailed discussion of other hypotheses¹.

Corresponding with the deities of corn and wine we have another triad in the opposite wing of the gable. Here again Pheidias took a hint from ceramic tradition; for a black-figured *amphora* in the Louvre (fig. 530)² shows three goddesses in a row to the extreme right of the birth-scene. F. G. triad was Aglauros, Herse, and Pandrosos; and J. Roulez¹ was inclined to give the same explanation of the three goddesses on the Paris vase. Their view is attractive and the title 'die "Thauschwestern"' still finds some defenders². Nevertheless the discovery of the Madrid *puteal* has gone far towards proving that the old³ name, 'the Fates,' is right. Even F. Hauser⁴, who argues that the Fates of the *puteal* were not taken from the same model (*Vorbild*) as its other figures, yet admits that they too may well go back to the east pediment of the Parthenon as their original. Further, while granting that their attributes have not yet been

rolls can be quoted from older Greek sources¹. I have not scrupled, therefore, to use the Madrid *puteal* and the Tegel *replica* for the restoration of these goddesses, assuming that the first designer of such reliefs adapted the pedimental group to the requirements of his frieze by the simple expedient of making two of the figures stand up². In the pediment the Fate sitting on a separate rocky seat is *Klothó*, the 'Spinner.' She holds a distaff in one hand, a spindle in the other, and—a thoroughly natural touch—has drawn back her right leg to leave room for the spindle to twirl. Lachesis too is seated (Platon³ speaks of her lap) and holds the *lúche* or 'lots,' of which Atropos the left-handed⁴ has just drawn the one that she is reading. She lies on the knees of Lachesis and thereby declares herself a personification of that irreversible fate which, as Homer has it, 'lies on the knees of the gods'⁵. Intentionally or not, Pheidias conceived her in accordance with the strange Hesiodic⁶ description—literally lower than her sisters and yet the eldest and in a sense the most exalted of the three. Details apart, the common interpretation of this famous triad as the Fates is so apt that we may again without scruple jettison a cargo of divergent and sometimes fantastic misunderstandings⁷.

² Rhys Carpenter in his restoration (*supra* pl. lviii, 2) has contrived to work in the Fates of the *puteal* as three standing figures, but at the expense of more than one improbability. He has to place this triad in the left wing of the gable, whereas the vase-painter relegated it to the extreme right of the scene (*supra* fig. 530). Again, Carpenter must represent his Fates as three figures on an ascending scale, large, larger, largest—a variation which might be tolerated in the case of three diverse deities but becomes grotesque if applied to three powers of equal prestige. And lastly, the aesthetic effect of so many single figures standing erect in parallel, pillar-like lines is architectural rather than sculptural: it recalls indeed the east pediment of the temple of Zeus at Olympia, but is in flat and flagrant contradiction of Pheidias' closely knit and subtly balanced design.

⁴ In the Platonic image (*ib.* 617 C) Klotho uses her right hand, Atropos her left, Lachesis either hand alternately. Platon is probably Pythagorising (J. Adam *ad loc.*), and where that is the case we may well suspect a basis of popular belief (to the passages cited *supra* ii. 222 n. 1 add i. 283 n. 0, ii. 223 ff., 354, 649, 1129, etc.).

The whole scene of Athena's birth is flanked by two angle-groups representing daybreak and nightfall¹. On the left Helios drives his team of four horses up from the sea. On the right Selene drives hers down behind the hills². The rising Sun thus synchronises with the setting Moon and fixes the time as that of a full moon. Pheidias has indicated this with subtlety and success by making

¹ The juxtaposition of these groups with Dionysos on the left and the Fates on the right was more or less defensible on religious grounds. Dionysos had points of contact with Helios (*supra* II. 253 with n. 4), and the Fates were sometimes reckoned daughters of Nyx (*frag. lyr. adesp.* 140 Bergk³, 5 Diehl, 70 Edmonds *ap. 'An Athenian standing at dawn before the east front of the Parthenon and looking towards the pediment might see the sun rising from the sea on his left and the moon passing on his right away over the hills ... With equal justice to the natural phenomena the sculptor could have imagined himself facing in the opposite direction. The sun would then have been on his right hand and the moon on his left, as on a beautiful vase in the British Museum about contemporary with the Parthenon (E 466) [Furtwangler—Reichhold—Hauser *Gr. Vasen-malerei* III. 33 ff. pl. 126] ... It is true that the Greeks generally and Pheidias in particular regarded the east as on their left hand. On the base of his statue of Zeus at Olympia, representing the birth of Aphrodite, the sun was seen rising on the extreme left, the moon retiring on the right (Pausanias, v. 11, [8]), and on the base of his Athena in the Parthenon itself the same phenomenon occurs, if we may judge from the Lenormant copy of the statue. But granting that this was a mere habit on his part, we must still regard it as a happy coincidence that on the Parthenon the sun rises exactly as in the sky at Athens'. Selene look round towards the new-born goddess¹ and so reveal the full beauty of her face². Here, however, a certain difficulty must be met. Scholiasts and lexicographers attempt to explain the ancient epithet *Tritogéneia*³ by asserting that Athena was 'born on the third' day from the end of the month⁴, which would be quite incompatible with a full moon. August Mommsen⁵ held that the Pheidias combination of rising sun with setting moon might have meant that Athena first saw the light on the morning of a 'setting day' (*phthínās heméra*), i.e. a day towards the end of the month. August Mommsen was a learned man, but foolish at times. H. Nissen⁶ would reject the testimony of the late grammarians as a worthless etymological speculation and accept Pheidias' grouping as evidence that Athena was born on the morning of a full-moon day. I incline to a modification of his view. We have seen reason to believe that the myth of Athena's birth presupposes some such rite as the Dipolieia; in fact we have derived thence the startling motive of Zeus struck on the head by a double axe⁷. Moreover we observe this: the ceremonies of the Dipolieia aimed at securing an adequate dewfall and rainfall at a critical time of year⁸; and the story of Athena's birth told how, at the moment when Hephaistos cleft the head of Zeus, a golden shower descended upon Rhodes⁹.

We may, then, perhaps assume that the birth of Athena, whatever its original date, was early brought into connexion with the cult of Zeus and celebrated at the time of the Dipolieia, *i.e.* on the occasion of the last full moon in the Attic year¹. But the ever-growing importance of the Great Panathenaia would predispose men to identify this festival rather than the obscure and old-fashioned Dipolieia with the real birthday of the goddess. And, since the Great Panathenaia was held on the third day from the end of Hekatombaion², the way was open for ingenious etymologists to explain the title *Tritogénia*.

The rocky summit compassed about by the Sun and Moon is the Akropolis itself³: Athena must needs be born in Athens⁴. The local setting is further shown by the *personnel* of the assembled gods. The central group comprised Zeus the thunderer and Athena his armed daughter, together with Hephaistos and Poseidon the gods of fire and water. We think at once of Zeus *Policus*, who

² Prokl. in Plat. *Tim.* i. 26, 18 f. Diehl.

³ A. Michaelis *Der Parthenon* Leipzig 1871 p. 166 f., after a review of previous opinions, concludes that the scene is laid ἀκροράτῃ κορυφῇ πολιδείας Οὐλύμπου (II. 1. 499). E. Petersen *Die Kunst des Phidias am Parthenon und zu Olympia* Berlin 1873 p. 110 ff. likewise argues for the rocky summit of the 'Götterberg,' Mt Olympus. C. Waldstein *Essays on the Art of Phidias* Cambridge 1885 also assumes 'the summit of Mount Olympus' Others are less precise and incline to make Olympus mean, not the mountain, but the sky above it (*supra* i. 115). So *e.g.* Furtwängler *Masterpieces of Gk. Sculpt.* p. 465 'The whole space enclosed within the border of the pediment is in fact Olympus' etc., Collignon *Hist. de la Sculpt. gr.* II. 22 'Le lieu de la scène est le ciel des Olympiens,' H. Lechat *Phidias* n.d. p. 98, *ib.*² Paris 1924 p. 115 'alors, à ces pensées, comme la scène s'élargit! comme grandit ce fronton de moins de 30 mètres, qui contient tout l'Olympe peuplé de dieux, et à ses extrémités, en bordure de l'Olympe, l'Océan, et, sur la divine assemblée, la courbe lumineuse du ciel entier, de l'horizon du matin à l'horizon du soir!'

Dissent is expressed by that sturdy independent A. S. Murray *The Sculptures of the Parthenon* London 1903 p. 31 f. Urging that the western pediment admittedly portrays the gods as 'invisibly present in the atmosphere of the Acropolis' and that the eastern frieze does much the same, he claims 'at least a strong presumption that the same principle had applied to the central deities of the east pediment' 'Let us call the invisible sphere where she was born Olympus, but define it as for the moment just over Athens.'

I would go even further in the same direction. If the olive-tree and the salt well were represented in the west gable, why not the hollowed theatre and the rocky stairway in the east? Many localities could boast their own Olympus (*supra* i. 100): was Athens unworthy of the like honour?

⁴ No adverse argument can be based on the authority of *h. Ath.* 28. 4 ff., which may in fact be of very recent composition (W. Schmid—O. Stahlin *Geschichte der griechischen Literatur* München 1929 i. 1. 243 'ob der Dichter an die Bildwerke vom Ostgiebel des Parthenon gedacht oder der Künstler das Gedicht im Sinn gehabt hat oder ob beide von Stesichoros (fr. 62 B.) abhängen, ist nicht auszumachen').

stood beneath the open sky, of Athena *Poliás* in the neighbouring Erechtheion, and of Poseidon and Hephaistos with whom she shared her ancient dwelling. In a word, we have before us all the most important deities worshipped in the eastern half of the Akropolis.

Again, the same local significance attaches to the extreme figures on the south and on the north. On the south Dionysos sits at ease upon his rock spread with panther-skin and mantle, a spectator as it were in his own theatre¹. Was it not hollowed out of the hill-side immediately below him? On the north the three Fates are seated on rocks, which—to quote A. H. Smith's description—are 'levelled on the top, and...cut in step form to suit the composition².' This surely suggests the ancient rock-cut steps leading down through the cave of Aglauros towards the Gardens³, where the Fates were⁴, and for that matter still are⁵, worshipped.

³ Not, of course, the postern-steps of the Helladic fortress (L. B. Holland in the *Am. Journ. Arch.* 1924 xxviii. 143 ff. with pl. 7 and figs. 2 and 3, W. Judeich *Topographie von Athen*² München 1931 pp. 118, 259), for that exit had been long since blocked and filled in, but the underground stairway by which the *Arrhephoroi* went down through the Aglaurion (*supra* p. 169 n. 1).

⁴ Paus. i. 19. 2 (cited *infra* p. 722 n. 3). P. Weizsacker in Roscher *Lex. Myth.* ii. 3089 notes that these Moirai were associated in cult with Zeus *Μοιραγέρης* (*supra* ii. 231 n. 8 (a)).

⁵ B. Schmidt *Das Volksleben der Neugriechen* Leipzig 1871 i. 217 f. cites two items of evidence, which may refer to the same locality. (1) J. Galt *Letters from the Levant* London 1813 p. 109 f. an Athenian friar mentions that at Athens young girls, when they become anxious to get husbands, on the first evening of the new moon, put a little honey, a little salt, and a piece of bread on a plate in a certain spot on the bank of the Ilisos, near the Stadion, and on setting it down mutter some ancient words of forgotten meaning in which they beg Fate to send them 'a pretty young man': after this they return home and eagerly await the fulfilment of their charm. (2) F. C. H. L. Pouqueville *Voyage de la Grèce*² Paris 1827 v. 66 f. states that women at Athens who long to bear children and also those who are already pregnant come and rub themselves on a rock near Kallirhoe and invoke the Moirai to be gracious to them, using the formula 'Ελάτε, Μοίραι τῶν Μοιρῶν, να μοίρατε κ' ἐμένα (Schmidt cj. μοιράνετε for να μοίρατε). See further N. G. Polites *Μελέτη ἐπὶ τοῦ βίου τῶν Νεωτέρων Ἑλλήνων* Athens 1874 ii. 227 ('ἐν τῷ Παναθηναϊκῷ σταδίῳ ἐν τῇ ὁπῇ τοῦ λόφου τοῦ λεγομένου "τρίπιο βουνό"', J. C. Lawson *Modern Greek Folklore and Ancient Greek Religion* Cambridge 1910 p. 120 with n. 4 ('Apparently the old subterranean passage by which competitors entered the stadium'). Lawson *ib.* p. 130 notes the modern 'belief that the Fates invariably visit each child that is born in order to decree its lot,' adding: 'I do not wish to engage in the controversy which has raged round the identification of the figures in the east pediment of the Parthenon; but those who would recognise among them the three Fates, may fairly draw a fresh argument from the strength of this popular belief.'

E. Petersen¹ and F. Studniczka² contend that the lovely reclining Fate of the Parthenon gable must be Aphrodite and none other. But close to the temple of Aphrodite in the Gardens stood a herm-like statue of Aphrodite *Ouranía* with an inscription declaring that she was the eldest of the so-called Fates³. And, as Furtwängler⁴ points out, the Fates are repeatedly represented with the *chiton* slipping from the shoulder—a motive manifestly Aphroditic.

It seems probable that this principle of local significance applied not only to the central and side-figures of Pheidias' composition, but to the rest of it as well. Certainty is of course unattainable: yet a few tentative suggestions may be made.

The deities between Dionysos and Hephaistos were, from left to right, Demeter, Persephone, Eileithyia, Herakles(?), Hebe(?), and Hera(?). Demeter and Persephone represent the cult at Agra, where the Lesser Mysteries were celebrated⁵. Pheidias has made Persephone slightly larger in scale and decidedly more prominent in pose than Demeter. Why? Because the daughter, not the mother, was the chief goddess of Agra⁶. As such she appears, sceptre in hand, on the painted tablet of Ninnion (fig. 531)⁷.

This tablet of painted terra cotta (height 0'30", width 0'15") was found by Skias in 1895 during his excavations at Eleusis and is now in the Museum at Athens. Its lower edge bears, in lettering of s. IV B.C., the dedication Νά(ι)ννιον τῶν θε(ῶ)ν ἀνέθηκεν. Who Ninnion was, we do not know. Svoronos tries to identify her with the *hetaira* Nannion (Athen. 567 E—F Νάννιον, 587 F Ναννάριον). But this—though Miss Harrison *op. cit.*²

p. 558 n. 2 agrees—is quite impossible, and very gratuitous. *Nuvviov* is the affectionate diminutive of *νύνη*, 'aunt' (F. Bechtel *Die Attischen Frauennamen* Göttingen 1902 p. 66), and nobody would have been more shocked at Svoronos' identification than 'Auntie' herself!

Fig. 531.

The tablet is shaped like a temple-front with pediment and *akrotérion*. The decoration of its pilasters and triglyph-frieze is peculiar and certainly symbolic: the pilasters suggest *βάσχοι*; the frieze, cymbals (?) or basins (?), hardly phases of the moon.

The main design has two registers. To the right of each is a seated goddess, towards

Eileithyia too had a sanctuary at Agra¹ and a couple of *Hersephōroi* for whom seats were reserved in the theatre². These Agraeon goddesses are admirably placed between Dionysos on the left and Herakles on the right. For on the one hand the Lesser Mysteries are described as 'a representation of Dionysos' story³, and on the other hand their first initiate is said to have been Herakles⁴. However, a more famous centre of Herakles-worship was that at Kynosarges in the north-easterly suburb Diomeia, where he had a temple and an altar⁵. His consort there was Hebe, daughter of

whom three and four figures respectively are advancing. Presumably the two seated goddesses are Demeter above, Persephone below, since Demeter is larger and coloured red, Persephone smaller and coloured white. If so, there is (*pace* M. P. Nilsson in *Archiv f. Rel.* 1935 xxxii. 93 f.) something to be said for Miss Harrison's suggestion that the upper register shows the mysteries of Eleusis, the lower those of Agra, which were a preliminary purification (*προκάθαρσις*) for the greater rites to follow. This agrees with the indications of landscape. Above we see the groundlines of a rocky floor and a pillar standing at the foot of a hill, suggestive of the *Telestérion* at Eleusis (cp. *supra* i. 218 pl. xviii, 221 fig. 164). Below we have again a hilly surface. The *omphalós* and the crossed *bákchoi* perhaps imply that at Agra the *omphalós* was deemed to be the grave of Dionysos (*supra* ii. 219 n. 4).

Demeter is approached by a female *daidouchos*, who bears a couple of blazing torches, and a girl who carries the *kérxvos* or *képros*, a vessel containing lamps, fitted with a lid having apertures in it, decked with myrtle-twigs, and attached to the bearer's head by means of white ribbons (see the literature cited *supra* p. 248 n. 1, especially O. Rubensohn in the *Ath. Mitth.* 1898 xxiii. 295 f. with fig.). The *kernophóros* is followed by two men, big and little. The big man has a staff in his right hand, the little man has a jug. I take the scene to be the initiation of Herakles: the staff is his club, the jug hints at the banquet of the blest.

Persephone in like manner is approached by a male *daidouchos* with two blazing torches, another *kernophóros*, and a bearded man with a staff over his shoulder—Herakles again.

Finally, in the pediment we see the same *personnel* in a scene of final felicity—the *kernophóros* in the centre, a flute-girl making music on the left, Herakles draining his jug on the right, with a couple of other feasters in the angles.

Zeus, who had an altar of her own¹, and again special seats in the theatre². Hera's temple stood somewhere on the road from Phaleron to Athens³. In the Parthenon pediment, as restored, she is turning round⁴ to encourage her timorous daughter Eileithyia, with whom indeed she was actually identified at Thorikos and Argos⁵.

The deities between the Fates and Poseidon were, from right to left, Hermes(?), Artemis(?), Apollon(?), Eros(?) and Aphrodite. Hermes sets foot on a rock at the top of the stepped seats, on which the Fates are sitting. He presumably represents the oldest Hermes-cult of Athens, that of the Erechtheion⁶, hard by the top of the Aglaurion staircase. Artemis will probably be Artemis *Agrotéra*, the divine huntress of Agra, whose statue was equipped with a bow⁷. Apollon the *kithára*-player is Apollon *Pýthios* of the Pythion adjoining the great Olympieion⁷. Finally, Eros and Aphrodite had a joint-sanctuary among the rocks on the north-east slope of the

citadel¹, and Aphrodite was also goddess of the Gardens, which are believed to have occupied the low ground on the right bank of the Ilissos².

On this showing every figure in the east pediment of the Parthenon corresponded with an actual cult, either on the eastward half of the Akropolis itself, or at any rate in some easterly suburb of Athens. The gods of the town had assembled, as it were, on their local Olympos to witness with joy and wonder the epiphany of the all-conquering goddess.

(i) Significance of the birth of Athena.

The myth represented in the Parthenon pediment is so peculiar in character that it has evoked a great variety of interpretations from critics both ancient and modern.

The Stoics of course allegorized³. Chrysippos⁴ explained that Athena meant Wisdom, located her in the breast, and said that she issued from the head as Voice, being delivered by Hephaistos, since Wisdom was produced by Skill, and rightly named *Athenā*, that is *Athrenā*⁵ 'Observation,' and *Tritonīs* or *Tritogēneia* as comprising the triad of Physics, Ethics, and Logic. a philosopher from Seleukeia on the Tigris¹, born c. 240 B.C.², identified Zeus with the universe or the universal soul and *Athenā* with its highest part, the *aithér*, and was thus enabled to work in the Stoic *clichés* 'from the head' and 'Zeus male and female.' Lastly Cornutus³ in his *Compendium of Theology* offered a blend of Chrysippos and Diogenes.

Aristokles⁴ the historian, presumably in his *Theogony*⁵, went off on a different tack. He declared that Athena was born in Crete, where she lay hidden in a cloud till Zeus cleft it and so brought her to light. This mention of the cloud recalls the Theogony of the Orphic Rhapsodies, in which the cosmic egg containing Metis was called 'the cloud'⁶; and it may be that Aristokles was here indebted to Orphism.

728 Significance of the birth of Athena

E. Rückert¹, and G. Hermann² early in the nineteenth century, following the lead of the Stoics, accepted Athena as a personification of divine Wisdom and laid stress on the myth of Metis³. Dictionaries and handbooks spread the edifying doctrine, until no gentleman's library was complete without a bust of Pallas.

The second half of the century rebelled against excessive moralising and substituted a string of so-called 'physical' interpretations⁴. F. G. Welcker⁵, like Diogenes, took Zeus to be the supreme spirit and equated *Athéné* with *aithér*, the divine effluence that issues forth from him as, in Philon's theology, the Logos proceeds from the Godhead. Others, obsessed by equally impossible etymologies, spent much eloquence in maintaining that Athena, daughter of the sky-god, must needs be the Dawn⁶, or at least the Morning Twilight⁷.

Such vagaries gradually gave way before the advance of another 'physical' school, the advocates of Storm-cloud and Lightning. They too founded upon classical lore, since they claimed the support

Vielmehr, wenn wir die mannichfaltigen Formen ihres Kultus überblicken, werden wir zu der Ueberzeugung geleitet, dass es die allwaltende gottliche Macht, Weisheit und Gute, die gottliche Vorsehung gewesen sei, die man als die gewaltige, hochsinnige, huldreiche Tochter des Himmelsherrschers, als Pallas Athena anbetete.'

'Dans le principe, personification des eaux ou tout au moins des vapeurs qui, des eaux, s'élèvent dans l'air, elle n'est plus guère, à l'époque de Périclès, qu'une hypostase de la sagesse divine et de la providence de Zeus' (¹ Arnob., *Adv. gent.*, III, 31.). De déesse de l'élément humide, elle devient déesse de l'air pur, de l'éther, et par là elle se confond avec le roi des dieux, Zeus, qui personnifie le firmament... Athéné représente en conséquence la sagesse, la pensée de Zeus... Déjà, dans Hésiode, on a vu Mêtis représenter, sous une forme analogue, la sagesse divine; mais, en passant dans Athéné, cette idée s'épure et s'agrandit. Toutes les vertus, toutes les perfections qui s'attachent à l'idée de l'intelligence suprême, servent à composer le personnage de la déesse... Telle est l'origine du mythe qui nous montre la déesse sortant tout armée de la tête de Zeus.'

of Aristokles and his 'cloud.' J. F. Lauer¹ in 1853 was the first to characterize Athena as mistress of the Clouds. F. L. W. Schwartz² in 1860 elaborated the notion: he contended that the head of Zeus cleft by the axe of Hephaistos or Prometheus was the storm-cloud split by the lightning, Athena *Sálpinx*³ being the trumpet-blare of the thunder⁴. T. Bergk⁵ in 1860, W. H. Roscher⁶ in 1886, and C. Robert⁷ in 1894, with greater or less enthusiasm, rallied to the same standard. Even F. Dümmler⁸ in 1896 was still largely under its spell. But in that year L. R. Farnell⁹ showed convincingly that 'physical' explanations in general and storm-symbolism in particular must be abandoned in favour of some less arbitrary hypothesis.

Symbolism, however, dies hard. Birth from the heavenly height might be discredited; but birth from an earthly height took its place. O. Gruppe¹⁰ suggested that the Argive cult of Athena *Akría*¹¹ perhaps gave rise to the myth that Athena sprang 'from the summit (*akrotátas*) of the head of Zeus¹².' U. von Wilamowitz-

730 Significance of the birth of Athena

Moellendorff¹, possibly taking a hint from T. Bergk², claims that in a pre-Greek myth Athena issued from the crest of Mount Olympos, the 'Gottesberg', for which the head of Zeus was the later Hellenic equivalent. O. Weinreich³ accepts Wilamowitz' view as well worthy of attention: F. Pfister⁴ attends, but is non-committal. O. Kern⁵ and A. H. Krappe⁶ are frankly convinced.

Apart from these typical explanations we have to reckon with a few more isolated and individual conjectures. Thus W. Deonna⁷, impressed by the fact that a Cycladic marble statuette at Karlsruhe

¹ U. von Wilamowitz-Moellendorff 'Athena' in the *Sitzungsber. d. Akad. d. Wiss. Berlin Phil.-hist. Classe* 1921 p. 926 f. 'Ist es nicht eine grossartige und allem einfachen Denken entsprechende Vorstellung, dass die Göttin, die wir uns nur in ihrer vollen Rüstung denken können, einmal dem Gipfel der Gottesberges entsprungen ist; Vasenbilder zeigen uns öfter ein solches Aufsteigen einer Göttin aus dem Boden. Darin wurde liegen, dass der Gipfel des Berges Scheitel eines Gottes, hier also des höchsten Gottes gewesen ist. Eben dieses klingt mir gar nicht unglaublich, es weist aber in die Zeit, da Helikon, Kithairon und Parnes noch riesige Götter waren, wie sie bei Korinna erscheinen, da auch der Mimas ein Gigant war. Nicht ohne Grund sind die meisten Bergnamen vorgriechisch, der Olymp an der Spitze; Kultplätze auf den Hohen werden öfter erwähnt, und für die Kappadoker, also einen Stamm des Volkes, das den hellenischen Gebirgen ihre Namen gegeben hat, wird die göttliche Verehrung des Berges ausdrucklich bezeugt¹ (¹Maximus Tyrius 8, 9 [*supra* ii. 978]). So bin ich geneigt, diesen Mythos für vorgriechisch zu halten, den Zeus in ihm für Ersatz des Olympos, der selbst einmal der Wolkensammler und Blitzschleuderer gewesen ist.'

Darf man einen Schritt weitergehen und sagen, der Mythos ist Reflex eines einstigen Palladion-Kults auf dem Bergscheitel?'

⁴ Pfister *Rel. Gr. Rom.* 1930 p. 130.

⁵ O. Kern *Die Religion der Griechen* Berlin 1926 i. 180: 'Denn nachdem Zeus den alten Berggott vom Olymp verdrängt hatte, wurde der Mythos erfunden, dass die alte vorgriechische Göttin Athene gewappnet seinem Haupte entsprungen sei. Die Anthropomorphisierung war erfolgt: Zeus thronte auf dem Olympos, und aus dessen Gipfel wurde in der Sage von der Geburt der Göttin das Haupt.'

⁶ A. H. Krappe in *Litteris* 1928 v. 63: 'Zeus is most convincingly shown [*sc.* by Kern] to have taken the place of a proto-Hellenic mountain divinity, and Athena was born from its top, later identified with Zeus' head, a truly admirable solution of one of the most puzzling of mythological problems.' *id. Mythologie universelle* Paris 1930 p. 272: 'Le lien entre Athéna et Zeus est secondaire. Il n'était possible qu'après l'identification du dieu du ciel indo-européen avec le démon de l'Olympe. C'est que l'ancienne déesse crétoise et l'Athéna originelle étant toutes les deux des déesses de la montagne, comme la Cybèle asiatique, on imagina le mythe d'Athéna née de la tête de Zeus, c'est-à-dire de la cime de la montagne.'

primitive notion of paternity¹—is to be found in the Greek type of Athena emergent from the head of Zeus (figs. 480, 484 ff., pls. liv, lv, lvi). The myth would then be of the purely iconographic sort, due, that is, to the misunderstanding of an early art-form². Such cases no doubt occur, though they are exceptional³. It should, however, be observed that on this showing the relation of Zeus to Athena was primary, the intervention of Hephaistos secondary. But we have already seen strong reasons for regarding Hephaistos and Athena as the pre-Greek deities of the Akropolis⁴, and Zeus as a later importation⁵. If therefore Deonna's view is to stand, we must at least assume—a not impossible assumption—that the art-type of Athena's birth denoted her conventional adoption⁶ rather than her natural filiation.

That may be hazardous, but it is far less so than a rival explanation put forward the next year by G. Ancey⁷. He holds that Athena, who ended by becoming a divine Thought (*Mētis*), began by being merely an oracular Voice or cephalic Sound. She was in effect the Big Noise, the awe-inspiring Sneeze of Zeus⁸! We are bidden to reflect that the Laconian form of her name, *Asána*, is obviously onomatopoeic, and that words connected with her—*kóre*, *kórre*, *kórys*—are suspiciously like *kórysa*, 'a catarrh⁹'. Oddly enough, the learned author does not mention Athena *Salpinx*¹⁰, and fails to produce what might have been his trump card, the Aristotelian query 'Why do we regard a Sneeze as a deity?...Because, like reason, it issues from our head, the divinest part of us¹¹?'

Having thus run through the whole gamut of explanations, from the sublime to the ridiculous, we are in a position to affirm that the

myth of Athena's birth as set forth in the Parthenon pediment admits of no single, satisfactory clue. So far we have recognised certain elements in the design as drawn from the ritual of the Dipolieia—Zeus *Polieus*, like his representative ox, struck with the double axe, the escape of the striker, the acquiescence of the bystanders, and the intent to safeguard the fertilising power of the sky-god¹.

But that is not all. The rites of the Dipolieia on the animal plane were in a sense paralleled by the rules of royal succession on the human plane. Sir James Frazer² has taught us that an early community is apt to regard its king as a god incarnate. Where this is the case, the king is not allowed to grow old, lest his divine powers should dwindle with the decay of their bodily vehicle. He must in fact—if society is still in a backward stage—be put to a violent death at the first symptom of physical decline: grey hairs may be his death-warrant. When he is slain, the immanent divinity, the potency that made him what he was, leaves his body to take up its abode in a younger and more vigorous frame. This rule is of world-wide validity, and the Greeks formed no exception to it. I have argued elsewhere³ that early Greek kings, honoured as embodiments of Zeus and actually called by his name, were within traditional memory killed as soon as they began to exhibit the signs of old age. Further, I have pointed out that, when they were killed, the indwelling divinity was believed to quit their bodies in the form of a bird⁴. I am now emboldened to conjecture that the myth of Athena's birth reflects just this stage of social and religious development. At least it can be expressed in terms that are highly suggestive of the same. Zeus—say the vase-painters in effect—was king of the gods and sat, sceptre in hand, on a magnificent throne. But he had reached a mature age; indeed, according to Phrynos (*supra* p. 668 f. fig. 480) and the Villa Giulia Painter (pl. lix)⁵, he was already a grey-beard. So another god

⁵ I am indebted to Mr C. D. Bicknell for the observation that Zeus on this important *pelike* is white-haired. The vase, which came from Athens and is now in the British Museum (95. 8—31. 1), is referred by Professor Beazley to his 'Villa Giulia Painter' (J. D. Beazley in the *Rom. drew near and smote him on the head with an axe. Whereupon a divine power conceived as resident in his head flew forth¹ and left him—Athena was born.

Yet a moment's reflection will convince us that, although the scene shown in the pediment corresponds well enough with the requirements of a royal succession, the correspondence is by no means absolute. Certain essentials are altogether missing. Had the situation been true to type, Zeus ought to have been killed, and the killer in virtue of marriage with the late king's daughter ought to have succeeded to her father's throne. Now it might indeed be claimed that Hephaistos mated, or attempted to mate, with Athena². But we never hear that Zeus was killed by Hephaistos, or that Hephaistos succeeded to the throne of Zeus. Why is this?

Swindler *Ancient Painting* Yale Univ. Press 1929 p. 192 f.). Previous illustrations being inadequate (O. M. von Stackelberg *Die Gräber der Hellenen* Berlin 1836 p. 16 pl. 18, 2, Lenormant—de Witte *El. mon. étr.* 1. 25 pl. 14, 75 ff. pl. 30). I publish it here from the official photographs. Lenormant—de Witte *op. cit.* 1. 75 f. comment quaintly: 'Peut-être Zeus figure-t-il ici comme un dieu-montagne, dont le sommet est couvert de neige; c'est ce que semblent indiquer sa chevelure et sa barbe blanches. Ainsi, Jupiter est identifié avec le mont Olympe, où il fait sa demeure, ou avec telle autre montagne sur laquelle il est l'objet d'un culte particulier. Mais comme il s'agit ici d'une peinture attique, le nom de Jupiter *Hymettus* nous semble devoir être préféré. D'un autre côté, la chevelure blanche (πολιός, *blanchi par l'âge*), qui, sur ce vase, distingue Jupiter, nous fait souvenir encore du surnom Πολεὺς, le protecteur de la ville, que Jupiter portait à Athènes, et cette particularité si rare sur les monuments antiques, de voir Jupiter avec des cheveux blancs, puisque nous n'en connaissons pas d'autre exemple, tend également à faire accepter ici le dieu comme une divinité locale.' But, if justification were needed, the contrast with Hebe would suffice.

Mr Bicknell further notes Raphael's design of a white-haired Jupiter for the frescoes of the Villa Farnesina at Rome (A. P. Oppé *Raphael* London 1909 p. 172 f. pls. 121 and 123 ff.), which however was very possibly inspired by Dan. 7. 9 or Rev. 1. 14.

The worried, white-haired Zeus of the *phryakes* is, of course, ἄλλος ἄλλως. See the South-Italian bell-krater in the Vatican (M. Bieber *Die Denkmäler zum Theaterwesen im Altertum* Berlin—Leipzig 1920 p. 140 no. 101 pl. 76 (=my fig. 534), Furtwangler—Reichhold—Hauser *Gr. Vasenmalerei* in. 182, 189 f. fig. 95. Earlier literature in W. Helbig *Führer durch die öffentlichen Sammlungen klassischer Altertümer in Rom*³ Leipzig 1912 1. 316 f. no. 510), which shows with considerable humour a love-adventure of the elderly but amatory god. Wearing a trumpery crownlet and carrying a ladder, he advances from the left, while Hermes on the right holds up an absurd little lamp. The young woman, prinked and preened, awaits her lover at the window, and betrays her eagerness by the finger-tips already resting on its sill.

But we can hardly say the same of the soul-birds on another from Orvieto (*supra* p. 681 ff. fig. 492), nor of the bird between Hephaistos and Hera on a fourth from Vulci (*supra* p. 700 n. 3 (1) fig. 517) nor yet of the eagle behind Thalna on the mirror from Arezzo (*supra* ii. 709 ff. pl. xxix).

Significance of the birth of Athena 735

The fact is, the myth represented in the pediment was a myth of accommodation¹. At this vital focus of Athenian worship allowance had to be made for the racial and religious changes through

Fig. 534.

¹ The only critic who has perceived this important point with adequate vision is Professor H. J. Rose *A Handbook of Greek Mythology* London 1928 p. 50 f. : 'The close connexion between Zeus and Athena is probably due to historical causes. The chief god of the invaders must come to some sort of terms with the powerful and well-established

which the worshippers had passed. If the results of our somewhat scattered enquiry may be gathered up in the form of a diagram,

3	ZEUS storm-god	thunderbolt and eagle	Attic <i>from Eleusis</i>
	POSEIDON (by-form of Zeus) god of streams, lakes, sea	(lightning-fork) trident fishing-spear	Ionian <i>from Boiotia (?)</i>

	ATHENA rock-goddess	olive, snake, owl	Pelasgian or Tyrsenian <i>from Asia Minor</i>
I			

I should maintain that the cults of the Akropolis can be arranged chronologically in a threefold stratification¹. Athena and Hephaistos came first, being a pre-Hellenic pair, the rock-goddess and the fire-god of an Anatolian people best called Pelasgian or Tyrsenian². The next to arrive, perhaps *viâ* Boiotia³, was the Ionian Poseidon, originally a lightning-god to judge from his trident⁴, though later taken to be a sea-god with a fishing-spear⁵: at first in conflict with

Minoan-Mycenaean goddess; but he cannot be her husband, since she, like the rest of her kind, has either no consort or an insignificant one; therefore he must be her father. But she can have no mother, for that would subordinate her to some other goddess, such as Hera or Persephone, and she is far too important for that. Hence her miraculous birth, which represents, if we could but recover the details, an interesting chapter in early diplomacy and ecclesiastical polity.⁷

¹ I first put forward this scheme in a course of Lectures on *The Gods of Athens, their Significance and Stratification*, which was given at Cambridge on the J. H. Gray Foundation, Feb. 14, 21, and 28, 1936.

A curious, but of course quite fortuitous, result of my arrangement is that we thus obtain deities of earth (Athena), air (Zeus), fire (Hephaistos), and water (Poseidon) comparable with the personified elements of Empedokles (*supra* i. 31).

² *Supra* pp. 189 ff., 224 ff., 236.

³ On Boiotia as an early centre of Poseidon-worship see *supra* ii. 583 n. 3. If Boeotian Δάμ = 'Zeus' (*supra* ii. 342 n. o, 344 n. o), then ποσει-δάμ = 'Lord Zeus' (*supra* ii. 583), cp. πόρνια 'Hera' = 'Lady Hera' (*supra* i. 444 n. 5, 456 n. 8).

Poseidon, though coming from Boiotia, may still have been Ionian by descent. For Boiotia, as Professor Myres has recently proved, was overrun by Ionians in pre-Dorian days (J. L. Myres *Who were the Greeks?* Univ. of California Press 1930 pp. 158, 561 n. 133).

⁴ *Supra* ii. 789 ff., 850.

⁵ *Supra* ii. 786, 790 f., 850.

Athena, he was ultimately identified with her *protégé* Erechtheus, the 'Cleaver,' and accommodated in the Erechtheion¹. Last came the Attic storm-god Zeus, introduced by the clan Kerykes from Eleusis², and worshipped in his festival the Dipolieia³ with rites that go far towards explaining the pedimental design⁴. The divine ox was struck with the double axe in order that he might come to life again with vigour unimpaired and work for his people as of old. Zeus is hit over the head for much the same purpose. The blow releases Athena, a further manifestation of his might. Three *strata*: but from the lowest to the highest it is Athena who really dominates the scene. Zeus himself lives on in her younger, fresher life.

If this sequence be conceded, several disturbing features in the pediment find a ready explanation. Room must be made in the central group for the predecessors of Zeus—Athena, Hephaistos, and Poseidon. At the same time Athena and Hephaistos cannot be regarded as the next occupants of the divine throne. And that for two reasons. On the one hand, as the original divinities of the Akropolis they were pre-Zeus and could not well be represented as post-Zeus. On the other hand, religious thought was beginning to outgrow its primitive phases and had by now reached a stage in which Zeus, as power supreme, could not conceivably be superseded by any other deity. Nor again could Zeus be affiliated to Athena, who, though originally a mother-goddess⁵, had long since come to be viewed as a Virgin⁶. It remained for Athena, by a daring device, to be affiliated to him. We must not, however, assume that the myth of Dionysos sprung from the thigh of Zeus⁷ here furnished the model; for in all probability the myth of Athena was the older⁸. In any case the choice of the head rather than the thigh for this simulated birth involves the archaic belief that an indwelling spirit may be forcibly delivered by a timely crack on the crown⁹.

738 Significance of the birth of Athena

The ancients, like ourselves, found the idea entertaining—witness a delightful parody of the Athena-myth on a *phlyax*-vase at Bari (fig. 535)¹. Leda's egg has been set carefully in a basket to hatch. But Zeus, who knows from experience what Hephaistos' double axe

Travancore, cut off the top-knot of the deceased (see Frazer, *Burial Customs*, p. 83, note). But when Sir Arthur quotes (*op. cit.* p. 476) as a classical parallel Numa's words to Iupiter in *Ov. fast.* 3, 341 'Summos, ait ille, capillos,' he is relying on a worthless variant. The better manuscripts read "'sumes" ait ille "capillos"'—a very different story (*supra* p. 433 n. o).

This releasing of the spirit from the head is an immemorial usage, which explains many things from the trepanning of neolithic skulls (K. Sudhoff *s.v.* 'Trepanation' in Ebert *Reallex.* xiii. 430—432 with bibliography) to 'The Holy-mawle' described by Aubrey, 'w^{ch} (they fancy) hung behind the Church dore, w^{ch} when the father was seaventie the sonne might fetch, to knock his father in the head, as effete, & of no more use' (*supra* ii. 703 n. 2).

A more brainless bit of bogus mythology based on the myth of Athena's birth may be found in schol.(B.)T. *Il.* 19. 126. When Zeus in anger seizes Ate κεφαλῆς λιπαροπλοκάμοιο and flings her down from heaven to earth, the nitwit scholiast comments: οἱ μὲν ἀπὸ τῆς ἐαυτοῦ κεφαλῆς τῆς λιπαροπλοκάμον ἐίλε τὴν Ἀτὴν· φησὶ γοῦν "κράατα βαίνει" (*Il.* 19. 93).. οἱ δὲ τὸ "κεφαλῆς λιπαροπλοκάμοιο" ἐπὶ τῆς Ἀτῆς ἤκουσαν. can effect, sends him to crack the shell. Out pops Helen to the amazement of Tyndareos, while Leda herself, mindful of the celestial swan, peeps shyly through the doorway.

(κ) The superannuation of Zeus.

If the foregoing analysis be sound, one element in the complex myth of Athena's birth was the primitive persuasion that Zeus, king of the gods, must like all other kings in due course be superseded by a stronger than he. But—it will be said—what right have we to speak of Zeus being superannuated? Was he not looked upon as a power permanently supreme¹? To this the true answer is both Yes and No². Philosophical and *quasi*-philosophical writers certainly regarded Zeus as eternal, or at least everlasting, ruler of the universe. But the populace, heirs of the mythopoeic age, did not³. Even Aischylos, who in his moments of deepest insight approximates to the philosophers' view, speaks of succession to the divine throne as the prize of a grand Olympian wrestling-match, and tells how Ouranos was overthrown by Kronos, and Kronos in turn by Zeus:

He who of yore was great
And boldly challenged all
Hath lost his former state
Nor cometh at the call.
And he who thereupon
Rose in his stead is gone—
He too hath met his fall.
But if a man with glad triumphant cries
Hail Zeus as victor, verily he is wise⁴.

¹ Soph. *O. T.* 903 ff. ἀλλ', ὦ κρατύνων, εἴπερ ὄρθ' ἀκούεις, | Ζεῦ, πάντ' ἀνάσσω, μὴ λάθοι | σὲ τάν τε σὺν ἀθάνατον αἰὲν ἀρχάν is typical.

² Lact. *div. inst.* I. 11 has a trenchant passage on the subject of Zeus being superseded: 'atquin divinum imperium aut semper inmutabile est aut si est mutabile, quod fieri non potest, semper utique mutabile est. potest ergo Iuppiter regnum amittere, sicut pater eius amisit? ita plane.'

³ I am not here concerned with the progressive senescence of art-types—a matter interestingly handled by E. Pottier 'La vieillesse des dieux grecs' in the *Annuaire de l'Institut de Philologie et d'Histoire Orientales* 1934 in (*Mélanges Bidez*) 729—743. In a few well-put paragraphs (pp. 730—733) he traces the gradual change that comes over Zeus as conceived by sculptors etc. from early Hellenic to late Hellenistic times. We see successively a warrior brandishing his bolt or a king sitting on his throne, a man of fine physique attacking his foes or pursuing his amours, the more mature and pacific ruler imagined by Pheidias, the ideal of philosophers and poets, and the anxious thinker portrayed by the Ottricoli bust. In short, brute force, youthful vigour, active benevolence, moral grandeur, providence, and at the last pensiveness deepening into melancholy. 'C'est un Zeus vieilli, en qui l'on aurait peine à reconnaître l'époux triomphant qu'Homère nous dépeint dans les bras de Héra, sur un lit de lotus et d'hyacinthes.'

⁴ Aisch. *Ag.* 167 ff.

Moreover, Aischylos is aware of the popular belief that Zeus holds his throne upon the same precarious tenure as his predecessors. That belief is involved in the plot of *Prometheus Bound*. Prometheus there says to Io :

- But now no limit is appointed me
Of torment, till Zeus fall from his high throne.
Io Zeus fall! Comes there a time when that may be?
Prom. 'Twould gladden thee, I trow, to see that day.
Io Most surely, since from him are all my woes.
Prom. Then be assured the very truth is so.
Io What hand shall wrest from him the staff of power?
Prom. His own vain counsel, lorn of wisdom's light.
Io In what wise? tell me, so it bring no harm.
Prom. Winning a bride, whose wedding he shall rue.
Io Of Heaven or Earth? If not forbidden, tell.
Prom. Inquire no more. 'Tis not to be revealed.
Io Shall his new consort oust him from his throne?
Prom. Their son shall be more puissant than his sire.
Io And may he not avoid that overthrow?
Prom. Only when I, delivered from my bonds—¹

But the sentence is broken off, and Prometheus does not reveal how Zeus may escape the impending doom. Later in the same play he reverts to the subject in the presence of the Ocean nymphs :

- Prom.* Yet Zeus himself, though stubborn be his will,
Shall be brought low at last, through the marriage-bond
He purposeth. For it shall hurl him down
From power supreme to nothing. Then shall come
To pass the curse his father Kronos cried
In that same hour when driven from his throne
Of primal sovereignty. To avert this doom
No god but I can point him the sure way.
I know each turn thereof. Then let him reign
Securely, trusting to his thunder's noise
And wielding there aloft his lightning brand !
Naught shall they warrant him from that sure fall,
Intolerable, unhonoured, unreprieved.
So dire a wrestler he himself provides
Against himself, a portent huge in might,
The weapons of whose forging shall o'er-blaze
His lightning and out-blare his thunder-blast.
And the new sea-god's spear, the trident dread,
Poseidon's arm that plagues the stricken lands
With earthquake, shall be shattered by his power.
Zeus, foundering on that rock, shall fathom then
What space divides the ruler from the slave.

¹ Aisch. *P.v.* 755 ff. trans. L. Campbell.

- Cho.* Thou word'st thy wishes against Heaven's high king.
Prom. My wishes, and the truth of what shall be.
Cho. Must we then look for one to master Zeus?
 • *Prom.* Yea, with a yoke yet heavier than mine.
Cho. How can'st thou talk so rashly, and not fear?
Prom. Why should I fear, whose fate is not to die?
Cho. He might decree some doom more painful still.
Prom. Let him! Naught can surprise me, who foreknow.
Cho. Wisdom bids bow before Necessity.
Prom. Ay, bend and worship, fawn upon the strong!
 Less than the least care I for Zeus's will.
 Let him employ his strength even as he may,
 For this brief hour. His reign will soon be o'er¹.

But despite this attitude of defiance and exultation the Titanic sufferer in the following play, *Prometheus Unbound*, consents at length to give up his secret—the oracle concerning Thetis—and thereby obtains release from his bondage². Thus in the end Zeus is saved by Prometheus, and Thetis the fateful bride is bestowed upon Peleus³.

The myth is set out more lucidly by Aischylos' contemporary Pindar:

These things the immortals planned,
 When Zeus for Thetis' hand
 With great Poseidon strove,
 And either suitor vied
 To have her as his own, his comely bride,
 So learnt the power of love.
 Howbeit their deathless wisdom did not take
 The prize they purposed; for, lo, Themis spake
 And gave unerring counsel for their sake,
 How that by Fate's decree
 The mistress of the sea
 Should bear her lord a prince more potent yet—
 One who should launch a shaft
 By his consummate craft
 Swifter than lightning-flash,
 Fiercer than trident's dash—
 If she with Zeus or with Zeus' brethren met.

Pindar, it will be observed, speaks of two competitors for the hand of Thetis, Zeus and Poseidon². Tzetzes adds a third, Apollon³. It is, however, probable that the original story recognised but one, Zeus himself⁴, and that his mythical association with Thetis arose

Different in origin, but similar in development, was the myth of Metis,³ which may be regarded as a Boeotian doublet of the Thessalian story. The Hesiodic, like the Homeric, Zeus is *metieta*⁴, *metiōeis*⁵, the 'Magician'⁶. But, whereas *mētis* in Homer was merely abstract 'prudence' or concrete 'counsel'⁶, *Mētis* in Hesiod is a full-blown personality. She ranks as one of the many daughters borne by Tethys to Okeanos⁷, for supernatural wisdom belongs to the deities of the deep⁸. If now we ask how Zeus came to be so full of *Mētis*, Hesiod⁹ is ready with a naive explanation. Metis, the

first¹ wife of Zeus, surpassed in wisdom all mortals and immortals, and was fated to bear children exceeding wise—Athena equal to her father in might and counsel, and after Athena a son of such prowess that he should become king of gods and men. Hence Gaia and Ouranos advised Zeus to deceive Metis with crafty words and swallow her, lest another god should arise and deprive him of his kingly honours. Zeus accordingly did so, and himself bore Athena from his head². Others add some details that belong to the same context. It appears that Metis was wont to change her form with a view to escaping the embraces of Zeus³: consequently he waited until she was small enough and then swallowed her⁴—a barbaric expedient clearly copied⁵ from the ugly habits of Kronos⁶.

theological speculation. F. Jacoby in his edition of the *Theogony* (Berlin 1930 pp. 37, 186, 188 f.) takes the same view. And F. Schwenn *Die Theogonie des Hesiodos* Heidelberg 1934 p. 50 is inclined to acquiesce, though he objects that Zeus' marriage with Metis would then be left without offspring. But to assume that the swallowing of Metis by Zeus must necessarily be a late invention is quite unjustifiable. The episode in itself is thoroughly consonant with primitive thought (see e.g. S. Thompson *Motif-index of Folk-literature* (FF Communications No. 107) Helsinki 1933 ii. 276 D 1793 'M[agic] results from eating or drinking'), and Zeus may well have been early credited with rivalling the digestive feats of Kronos. If it be borne in mind that the μήτις of the μητρία was magical wisdom or cunning, theological speculation is seen to be out of place.

¹ According to Hes. *theog.* 886 ff., Zeus wedded (1) Metis, whom he swallowed before producing Athena; (2) Themis, who bore the three Horai, Eunomia, Dike, Eirene, and the three Moirai, Klotho, Lachesis, Atropos; (3) Eurynome daughter of Okeanos, who bore the three Charites, Aglaia, Euphrosyne, Thalia; (4) Demeter, who bore Persephone; (5) Mnemosyne, who bore the nine Muses; (6) Leto, who bore Apollon and Artemis; (7) Hera, who bore Hebe, Ares, and Eileithyia.

I have discussed the marriage of Zeus and Hera in two articles published in the *Class. Rev.* 1906 xx. 365—378 and 416—419 under the title 'Who was the Wife of Zeus?'

Farnell *Cults of Gk. States* i. 283 says: 'According to a later legend she complacently took the shape of a fly.' But he quotes no authority for the statement, and I am not aware of any such legend—unless indeed Farnell was confusing Metis with Periklymenos, son of Neleus and Chloris (schol. Ap. The general resemblance between the myths of Metis and Thetis is unmistakable. Metis, like Thetis, was a sea-power. Metis, like Thetis, was a shape-shifter. Metis, like Thetis, was loved by Zeus. Metis, like Thetis, was destined to bear a son that should oust his father—a danger averted in either case by an oracular utterance and consequent guile. But the Metis-myth is more than a mere parallel to the Thetis-myth. For it definitely associates—at least in its present Hesiodic form¹—the birth of Athena with the superannuation of Zeus, and so justifies us in claiming² that the superannuation-*motif* may be detected in the art-types of the birth.

The subsequent history of the Metis-myth is curious. In the Theogony of the Orphic Rhapsodies³ Metis is one of the names borne by the bisexual Phanes who, emerging from the cosmic egg, begat and consorted with Nyx, thus becoming the parent of Gaia and Ouranos, Rhea and Kronos, Hera and Zeus. This first creation was followed by a second creation. Zeus at the advice of Nyx leapt upon Phanes and swallowed him whole. Zeus was thus enabled to make afresh within himself the world and all its contents, gods and goddesses included: Athena, for example, in full armour sprang from his head. Zeus therefore as a pantheistic god comprises—

Fire and water and earth and *aithér*, day too and night;

Metis the first forefather and Eros of much delight⁴.

Métis is here boldly made masculine, perhaps as tantamount to *metiēta*, the epic appellative of Zeus⁵. But the license offended the neo-Platonist Syrianos, who quotes the same line with one small correction—

Metis the first foremother and Eros of much delight⁶.

Apion in the Clementine *Homilies*⁷ sets forth a somewhat

¹ *Supra* p. 744 n. 2. It remains possible, and even probable, that a pre-Hesiodic form of the myth represented Zeus as swallowing Metis simply in order to acquire her magic, but that later, owing to some social or political exigency (*supra* p. 737) room had to be found for Athena, goddess of the old Pelasgian *stratum*. The *Theogony*, as it stands, is certainly a patchwork.

similar Theogony, which may be described as a *quasi*-Orphic account with a strong etymological colouring. When the bisexual Phanes emerged from the cosmic egg, the rest of its material contents sorted themselves out. The heavier dregs subsided in time (*chrónos*) and so were said to have been swallowed by Kronos: their abundance (*pléthos*) caused them to be called Plouton. The fluid floating on the surface of this sediment got the name Poseidon. The highest and purest portion, consisting of translucent fire, was termed Zeus by reason of its heat (*zéousa*). This was not swallowed by Kronos, but in virtue of its own warmth drew upwards the finest and most divine element left in the fluid layer, a spirit named Metis. Absorbed by the *aithér* and passing through its upper part or head, this spirit set up a perpetual agitation (*palmós*), in short produced Understanding or Pallas¹.

In Platon's *Symposium*² Diotima of Mantinea³ has a tale to tell about the parentage of Eros. When Aphrodite was born, Poros son of Metis ('Way' son of 'Wisdom') was feasting with the other gods. Being drunk with nectar⁴—it was before the days of wine—he betook himself to the garden of Zeus⁵ and there fell asleep. Meantime Penia ('Poverty') got wind of the feast and came begging at the door. Anxious to cure her distress (*aporía*), she lay with Poros and became by him the mother of Eros, who is attached to Aphrodite because he was begotten on her birthday. He is poor (*pénes*) and homeless like his mother, but eager, ingenious, and fertile in resource (*porimos*) like his father. As a *daimon*, he is neither mortal nor immortal⁶, but in a single day will live and die

and rise again thanks to his father's nature. This transparent little allegory may or may not have been invented by Platon¹. In any case it offered possibilities to the allegorists of a later age², and was obviously susceptible of a Christian re-interpretation. A. von Sallet³ first drew attention to the fact that a medallion, finely struck by Giovanni Cavino 'the Paduan' (1500—1570 A.D.) in dark copper with a border of brass (fig. 536), has for obverse design a head of Christ inscribed **PORVS CONSILII FILIVS**, and acutely recognised in this legend the Latin rendering of the Platonic 'Poros son of Metis'⁴.

Fig. 536.

So in the long run the oracle concerning Metis came true, and Zeus, despite his most desperate shifts, found himself superseded by a Son of divine 'Wisdom,' One who was indeed the 'Way'—and the Truth, and the Life.

(λ) The attributes of Athena.

The affiliation of the pre-Hellenic Athena to the Hellenic Zeus produced a goddess whose powers, as evidenced by her attributes,

belonged partly to the old order, partly to the new, but contrived to reconcile both in the brilliance of a fresh and vivid personality.

The said attributes can best be understood as the direct outcome of certain conclusions already reached. The Akropolis, I have said¹, was originally called *Athéné*, a place-name whose locative **Athenai* occasioned the plural *Athénai* habitual in later Greek². Homer³—be it observed—in the *Odyssey*, when speaking of Athens, can still use the singular form:

‘She came to Marathon and wide-wayed Athene.’

I further insisted⁴ that the goddess was named *Athéné*, like the rock, simply because at the outset she *was* the rock⁵, a mountain-mother of the Anatolian kind.

No doubt objections will be brought against both these points of view. I shall be told that to use the same word *Athéné* at one moment of the goddess, at the next of her rocky abode, would have been intolerably confusing. Homer thought otherwise. The immediate context⁶ of the line quoted above tells how ‘Athene...left lovely Scherie, and came to Marathon and wide-wayed Athene.’ So Athene came to Athene! The poet is serenely unconscious of anything amiss.

Others may demur to Athena being treated as a mountain-mother. She was so notoriously a Virgin that to call her a Mother at all borders on the blasphemous. But we are apt to forget that in early illogical days the status lost might by appropriate means be regained. Pausanias⁷, for instance, informs us that Hera recovered her virginity every year by bathing in the spring Kanathos near Nauplia. And it is not unreasonable to suppose that the same

⁵ Dr B. F. C. Atkinson has suggested to me that a masculine parallel might be found in *Ἄθως*, a mountain which bore a name of Anatolian type (cp. *Κέως*, *Κῶς*, *Τέως*), was addressed by Xerxes as *Ἄθω δαυμόνιε* (Plout. *de coh. lib. tra* 5), was later personified as a giant (H. W. Stoll in Roscher *Lex. Myth.* i. 704, K. Tumpel in Pauly—Wissowa *Real-Enc.* ii. 2065 and 2069), supported a population of Macrobia (Plin. *nat. hist.* 4. 37: cp. *supra* ii. 500 n. 4), and down to the present day is regarded as a *Ἄγιον Ὄρος* of the utmost sanctity (*supra* ii. 906 n. 1).

thing happened to Athena, both in Argos and at Athens. The Argive women once a year took the image of Athena and washed it in the river Inachos¹. At Athens it was the old wooden statue in the Erechtheion that had the annual bathe. It was escorted down to Phaleron by the *éphēboi*, dipped in the sea by two *loutrides* or 'bathing-women,' and brought back in the evening with a torch-light procession—the whole business being termed the Plynteria or 'Washing Day².' Now we may be very sure that it was some strong religious reason—godliness rather than cleanliness—which prompted the Greeks to bathe their goddess in river or sea. And, if we may argue from what is told us of Hera, the object was to transform the Mother into a Maiden once more. Of course to all and sundry in up-to-date Athens Athena was *Parthénos*. But the women of Elis, country folk who clung to archaic beliefs, had a sanctuary of Athena *Méter*³, a mother-goddess confessed.

I take it, then, that Athena was the pre-Greek mountain-mother of the Akropolis rock. As such she would stand in specially close relation to the rock-products, whether vegetable or animal. Any life issuing from crevices or holes in the rock would be *her* life. The flora and fauna of the place would be venerated as divine manifestations of herself. And of these manifestations there are three that claim our special attention.

(1) The olive of Athena.

Only one tree, so far as we know, grew on the Akropolis—the famous olive in the Pandroseion⁴ (fig. 537)⁵. The antiquary Philochoros⁶ mentions it in connexion with a curious happening of 306 B.C. He says:

'This year had ended and another begun, when the following portent took place on the Akropolis. A bitch got into the temple of the *Polias* and, diving into the Pandroseion, mounted the altar of Zeus *Herkeios*, which stands under the olive tree, and there lay down, though it is an old-established custom at Athens that dogs⁷ are not allowed on the Akropolis.'

The olive of Athena

One fancies the scene—the dog dodging pursuit, the horrified bystanders, the fattish sacristan in full cry, but balked of his prey as the creature leapt into safety beneath the shade of Athena's olive!

This was the tree said to have been planted by Athena as

evidence that the Akropolis belonged to her and not to Poseidon. Apollodoros¹ tells the tale:

'Poseidon...with a blow of his trident on the middle of the Akropolis produced a sea, which they now call Erechtheis. After him Athena, having summoned Kekrops as witness of her right, planted an olive-tree, which is still shown in the Pandroseion. But when the two strove for possession of the place, Zeus² parted

them asunder and appointed as arbiters...the twelve gods. By their verdict the land was adjudged to Athena, because Kekrops bore witness that she had been the first to plant the olive. Athena, therefore, called the city Athens after herself, while Poseidon¹ in hot anger flooded the Thriasian plain and laid Attike under the sea.²

The story is related by Greek and Roman writers with some variety of detail³. But the main points are sufficiently clear. And it is the unanimous, or all but unanimous, opinion of modern scholars that this legend covers a historic fact—the attempted supersession of Athena-cult by Poseidon-cult⁴. Or, as I should venture to put it, the intrusion of the Ionian god upon the Pelasgian goddess⁵.

And here we must take into account the western pediment of the Parthenon, about which Pausanias⁵ says simply: 'The back gable contains the strife of Poseidon with Athena for possession of the land.' This pediment at once met the eye of all visitors to the Akropolis, and in ancient times lent dignity to a somewhat barren

¹ Poseidon, despite his stormy strength, really seemed born to lose lawsuits! Similar legends told how he strove with Hera for Argos, lost his case, and in anger first drained the country of water and then swamped it with a flood (Paus. 2. 15. 5, 2. 22. 4); how he contended with Zeus for Aigina and again lost (Orph. *frag.* 335 Kern *ap.* schol. Pind. *Isthm.* 8. 92 ἢ οὐκ ἐφίλονεικῆσαν Ποσειδῶν τε καὶ Ζεὺς περὶ Αἰγίνης, ὅτε καὶ μεταβαλεῖν δοκεῖ τὴν νῆπον Ποσειδῶν, καθὰ ἄλλοι τε φασὶ καὶ Πυθαίερος (an *addendum* to *Frag. hist. Gr.* iv. 487 Muller) προσαγόμενος Ὀρφέα. See further J. P. Hailand *Prehistoric Aigina* Paris 1925 pp. 52, 81 ff.); how he disputed the possession of Trozen with Athena, but was forced to go shares, and vented his spleen by flooding the land with salt water (Paus. 2. 30. 6, 2. 32. 8). But, so far as Athens is concerned, notice the orderly and decorous nature of the proceedings—the two litigants, the rival claims, the production of evidence and material exhibits, the peaceful settlement by adjudicators on the ground of well-attested priority. I should infer that the legend took shape in comparatively recent times, and I should be disposed to conjecture that the original dispute was a fight, not a lawsuit at all.

rock by representing it as a bone of contention between two major deities. Nowadays the sculpture has almost completely vanished from the pediment-floor; but, so far as the principal antagonists are concerned, extant fragments suffice to prove¹ the general trustworthiness of the fourth-century *hydria* from Pantikapaion, which gives us in gilded relief a close copy of the central group (fig. 538)². Both claimants are in strenuous action, Athena striking downwards with her lance, Poseidon with his trident. Beside the former is her olive³ with a snake twined about it and a Nike hovering in the branches. Beside the latter is his sea with a couple of dolphins plunging in it. And the vase-painter has acknowledged his debt to the sculptor by adding a small temple in the top right-hand corner, as who should say 'I owe my inspiration to the Parthenon'⁴. Sir Cecil Smith⁵ in 1907 was able to show that the existing portions⁶ of Athena and Poseidon could be aptly superposed on the corresponding vase-figures. That is reassuring. But sundry difficulties remain. Why after producing their tokens are the gods depicted as

Swindler *Ancient Painting* Yale Univ. Press 1929 p. 357 with fig. 476. The olive-tree is completely gilded. Athena (head broken away) and Poseidon are in high relief. The goddess wears a green *péplos* and carries a yellow shield, but her lance and adornments are golden. The god is brown-skinned and has a reddish *chlamys*, a gilded trident, and a white horse.

C. Robert in *Hermes* 1881 xvi. 60—87 argues that the scene shows Poseidon attempting to destroy with his trident the newly created olive-tree, which is protected both by the snake Erichthonios and by Dionysos *Δενδριτης* (Plout. *symph.* 5. 3 1), while Athena raises her lance to attack Poseidon himself. The remaining figures, from left to right, will be Pandrosos, Amphitrite, Kekrops. The vase, like the pediment, thus depicts the actual *épis*, of which no literary description has come down to us.

striking downwards? Studniczka¹ suggested that to drive a spear into the ground was to claim possession of the soil—a piece of symbolism current in antiquity, like the modern hoisting of a flag. But the examples of the alleged custom quoted by him are not very convincing². More often we are told that Athena strikes the rock with her lance and so creates the olive, Poseidon strikes it with his trident and so makes the salt well. The action and its immediate result are combined in one simultaneous scene. That may be so. Only, it is *not* what Apollodoros said. According to him³, Athena never struck the rock at all! Poseidon with a blow of his trident on the middle of the Akropolis produced his sea, but Athena merely planted her olive-tree. What, then, are we to make of her action with that spear? It looks to me as though Pheidias or whoever designed the western pediment of the Parthenon had taken an old combat-*motif*, two people fighting one another, and modified it to suit a new situation—the more peaceable producing of proofs, right rather than might.

Fig. 539.

Fig. 540.

Imperial bronze coins of Athens (figs. 539, 540)⁴ are often cited in illustration of the pediment. But I doubt their relevance. For one

¹ F. Studniczka in Roscher *Lex. Myth.* iii. 2863.

² Studniczka (after W. Judeich) quotes Diod. 17. 17 (Alexander from his ship hurled a spear at the Troad and ἀρεφαίvero τῇν Ἀσίαν δέχεσθαι δορίκτηρον) and Serv. in Verg. *Aen.* 3. 46 (Romulus, captato augurio, hastam de Aventino monte in Palatinum iecit: quae fixa fronduit et arborem fecit). But how far was the hurling of the spear an essential part of the symbolism (cp. *supra* ii. 703 n. 2)? The Centumviral *hasta* (B. ten Brink *De hasta praeceptum apud Romanos signo, imprimis iusti domini Groningae* 1839 pp. 1–116) may or may not be in point (see E. Cuq in Daremberg—Saglio *Dict. thing, Poseidon and Athena are to the left and right of the tree: in the pediment their position was the reverse. Again, the coins put an owl on the tree, where the pediment had a hovering Nike. And lastly, the coins make Poseidon strike the rock, but Athena merely point to her tree: on no specimen known to Svoronos has she a lance. The inference is clear. The coins are presenting the myth as told by Apollodoros, not the myth as represented in the pediment.

Pausanias¹, when he visited Athens, noticed yet another memorial of the famous Strife. On the summit of the Akropolis, at a point closely adjoining the altar of Zeus *Polieús*, he saw 'Athena exhibiting the olive-plant and Poseidon exhibiting a wave.' It is commonly, but with no great certitude², maintained that the type of this group is attested by a series of minor antiquities³ including a silver buckle from Herculaneum (fig. 541)⁴, an imperial bronze coin of Athens

² Protests were raised by B. Sauer *Die Anfänge der statuarischen Gruppe* Leipzig 1887 p. 65 n. 233 (the Smyrna relief presupposes *post*-Lysippean statuary types, but not necessarily a statuary group; and the same is true of the minor antiquities in general) and in *Aus der Anomia* Berlin 1890 pp. 96—113 (the Smyrna relief is abbreviated from the eastern frieze of Athena Nike: but see *supra* p. 581 n. o).

My own feeling is that the minor monuments in question do not illustrate the group described in Paus. i. 24. 3. 'Athena exhibiting the olive-plant' suggests rather such a pose as she takes *infra* fig. 549, a. And 'Poseidon exhibiting a wave' sounds like a misunderstood *motif*—Poseidon holding a curled *áphilaston* as e.g. on a silver coin of Hadrian (Overbeck *Gr. Athena had indeed won her victory, and henceforward Poseidon, abating his claim to sole possession, must be content with a very subordinate rôle, that of a mere lodger in the ancient temple of Athena *Poliás*. To effect an entry into that august abode, he had to become as like as possible to Erechtheus, the acknowledged *protégé* of the goddess. The 'strong house of Erechtheus' seems to have had a rock-cut cistern, which would serve as his 'sea' under the respectable old name Erechtheis³. Above this 'sea,' which could be seen and heard through an opening in the pavement, was the west chamber of the later Erechtheion, and here stood three altars fortunately described by Pausanias⁴. 'On entering the building,' he says, 'you find three altars, one to Poseidon on which at the bidding of a certain oracle they sacrifice also to Erechtheus, a second to the hero Boutes, a third to Hephaistos.' Now Hephaistos we can understand: he was the original husband of Athena⁵. Boutes too had a right to be there: he was the ancestor of the Eteoboutadaí, hereditary priests of the Erechtheion⁶. But Poseidon and Erechtheus must make do with a single altar. The fact is, Poseidon had long since been officially identified with Erechtheus⁷. As early as the

fifth century B.C. we have a dedication 'to Poseidon Erechtheus'¹, and plenty of later inscriptions and texts bear witness to the blend². Now and again there is some consciousness that the two were not really one, as when in the first half of the fourth century the tribe Erechtheis sacrifices a bull 'to Poseidon *and* to Erechtheus'³. But then, after all, the tribe Erechtheis would naturally be jealous for the credit of its namesake Erechtheus. For the most part, the populace acquiesced in this slight simplification of theology. Peaceful penetration had as usual succeeded.

The actual olive, token of Athena's triumph, rose from a cleft in the rock beside the altar of Zeus *Herkeios* (figs. 547, 548)⁴. A tree of immemorial sanctity would presumably be thick-stemmed and bent with age⁵; and as such it is represented on Athenian coins of

imperial date¹. In popular parlance it was dubbed sometimes 'the Stunted or Writen Olive²,' but sometimes also 'the Citizen Olive³'—a very notable name, since it assured the citizens that the Olive was one of themselves. They were *astoi*: it, or rather she, was *asté*. But this sympathy between tree and townsfolk went further than that. There is reason to think that the Olive of the Erechtheion was regarded as the life-tree⁴ of Athens, on whose preservation the very existence of the state depended. When the Persians sacked the Akropolis, this all-important tree was burnt. 'But,' says Herodotos⁵, 'on the day after its burning, when the Athenians bidden by the king to sacrifice went up to the sanctuary, they saw a shoot of about a cubit's length sprung from the stump and duly reported the matter.' Pausanias⁶ tells the same tale, except that his olive, instead of one cubit in two days, grows two cubits in one day. Stories can grow as well as olives!

Clearly the tree was a hardy perennial, and the Athenians were well advised when they took twelve slips of it and planted them in the Akademeia. The resultant trees furnished the sacred oil for the Panathenaic victors and were known as *moriai*⁷, not because they

were fractions (*mére*) of the original stock, but because on them depended the fate (*móros*) of the people. A similar life-tree was the wild olive in the market-placé at Megara: an oracle had announced 'that, if this were cut open, the city would be taken and plundered; which'—adds Theophrastos¹—'came to pass when Demetrios took it.' Athena herself, as mistress of the fateful olives, bore the title *Mórios*², therein resembling Zeus *Mórios*³. A red-figured *amphora* published by Gerhard⁴ (fig. 549) shows the goddess holding out her

But Zeus 'Ελαιός may be an attempt to extract Greek sense from a Semitic name. R. Meister *Die griechischen Dialekte* Göttingen 1889 ii. 208 thought to find the Phoenician 'Ελ [more correctly 'Ελ] in a whole group of Cypriot names, including Hesych. Εὐελίδης· αἰθάλης. καὶ ὁ Ζεὺς ἐν Κύπρῳ (cp. Hesych. 'Ελκίς· Ζεὺς ἐν Θήβαις) and such titles as Εἰλήτη (*supra* i. 527 n. o) and Εἰλαπιναστής (*supra* i. 654 n. 4, iii. 652 n. o). olive, while a priestess(?) or worshipper(?) extends an *oinochóe* towards her¹.

But the exact nature of the relationship between goddess and tree (figs. 550, 551)² is nowhere recorded. Jane Harrison³, never lacking in courage, and impressed by the fact that the olive is called *Athenaïs*⁴, the 'Athena-tree,' roundly declared 'that at Athens... Athene herself at one period of her development was' *Athenaïs*, 'the sacred olive tree.' Miss Harrison went on to observe: 'The image of the goddess was made of her olive-tree.... But this is a second step on from the time when the goddess *was* the tree, dwelt in the tree, her life and that of the people intimately bound up, practically identical with it.' Those lines were written over forty years ago, and today they may stand in some need of revision. Personally I would

¹ Gerhard *loc. cit.* notes that the two sides of the vase must be regarded as forming a single picture, in which Athena and her priestess or worshipper face each other. He cp. On a silver *statér* of Aphrodisias (?) or Nagidos (?) in Kilikia, struck in the time of Pharnabazos (379—374 B.C.), the local copy of Athena *Parthénos* appears. rather put it thus. Athena was the mountain-mother of the Akropolis. Everything that issued from its rocky surface was instinct with her vitality and must be accepted as a manifestation of herself. The rock is primary, the tree is secondary: it is the divinity of the former that makes the latter also divine.

(2) The snake of Athena.

But life emerging from the surface of the Akropolis might be animal as well as vegetable. There was a widespread belief in antiquity that snakes were the children of Mother Earth. Herodotos¹ makes the Lycian priests tell Kroisos that the snake is the child of Earth. Centuries later the same thing is said by Artemidoros²: 'A child of Earth he is, and in the earth he dwells.' Pliny³ too remarks: 'Some creatures will not harm natives, though they kill strangers. This is the case with the small serpents at Tiryns, which are said to be sprung from the earth.'

Now the Akropolis, since it abounds in crevices and holes, must in early days have harboured plenty of these reptiles, especially the *Tarbophis fallax*, a species that still haunts the rocks and ruins of Greece⁴. A *pelike* from Kameiros already figured⁵ shows two such snakes, apparently male and female⁶, creeping out of the Akropolis rock to protect the infant Erichthonios, who sits up in his basket and takes notice of Athena. The basket-lid has been lifted off by the disobedient sisters Aglauros and Herse. Scared by the snakes, they flee for dear life and are represented on the other side of the vase hurrying off to their death⁷.

The scene recalls an early passage in the *Ion*¹:

To earth-born Erichthonios Zeus' daughter
Assigned as watchful guards a pair of snakes,
And bade the Aglaurid maidens keep their trust.
Wherefore Erechtheus' sons in Athens still
Are wont to rear their babes 'mid snakes of gold.

The sequel makes it clear that the last couplet alludes to prophylactic snakes hung round the necks of infants (*peridêraia*²). For the mutual recognition of mother and son at the close of the play turns largely on the preservation and production of such a gaud³:

Ion Is there aught else,—or canst thou guess but once?
Kreousa Snakes all of gold, the custom of my race.
Ion Athena's gift, and used by her command?
Kreousa Copied from Erichthonios of yore.
Ion How is the trinket used and worn? Explain.
Kreousa As necklace for a new-born babe, my child.
Ion The snakes are here!

fifth centuries is notoriously scarce¹. However, it is certain that Euripides, an antiquarian at heart, is here giving the *action* of an actual custom, which placed the young Athenian under the protection of Athena's snakes².

It is tempting to recognise the same two guardian snakes in a couple of fragmentary reptiles found in 1888 to the east and south-east of the Parthenon³. They are the angle-figures of a pedimental group executed in painted *pôros* between 580 and 560 B.C.

He adduced *inter alia* the modern Greek practice of calling an unbaptised infant *δράκος*, *δράκαινα*, or the like. His Excellency Mr D. Caclamanos assures me (6 June 1936) that this practice still obtains in Greece, but he inclines to accept my suggestion that, in the Greek view, 'the old serpent' (Rev. 12. 9, 20. 2), the Devil, has not yet been expelled from the child by baptism. T. Wiegand¹ held that they came from the eastern gable of the old Hekatompedon, and thought to combine them with a central trio, of which he claimed to identify two figures—Athena seated full-front and Zeus seated in profile beside her (fig. 564)². But Wiegand's arrangement of the centre, though accepted by H. Lechat³, is rejected by more recent critics. R. Heberdey⁴ assigned this Zeus and the seated goddess, whom he calls Hera, to a smaller pediment, 6.60^m long, representing the introduction of Herakles to Olympos. In this he is followed by G. Dickins⁵, M. Schede⁶, and the majority

of archaeologists. Heberdey then attempted to pack into the western Hekatompedon gable a central group of lion, lioness, and bull, flanked by the two big snakes, but later realised that the presence of a step in the gable left insufficient space for this menagerie⁷, and was content to assume a single lion holding down a hypothetical stag⁸. E. Buschor⁹, dissatisfied with Heberdey's results, combined the snakes with yet another leonine group, comprising an extant big lioness and a *non*-extant big lion, each at work on the body of a bull: this imposing circus he would regard

as the front gable of an early apsidal Parthenon! H. Schrader¹ is much better advised when he reaffirms Heberdey's contention that the snakes belong to the second gable of the Hekatompedon, but makes no attempt to fill the space between them (fig. 565). Dickins² had already drawn the sound conclusion: 'At present...the central group of this pediment is unidentified.' And here, at the risk of making confusion more confounded, I cannot help remarking that snakes in the angles of a pediment, though mythological in origin, may be merely decorative in usage—a feature due ultimately to

More certainly connected with Athena is the pair of snakes, which on a red-figured *pyxis* at Copenhagen (fig. 566)⁴ are drawing

the goddess in her chariot to face the judgment of Paris¹. A later vase, a gilded *aryballos* at Athens (fig. 567)², shows the judge, here lettered *Aléxandros*, considering his verdict in much perplexity. On the one hand, a seductive Eros points out to him that Helen³ is already approaching from the left with open arms. On the other hand, between him and his promised bride is set the small but threatening figure of the *Palládion*, while from the right comes an indignant Athena accompanied by a single gigantic snake with forked and flickering tongue. Jane Harrison⁴ *more suo* observes: 'The artist seems dimly conscious that the snake is somehow the double of Athene

which actually lived in the Erechtheion. Herodotos¹, describing the eve of Salamis, writes as follows:

The Athenians say that a great snake dwells in their sanctuary² and guards the Akropolis. So they say and in proof of their words set out for it a 'monthly offering, to wit a honeycake. This cake had always before been consumed, but was now left untouched. When the priestess made that known, the Athenians were more willing to leave their city, because they deemed that the goddess too had deserted the Akropolis.

Plutarch³ tells the same tale, except that he regards the whole business as a ruse on the part of the artful Themistokles. Other authors add nothing of importance, and the common assumption that the snake was Erechtheus or Erichthonios is a probability rather than a certainty. At most we know that Aristophanes⁴ called it 'the house-keeping snake,' masculine in gender and therefore not to be identified with the goddess herself.

The original significance of the snakes that figure so frequently in the myths and rites of Athens is by no means easy to determine. In view of the curious⁵ belief that the spinal cord of a dead man turns into a snake⁶—a belief still current in Palestine⁷—it would

⁵ Not so very curious, either. For there is, of course, a rough resemblance between the cord with its tapering end and the snake with its tapering tail, as my friend and colleague Dr F. Goldby assures me. The likeness of the vertebral column to a snake's skeleton is less pronounced.

not be unreasonable to regard the single male snake as the soul of a buried king¹. The pair of snakes, male and female, would then be the souls of the ancestral couple². In the case of Kekrops³ and, according to some late authorities, in that of Erichthonios⁴ the half-snake would imply the tail-end, so to speak, of the snaky tradition⁵. Even so it must be admitted that these Akropolis-snakes are a terrible tangle, and raise problems to which at present no sure solution has been found. Who or what, for example, was the bearded⁶ snake that Pheidias set beside Athena? Pausanias⁷ says 'He might be Erichthonios.' But was Pausanias right⁸? Again,

Jewish notions, "the spinal cord of a man who does not bend his knees at the repetition of the benediction, which commences with the word 'Modim,' after seven years becomes a serpent'."

what are we to make of a white-ground *lékythos* from Gela, now in the British Museum (fig. 568)¹? A female figure is seen standing by a column with a *phidie* in her right hand and a snake in front of her. H. B. Walters² thought her perhaps a priestess of Athena 'accompanied by the Erechtheion-snake. A. Fairbanks³ suggested 'a simple scene of libation' and equated the woman with Artemis. But deities are rare on vases of this class, and Mr C. D. Bicknell⁴ is content to

suppose that we have here a dead woman ready to receive offerings in the presence of her ancestral snake. Of course the early date of our vase, *c.* 470 B.C., rules out any attempt to interpret the subject as Athena *Hygieia* beside the corner column of the Propylaia¹ or Hygieia herself arriving with the divine snake in the newly-built Asklepion². But why, by the way, did Asklepios ever come to dwell on the southern slope of the Akropolis? Had the snakes of the rock anything to do with it (fig.)³?

A final puzzle: what did Cyprian⁴, bishop of Antioch in the third century after Christ, mean by stating that as a boy of ten he had 'performed the liturgy of Pallas' snake on the Akropolis'? The empress Eudokia⁵ hitched into hexameters the recital of his various initiations and makes him say:

Fig. 569.

I wrought the snaky rites
Of Athenaia on the citadel.

But what exactly were these rites? We are reduced to blank conjecture⁶.

The fact is, snake-myths and snake-cults of every kind fairly cluster round the Akropolis-rock, almost all of them in close association with Athena the rock-mother. Is it not fair to infer that

these daemonic powers drew their vitality from her? We must not, I suppose, at this stage prematurely assert that Athena herself was conceived as a snake at Athens, though I for one should not deny that elsewhere such may have been the case. An Orphic hymn does address her definitely as *Drákaina*, the 'She-Snake'.¹ And on the road from Sparta to Arkadia Pausanias saw standing in the open an image of Athena *Pareta*.² That surely can mean one thing, and one thing only, Athena the 'Adder.'

(3) The owl of Athena.

But snakes are not the only living things that slip silently out of holes in the Akropolis rock. Of an evening the owls come out. I have seen them in the dusk, and I dare say my readers have too, flitting with low undulatory flight across the roads and gardens to the south of the Akropolis. In antiquity their number gave rise to the proverb 'an owl to Athens'³ in the sense of 'coals to Newcastle'.⁴ Another proverb, 'an owl on the citadel,' was explained as alluding to an owl dedicated by Phaidros on the Akropolis⁵. Ausonius⁶ describes it as 'that owl on the citadel painted with colours of such magic power that it lures birds of all sorts and destroys them by its stare.' A colossal owl of white marble has in fact been found on the Akropolis (fig. 570)⁷ together with a couple of pillars bearing

¹ L. Ross *loc. cit.* This conjecture has been widely accepted, and is consistent with the known facts. Was Phaidros (*supra* p. 776 n. 5) a local sculptor? Diog. Laert. 7. 1. 12 mentions a possible descendant in one Φαῖδρος Ἀναφλύστιος, who helped to build the tomb of Zenon in the Kerameikos.

J. N. Svoronos *loc. cit.* fancied that the marble owl was perched on the olive-tree in the centre of the west pediment of the Parthenon and quoted in support the bronze coins, which certainly show such an owl (*supra* figs. 96, 539, 540). But I have already argued that these coins do *not* represent the said pediment at all (*supra* p. 754 f.). Besides, owl-on-column was a familiar type in connexion with Athena. Ross *loc. cit.* justly compares a Panathenaic *amphora*, on which Athena is flanked by two Ionic columns with an owl on each (E. Gerhard *Etruskische und kampanische Vasenbilder des Königl. Museums zu Berlin* Berlin 1843 pl. B, 29. My fig. 571 is from Ross pl. 14, 5), and the Roman mural relief, in which Athena as she superintends the building of the Argo has at her back an owl on a round pillar (Von Rohden—Winnefeld *Ant. To these should be added the owl-on-column that appears before Athena in the Lansdowne relief (*Burlington Fine Arts Club. Exhibition of ancient Greek Art* London 1904 p. 31 f. no. 50 pl. 35 (=my fig. 576), H. Schrader in the *Jahresh. d. oest. arch. Inst.* 1911 xiv. 68 ff. fig. 73, Reinach *Rép. These examples of owl-on-column recall the description in Longfellow's *Hyperion* Liverpool 1848 p. 79: 'the owl is a grave bird,—a monk, who chants midnight mass in the great temple of Nature,—an anchorite—a pillar saint—a very Simeon Stylites of his neighbourhood.'

at Berlin dating from the latter part of the fifth century (pl. lx)¹ shows a worthy citizen of Athens obviously fascinated by the uncanny bird! And well he might be, for the owl was the goddess herself in animal form—*theà glaukōpis Athēne*². Whatever that phrase denoted or connoted to the readers and even to the writers of the Homeric poems³, it was certainly a line of pre-hexameter verse⁴ describing Athena in all probability as a 'goddess with the eyes, or face, or aspect, of an owl.' On this showing it points backwards to a time when it was believed that Athena could take shape as a bird. Homer makes her appear on sundry occasions as a pigeon⁵, a hawk⁶, a kite or a shearwater⁷, a vulture⁸, a

² The tags γλαυκῶπις 'Αθήνη and θεὰ γλαυκῶπις 'Αθήνη are both frequent, alike in *Iliad* and *Odyssey*, but always at the end of the hexameter and normally in the nominative case. On occasion we find the accusative γλαυκῶπιν 'Αθήνην (*Od.* 1. 156, *h. Ap.* 314, *h. Aphr.* 8) or γλαυκῶπιδ' 'Αθήνην (*h. Ap.* 323), the genitive 'Αθηναίης γλαυκῶπιδος (*Il.* 6. 88, *h. Heph.* 2), the dative 'Αθηναίη γλαυκῶπιδι (*Il.* 9. 390, 11. 729, 23. 769). Fuller phrases are Παλλάδ' 'Αθηναίην .. | γλαυκῶπιν (*h. Ath.* 28. 1 f.), Διὸς γλαυκῶπιδι κούρη (*Od.* 2. 433), κούρη γλαυκῶπιδι καὶ Διὶ πατρί (*Od.* 24. 518), and even γλαυκῶπιδι κούρη without mention of Zeus (*Il.* 24. 26). On the other hand, γλαυκῶπις can be used by itself in nominative (*Il.* 8. 406, *Od.* 6. 47), vocative (*Il.* 8. 420, *Od.* 13. 389), accusative (*Il.* 8. 373, *Od.* 3. 135, 24. 540), and genitive (*h. Ath.* 28. 10). See further H. Ebeling *Lexicon Homericum* Lipsiae 1885 i. 36 and 259.

For the analogous usage of βοῶπις πότνια 'Ἥρη see *supra* i. 444.

³ Here opinions differ widely. Welcker *Gr. Gotterl.* i. 303 f. thinks that the epithet γλαυκῶπις refers to 'den feurigen Aether.' *Contra*, R. Hildebrandt 'Αθήνη Γλαυκῶπις' in *Philologus* 1888 xlv. 201—209 argues for 'Athena of the grey-green water,' ἡ θεὰ τῆς γλαυκῆς θαλάσσης (cp. *Il.* 16. 34). Other contentions in C. W. ⁶ *Il.* 7. 58 ff. (with Apollon). D'Arcy W. Thompson *A Glossary of Greek Birds* Oxford 1895 p. 16 took αἰγυπῖος in Homer and later writers to mean 'vulture.' But Sir W. M. Ramsay *Asiatic Elements in Greek Civilisation* London 1927 pp. 60—71 adduces strong reasons for thinking that the Homeric αἰγυπιοί were 'hawks,' not vultures at all.

But H. Stuart Jones in the new Liddell and Scott, on the strength of Aristot. *hist. an.* 9. 1. 609 a 23 f., etc., says 'unknown bird of prey, prob. shearwater.' More in D'Arcy W. At Korone in Messenia, where Pausanias³ saw a bronze statue of Athena holding a crow, the goddess herself *may* have been symbolised by her attribute⁴. At Megara, where a headland projected into the sea, there was a well-

A Boeotian plate in the British Museum shows *inter alia* the sacrifice of an ox to Athena. Behind the goddess is her snake, and a Doric column to indicate her temple. Before her is an altar from which flames are rising, while a bird—crow rather than cock—is perched proudly on the top of it (Sir C. Smith in the *Journ. Hell. Such a position no doubt implies that the bird stands in a special relation to the deity (Miss E. M. Douglas (Mrs Van Buren) in the *Journ. Hell. See further A. Kiöck 'Athene Aithya' in the *Archiv f. Rel.* 1915 xviii. 127—133, who notes that Leukothea too after helping Odysseus dived into the sea αἰθῦνῃ εἰκνύα (*Od.* 5. 383, cp. Gruppe *Gr. The appellation *Aithya* denotes some species of gull (D'Arcy W. Thompson *A Glossary of Greek Birds* Oxford 1895 p. 17: 'Probably a large Gull, e.g. *Larus marinus*, the Black-backed Gull (Sundevall), or *L. argentatus*, the Herring Gull (Kruper), the former being rare in Greece'), perhaps the shearwater (D'Arcy W. of course she was an owl¹. Hence the appearance of an owl was hailed as an omen of victory. In the *Wasps*² the old dikasts attribute their repulse of the Persians to the timely arrival of an owl:

Yet we drove their ranks before us, ere the fall of eventide:
As we closed, an owl flew o'er us, and the Gods were on our side!

The scholiast³—shrewd fellow—remarks: 'He is here speaking of Athena as an owl.' According to Plutarch⁴, just before Salamis an owl came flying from the right, perched on Themistokles' mast-top, and so induced the Greeks to follow that commander's advice. Posterity concluded that Themistokles was a man of resource⁵. Agathokles too on one occasion (310 B.C.) routed the Carthaginians by the simple expedient of uncaging a few owls. They settled on the shields and helmets of his men, who with confidence restored promptly defeated the foe⁶. An allusion to this incident has been detected⁷ on a unique gold *statér* of Agathokles, struck between

310 and 304 B.C., which has for its reverse type (fig. 580) Athena winged and weaponed advancing into the fray with an owl at her side. As a presage of victory¹ the bird passed into a proverb. 'There goes an owl!' men said when there were obvious symptoms of a coming triumph².

If the owl was indeed regarded as Athena herself in bird-form, we can understand why the town-arms of Athens were an owl between two sprigs of olive. A good example, which came to light in 1839 at *Palaiopolis* (Korkyra), is now in the British Museum (fig. 581)³. An inscription in silver-filled letters of s. iv B.C. records a grant of *proxenia* made by the Corcyraeans to a certain Athenian named Dionysios, son of Phrynichos. It is incised on a bronze

¹ The bird which portended victory to friends naturally portended defeat to foes. Consequently the owl had also a sinister significance, on which see P. Perdrizet 'Sur le folk-lore de la chouette dans l'antiquité' in the *Bulletin de la Société nationale des Antiquaires de France* 1903 pp. 164—170. I add a couple of contrasted examples. Hieron ii of Syracuse was entering on his first campaign, when an owl perched on his spear and an eagle on his shield: this meant that he would be both a prudent counsellor and a powerful king (Iust. 23. 4. 10). Pyrrhos i of Epeiros was riding towards Argos by night, when an owl perched on the top of his spear: this foretold his miserable death (Aul. de nat. an. 10. 37). We must remember that the Argives were protected by their goddess, Athena Ὀρνιδερχής (Paus. 1. 24. 2: *supra* ii. 502 n. 2), who may well have appeared to Pyrrhos as an owl.

into the period of south-Italian imitations¹. I give an example from my collection (fig. 582)², in which the red is an opaque pigment laid on the black glaze, the idea of the potter being to produce a cheap copy of red-figured ware³. Sir Cecil Smith⁴ maintained that such cups were 'made for some special official or religious occasion.' But, unless there is some further indication of solemn or sacred usage, we should be ill-advised to assume it. It would be wiser to compare the china mugs of our childhood inscribed in gilt lettering 'A present from Brighton' or the modern souvenirs of Goss ware adorned with local arms. Greater seriousness of intention

attaches to a broken *kylix* (fig. 583)⁵ found on the Akropolis at Athens in the excavations of 1886 and referable to a date preceding the Persian sack of 480 B.C. Owl and olive-sprays are painted inside, brick-red on a black ground. But this time the potter, a young man offering as in duty bound his maiden effort to Athena, has encircled the design with an inscription⁶: '[...]os dedicated (this) as his firstfruits.' Again, in 1867 the Museum at Athens acquired a cylindrical vessel of red ware, made with the utmost

stamp—a helmeted head of Athena facing right. These two reliefs, implying small stamps or seals of excellent work, were compared by A. Dumont with Athenian coins of the 'new style' (c. 220 B.C. and later). His comparison was most just; for coins, as T. Burgon² pointed out long ago, are nothing but 'pieces of *sealed metal*,' and

their types, as Sir George Macdonald¹ has made abundantly clear, are for the most part simply badges of the issuing town or magistrate. I think we may go further and assert that, alike on the quart-measure and on the coins, the owl and Athena represent the animal form and the human form of the self-same goddess².

A similar explanation must be given of the owl stamped on the bronze tickets (figs. 584, 585)³ and on the bronze (figs. 586,

³ During the Samian War the Athenians branded their prisoners on the face with an

We have said that the owl, as issuing from the Akropolis rock, was held to be a special manifestation or embodiment of Athena the rock-goddess¹. It is, however, possible that there was a further cause for its sanctity at Athens, and one which brings it into closer connexion with Zeus. O. Gruppe² has pointed out that over a wide area of the ancient world³ birds of prey were believed to be filled with the fire of the celestial region from which they came darting down, a fire that blazed in the colouring of their beaks or glittered in their flashing eyes. Some birds indeed got their name from their fiery nature—the *phlegyas*⁴, the *phléxis*⁵, the *incendiaria avis*⁶, the

owl (Ail. *var. hist.* 2. 9), while the Samians branded theirs with a galley (Douris of Samos Σαυλὼν ὄποι frag. 59 (*Frag. hist. Gr.* ii. 483 Muller)=frag. 66 (*Frag. gr. ⁶ Plin. *nat. hist.* 10. 36 inauspicata est et incendiaria avis, quam propter saepenumero lustratam urbem in annalibus invenimus, sicut L. Cassio C. Mario cos. (107 B.C.), quo anno et bubone visio lustratam esse. quae sit avis ea non reperitur nec traditur. quidam ita interpretantur, incendiariam esse quaecumque apparuerit carbonem ferens ex aris vel altariibus. alii spinturnicem eam vocant, sed haec ipsa quae esset inter aves qui se scire diceret non inveni.

Pliny's account of the *incendiaria avis*, which, some said, appeared bringing embers from the altars, leaves us guessing. On the one hand, we are reminded of the phoenix carrying its parent's body to the altar of the Sun at Heliopolis and burning it there (*Tac. ann.* 6. 28: see further Turk in Roscher *Lex. Myth.* iii. 3450 ff., *supra* i. 341). On the other hand, the name may cover some forgotten rite, perhaps comparable with the *Scoppio del Carro* on Easter Eve at Florence. The 'Sacred Fire' is then struck from flints brought by one of the Pazzi family from Jerusalem in the middle ages and kept in the church of the Holy Apostles on the Piazza del Limbo. A candle thus lit is taken in solemn procession to the high altar in the Cathedral. Meantime two splendid white oxen with crimson housings and gilded horns, wreathed with flowers and evergreens, have drawn the *Carro*, a four-sided erection tapering both towards the top and towards the base and covered with fireworks, to a point on the Piazza del Duomo between the Cathedral and the Baptistry. Here it is connected by a wire with a pillar set up in front of the high altar. 'Precisely at noon the "Gloria" was reached, and as the first words were sung the sacred fire was applied to the pillar, which, like the "Carro," was wreathed with fireworks. This was the supreme moment of the ceremony; with a hissing sound, and a shower of sparks, a dove, apparently of fire, flew from the pillar along the wire,—it should have reached the "Carro," and setting that alight, returned to the altar from whence it came, on the success or non-success of its flight depending, in the opinion of the Contadini, the fate of this year's harvest. By some unhappy chance it flew no farther than midway down the nave, where, with a last despairing "fizzle," it became extinguished,

*spinturnix*¹. So charged with heat was the eagle that, had it not introduced a piece of cool jet into its nest, it would positively have cooked its own eggs²! Viewed in this context the name *Aithya*³ becomes significant. It is best explained as an old participle of the verb *aittho*, 'I burn'⁴, and suggests a burnt or fiery colour⁵. In point of fact the herring-gull is distinguished by its yellow bill, which has a patch of bright red at the basal angle; the eye too is of a beautiful straw-colour set in a frame of vermilion formed by the rim of the eyelid⁶. Again, the little owl—*Athene noctua*, as the ornithologists term it—certainly derived its name *glauk* from the fiery glance of

revealing itself as a stuffed bird tied on to a bundle of squibs. Immediately the spectators rushed upon it, each trying to secure at least a feather . . . That evening the walls were placarded with the announcement of a "Mala Pasqua," and all sorts of misfortunes for the present year were freely prophesied' (Jessie L. Weston in *Folk-Lore* 1905 xvi. 182—184. Frazer *Golden Bough*³: Balder the Beautiful i. 126 f.). I witnessed the ceremony myself on Saturday, 15 April 1922, when the fiery bird made its double flight in safety, the *Carro* burst in fine style, and the crowd filling the Piazza scrambled for the smouldering fragments.

its eyes¹. Such birds, swooping upon their prey by sea or land, would appeal to the imagination of a simple folk and might well be regarded as lightning-birds appropriate to Athena, who wielded the thunderbolt of Zeus². This is speculative, and of course uncertain. But, so far as the owl is concerned, further evidence is forthcoming. Columella³, describing the rites by which the country people sought to avert wind and weather, says:

Hence Amythaon's son⁴, whom Cheiron taught,
On crosses hung the night-birds and on roof-tops
Would have them cry no more their deadly dirge.

Palladius⁵ follows suit, and in his farmer's calendar, among other magic means of warding off hail-stones, gives the *recipe*: 'Or else an owl is nailed up with wide-spread wings.' The same cure is still popular in Germany⁶ and elsewhere. C. Swainson⁷, a well-known authority on bird-lore, remarks: 'Owls are often nailed up on barn doors or walls. The meaning of this custom is now unknown in our own rural districts; but in Germany the peasants will tell you it is done to avert lightning. The owl, it is to be observed, is a lightning bird.' If so, we get rid of one small difficulty. It might have been thought that the divine power resident in the head of Zeus would have been born as an eagle, not an owl⁸. But the owl of Athena, as we now perceive, was virtually equivalent to the eagle of Zeus. The equation seems to have struck the Greeks themselves in

The passage from the ornithomorphic to the anthropomorphic conception of Athena involves several successive stages :

1. Athena as a bird.
2. Athena as a bird with human arms.
3. Athena as a bird with human head.
4. Athena as a goddess with bird's wings.
5. Athena as a goddess with a bird for her attribute.

The first stage we have already considered. It was perhaps best exemplified by the Megarian cult of Athena *Atthyia*, 'the Gull'.¹ But there were substantial grounds for thinking that at Athens Athena took the form of an owl.²

We have next to note how the bird becomes human-armed. A series of moulded terra-cotta pendants found in south Italy, especially in the neighbourhood of Tarentum, represents an owl that has not only wings but human hands as well and is spinning with distaff, yarn, and wool-basket all complete (figs. 595, 596).³ These odd-looking objects are always pierced with a couple of holes and seem to have served originally as loom-weights.⁴ There can be little doubt that the owl spinning is Athena *Ergane*⁵ in her character as patron of women's handiwork.⁶

The transition from bird to human-headed bird can be illustrated by an early Corinthian *aryballos*, found in Aigina and now preserved in the Archaeological Museum at Breslau (fig. 597).⁷ This shows Herakles contending with the Lernaean Hydra. The hero has already cut off one of the monster's ten heads: it is to be seen above, that is beyond, the horses on the right. Undaunted by two

more heads, which are biting deep into his shoulders, and by a large crab, which is nipping his legs, Herakles has run a long sword through two of the snaky necks, wounded a third, and grasped a fourth by the throttle. Even so he would be in imminent danger, were it not for the presence of Iolaos, who, attacking the Hydra from the opposite side, reaps three of its heads with a single pull of his toothed sickle. To right and left, marked off from each other by a flying bird, stand the chariots of Iolaos and Herakles, four-horsed and two-horsed respectively. In the former a young charioteer, Lapythos by name, holds his goad and reins in readiness for flight, while he turns his head to watch the combat. In the latter Athena had escorted Herakles. She has now dismounted and stands close at his back, inviting him with a gesture of her left hand to refresh his strength with a draught from the cup that she holds in her right. On the reins of the chariot is perched her owl; on the goad, a woman-headed bird, beside which is inscribed the word *wous*. M. Mayer¹ took this to be a variant form of *phôyx* or *pôyx*, an echoic name for 'gull.' The woman-headed bird would then be an *altera ego* of Athena *Aithyia*. But my friend the late Dr P. Giles informed me years ago that Mayer's explanation is phonetically impossible: the assumed interchange of an initial labial with an initial digamma depends on the mistaken view that digamma was pronounced like our letter *f*. Dr Giles himself suggested that *wous* might be a local onomatopoeic name for 'owl,' comparing the imitation of an owl's hoot, which in a poem by Thomas Nash² appears as *to-witta-vooo!* and in another by Shakespeare³ as *Tuwhit! tuwhoo!* I gladly accept this suggestion, especially as the

ceive that the Corinthian potter has here synchronised in an instructive series three distinct stages in the evolution of Athena—the ornithomorphic, the semi-ornithomorphic, and the anthropomorphic¹. Another Corinthian *aryballos*, in the Karlsruhe collection

Fig. 599.

pp. 75–80 with fig. (= my fig. 599. Scale $\frac{1}{5}$) puts together four fragments of a Corinthian *pinax* at Berlin (Furtwangler *Vasensamml. Berlin* i. 76 no. 683, 78 no. 757, 89 f. nos. 822 and 829 'Stil des Timonidas'), on which a man named Λόκρῆς stokes a potter's oven. Before it stands a small ithyphallic figure of the sort known as βαρκάνιον (Aristoph. *fab. incert. frag.* 39 (*Frag. com. Gr.* ii 1185 Meineke) *ap.* Poll. 7. 108, *cp.* Bekker *anecd.* i. 30, 5 ff), here named Λα— (? *cp.* Λάσταυρος, Λαικαστήρ, or the like). Upon it is perched a large owl named Φώκα (Roehl *Inscr. Gr. ant.* no. 20. 69, F. Blass in Collitz—Bechtel *Gr. Dial.-Inscr.* iv. 1. 66 no. 3119 h 69 Φώκα or Φώκα, *Inscr. Gr. Pelop.* i no. 313 Φώκα), *cp.* He-ych. *φωκίων* 'δρνις ποίος. The word, like Φώκη 'a seal,' may be a derivative of the Indo-Europæan **phōu-* 'to blow, puff': so Φῶξ (Prellwitz *Etym. Wörterb. d. Gr. Spr.*² p. 498 f., Boisacq *Dict. etym. de la Langue Gr.* p. 1044 f.), if not also our *puffin* (but see E. Weekley *An Etymological Dictionary of Modern English* London 1921 p. 1166).

¹ It is interesting to see the same three stages combined on a red-figure *kylix* potted by Pamphaios, found at Todi, and now preserved in the Villa Giulia (G. Bendinelli in the *Mon. d. Linc.* 1916 xxiv. 874–880 pls. 3 and 4 (= my fig. 600), Hoppin *Red-fig. Vases* ii. 304 no. 19 *bis* fig., *Corp. vas. ant.* Villa Giulia iii 1. c pl. 25, 2 and 3, pl. 26, 2 with text p. 13 by G. Q. Giglioli), which represents another exploit of Herakles. While the hero wrests the tripod from Apollon, Iolaos holds in readiness his four-horsed chariot and Athena advances to his aid at once as owl, as human-headed bird, and as goddess. By this time, however, the human-headed bird has ceased to be conceived as an owl or labelled as such and has become a commonplace soul-bird of the Seiren sort (G. Weicker in Roscher *Lex. Myth.* iv. 617 ff.).

Fig. 600.

(fig. 601)¹, represents a human-headed bird wearing a helmet. This can hardly be, as G. Weicker² supposes, the soul of a valiant warrior; for in that case it would, according to custom³, have been bearded. Rather, it is Athena herself, no longer a bird, not yet a goddess.

Fig. 601.

This transitional conception lay dormant for centuries, while Greek art was in its prime, and then—like so many other half-forgotten ideas—awoke to a new lease of life in imperial times. Certain rare bronze pieces of small size—whether coins (*kollybai*, *kollyba*⁴) or counters we cannot say—were struck at Athens in the Roman period and have as their reverse device an owl *en face* with a female helmeted head (figs. 602, 603)⁵. followed by M. Bahrfeldt⁷, observe that the feathers of the bird are spotted as in some species of owls. There can then be little doubt but that here too we see Athena as a *quasi*-bird. The same type, with sundry variations, occurs on a series of engraved gems and pastes of Roman date (figs. 607, 608)⁸, which were probably sup-

a laugh and so heighten the prophylactic effect¹. A bronze in the Castellani collection (fig. 611)² represented the goddess as a cock with human face, wearing by way of helmet the skin of a cock's head complete with comb, wattles, and beak. This singular fowl, perched on a winged skull, perhaps betokens the victory of vigilance over death or points some equally edifying moral.

Fig. 611.

The fourth stage in the evolution of Athena is that in which she appears as a goddess with the wings of a bird. It has indeed been maintained that the conception of a winged Athena is not found on Greek soil till the Hellenistic age and should be explained as a case of late syncretism—Athena and Nike rolled into one³. But

that is seriously to underrate both the quantity and the quality of the evidence for an Athena winged in her own right¹.

On the one hand, a winged Athena is familiar enough in Etruscan art. A cornelian scarab of careful archaic style² shows the goddess without helmet, but with spear and *aigís* and two well-marked wings on her back. A bronze in the Museo Gregoriano (fig. 612)³ again represents her with wings: this time she wears a helmet and an *aigís* decorated with a *Gorgóneion*, apparently viewed as the sun⁴, a crescent moon, and sundry stars. Again, a bronze *candelabrum* from Chiusi, formerly owned by G. P. Campana and then by A. Castellani, is topped by the statuette of a winged Athena, who wears a helmet with cheek-pieces up and an *aigís* with *Gorgóneion*: her right hand is empty, her left carries a naked infant (fig. 614)⁴. On the other hand, Ionian art of the sixth century B.C. does not hesitate to equip the goddess with wings. A scarab in banded onyx, set in a gold bezel attached to a bronze ring, came from Amathous to the British Museum and shows (fig. 615)¹ Athena standing towards the right. Two recurved wings start from her back. Her breast is full and prominent². One hand grasps a spear, the other holds up her *chiton*. Behind her back are visible the snakes of her *aigis* and a Seilenos-mask, which appears indeed to form part of her crested helmet, but is better explained as her *Gorgoneion* seen in profile³. Behind her feet are three lines of doubtful meaning⁴. Again, a white-figured sarcophagus from Klazomenai, now at Berlin, has a frieze of late sixth-century style, in which a central Athena standing to the left with round shield and four recurved wings is flanked by two warriors with horses and hounds⁵. Lastly, the west frieze of the Siphnian Treasury at Delphoi (c. 525 B.C.) represents Athena setting foot on a chariot drawn by four winged horses, but pausing to adjust a large *aigis* on her shoulders. The goddess herself had recurved wings of the archaic sort: the end of one is still visible in the relief; the other was originally added in paint on the background⁶.

now in the Louvre¹. The goddess, wearing a high-crested helmet and carrying a spear, is seated on a folding-stool: her owl is beside her, perched on the tip of her left wing. Finally, on an *oinochôe* from Kameiros in the Bibliothèque Nationale at Paris (fig. 618)² we see Athena, armed with a spear and a long-crested Corinthian helmet, winging her way through the air as she bears

a dead warrior (? Kekrops¹) across the sea. Her protective air recalls Aischylos² phrase at the end of the *Eumenides*: 'them that shelter beneath the wings of Pallas the Father honoureth.' Yet the same poet³ in the same play makes Athena come from Troyland 'without wings, flapping but the *aigis*-fold.' Clearly

¹ This is possible, but far from certain. On the one hand, the representation suits the myth of Athena Αἰθυία (*supra* p. 783 f.). On the other hand, the myth does not say that Kekrops was actually dead when carried off by Athena to Megara; and, unless we accept Pausanias' assumption (1. 5. 3) that there were two kings named Kekrops, we should expect him to be serpentine (*supra* pp. 181, 186 f., 770, 773).

Aischylos, like the painter of the Orvieto bowl, could think of her either as winged or as wingless.

During the fifth century, when humanising tendencies were rife, Athena ceased to be treated at will as a semi-bird. We have reached the point at which Nike split off from Athena. *Nike* and went her own winged way, leaving the older goddess wingless. But just here we encounter an obvious difficulty. If Nike with wings was indeed an abstraction from Athena *Nike*¹, how is it that Athena *Nike* had no wings, was indeed so notoriously 'wingless' that she came to be known as Nike *Ápteros*²? The texts describe her cult-effigy as a *xóanon* without wings, holding a pomegranate in its right hand, a helmet in its left³. It was in all probability seated, for an Attic *oinochóe* of the later black-figured style, now at Altenburg and

Baudrillart *Les divinités de la Victoire en Grèce et en Italie d'après les textes et les monuments figurés* Paris 1894 p. 7 'Simple don ou attribut d'Athéna, elle se détache d'elle, prend une personnalité distincte, et apparaît bien réellement comme la seconde personne d'une sorte de dualité,' *ib.* p. 13 'C'est donc vers le commencement du cinquième siècle qu'a dû s'achever la séparation progressive de Niké d'avec Athéna et la conquête de son indépendance, fait qui d'ailleurs n'empêche point l'antique Athéna-Nike de subsister.'

E. E. Sikes, who does not accept this view, argues that 'if Nike is to be regarded as an abstraction from any greater deity, she must be an abstraction from Zeus' (*Class. Rev.* 1895 ix. 282). Mr Sikes' criticism is approved by H. Bulle in Roscher *Lex. Myth.* iii. 310. See, however, Gruppe *Gr. Myth. Rel.* p. 1066 n. 3 (*id. Myth. A white-ground *lekythos* by a minor painter of the middle archaic period, about 480 B.C., gives head and hand only, helmet and pomegranate being the essential points (fig. 620)². The head is simply copied from the current coinage of Athens—its position in profile to the right, its scroll-pattern, its neck-plate, its leaves to commemorate Marathon³—unless of course both vase and coins are copies of the cult-statue. plainly popular¹. In fact, some seventy years later, in 409 B.C., Sophokles² in his *Philoktetes* can still make Odysseus invoke the same goddess:

‘Nike Athena Poliás, saviour mine.’

On the whole, the available evidence seems to point to the following conclusions. The worship of Athena on the Nike-bastion was of ancient date³. The goddess as an earth-mother was represented by a seated statue—Athena *Poliás*⁴—holding a pomegranate, symbol of fruitfulness or life renewed⁵. At some period of warlike achievement, say that of Marathon, the helmet was added and the

³ H. Bulle in Roscher *Lex. Balanos beneath the temple of Athena Nike (E. P. Blegen in the *Am. Journ. Arch.* 1936 xl. 145–147 with 4 figs.: ‘The work of taking down the Nike bastion is continuing. The temple itself has been entirely removed except for the foundations and lower step on the north side which it is hoped may be left undisturbed, as well as the north face of the bastion. Just inside the north foundation wall of the marble temple, blocks of an earlier, probably post-Persian, poros temple, were found *in situ*. This is orientated with the altar and bases found by Welter in the space between the marble temple and the Propylaea. The Turkish cistern which had been cut in the centre of the bastion had destroyed most of this earlier temple and no one had been sure of its existence’).

⁵ The significance of this pomegranate has been much discussed. O. Benndorf ‘Ueber das Cultusbild der Athena Nike’ in the *Festschrift zur 50jähr. Grundungsfest der deutschen archaologischen Instituts in Rom* Wien 1879 pp. 17–47 conjectured that Kimon organized the cult and built the temple of Athena Nike after the great Athenian victory on the Eurymedon (467 or 466 B.C.), and that he introduced the art-type of the goddess from the neighbouring town of Side in Pamphylia: σιδη means ‘pomegranate’ and coins of Σιδη from s. v onwards show a pomegranate, Athena, and Nike, though not Athena or Nike actually holding a pomegranate (*Brit. Mus. Cat. Coins Lycia*, etc. p. 143 ff. pl. 25, 7 ff., *Hunter Cat. Coins* ii. 510 ff. pl. 58, 6 ff., *McClean Cat. Coins* ii. 262 ff. pl. 317, 1 ff., *Babelon Monn. gr. rom.* ii. 1. 535 ff. pl. 24, 4 ff., ii. 2. 931 ff. pl. 142, 6 ff., *Head Hist. num.* 2 p. 703 f.). But this ingenious hypothesis has to face two serious objections: (1) An inscription published by P. Kabbadias in the *Ἐφ. Ἀρχ.* 1897 p. 173 ff. pl. 11 (Michel *Recueil d’Inscr. gr.* no. 671, A, Dittenberger *Syll. inscr. Gr.* 3 no. 63, a, *Inscr. Gr.* ed. min. i no. 24), which can be dated by its lettering to the period 460–446 B.C. and by the name [ἡμιπρόν]ικος, sc. son of Kallias, to the year 448 B.C., records a proposal (line 4 ff.) [τῇ] [Ἀθηναίαι τῇ Νικῇ] ἐκὶ ἐνὶ ἡμέραν ἢ ἐν δὲ [ἀ] βιο ἡμερᾶσι ἐκὶ Ἀθηναίων λαπα[ρό]ν καθίστα[σθαι] καὶ τὸ ἡμερὸν θυρόσσει, καθότι ἂν Καλλικράτης χοινογράφει· ἀπομισθῶσαι δὲ τὸς πολετὰς ἐπὶ τῇς Λεοντίδος πριτανείας· φέρειν δὲ τὸν ἡμέραν πεντέκοντα δραχμὰς καὶ τὰ σκέλε, καὶ τὰ δέρματα φέρειν τὸν δευμόσιον· νεὸν δὲ οἰκοδομᾶσαι καθότι ἂν Καλλικράτης χοινογράφει καὶ βόμὸν λίθινον. (2) For some unknown reason the matter was long delayed. Indeed the architecture and sculpture of the existing temple are carried out in a style which points to a date c. 425 B.C. (Furtwangler *Masterpieces of Gk. Sculpt.* p. 442 ff.). In that year the Athenians won

successes against the Ambraciotes and their Peloponnesian allies at Olpai, the Corcyraean insurgents on Mt Istone, and the inhabitants of Anaktorion. They testified their gratitude by dedicating a fresh statue of Athena *Nike*, and this in turn was restored at some date between 350 and 320 B.C. (*Inscr. Gr.* ed. min. ii—iii. i no. 403, a, Dittenberger *Syll. inscr. Gr.*³ no. 264, a). These considerations have led to a summary rejection of Benndorf's hypothesis (E. Curtius in the *Arch. Zeit.* 1879 xxxvii. 97, C. Robert in U. von Wilamowitz-Möllendorff *Aus Kydathen* Berlin 1880 p. 184 n. 1, R. Kekulé *Die Reliefs an der Balustrade der Athena Nike* Stuttgart 1881 p. 25, A. Furtwangler in Roscher *Lex. Myth.* i. 689, H. Bulle *ib.* iii. 310 f., Collignon *Hist. de la Sculpt. gr.*

Fig. 621.

ii. 99 n. 1, W. Judeich *Topographie von Athen*² München 1931 pp. 218 n. 1, 222 n. 2), and indeed it is clear that Kimon cannot have had any hand in the building or equipping of the extant temple. It might, however, be contended that he built and equipped an earlier structure on the same site, especially in view of the 'post-Perian' blocks of *póros* found by N. Balanos (*supra* p. 813 n. 3). Even so it remains highly improbable that the cult of Athena *Nike* was introduced from Pamphylia, or that the pomegranate in her hand was a piece of canting heraldry.

Assuming then, as we have every right to do, that the pomegranate in Athena's hand was an ancient symbol, we have next to discover the nature of the symbolism. The Greeks were struck by two characteristics of the fruit—its red colour and its numerous seeds (cp. Kallim. *lavacr. Pail.* 27 f. of Athena's toilet before the Judgment of Paris τὸ δ' ἔρυσθος ἀνέδραμε, πρῶτον οἶαν | ἢ ῥόδον ἢ σίβδας κόκκος ἔχει χροῖαν). The first certainly suggested blood (Artemid. *oneirocr.* i. 73 ῥοαὶ δὲ τραυμάτων εἰσὶ σημαντικαὶ διὰ τὸ χρῶμα). The second possibly suggested fertility (Furtwangler *Masterpieces of Gk. Sculpt.* p. 445, Farnell *Cults of Gk. States* ii. 696 n. c), though of this we have no definite proof (yet P. Saintyves *Les Vierges Mères et les Naissances Miraculeuses* Paris 1908 p. 94 remarks that pomegranates occur in a Florentine spell against sterility in women). The two

together seem to have betokened the renewal of life after death. And this would agree well enough with the observed habits of the tree (Theophr. *hist. pl.* 4. 13. 3 *ἐνία δὲ γηράσκει μὲν καὶ σήπεται ταχέως, παραβλαστάνει δὲ πάλιν ἐκ τῶν αὐτῶν, ὥσπερ αἱ δάφναι καὶ αἱ μηλᾶι τε καὶ αἱ ῥοαὶ καὶ τῶν φιλόδρων τὰ πολλά*).

Thus pomegranates sprang from the blood-drops of Dionysos; whence women celebrating the Thesmophoria would not eat pips of the pomegranate that fell on the ground (Clem. Al. *protr.* 2. 19. 3 p. 15, 9 ff. Stahlin, Euseb. *praep. ev.* 2. 3. 28. ?cp. *supra* ii. 1129). The same fruit was taboo at the Athenian Halioia (schol. Loukian. *dial. mer.* 7. 4 p. 280, 22 Rabe). at the Eleusinian mysteries (Porph. *de abst.* 4. 16, cp. Artemid. *oneirocr.* 1. 73), and in the Arcadian temple of Despoina (Paus. 8. 37. 7). Again, a pomegranate sprang from the severed member of Agdistis; and Nana, who placed some of its fruit in her bosom, thereby conceived and became the mother of Attis (*supra* ii. 969 n. 4) Attis has pomegranates in his wreath (*supra* ii. 298 with fig. 189), and his priest holds one together with three pomegranate(?)-twigs (*supra* ii. 300 with fig. 193).

On the common tomb of Eteokles and Polyneikes grew a pomegranate, said to have been planted there by the Erinyes: its fruit bled, when plucked (Philostr. *mai. imagg.* 2. 29. 4). On the tomb of Menoikeus near the Neistan gate of Thebes grew another pomegranate: when the rind of its fruit was broken, the inside looked like blood (Paus. 9. 25. 1). A pomegranate, therefore, was desirable food for the dead, and figures frequently on funeral monuments of the archaic period (Spartan *stélai*, 'Harpy' tomb, etc.). A fragmentary Laconian *kýlix* in the British Museum shows a woman presenting a pomegranate to a seated man (*supra* i. 95 fig. 68). A polychrome Attic *lékýthos* at Berlin depicts a *stèle*, and a woman holding out four pomegranates on a plate for Charon to take (Furtwangler *Vasensamm.* Berlin ii. 765 no. 2680, F. von Duhn in the *Arch. Zeit.* 1885 xlin. 20 ff. no. 6 pl. 3 (=my fig. 621). Reinach *Rep. Vases* 1. 457, 4). A similar *lékýthos* from Alopeke near Athens, also at Berlin, has the dead man seated by his *stèle* leaning on a couple of spears. His *chiton* is decorated with a sprig of pomegranates (green leaves, purple fruit), and both *chiton* and *himation* have a border of green leaves. On the right stands another man, whose *himation* is adorned in the same way with two large pomegranate-sprigs and with sundry separate leaves and fruits. On the left a maiden approaches with a basket of offerings. She wears *p. plos* and *himation*, the former decked with leafy borders and two large pomegranate-sprigs, the latter with a third sprig of the same sort (Furtwangler *Vasensamm.* Berlin ii. 766 no. 2682, W. Kiezler *Wissenschaftliche Attische Lekythen* München 1914 p. 140 f. pl. 92).

The pomegranate as the food of the Underworld recurs in the myth of Persephone, who might not remain on earth with Demeter because she had eaten one (*h. Dem.* 372, 412, Apollod. 1. 5. 3) or three (Ov. *fast.* 4. 607 ff., Lact. *Plac. in Stat. Theb.* 3. 511) or seven (Ov. *met.* 5. 533 ff., cp. Serv. in Verg. *georg.* 1. 39, interp. Serv. in Verg. *Aen.* 4. 462, Myth. Vat. 1. 7, 2. 100) pips of a pomegranate growing in Hades' domain. An engraved amethyst in my collection shows, according to A. S. Murray, Persephone holding a pomegranate over against Demeter. A bronze statuette from the Payne Knight collection represents Persephone with a pomegranate in her left hand and a torch (?) in her raised right hand (*Brit. Mus. Cat. Bronzes* p. 179 no. 982). A bronze mirror at Paris makes her stand with a pomegranate held out in her right hand (Babelon—Blanchet *Cat. Bronzes de la Bibl. Nat.* p. 530 no. 1320). Persephone is often associated with a pomegranate in terra-cotta figures, the fruit or flower being regularly held against her bosom. Usually the fruit is in her right hand between her breasts (*Brit. Mus. Cat. Terracottas* p. 109 no. B 212 Kameiros, p. 110 no. B 223 Kameiros, p. 143 no. B 427 Sicily, R. Kekulé *Die Terrakotten von Sicilien* Stuttgart—Berlin 1880 p. 59 fig. 121, cp. *Brit. Mus. Cat. Terracottas* p. 93 no. B 126 Kos, p. 234 no. C 474), occasionally in her left hand as well (*ib.* p. 87 nos. no. B 390 Tharros in Sardinia). Her priestess or worshipper similarly has a shallow basket containing two pomegranates, which she holds in her left hand against her breast (*ib.* p. 281 f. no. C 798 Benghazi). A tomb-painting from Nola, now at Berlin, shows Persephone, or more probably a dead woman, seated on a throne, holding a pomegranate in her left hand against her breast and a flower in her uplifted right hand (E. Gerhard in the *Arch. Zeit.* 1850 viii. 145 ff. pl. 14 (=my fig. 623), Reinach *Vases Ant.* p. 88 f. pl. Millin ii, 78, 9, Farnell *Cults of Gk. States* iii. 228 pl. 11, F. On the pomegranate in relation to Persephone see further L. Stephani in the *Comptendu St. Pé.* 1859 p. 131 f. Atlas pl. 4, 2, 1865 pp. 10 no. 14, 77 Atlas pl. 3, 22, 1873 p. 16 and B. Ashmole in the *Journ. Hell. Stud.* 1922 xlii. 250.

In view of the foregoing evidence it is reasonable to conclude that a pomegranate in the hand of a deity implied perpetual regeneration and was virtually regarded as a fruit from the Tree of Life. Polykleitos' chryselephantine Hera was enthroned with a pomegranate in one hand, a sceptre in the other (Paus. 2. 17. 4: *supra* i. 134, iii. 65 ff.). A bronze statue representing Milon the Olympic victor as standing on a *diskos* with a pomegranate

grasped in his left hand and the fingers of his right hand raised and spread, while his head was bound with a fillet, was said by Apollonios of Tyana to portray the athlete as a priest of Hera (Philostr. *v. Apoll.* 4. 28 p. 76 f. Kayser, but cp. Paus. 6. 14. 6, Ail. *de nat. an.* 6. 55, *var. hist.* 2. 24). A statue of the youthful Zeus *Kúrios* at Pelousion held a pomegranate in its outstretched hand (*supra* ii. 986 n. o).

Aphrodite is said to have planted the pomegranate in Kypros (Eriphos *Meliōia frag.* 1. 11 f. (*Frag. com. Gr.* iii. 556 f. Meineke) *ap.* Athen. 84 c). Her connexion with the fruit comes out also in the story of Melos. According to the interp. Serv. *in Verg. ecl.* 8. 37, a certain Delian named Melos fled to Kypros in the reign of Kinyras. Kinyras

made him companion to his son Adonis and gave him to wife Pelia, a relative of his own who was likewise a devotee of Aphrodite. Pelia bore Melos a son, called Melos after his father; and the boy was brought up *inter arva, i.e.* in the precinct of Aphrodite. When Adonis was killed by the boar, Melos i in his grief hanged himself on the tree from which he got his name *Mēlos*: Pelia, his wife, hanged herself on the same tree. Aphrodite in pity for their fate made perpetual lament for Adonis, transformed Melos i into the fruit that bears his name, Pelia into a dove (*πέλεια*), and bade Melos ii return with followers to Delos. He did so, and becoming powerful there founded the state of Melos (cp. Arrianos of Nikomedeia *frag.* 71 (*Frag. hist. Gr.* iii. 599 Muller) = *frag.* 70 (*Frag. gr. Hist.* ii. 865 Jacoby) *ap.* Eustath. *in Dionys. per.* 530). It should be added that the *μήλον* on coins of Melos is always a pomegranate, never an apple (see e.g. Babelon

Monn. gr. rom. ii. 1. 1319 ff. pl. 62, 10—14, ii. 3. 847 ff. pls. 241, 8—21, 242, 1—19, 243, 1—23, *Brit. Mus. Cat. An archaic Greek bronze in the British Museum shows a goddess assumed to be Aphrodite holding a pomegranate in her right hand, her drapery in her left (*Brit. Mus. Cat. Bronzes* p. 18 no. 198 pl. 3). An Etruscan mirror-stand in the same collection repeats the motif (*ib.* p. 77 no. 549). Terra-cotta statuettes from Kition (*Larnaka*) in Kyprios, which represent a goddess holding a pomegranate to her breast (*Brit. Mus. Cat. Terracottas* p. 47 nos. A 270, A 271, p. 59 no. A 391) or on her knee (*ib.* p. 47 no. A 269), may be meant for Aphrodite (see *ib.* p. xxxvii, and cp. *supra* ii. 807 n. 5 (4)). One of the Horai on the magnificent red-figured *kylix* by the potter Sosias (bibliography *supra* ii. 1167 n. 6: add J. D. Beazley *Attische Vasenmaler des rotfigurigen Stils* Tübingen 1925 p. 59) is holding a branch laden with pomegranates in either hand. An oval bronze tablet of Graeco-Roman date in the British Museum has

a high relief of three goddesses (Horai?), each of whom wears a triple-pointed crown with an inverted crescent in front of it and holds a pomegranate in her right hand: their left hands hold respectively a bird, a flower, and an indistinguishable object (*Brit. Mus. Cat. Bronzes* p. 156 no. 862. My fig. 624 is from a new photograph). How Rhoio (O. Hofer in Roscher *Lex. Myth.* iv. 121 ff., Weicker in Pauly—Wissowa *Real-Enc.* i A. 1004 ff.) and the Rhoiai (O. Hofer *loc. cit.* iv. 119), nymphs of the pomegranate-tree, were represented, we do not know.

Older than any of these is a clay idol (0.80^m high) found in a small circular hut of the latest 'Minoan' phase at *Gazi* between Tylissos and Herakleion. The half-length figure of a goddess with uplifted hands rises from a cylindrical base (cp. *supra* ii. 536 fig. 406, c): she wears, stuck upright in her hair, three pins topped by pomegranates. A similar, but smaller (0.53^m high), goddess from the same sanctuary has on her head 'horns of consecration' flanked by a pair of doves (Elizabeth P. Blegen in the *Am. Journ. Arch.* 1936 xl. 371 f. figs. 1, 2 (=my fig. 625), 3).

A modern Greek folk-tale from Syros (*Syra*) makes a prince transform himself into a huge pomegranate growing on a tree in the king's garden (J. G. von Hahn *Griechische und albanesische Märchen* Leipzig 1864 ii. 38 no. 68).

appellative *Nike* became fixed. The rock-goddess had sent forth her owls, omens of victory, and henceforward these emissaries—the Nikai of her famous balustrade—must needs be winged, though she their source and origin remained wingless¹.

However that may be, the winged Athena reappears in

¹ A terra-cotta statuette in the Antiquarium at Munich, referred by Bulle to the middle of *s. v.* B.C., represents a winged Nike standing with her left arm supported on a tree-stem. She holds a pomegranate in her left hand, an *oinochôe* in her right, being apparently conceived as a handmaid (cp. E. Bernert in Pauly—Wissowa *Real-Enc.* xvii. 293, 302) about to offer food and drink to some deity, perhaps to Athena *Nike* (H. Bulle in Roscher *Lex. Myth.* iii. 340 with fig. 18 = my fig. 626).

(fig. 627)¹, on which a winged Athena advances towards the right, one arm outstretched and covered with the *aigís*, the other raised and brandishing the thunderbolt. Bronze coins of Prousius i (fig. 628)², who was king of Bithynia from c. 228 to c. 183 B.C., vary the type. A winged and helmeted Athena with lowered left hand holds a shield bearing in relief a Gorgon's head, while with uplifted right hand she crowns the king's name (in place of himself). An example belonging to the French consul L. E. Cousinéry (1747—1833) showed wings on the helmet, not on the shoulders, of Athena (Mionnet *Descr. de méd. ant.* ii. 508 f. no. 47). Athena has a winged helmet also on a terra-cotta mural relief in the Louvre (G. Fougères in Daremberg—Saglio *Dict. Ant.* iii. 1925 fig. 5060: see further *infra* Append. 144, 143, etc. B.C., introduce a further variation. Athena, winged and helmeted as before, supports with her left hand shield and spear, but on her right hand carries a small Nike, who extends

Graeco-Roman gems likewise represent Athena winged and armed, carrying a Nike¹, or holding a wreath and accompanied by her snake², or grouped with a diminutive warrior³.

Among the finds made in a Scythian grave-mound at 'Alexandropol and now preserved in the Hermitage was the skeleton of a horse still wearing its *phálara* of gilded silver. The frontlet is embossed with a facing figure of the winged Athena—an excellent *apotrópaion*⁴. The goddess mounts guard with spear, shield(?), and *aigis*, her faithful owls beside her (fig. 632)⁵. An ingenious application, or misapplication, of the type occurs in a Pompeian fresco (fig. 633)¹, one of several which represent Auge the priestess of Athena pursued by Herakles² and were presumably based on some Pergamene original³. Auge was the daughter of Aleos, king of Tegea⁴, and the scene is laid at the foot of Mount Parthenion. The artist personifies the mountain as Parthenos and, thinking of Athena *Parthénos*, equips her with the *Gorgóneion* and the filleted olive-branch of the goddess. Then, remembering that Parthenos was also the constellation Virgo⁵, he adds dark blue wings spangled with yellow stars and a blue *nimbus*⁶ with golden rays. Perhaps too he realised that Parthenos the constellation was by some identified with Dike⁷, the daughter of Zeus by Themis⁸, who might well be moved by this exhibition of lawless love.

Less learned, but more noble, is a fine Flavian goddess in white Italian marble, found at Ostia near the Porta Romana, of whose attic she once formed part (fig. 634)⁹. She has the three-crested helmet of Athena *Parthénos*, a circular shield with a central *Gorgóneion* at her right side, and a pair of splendid pinions on her back. Accordingly, G. Calza¹⁰, on the analogy of Athena *Nike*, calls her 'Minerva Vittoria.' Minerva *Victrix* would perhaps be better Latin; but that appellation is known almost entirely from coins¹¹.

and the numismatic type is unfortunately wingless¹. Mrs Strong² with greater caution speaks of 'the winged Minerva' as an 'adaptation of a Greek model of the fifth century' and in that respect compares the (wingless) Minerva of the Forum Transitorium³. C. Picard⁴ too is content to recognise a 'Minerve ailée,' aptly citing the similar goddess from Bulla Regia in Numidia⁵.

Finally, in the fifth stage of her evolution Athena becomes purely anthropomorphic. But even then the owl is retained as an attribute or adjunct. Goddess and bird, originally connected by a bond which amounted to identity, were never wholly separated. Their association might of course be expressed in a great variety of ways. In point of fact, however, it commonly took shape in certain art-types of long-standing sanctity and significance, the bird appearing on the pillar, on the head, on the hand of the goddess, or duplicated and attached to her chariot.

Of the owl on a pillar I have already spoken⁶. It conforms to the wide-spread type of bird-on-column⁷, which can be traced back to 'Minoan' times⁸ and, as M. P. Nilsson⁹ justly claims, implies the epiphany or embodiment of the deity concerned.

The owl on the head of Athena is indeed attested by two

and inscriptions (p. 494 n. 1) (add one literary reference, in *Acta* 581) concludes: 'Briefly, the winged goddess of Ostia represents a fusion of the Parthenos type and the Victory motif, whether this fusion be derived from a Greek Athena Nike or be due to the originality of the Roman artist. In all probability it stands for Minerva Victrix and not for Roma Victrix. For the only other known Roman example of a winged Athena type represents Minerva and not Roma, and the conception of Minerva Victrix appears to have been more popular under the Empire than that of Roma Victrix, particularly from the reign of Domitian on.'

¹ Unless it can be maintained that the winged but nameless figure on Domitian's *denarii* (*supra* p. 821 fig. 630) was also a Minerva Victrix.

passages of Aristophanes¹, but remains unexampled. It was, I think, modified into the owl on her helmet, of which sundry specimens are extant². W. Deonna³ illustrates the *motif* from a couple of Graeco-Egyptian terracottas at Geneva, a lamp at Berlin⁴, and a fine bronze statuette of Roman date found in 1916 at Avenches⁵ (fig. 635). He assumes an original emanating from the school of Pheidias in the second half of the fifth century and dedicated on the Athenian Akropolis. But again we may reasonably suspect that the type had a long history behind it, being a late but lineal descendant of such figures as the Cnossian goddess with a dove on her head⁶.

to indicate that the scene is her own precinct on the Akropolis. Once more it is obvious that the owl sent forth from the hand of the goddess is comparable with the small running figure on the arm of the Cauloniate Apollon⁴ or with winged Eros on the arm of Aphrodite⁵—in short, embodies the very soul of Athena.

Hellenistic fancies are not without some warrant in Hellenic literature and art. Apollon's swans go back to Alkaios¹, Aphrodite's sparrows to Sappho², and Athena herself on a fifth-century vase has a team of snakes³. But the Hellenic grouping of divinity and divine animal more often figures the former as riding on the latter—Apollon on his swan⁴, Artemis on her doe⁵, Poseidon on a dolphin⁶, Dionysos on a bull⁷, Aphrodite on a goat⁸, and so forth. At an earlier date Anatolian and Mesopotamian art made the god or goddess stand erect on the back of the sacred creature—Sandas on a lion⁹, Adad¹⁰ or Ramman¹¹ or Iupiter *Dolichenus*¹² on a bull, his consort on an ibex¹³ or a hind¹⁴. In such cases the anthropomorphic and theriomorphic representations of the deity are simply juxtaposed.

Fig. 643.

And here a point of some interest emerges. In the foregoing sections I have contended that Athena was a pre-Greek mountain-mother of the Anatolian kind, whose life was manifested in the flora and fauna of the Akropolis-rock¹⁵. The olive¹⁶, the snake¹⁷, the owl¹⁸ were all alike daemonic powers instinct with the vitality of Athena. The owl in particular was regarded as Athena herself in

visible form. Indeed, we have traced in some detail the stages through which the bird was developed into the goddess¹.

A curious confirmation of these claims may be found in a Sumerian tablet of baked clay referable to the time of the Larsa dynasty (c. 2300—2000 B.C.), recently published by Mr Frank Davis², and now to be seen in the art-collection of Mr Sydney Burney (pl. lxi)³. She wears a head-dress of bovine horns⁴, bunches of hair that hang down over her shoulders, a broad necklace round her throat, and bracelets on her wrists. Lastly, in either hand she displays an emblem which Mr Sidney Smith interprets as a measuring rod and looped cord⁵. As to technique, the eyebrows

² In *The Illustrated London News* for June 13, 1936 p. 1047 with a full-page photographic reproduction. D. Opitz 'Die vogelfussige Göttin auf den Lowen' in the *Archiv für Orientforschung* 1937 xi. 350—353 fig. 1 seeks to discredit the relief as exhibiting sundry rare or unexampled features. But E. Douglas Van Buren 'A further Note on the Tera-cotta Relief' *ib.* pp. 354—357 figs. 2—6 aptly cites several parallels, e.g. fig. 3 the Louvre plaque AO 6501 (*infra* p. 833 f.). An authoritative discussion by H. Frankfort is shortly to be published.

³ Mr Burney, of 4 Bruton Street, Westminster, W. 1, kindly allowed me to examine the original at my leisure, while Mr Sidney Smith spared time to discuss its significance and furnished me with the fine photograph from which my pl. lxi is taken. The tablet itself measures 19½ inches in height, and is in a state of almost complete preservation.

⁴ Certainly not a 'snake head-dress,' as Mr F. Davis *loc. cit.* states. Cp. e.g. *supra* i. 263 fig. 190 Šamas (4 horns), i. 577 fig. 446 Ramman (1 horn) and Istar (1 horn), i. 578 fig. 447 Ramman? (4 horns), ii. 546 fig. 424 Adad (1 horn) and Istar (1 horn). Good examples in Ebert *Reallex.* vii pl. 143 Sun-god (4 pairs of horns) and pl. 145, b Sun-god (4 horns). Better still in the *Encyclopédie photographique de l'Art Paris 1935—1936* L'Ait de Mésopotamie ancienne au Musée du Louvre pp. 218 A, B, 226 A, 247, 258 A, 259 C, 260 A, 263 C, D, 286 A, B.

⁵ Sir E. A. Wallis Budge in his account of the Sippar relief (*supra* i. 263) spoke of this emblem, there held by the Sun-god, as 'a disk and bar, which may be symbolic of the sun's orbit, or eternity.'

Mr Sidney Smith would recognise rather a measuring rod with a coil of cord. He compares part of the *stèle* of Ur-Nammu, on which the coil is rendered as having separate strands and a dependent loop (C. L. Woolley in *The Antiquaries Journal* 1925 v. 398 pl. 48 ('I imagine that the staff and looped cord are the measuring-rod and line of the architect such as were held by the angel whom Ezekiel saw in a vision in Babylonia

are in relief, the lines on the palms incised¹; the eyes were inlaid, the whole body painted red, except perhaps for a darkened *pubes*; the wing-feathers are picked out in red and dark colouring. The nearest analogue to the entire figure is furnished by a similar, but much smaller, plaque in the Louvre², which again shows a nude

(Ezek. xl. 3¹), L. Legrain in the *Revue d'Assyriologie et d'Archéologie Orientale* 1933 xxx. 111 ff. with pl. 1), and concludes (July 3, 1936): 'I suppose then, this Lilith holds the symbols of justice because she is executing the orders of some high god, carrying out fell designs only on those who have sinned.'

Mr C. T. Seltman has suggested to me (Nov. 11, 1936) that the emblem in question is akin to the Cypriote form of *ānkh* on coins of Salamis (e.g. *Brit. Mus. Cat. Coins Cyprus* p. 50 nos. 23 and 26 pl. 10, 1 and 4 = my figs. 644 and 645), and that circle and bar may have symbolised the female and male organs. Such a combination would be suitable enough for Lilith, and there is much to be said for the view that the *ānkh* was a sign of procreation (Sir E. A. Wallis Budge *Amulets and Superstitions* Oxford 1930 pp. 128 ff., 134 f., 339 f.). Yet other interpretations are still rife (see e.g. Sir W. M. Flinders Petrie *Amulets* London 1914 p. 14 pl. 3 fig. 30, a—g man's girdle-tie, A. H. Gardiner in J. Hastings *Encyclopædia of Religion and Ethics* Edinburgh 1915 viii. 20^b f. sandal-straps), and it should be noted that the *ānkh* has almost invariably its oval or circle resting on a vertical as well as a horizontal bar.

An object of curiously similar shape is the navel-string or 'twin' (*mulongo*) of the king of Uganda, which was wrapped in bark-cloth, decorated with cowries and beads, and treated like a person in a special house built for it (Frazer *Golden Bough*³: The Magic Art i. 196. Cp. *supra* ii. 193 n. 1). Fig. 646 is from an example in my possession. But the resemblance of the African relic to the Sumerian attribute is presumably quite fortuitous.

If guess-work were allowable, my own surmise would be that the bar-and-circle held by the goddess is a conventional snake, such as the *Imoka Kamui* or 'divine image' made out of sedge by the Ainu and used by them in their snake-worship especially at the time of childbirth (J. Batchelor in J. Hastings *op. cit.* i. 251^a with fig. = my fig. 647). On this showing the Mesopotamian goddess would be a close counterpart of the 'Minoan' goddess, who brandished a snake in either hand (*supra* ii. 930 n. o, cp. ii. 1221 fig. 1014) and has been already compared with Athena (*supra* p. 189 f.). However, from Larsa to the Kurile Islands is a far cry.

¹ So in early 'Ionic' sculpture, e.g. the left hand of the rejoicing woman or of the lyre-playing youth on the Boston relief (F. Studniczka in the *Jahrb. d. kais. deutsch. arch. Inst.* 1911 xxvi pl. 1 and fig. 61, L. D. Caskey *Museum of Fine Arts, Boston. Catalogue of Greek and Roman Sculpture* Harvard Univ. Press 1925 p. 30 ff. no. 17, G. M. A. Richter *The Sculpture and Sculptors of the Greeks* Yale Univ. Press 1929 p. 31 with figs. 477 and 478).

goddess *en face*, with bird's wings, claws, and spurs, but makes her stand on two goats and omits the two owls.

It is not easy to give a name to this singular personage. Her nudity suggests a goddess akin to Aphrodite or Astarte or Ištar. Her lions recall Kybele, the mountain-mother of Asia Minor; and we observe that the ground beneath the lions is marked with the regular conventional design for mountains. A nude goddess standing erect on a lion occurs in Hittite art¹ and—since she suckles an infant—must be regarded as maternal. I am therefore emboldened to surmise that in this unique, or all but unique, Mesopotamian type we have—incredible as it sounds—the remote ancestress of Athena, half-bird half-goddess, *theà glaukôpis* as Homer's forebears called her².

To this venturesome view Mr Sidney Smith demurs. In a recent letter to me (June 25, 1936) he puts forward a less precarious hypothesis:

'The plaque presents some very interesting problems in Sumerian religion. The goddesses are very difficult to place, and many of the names merely represent different aspects of one and the same conception—given at different points in a ritual, or at different times of the day, or on different occasions. The point is to decide the class of deity represented on the plaque; and this, I think, can be done with some certainty. The claw-feet and the spur on the leg (a new feature) place her in the demon class. Her obvious beauty consorts with that. She is the kind which ravishes young men, in lonely places, by night, leaving them unsexed³. Finally, her association with the lions points to a connection with the celestial Ishtar, the morning- and evening-star: and Ishtar was a ravisher of men, see the Gilgamesh epic. What then are the owls (an entirely new feature)? They are, as I guess, her night servants: they serve her fell purpose as watchers.

A relief in Greek marble, which passed from the collection of J. Gréau into that of W. Frohner, shows a Nightmare of the sort, assaulting her victim, in the guise of a nude woman with a bird's wings and talons (T. Schreiber *Die hellenistischen Reliefbilder* Leipzig 1889—1894 pl. 61 (= my fig. 648), Harrison *Proleg. Gk. Rel.*² p. 202 f. fig. 38, G. Weicker *Der Seelenvogel in der alten Litteratur und Kunst* Leipzig 1902 pp. 74, 181, *id.* in Roscher *Lex. Myth.* iv. 609 with fig. 8).

For Germanic parallels see F. Ranke 'Alp' in the *Handwörterbuch des deutschen Aberglaubens* Berlin—Leipzig 1927 i. 281—305 (especially p. 294 f.).

If this be right—it cannot be far wrong—the plaque is an apotropaic: the thing pictured drives away the thing immaterial, a well-established principle in Babylonian magic.

I turn back to your letter of the 18th with its very fascinating thesis....It seems to me that a difficulty immediately occurs. Athene was preeminently the virgin, and that is just the reverse of the character we may assume for the Babylonian goddess. You say that the *Parthenos* is later, that she was originally *Meter*, but recovered virginity yearly¹. But *Meter* also is very far from our demon, whose name may have been *Lilitu* (Lilith) *Ardat Lili* (the slave-girl of the Night) whose characters you can discover in R. C. Thompson, *Devils and Evil Spirits*². To establish a firm connection between Athene and the goddess of the plaque, will it not be necessary to show that the goddess was not originally, as later, representative of Law, Liberty, and Reason, but a local demon who fell upon the transgressor (witting or unwitting)?

The strongest point in favour of your argument would be the association of snakes¹ and owls with the same deity. It might be possible to assume that the snakes who are associated with Ishtar are the snakes who carry out the commands of Shamash, the god of Law and Righteousness.'

In answer to the friendly criticisms of Mr Sidney Smith I would urge that the formidable and rapacious aspect of the goddess desiderated by him is to be sought in Athena's relation to the Gorgon², who sometimes at least was conceived as a ravening bird of prey (fig. 649)³. That this side of her nature made a strong appeal to the popular mind is sufficiently proved by the survival of her epithet *Gorgoepékoos*⁴.

³ A black-figured *hydria* of late, Etruscan, style, found by E. The very similar figure, which appears twice as a decorative relief on a bronze Etruscan *situla*, found at Offida, Picenum, in 1877 and now in the British Museum, has a purely human face with dishevelled hair in place of the *Gorgoneion* (*Brit. Mus. Cat. Bronzes* p. 107 f. no. 650 fig. 18). Weicker *loc. cit.* rightly assumes that the Etruscan *hydria* and the Etruscan *situla* presuppose a common source.

The *aigis* and *Gorgóneion* of Athena 837

(4) The *aigis* and *Gorgóneion* of Athena.

If, then, Athena, originally the rock-goddess of the Akropolis at Athens, manifested herself sometimes as a Snake, more often as an Owl, we obtain at last a satisfactory explanation of that puzzling attribute, her *aigis*. For, when a sacred animal becomes anthropomorphic, the resultant deity tends to retain the old animal-skin as a relic charged with the virtues of his former estate¹. One thinks of the Hittite lion-god fairly covered with lions or lion-skins², of the Egyptian Zeus *Thebaieus* masquerading in a ram-skin³, of the Italian Iuno *Sospita* habitually garbed in a goat-skin⁴, perhaps too of the Greek Dionysos *Melánaigis*⁵ and of Argos wearing his black bull's-hide⁶. Now Athena's *aigis*, as represented by painters and sculptors⁷, is a skin-cape either scaly (figs. 650, 651)⁸ or feathered (figs. 652, 653)⁹, and normally displaying the *Gorgóneion*, a fear-some head with staring eyes. My belief is that in both cases the humanised Athena is wearing the *exuviae* of the animal that once she was. As a Snake, she dons the scaly skin with its baleful head. As an Owl, the feathered skin with its round glittering eyes.

Further, since the skin most commonly worn was the rustic's everyday goat-skin (*aigis*¹⁰), people would be apt to speak of any

skin-cloak as an *aigis*, regardless of its original species¹. Thus Athena's snake-skin or owl-skin would equally come to be designated as her *aigis*. And, when origins were forgotten, the way would be clear for ingenious enquirers to explain Athena's sacred attire as a glorified goat-skin. Accordingly Herodotos² asserts that the *aigis*

of Athena was derived from the fringed or tasselled goat-skins worn by Libyan women—a rationalistic view which A. W. Lawrence¹ wisely pronounces to be 'plausible but far from certain.' It would entail our accepting Herodotos' highly improbable contention that Athena herself came from Libye². Nevertheless this Herodotean notion has met with some favour both in ancient and in modern times. An Etruscan mirror, of fourth-century style, found at Tarquinii and once owned by E. Gerhard³, represents in mythological guise Prodikos' story of Herakles' choice between Virtue and Vice⁴ (fig. 654). Within a flowery framework stands Herakles (*Herclē*) midway between Athena (*Menrfa*) and Aphrodite (*Turan*). The artist, wishing to stress the simple hardihood of the more manly goddess, has given her by way of *aigis* a mere goat-skin with pendent head and feet. He has, however, added the usual *Gorgóneion* on her breast, not to mention a griffin's head on her shield, while a single snake coiled on her shoulder hisses at Aphrodite's dove. Later mythologists, accepting the explanation of the *aigis* as a goat-skin, toyed with the theme. Athena slew the earth-born fire-breathing monster called Aigis and used its skin as her breastplate in subsequent encounters⁵. Or, Zeus at the advice of Themis flayed the goat Amaltheia, his foster-mother, and donned its skin as his protection in the war against the Titans⁶. Recent

This late recital includes some early traits. advocates of the view that the *aigís* was from the first a goat-skin have sometimes been content to follow the lead of Herodotos¹, but have more often pointed out that the goat, normally taboo on the Akropolis at Athens, was once a year driven up there for a solemn sacrifice² and have urged that the skin of the victim so slain, being possessed of magical potency, was wrapped round the effigy of the goddess³. It must, however, be objected that any derivation of the

¹ Miss C. A. Hutton in the *Journ. Hell. Stud.* 1897 xvii. 314 f. (citing W. Reichel *Über homerische Waffen* Wien 1894 pp. 65—72) says of Athena's *aigís*: 'Probably, it and the lion skin of Heracles were the sole survivals of a time when the only thing available for protective armour was a skin, worn as a cloak in time of peace, and brought round over the left arm in battle *ἐν προβολῇ*.'

Sir W. Ridgeway, as reported in the *Journ. Hell. Stud.* 1900 xx p. xlv, claimed 'that the primitive garb over a wide Aegean area at an early date was a goat-skin, worn in such a way that the head hung down in front of the wearer: the edges of this skin were either themselves frayed or adorned with a fringe of leather; and the scalp was decorated till it became *γοργεῖη κεφαλὴ δεινοῖο πελώρου*. A Dyak's skin-costume, trimmed with feathers and embellished with a plate of shell where the head should be, was exhibited in support of the argument.' *Id. The Origin of Tragedy with special reference to the Greek Tragedians* Cambridge 1910 p. 89 f.: 'Some years ago the present writer explained the *aigís* and *gorgoneion* of Athena as nothing more recondite than the primitive goat-skin covering used in ancient Athens as the ordinary dress. A slit was made in the back of the skin through which the wearer's head was put, and the grinning skin of the animal's face hung down on the breast of the wearer.' *Id. The Early Age of Greece* Cambridge 1931 ii. 482 repeats the same contention, but produces no proof that a goat-skin was ever 'the ordinary dress' at Athens.

Farnell *Cults of Gk. States* 1. 100 'It would be quite in accord with the ideas of a primitive period, when the divinity and the worshipper and the victim were all closely akin, that Athena should be clothed in the skin of her sacred animal, and that in this, as in many other cases.... the sacrificial skin should possess a value as a magical charm. Being used in the ritual of the war-goddess, it was natural that it should come to be of special potency in battle; but the skin of the sacred animal of the tribe ought also to have a life-giving power as well, and it is interesting to find that the *aigís* in an Athenian ceremony possessed this character also, being solemnly carried round the city at certain times to protect it from plague or other evil, and being taken by the priestess to the houses of newly married women, probably to procure offspring.' In the concluding lines Farnell presumably had in mind Plout. *prov. Alex.* 2. 21 (E. L. von Leutsch—F. G. 842 The *aigis* and *Gorgóneion* of Athena

aigis from an original goat-skin leaves quite unexplained the scaly or feathered character of its surface. This is so constant a feature that it cannot be lightly dismissed as mere decoration¹. Rather it points back to the snake-skin sloughed off, or the owl-skin laid aside, by the emergent deity.

Mythology has a word to say about both types of *aigis*, the scaly and the feathered. Apollodoros, in his account of the Gigantomachy, after mentioning that the Giants had 'the scales of snakes for feet'², goes on to state that Athena flayed one of them named Pallas and used his skin to protect her own body in the fight³. A variant and perhaps older version made Pallas the father of Athena by Titanis, daughter of Okeanos. When Pallas attempted to violate Athena, she slew him without mercy, wrapped his skin about her as an *aigis*, and fitted his wings to her feet⁴.

Stud.* 1897 xvii. 317 says: 'An unsuccessful attempt to represent the tufts of hair on the skin may be the basis of the scales, ... but the main reason for them arises from the combination of the aegis and the gorgoneion,' when 'the Medusa legend with its snakes dominated the conception.'

The earliest example of a Giant with serpent-legs occurs on an Attic *aryballos* at Berlin (inv. no. 3375), which dates from the beginning of s. iv rather than from the end of s. v: it shows Dionysos, in a chariot drawn by a pair of griffins (cp. *supra* i. 270 fig. 197 Nemeses, ii. 523 pl. xxvii, d Rhea (?) and female companion), attacking two Giants, of whom one has human, the other serpentine, legs (H. The *aigis* and *Gorgóneion* of Athena 843

More familiar is Pherekydes¹ story of Perseus, who, helped by Athena, slew the Gorgon and gave her head to the goddess to put on her *aigis*. An unpublished bell-*kratér* at Leipzig² (pl. lxii) shows the hero, *hárpe* in hand, peering down a well to glimpse the horror held aloft by Athena. The Silenos on the right turns away and hides his face. A *kályx-kratér* in Gotha³ (pl. lxiii) gives Athena a blank shield and shows the head reflected upside down in the well. Such is the common tale⁴. But Euripides⁵ in the *Ion* tells it

in a simpler and presumably Attic¹ form. Athena herself, not Perseus, here slays the Gorgon and wears its skin as her *aigís*.

The evidence is incomplete, but it looks as though the feathered skin with its *Gorgóneion* went back to a Gorgon represented as a ravening bird of prey—precisely the representation that we have already seen on a black-figured vase at Berlin (fig. 649)². It is noticeable too that the Gorgon of modern Greek folk-tales, who turns men into stone, is usually conceived as a bird, the Bird of Truth³, the Speaking Bird⁴, the Bird Dikjeretto⁵, or the Tzitzinaina who knows the language of all birds⁶. Anyhow, in view of the Berlin vase, it may well be maintained that the feathery type of *aigís* with its Gorgon-face points back to an Owl Athena. Homer called her *glaukôpis*⁷: Sophokles, *gorgôpis*⁸.

Fig. 657.

Fig. 658.

In claiming that Athena's *aigís* with its *Gorgóneion* was thus developed out of a snake-skin or owl-skin, the *exuviae* of her old animal self, I do not pretend to have tracked the Gorgon to its original lair. I maintain merely that the horrifying head of the snake or owl tended from the earliest Greek times⁹ to acquire the characteristics of that essentially pre-Greek¹⁰ horror, the *Gorgóneion*.

The *aigis* and *Gorgóneion* of Athena 845

The earliest Gorgon's head known to me occurs on a signet-seal of black steatite now in my collection (fig. 659: scale $\frac{2}{1}$). It is Cretan work of the 'Middle Minoan ii'¹ period (1900—1700 B.C.) and, though broken, shows clearly enough the broad full face with its emphasised eyes, gross ears, and bristling hair. The nearest contemporary parallels are afforded by the horned imp on a signet from Mochlos² and one or two of the 'demonic' types on the clay-sealings from Kato Zakro³.

On the primary significance of the *Gorgóneion* there has been much rash speculation. Scholars ancient and modern have elaborated

not a few mutually destructive hypotheses. Plutarch dwells on the hideous face in the moon⁴, and an Orphic fragment dubs it *Gorgónion*⁵. Hence E. Gerhard⁶, G. R. Gaedechens⁷, and many more⁸ have identified the Gorgon's head with the moon, though on occasion it appears in a solar rather than a lunar context⁹. Others,

including J. F. Lauer¹, F. L. W. Schwartz², C. Diltthey³, and W. H. Roscher⁴, have equated its scowling features with those of the storm-cloud, partly because the word *aigís* is found in the sense of 'a rushing storm'⁵, partly because Quintus Smyrnaeus late in the fourth century A.D. compares the crash of Athena's *aigís* with the roll of thunder⁶. A. de Gubernatis⁷ in milder mood makes Medousa 'the evening aurora.' Others again drop from heaven to earth and offer a zoological explanation. F. T. Elworthy⁸ argues at length that the Gorgon must have been a cephalopod, the octopus, and L. Siret⁹ assures us that the *aigís* worn by god or goddess was his ubiquitous cuttle-fish¹⁰. T. Zell¹¹ is equally insistent that the *Gorgóneion* was the face of a gorilla. K. Gerogiannes¹² derives it from a lion's head. O. Jahn¹³, less daring but more discreet, stresses its use as an amulet potent to ward off the evil eye. Jane Harrison¹⁴ suggests that it was a ritual mask worn for prophylactic purposes, and R. G. Collingwood¹⁵ labels it 'an apotropaic mask.' Finally, H. J. Rose¹⁶ is inclined to think it 'a nightmare, a face so horrible that the dreamer is reduced to helpless, stony terror.' I am myself

J. Six *De Gorgone* Amstelodami 1885 pp. 94—97 discusses, but rejects, the suggestion that the Gorgon was derived from the Egyptian Bes (cp. *supra* ii. 457). It remains, however, highly probable that this godling with his pygmy stature and Súdani traits (Lanzone *Dizion. di Mitol. Egi.* pp. 202—221 pls. 73—81, Sir E. A. Wallis Budge *The Gods of the Egyptians* London 1904 ii. 284—288 with two figs. and col. pl., *id.* *From Fetish to God in ancient Egypt* Oxford 1934 pp. 253—255 with two figs.), his apotropaic powers (W. M. Flinders Petrie *Amulets* London 1914 p. 40 f. nos. 188—190 pls. 33 and 34), and his curious attachment to the full-face view (*supra* ii. 674 figs. 611, 612) affords a real analogy to the Libyan Gorgon. His wrinkled forehead and nose, broad face, and hanging tongue are comparable features. And it must not be forgotten that Bes, like the Gorgon, was connected with snakes (Lanzone *op. cit.* p. 211 pl. 79, 2, K. Sethe in Pauly—Wissowa *Real-Enc.* iii. 325 'als Abwehrer der schädlichen Tiere,' Sir E. A. Wallis Budge *From Fetish to God in ancient Egypt* p. 254 'a slayer of serpents and all kinds of noxious animals') and on occasion was represented in female form

Be that as it may, the Gorgon's head, thanks to the humanising tendency of Greek art, had an evolution of its own from lower to higher forms¹. The archaic type (fig. 662)² was a round face with formal curls and a wrinkled forehead. The mouth was wide, showing teeth and formidable tusks. The tongue was protruded. The ears often had circular earrings. Snakes were sometimes added, or even a beard.

Fig. 661. *a*, *b* is a cornelian bead of the 'Middle Minoan iii' period, from the Messara in southern Crete, with the head of a negro on one side and two crossed lines on the other. ² An antefix of terracotta found on the Akropolis at Athens. Lips, tongue, gums, and earrings are painted dark-red; hair, snakes, and pupils of eyes, black; face, buff. Seven fragments from a single mould survive, and date from the second half of s. vi B.C. (L. Ross *Archaeologische Aufsätze* Leipzig 1855 i. 109 pl. 8, 1 in colours (=my fig. 662), 2 side view, A. Furtwangler in Roscher *Lex. Myth.* i. 1715 with fig., D. Brooke in the *Catalogue of the Acropolis Museum* Cambridge 1921 n. 289 f. nos. 78, 79 fig. 322 f., 426). The bronze *Gorgóneion* of Dreros, which anticipates the milder type, may be dated c. 600—575 B.C. (S. Marinatos in the *Bull. Corr. Hell.* 1936 lx. 270 ff. pl. 29).

The *aigis* and *Gorgóneion* of Athena 849

The middle type (fig. 663)¹ retained the round face, the furrowed forehead, the wide toothy mouth, and the lolling tongue, but made all these traits somewhat milder and less horrific. The snakes are apt to pass into snaky locks, and the beard vanishes. The whole effect is repellent rather than repulsive.

The beautiful type appears for the first time in the head grasped by Perseus on a red-figured vase dating from *c.* 475 B.C. (fig. 664)² and then, mostly in Satyric scenes, on later Attic or early South Italian vases³. It was perhaps inspired, as

² Pythagoras of Rhegion made a bronze statue of Perseus with wings (on his feet?) (Dion Chrys. *or.* 37 (ii. 296, 3 f. Dindorf)). We have no right to assume that this is a blundered reference to Myron's Perseus.

This contest of beauty between Medousa and Athena was a commonplace of the later mythographers (Apollod. 2. 4. 3, schol. vet. Pind. *Nem.* 10. 6, interp. Serv. and Serv. in Verg. *Aen.* 6. 289 (citing Serenus (Sammonicus?) the poet), Lact. *Plac. narr. fab.* 4. 20, Myth. Vat. 1. 131, 2. 112, *alib.*). Cic. in *Verr.* 2. 4. 124 tells how Verres carried off from the gold and ivory doors of Athena's temple on the island of Ortygia at Syracuse 'Gorgonis os pulcherrimum, crinitum anguib.'.

Medousa as a beauty is *παρὰ προσδοκίαν* and calls for explanation. The epithet *εὐπάραιος* is clearly complimentary (Poll. 2. 87, 9. 162) and could hardly be taken as 'large-cheeked, broad-faced.' Nor would it be safe to see in it a mere euphemism as in *Εὐεῖδής*, *Εὐχαΐτης*, and the like (*supra* ii. 1112 n. 7). We must fall back on the assumption

The *aigis* and *Gorgóneion* of Athena 851

In any case, once introduced, the new type ran through a whole succession of phases, becoming in turn sinister (fig. 665)¹, pathetic (fig. 666)², and ultrapathetic (fig. 667)³, but at the last tranquillised

that the Gorgon among her original (African?) folk was frankly regarded as a reigning beauty. Hence her name *Μέδουσα*, the 'Queen,' her diadem, and her earrings. A modern parallel from an Epeirote tale is 'the Beauty of the Land,' who can turn men into stone (*supra* ii 1007, 1016).

¹ The Medusa Rondanini in the Glyptothek at Munich is a mask of Parian marble, copied in Roman times from a Greek original in bronze to be dated c. 400 B.C. or perhaps somewhat earlier (Brunn—Bruckmann *Denkm. der gr. und rom. Apart from the cold and cruel beauty of this face, the sculptor has imported a fresh element of interest in the pair of small wings attached horizontally to the head. Buoyed on these, with her concentrated stare and half-open mouth, Medousa hovers before us like some keen-eyed maleficent night-bird.

and dignified by death (fig. 668)¹. It will be seen that this final type, under the influence of regal portraiture², discards the full-face for the profile view and thereby exchanges its old prophylactic quality for a new ideal value.

Where prophylaxis was still required, the older horrors survived, as on Greek relief-ware of the fourth century (fig. 670, *a*, *b*)³, or might be made yet more horrible, as on Etruscan bronze-work of the same period (fig. 671)⁴.

The entire range of these modifications could be illustrated by a sequence of Greek and Roman coin-types, of which a few samples are here given (figs. 672—693)⁵. And a similar series might equally well be made out for vases, or gems, or other products of minor art.

We are, however, concerned primarily with the *aigis* of Athena. And here it is interesting to see how, through contact with that dominant and yet gracious personality, the *Gorgóneion* was gradually converted from demon to angel. On the Albani statue¹ (fig. 694),

which presupposes a bronze original of c. 450 B.C., the negroid face with animal tusks and lolling tongue has already become less frightful. The tusks have gone; the tongue is going. On the Dresden 'Lemnia'¹ (fig. 695), one of two marble copies of a Pheidias(?) Athena in bronze, c. 450—440 B.C., the cheeks are still too broad, but the tongue is pulled in, and the snakes are no longer knotted under the chin. On the Kassel statue² (fig. 696), a later version of the same original, the tongue is just visible, but the face is a better oval, and the snakes are replaced by a tangle of snaky tresses. Finally, on the Varvakeion statuette³ (fig. 697), a Hadrianic reduction of the *Parthénos*, the head in the centre of the shield develops a pair of winglets and might be mistaken for a mediaeval cherub⁴!

One other *Gorgóneion* remains to be considered—the expiring effort of Graeco-Roman accommodation in the west. The British goddess presiding over the hot curative springs at Bath was *Sul* or more correctly *Sulis*⁵, whose name—probably akin to the Old Irish *sūil* 'eye'⁶—was the Celtic equivalent of the Latin *Sol*⁷. These hot springs at Aquae Sulis are unique in the British Isles, and the natives seem to have thought that the sun as it sank beneath the western waves warmed the waters below and sent them up hot and bubbling to the surface. Their healing properties would

But Sir Arthur is careful to explain these as 'locks flowing out on either side and terminating in coils' like those of I-hitar.

⁵ The only forms of the name at present known are the genitive *Sulis* and the dative *Suli*. But other inscriptions may yet be forthcoming, for much of the ground adjoining the Bath still awaits excavation. Prof. J. R. R. Tolkien in R. G. Collingwood—J. N. L. Myres *Roman Britain and the English Settlements* Oxford 1936 p. 264 n. 1 points out that the Celtic nominative must have been *Sulis*.

then lead to the equation of Sulis the sun-goddess with Minerva, who at Rome and elsewhere bore the title *Medica*¹. The equation is attested not only by three² out of the ten inscriptions so far discovered at Bath³, but also by an interesting passage in Solinus⁴ who says:

Galfridus Monmutensis (Geoffrey of Monmouth), writing between 1136 and 1139 A.D., works this passage of Solinus into his fabulous *Historia regum Britanniae* 2. 10 successit deinde Bladud filius, tractavitque regnum viginti annis: hic aedificavit urbem Kaerbadum quae nunc Badus nuncupatur, fecitque in illa calida balnea ad usus mortalium apta, quibus praefecit numen Minervae: in cuius aede inextinguibiles posuit ignes, qui nunquam deficiebant in favillas, sed ex quo tabescere incipiebant, in saveos globos vertebantur.

H. M. Scarth *op. cit.* p. 3 (after T. D. Whitaker(?) in *The Anti-Jacobin Review and Magazine* 1801 x. 232 f. 'loose coals fused into nodules') offers a simple explanation of the concluding sentence in Solinus and Galfridus. The fire was not built of wood, which turned to white ashes, but of coal, which burnt into cinders. He adds that coal 'is to the present day dug up at Newton St. Loe, three miles from BATH: a point which is the more noteworthy, since if the interpretation be correct, it is the first mention of the use of coal in Britain.' To the same effect San-Marte (A. Schulz) in his edition of Geoffrey (Halle 1854) p. 220 and R. G. Collingwood—J. N. L. Myres *Roman Britain and the English Settlements* Oxford 1936 p. 232.

service of mankind. The power presiding over these springs is Minerva. In her temple are perpetual fires which never pass into white embers, for as soon as the fire has died down it turns into stony nodules.¹

The local cult was, during the Roman occupation, thoroughly classicised, and a noble bronze head (figs. 698, 699)¹ 'found under Stall Street in 1727, close to the south-west corner of the Baths' may well be that of Sulis Minerva herself². It was originally fitted with a helmet, beneath which the hair escaped about the brows. This, and the long neck clear of drapery, recall Niketas³ description of the great Bronze Athena on the Akropolis at Athens. Indeed, there are so many marks of Pheidias style here present—the long narrow eyes, the emphasised lower lid, the absence of overlap, the strong broad nose, the short upper lip—that we need not hesitate to recognise a Roman copy of that famous original. The surface bears numerous traces of thick gilding, and when first set up the whole statue must have been a resplendent sight, the sun-goddess in a glory of gold⁴.

Among the architectural remains of her temple⁵, discovered under the Pump Room in 1790, are large portions of a triangular relief (pl. lxvi and fig. 700) thus described by Mr A. J. Taylor⁶:

'Fragments from the tympanum of a temple pediment. When complete, the sculpture represented a group of arms, viz., a shield bearing a head inside oakwreaths, upheld by two winged Victories; a helmet with large cheekpieces and a crest like an animal's head; something, possibly a standard, with an owl perched on it, and, to the extreme right what may be the traces of a floriated cuirass. The head on the shield is marked by an astonishing and almost barbaric vigour and both in style and in vehement character stands almost if not quite alone among the sculptures of the western Roman Empire. It has wings and snakes in the hair and, though bearded, may represent some

variation on the common Medusa, whose head often appears on shields. This Medusa, if such it be, and the owl suggest that the temple was dedicated to Minerva, goddess of Bath.'

The *Gorgóneion* of Sulis Minerva (fig. 701)¹ has been diversely interpreted. G. Scharf² in 1855 declared that it is not a *Gorgóneion* at all, but just a personification of the Hot Spring itself. Most critics admit that it is indeed the head of Medousa, but a Medousa of a peculiar, provincial type. F. Haverfield and H. Stuart Jones³, to account for the beard and moustaches, suggest the contamination of Medousa with Phobos. R. G. Collingwood⁴ derives the type, 'glaring, ferocious, apotropaic,' from 'the human or demonic masks of early La Tène art,' and hints at the possibility that the Bath sculptor may have been no Briton, but 'Priscus of Chartres⁵ or one of his Gaulish colleagues.' My own belief is that the *Gorgóneion* here as elsewhere⁶ is treated as a representation of the sun. Sulis was a sun-goddess. The centre of a pediment is the right place for a solar disk⁷. The head itself has 'locks standing out flame-wise' and a 'fiery suffering expression⁸'. If in Rhodes the head of Helios could be assimilated to the *Gorgóneion*⁹, I conceive that at Aquae Sulis (Aquae Solis some called it¹⁰) the *Gorgóneion* could be assimilated to the head of Sol¹¹. Thus, in a sense, the Gorgon ends

866 The *aigís* of Athena transferred to Zeus

(5) The *aigís* of Athena transferred to Zeus.

It would seem, then, that the *aigís* was, and had been from time immemorial, an attribute of Athena. That pre-Greek mountain-mother was wont to manifest herself as Snake or Owl, and on attaining human form continued to wear the old snake-skin or owl-skin as a potent relic of her animal estate. Further, the snake's head or owl's head tended from the first to take on the apotropaic features of the Libyan Gorgon: as a *Gorgóneion* it had, we saw, quite a history of its own.

If such was the story of the *aigís*, one point is still obscure. Should we not expect to find that in the earliest extant literature of the Greeks the *aigís* would be treated as the exclusive property of Athena? And yet that is far from being the case. Athena wears it, of course¹. But so also does Apollon², and even uses it to wrap round the dead body of Hektor³. More than that. Among the pre-Homeric appellatives embedded in Homeric verse⁴ few are so frequent or so universally recognised as Zeus *aigióchos*, Zeus the '*aigís*-bearer'⁵, which in *Iliad* and *Odyssey* together occurs just fifty times⁶, but is never once applied to Athena⁷. How, we may well ask, did Zeus come thus to usurp the sacred prerogative of Athena? Fully to answer that question would demand a better knowledge than we possess of the momentous transition from Aegean to Achaean worship⁸. Homer at most drops a single significant hint:

The copper-smith Hephaistos gave the same
For Zeus to wear and rout mankind withal⁹.

Aristonikos of Alexandria, a famous Homeric scholar who lived in the time of

Thunderbolt of Zeus transferred to Athena 867

So Zeus got his *aigís* from Hephaistos, the consort of Athena¹. Our problem begins to solve itself. We shall not be far wrong if we maintain the following positions: (1) The *aigís* belonged by right to the pre-Hellenic Athena. (2) When the Achaeans arrived with their all-conquering Zeus, he must needs take over the magical garb of the goddess, and the minstrels coined for him that persuasive epithet *aigíochos*. (3) For all that, the common people were not persuaded, and—apart from one half-hearted attempt on the part of an Ionian vase-painter²—their artists never equipped Zeus with an *aigís* so long as Hellas was genuinely Hellenic. (4) But, when Hellenic art gave place to Hellenistic culture, Homer once more dominated the imagination of men and Zeus *aigíochos* regained his canonical supremacy³.

(6) The thunderbolt of Zeus transferred to Athena.

If Athena in Hellenistic times ceded her *aigís* to Olympian Zeus, Olympian Zeus had not long before lent his thunderbolt to Athena. And indeed Athena was no unworthy recipient. The western part of her 'ancient temple' on the Athenian Akropolis⁴ was devoted to the lightning-powers—Hephaistos of the double axe⁵, Erechtheus the 'Cleaver⁶', Poseidon with his fork⁷. Was this perhaps the point of Athena's strange boast at the close of the *Eumenides*⁸ 'I alone of the gods know the keys of the store-chamber in which the thunderbolt is sealed up'?

Euripides is more outspoken than Aischylos. In the *Troïades*⁹ Athena, because Aias son of Oileus has torn Cassandra from her sanctuary, is minded to take vengeance on the Greeks.

Augustus and Tiberius (L. Cohn in Pauly—Wissowa *Real-Enc.* ii. 964—966), was impressed by the passage, as we gather from schol. A. II. 15. 310 ἡ διπλῇ (sc. the marginal mark >, which was tantamount to our *N.B.*) ὅτι σαφῶς Διὶ ἐσκεύασται ἡ αἰγίς, καὶ οὐκ ἔστιν Ἀθηναίης, καθὼς οἱ νεώτεροι ποιηταὶ λέγουσιν.

When homeward bound they sail from Ilion.
On them will Zeus send rain and endless hail

To smite the Achaeans and to burn their ships.

Sundry later writers state that in the event Athena struck Aias with the lightning¹, and Heron of Alexandria², taking his cue from the *Nauplios* by Philon of Byzantion³, describes how the story was staged for his marionettes. In the fourth scene of their little play *Nauplios* the wrecker raised his torch, while Athena stood beside him. In the fifth and concluding scene Aias was shown swimming towards the shore, when, with a crash of mimic thunder, the fatal bolt fell⁴ and the puppet hero disappeared in the waves.

It is not, however, till the third⁵ century B.C. that Athena is actually represented with the thunderbolt in her hand. Antigonos Gonatas (277—239 B.C.)—or, less probably⁶, his nephew Antigonos Doson (229—220 B.C.)—issued imposing tetradrachms with the reverse type (figs. 702, 703)⁷ of an archaistic Athena, seen from behind, who bears a Gorgon-shield on her left arm and brandishes

⁴ Tittel in Pauly—Wissowa *Real-Enc.* viii. 996—1000 contends that Heron's life should probably be dated in the beginning of s. i B.C., *ib.* 997 f. that he was a younger contemporary of the mechanician Philon, and *ib.* 1051 that, with a few alterations, he simply took over Philon's representation of the *Nauplios*-myth.

⁵ We are not told that Athena herself flung the bolt. But that is because the text at this crucial point is defective: 22. 6 (i. 414 Schmidt) ἡ τῶν νεῶν ἐκπτώσις ἐφαίνετο καὶ ὁ Αἴας νηχόμενος < ἡ δὲ Ἀθηνᾶ ἐπὶ (suppl. H. Diels) > μηχανῆς τε καὶ ἄνωθεν τοῦ πίνακος ἐξήρθη, καὶ βροντῆς γενομένης ἐν αὐτῷ τῷ πίνακι κεραυνὸς ἔπεσεν ἐπὶ τὸν Αἴαντα, καὶ ἠφανίσθη αὐτοῦ τὸ ζῴδιον.

⁶ Browning was guilty of more than one slip when, confusing the third-century demagogue Lachares with the fourth-century sculptor Leuchares, he made Aristophanes declare that 'Lachares the sculptor' had carved a naked Pallas and remark: 'Moreover, Pallas wields the thunderbolt | Yet has not struck the artist all this while' (*Aristophanes' Apology* ed. 1889 p. 232). The whole context has been convincingly cleared up by C. T. Seltman in a paper on 'The Dismantling of the Pheidias Parthenos' read to the Cambridge Philological Society on Nov. 3, 1932 (*Cambridge University Reporter* 1932—1933 p. 337 f. = *Proceedings of the Cambridge Philological Society* 1932 cli—cliii. 12 f.).

On tetradrachms of Philip v (220—178 B.C.) she reappears, a comparatively clumsy figure in the usual stance³.

She is commonly called Athena *Alkis*⁴ and identified with the Athena *Alkis* or, better, *Alkidemos* worshipped at Pella⁵. But the goddess of Pella, to judge from the coins of her town (figs. 705, 706)⁶,

Athena fulminant on the bronze coinage of Athens in pre-Roman times (fig. 710)³ may reflect some temporary *rapprochement* between the Athenians and Antigonos⁴.

In any case the type was attractive and travelled far afield. It is found, under Attic influence, on a drachm of Phaselis in Lykia struck c. 190—168 B.C. (fig. 711)⁵. It was very popular with the Graeco-Indian kings from Menandros to Gondopharnes⁶ (figs. 712,

872 Thunderbolt of Zeus transferred to Athena

713)¹. And it appealed of course to Domitian (fig. 714)², a notorious devotee of Minerva³.

If Athena thus borrowed the thunderbolt of Zeus, while Zeus appropriated the *aigís* of Athena, small wonder that the populace came to regard the goddess as second self to the god⁴, and associated the two in not a few Hellenistic cults⁵. A sample will serve. P. Aelius Aristides, himself apparently a priest of Zeus⁶ and not likely to minimise the honour due to his deity, in 164 A.D.⁷ pronounced an encomium of Athena at Pergamon where Daughter and Sire were worshipped side by side⁸. I translate a few sentences from beginning and end of the oration just to show his drift:

'It seems to me that she was the deity actually foremost in honour, or assuredly one of the few who then stood first. That is why Zeus could not have ordered all things aright, had he not set Athena by his side as partner and counsellor. She alone wears the *aigís* perpetually. She alone arrays herself for

'To sum up, Athena's portion is the *agorá* of the gods, where all business is transacted. Hence she is nearest to Zeus, and, whatever be the matter in hand, the same decision always commends itself to both. Here I suppose I ought to stop; for my speech has returned to its starting point, nay rather has reached its goal. If one claimed that she was the very Power of Zeus, one would not—I contend—be far wrong. Why then go into detail by expounding her particular activities? Enough to say that the works of Zeus are works common to Zeus and to Athena².'

(i) Zeus *Hýes*.

The whole topic of Athena and her relation to Zeus, which has occupied us for the last two hundred pages, has been (I am well aware) something of a digression. It arose naturally, indeed inevitably, from a consideration of the Parthenon pediment, the design of which we found³ to be based, at least in part, on the curious ritual of the *Bouphónia*, an Attic equivalent for the rites of Zeus *Hyétios*.

If now we rejoin the high-road and pursue the main line of our investigation, we have next to ask whether there is any further evidence for the worship of Zeus *Hyétios*, 'the Rainy,' in the Greek area.

A gloss of the lexicographer Hesychios⁴, echoed by the grammarian Theognostos⁵, explains that *Hýes* (perhaps better

accentuated *Hýēs*¹) means Zeus *Ómbrios*, 'the Showery'². Hesychios, a trustworthy source, unfortunately omits to mention the locality where Zeus was called *Hýes*. But in the preceding gloss he states that *Hýé* was a name given to Semele 'from the rain'³. And *Hýe* as a name for Semele is attested by Pherekydes as early as the fifth century B.C.⁴ It is therefore tolerably certain that *Hýes* and *Hýe*⁵ (perhaps *Hýēs* and *Hýé*) were Thraco-Phrygian appellatives of the sky-god whom the Greeks named Zeus and of the earth-goddess whom they named Semele. The one rained, the other was rained upon.

But if this divine pair was really Thraco-Phrygian, we should expect them, in accordance with Thraco-Phrygian belief⁶, to have had a son bearing the same name and evincing the same nature as his father. And that is precisely what happened. Dionysos—as we have already had occasion to note⁷—was called *Hýes*, a name variously explained by the ancients from Kleidemos⁸ (c. 350 B.C.⁹) onwards, but always in allusion to rain¹⁰. When Aischines, grown to manhood, capered through the streets, with a posse of Sabazian revellers behind him, shouting

‘*Hýes Áttes, Áttes Hýes*’¹¹,

he was, I take it¹², much like the mystics of Eleusis¹³, raising the old-world cry

not, as Sir James Frazer¹⁵ conjectures, calling Attis a Pig!

(j) Zeus and the Hail.

At this point something must be said about one special form of rain, the frozen pellets that we term hail. For hailstones provide an obvious transition from the soft beneficent raindrops to the harder and more formidable aerolites.

Hail bulks big in modern folk-lore¹. It could scarcely be otherwise: fruit-grower and farmer know what damage it may do and are quite ready to try any and every superstitious recipe that promises to avert the threatened mischief.

Similarly in ancient times the peasant had recourse to a singular variety of expedients, which have been admirably collected and discussed by E. Fehrle².

Pliny the elder (25—79 A.D.), a man of vast erudition, is shy about mentioning irrational or indecorous detail, but here and there drops a significant hint, while on occasion his love of the marvellous prompts him to include this or that item of folk-belief. He says, for example:

nat. hist. 17. 267 Most people hold that hailstones can be averted by a charm, the wording of which I should not seriously venture to quote.

28. 29 There are charms against hailstorms and against various diseases and against burns, some even attested by experience, but I am prevented from giving particulars by a feeling of extreme diffidence in view of the great variety of men's minds. So each must form his own opinions about them as he may feel inclined.

Attes! Hyes Attes!" which was raised by the worshippers of Attis, may be neither more nor less than "Pig Attis! Pig Attis!"—*hyes* being possibly a Phrygian form of the Greek *hys*, "a pig." *Id. ib.* n. 4 says that this suggestion was made to him in conversation by R. A. Neil of Pembroke College, Cambridge.

I note one scrap of evidence which might be pressed in favour of Frazer's etymology. At the Weber Sale in 1919 the British Museum bought the bronze statuette (0.75^m long by 0.25^m high) of a boar standing on a thin base-plate. The figure is of poorish workmanship and is inscribed along the left side of the body in late lettering ΜΥΠΤΙΝΗΘΕ | ΩCΑΒΑΖΙΩ. May we infer that Myrtine thought of Sabazios himself as a Boar?

28. 77 Hailstorms and whirlwinds, they say, are driven off if the monthly course be exposed to the actual lightning-flashes. Thus the violence of the sky is averted, and storms at sea even without the courses.

37. 124 It is said too that this stone (*sc.* the amethyst) averts hail, and locusts likewise if a prayer be added, which they show you.

More explicit are the directions given by the *Geoponika*¹, a farmer's handbook, which devotes two chapters to the subject:

1. 14 Concerning Hail. By Africanus².

1. Let a woman in her courses exhibit her person to hail, and she turns it aside. All wild animals too flee such a sight³.
2. Or take a virgin's first cloth and bury it in the midst of the place, and neither vine nor seeds will be injured by hail⁴.
3. And if a strap from the skin of a seal be hung from a single conspicuous vine, hail will do no damage, as Philostratos observes in his *Heroikós*⁵.
4. Some say that, if you show a mirror to the impending cloud, the hail will pass by⁶.

¹ This collection of excerpts on agriculture, made at the bidding of the Byzantine emperor Constantinus vii Porphyrogennetos (912—959 A.D.), was based on an older compilation by Cassianus Bassus, a sixth-century scholar, who himself drew from two fourth-century sources, the comparatively rational and scientific *συναγωγή γεωργικῶν ἐπιτηδεύματων* by Vindonius Anatolius of Berytos, and the more magical and mystical *περί γεωργίας ἐκλογαί* by the younger Didymos of Alexandria (see K. Fehrle in *ΣΤΟΙΧΕΙΑ* iii. 7 remarks that two manuscripts, a cod. Guelferbytanus and a cod. Palatinus in the Vatican, in place of the indecent recipes (1) and (2) substitute the following: (1) εἰρῶν λίθον χαλαζίτην (cp. Plin. *nat. hist.* 37. 189), ἔχε. καὶ ὅταν ἴδῃς τὴν χάλαζαν, κρούσον αὐτὸν μετὰ σιδήρου ἀπέναντι, καὶ ἀποστραφήσεται. ⁵ E. Fehrle in *Alemannia* 1912 Dritte Folge iv. 16 f. was the first to point out that for Φιλόστρατος ἐν τῷ ἱστορικῷ codd. we must read Φιλόστρατος ἐν τῷ ἥρωικῷ, the allusion being to Philostr. *her.* 3. 25 (Palamedes to the peasant) 'σὺ δ' ἐπειδὴ φιλεῖς πού τὰς ἀμπελούς, εἰπέ μοι, τί μάλιστα περὶ αὐταῖς δέδουκας.' 5. Again, if you carry the skin of a hyaena or crocodile or seal round your place and then hang it up before the doors of your house, hail will not fall¹.
6. Or, if you hang many keys of different rooms on a string round your place, the hail will pass by.
7. And, if you set wooden bulls on your buildings, that will help greatly.
8. And, if you take a tortoise found in the marshes and place it on its back in your right hand, you should then carry it all over your vineyard. When you have gone the round of it, then proceed to the middle of your vineyard, set the creature still alive on its back, having heaped a little earth round it in order that it may not be able to turn itself about and get away (it will not be able to do so, if the ground under its feet is a bit hollow, for having nothing to push against it must needs stay where it is), and if you do this, no hail would fall on your field or whole estate².
9. Some folk say that you should carry round and deposit the tortoise at the sixth hour of the day or night.
10. Apuleius³ of Rome asserts that, if you paint a bunch of grapes on a tablet and dedicate the same in the vineyard when Lyra is setting, the fruit remains free from injury⁴. Lyra begins to set on the 23rd of January and sets completely on the 4th of February⁵.
11. This is what has been said by the ancients. But I hold that some of their sayings are too unseemly and should be rejected, and I advise all and sundry to ignore them altogether. I have included them simply that I may not seem to be omitting anything said by the ancients.
12. And strips cut from the hide of a hippopotamus, placed at each of the boundaries, stop the threatening hail.

Peter Needham (Cantabrigiae 1704) gave up the passage as hopeless. J. N. Niclas

Palladius in the fourth century gives several of the foregoing recipes (nos. 3, 4, 5, 8) and prefixes others of his own:

1. 35. 1 For the prevention of hail numerous remedies are current.—

Meal is covered with a russet cloth¹.

Again, bloodstained axes are raised in a threatening manner against the sky².

Again, the whole garden is surrounded with white vines³.

Or else an owl is nailed up with wide-spread wings⁴.

Or the iron tools to be used are anointed with bears' suet.

1. 35. 2 Some keep by them bears' fat pounded with oil and anoint the hooks with it when they are going to prune. But this cure must be worked in secret so that no pruner may be aware of it. Its efficacy, they say, is so great that no harm can be done by a frost or cloud or any wild beast. It is well to add that the thing, if bruited abroad, is useless⁵.

Magic of this sort might be worked by anyone. But for its proper performance some skill was needed, and the later Greeks had recourse to professional 'cloud-chasers' (*nephodiōktai*), who knew the right spells to use⁶. At Kleonai in the Argolid official 'hail-guards' (*chalazophylakes*) were employed, as we gather from an interesting passage in Seneca⁷:

'I will not refrain from exposing all the follies of our Stoic friends. They say that certain men are specially skilled at observing the clouds and can tell

when a hailstorm is likely to come. That they might have realised from experience pure and simple, having noted the colour of the clouds commonly followed by hail. But this is hard to believe, that at Kleonai were public officials called *chalazophylakes*, posted to look out for the coming hail. When these persons had signified the hail's approach, what think you? That folk ran for their cloaks or leather capes? Not a bit of it. They offered sacrifice for themselves, one man a lamb, another a chicken. And forthwith the said clouds, having tasted blood, took themselves off! You laugh? This will make you laugh louder. If anyone had neither lamb nor chicken, he did what he could without serious damage—he laid hands on himself. Do not imagine that the clouds were greedy or cruel. No, he just pricked his finger with a sharp-pointed pen and made his offering with this drop of blood. And lo, the hail turned aside from his plot of ground quite as much as from that on which it had been begged off by greater sacrifices.

They want a rational explanation of this practice. Some, as befits truly wise men, declare that it is impossible to bargain with hail or buy off storms with trumpery gifts, though indeed gifts vanquish the very gods. Others affirm their suspicion that there is some virtue inherent in blood, which has the power to turn aside and rout the cloud. But how in a little drop of blood could a force reside potent enough to penetrate on high and influence the clouds? Far simpler to say, "This is a lie and utter nonsense." But, if you please, the men of Kleonai¹ passed judgment upon those who had been entrusted with the duty of foreseeing the storm, on the ground that through their negligence the vineyards had been beaten down and the crops laid low.²

One step more, and magic passes upward into religion. A stone built into a wall at Amaseia in Pontos bears an inscription in late lettering³ (fig 715), which H. Grégoire⁴ was the first to interpret as a dedication to Aither *Alexichalazos*, 'Averter of Hail.' This is the only known case of an actual dedication to Aither, though the Orphic hymn to that deity⁵ prescribes saffron as an offering appropriate to him⁶. However, since Aither is invoked by the Clouds of Aristophanes⁶ as their father, he may well have been asked on occasion to ward off the cloud that threatened hail.

Proklos¹ in his account of the Boeotian Daphnephoria states that the bay-bearing procession used to go to the sanctuary of Apollon *Isménios* and *Chalázios*. If the text be sound—and there is no real reason to doubt it—the second appellative implies that the Theban Apollon too was a god ‘of Hail.’

But, of course, normally it was Zeus the weather-god who sent both rain and hail². It is not surprising, therefore, to find that in Phrygia he was worshipped as *Chalázios Sózōn*, the god ‘of Hail,

It will be noticed that, in the matter of hail, Greek religion like Greek magic was throughout concerned to avoid damage, not to cause it¹. Things were otherwise with the vindictive witchcraft of the middle ages (fig. 717)².

§ 10. *Zeus and the Meteorites.*

(a) The cult of meteorites.

It remains to mention what is in some respects the most amazing and terrifying of all celestial phenomena—the fall of meteorites³. Scientifically speaking, we must of course group these

the *Bull. Corr. Hell.* 1908 xxxii. 524, *Mendel Cat. Sculpt. Constantinople* iii. 41 f. no. 837 fig. (=my fig. 716): *Zeús Χαλάζιος Σώζων*. | *Ἐπὶ Διονυσίου* | *Θρακιοκωμηταὶ τῷ θεῷ τὴν στήλην καθιέρωσαν ὑπὲρ εὐκαρπίας καὶ ἀβλαβίας τῶν καρπῶν | καὶ ὑπὲρ ὑγείας καὶ σωτηρίας τῶν γεοκτειτῶν καὶ | τῶν συνερχομένων ἐπὶ τὸν θεὸν καὶ κατοικοῦντων | Θρακίαν Κώμην*. | *Μειδίας Στράτωνος τῷ θεῷ καὶ τοῖς κωμηταῖς | διοικήσας πρῶτος τὴν στήλην ἐκ τῶν ἰδίων ἔπαν γειλάμενος ἀποκατεστήσεν*.

¹ In this respect the Rhodian Telchines (*supra* p. 296 n. 6) were exceptional.

² See V. Stegemann in the *Handwörterbuch des deutschen Aberglaubens* Berlin—Leipzig 1930/1931 iii. 1305—1311. My fig. 717 is reduced ($\frac{2}{3}$) from Ulricus Molitor *De laniis et phthonicis mulieribus* [Strassburg c. 1488—1493], where it is prefixed to cap. 3. Apparently the witch and two of her followers are travelling through the air, transformed into animals and mounted on a forked stick, while a hailstorm breaks from a dark cloud to injure the trees.

³ The facts with regard to meteorites are well set out and illustrated by O. C. Farrington *Meteorites* Chicago 1915 pp. 1—233 with 65 figs. There is also a series of 10 cards in monochrome (set D 1) issued by the British Museum (Natural History) to illustrate its collection at South Kensington.

The folklore of the subject is touched upon by H. A. Miers 'The Fall of Meteorites

with the shooting-stars. But in popular belief they are very different, not soundless streaks of light moving across the nocturnal sky, but an explosive bombardment from above leaving the earth littered with visible débris. Hence shooting-stars are as a rule a good omen, meteorites a sign of downfall and ill-luck¹. Accordingly these mysterious bodies, when they were not dissipated into impalpable powder, but reached the ground in some bulk, were always viewed with peculiar veneration, their sudden arrival being attributed directly or indirectly to divine agency, most often that of a sky-god.

Much material said to bear on their cult in ancient Egypt has been collected in a series of important papers by Mr G. A. Wainwright². I shall therefore restrict myself in the main to evidence drawn from the Hellenic or Hellenistic area.

² G. A. Wainwright 'The aniconic Form of Amon in the New Kingdom' in the *Annales du service des antiquités de l'Égypte* Le Caire 1928 xxviii. 175—189 argues that the aniconic form of Amon—evidenced by a *stèle* from Asyut (fig. 1: dynasty xviii—xix), a couple of bronze plaques from Memphis (figs. 2 and 3. 593—588 B.C.), three models from Karnak (fig. 5 after G. Daressy 'Une nouvelle forme d'Amon' *ib.* 1908 ix. 64—69 pl. 1, a, b, c, d, of which a front + d right side = my fig. 718: Persian or early Ptolemaic period), and a Roman sculpture at Medinet Habu (fig. 4 after Daressy *loc. cit.* pl. 2)—is normally associated with Min the thunderbolt-god and may well have been a 'meteorite, or a fragment of one, which was kept as a sacred thing, on a stand or throne, wrapped up, and decorated with a feather on top and mystic figures on the wrappings' (p. 183). Where an actual meteorite was not available, it might be represented by an *omphalos*—witness the one found by G. A. Reisner in the inner part of Amon's temple at Napata (*Gebel Barkal*) (fig. 7 after F. Ll. Griffith 'An Omphalos from Napata' in *The Journal of Egyptian Archaeology* 1916 iii. 255 with fig. = my fig. 719. Material: sandstone. Date: c. 1 A.D.) or the omphaloid fetish in the *Ammonéion* (*supra* i. 355 ff.).

Id. 'The Relationship of Amūn to Zeus and his connexion with Meteorites' in *The Journal of Egyptian Archaeology* 1930 xvi. 35—38 re-states his view 'that Amūn of Thebes was a god of the air, a sky-god; that his sacred object at Thebes was a meteorite; that he was intimately connected with, if not actually derived from, his far older neighbour Min, the thunderbolt-god of Koptos; and that the omphalos of Zeus-Ammon at the Oasis of Ammonium (Siwah) had of itself certain characteristics which associate it with the weather.' He makes three further points in support of the same thesis. (1) Zeus was identified with Amūn of Thebes as far back as 900 B.C., for D. G. Hogarth in the *Ann. Brit. Sch. Ath.* 1899—1900 vi. 107 pl. x, 1 f. published a small bronze statuette of Amen-Rā, good early work of the New Empire, found by him in the *Psycho* Cave (*supra* ii. 926 n. 6). (3) At Gythion again there was a cult of Zeus Ammon (*supra* i. 351) and the stone of Zeus *Kappótas* (*infra* p. 939ff.), 'clearly a meteorite.'

Id. ib. 1931 xvii. 151 f. in a trenchant critique of K. Sethe *Amun und die Acht Urgötter von Hermopolis* (Abh. d. berl. Akad. 1929 Phil.-hist. Classe no. 4) Berlin 1929 demurs to Sethe's view that Yahweh originated in Egypt from Amūn as a result of the Sojourn, and concludes: 'As a matter of fact there are other Egyptian gods who are as much, or more, like Yahweh than is Amūn. The probability is that they, and Amūn, and Yahweh himself, as well as many other gods of the Near East, were all local developments of the one primitive conception of the air-, storm-, or sky-god.'

Id. 'The emblem of Min' *ib.* 1931 xvii. 185—195 discusses the thunderbolt first recognised by P. E. Newberry as the symbol of Min (*supra* ii. 767 n. 2). Wainwright too traces its development chronologically from the middle prehistoric period, when it was an arrow-like weapon with triple or double or single barb at either end, through a time of transition (end of dynasty vi to beginning of dynasty xii), till from c. 2000 B.C. onwards it attained a final form identical with that of the normal Greek thunderbolt. 'Min thus comes into relationship with Zeus; and this is not unnatural, seeing he was the original of Amūn, who was Zeus' (p. 188). Since coins of Seleukeia in Syria exhibit both the thunderbolt of Zeus *Keraūnios* (*supra* ii. 809 figs. 771 and 772) and the omphaloid stone of Zeus *Kásios* (*supra* ii. 982 f. figs. 880—884), Wainwright is able to urge that the one is the Greek, the other the Semitic form of the same object. He recalls the contention of F. Lenormant 'Zeus Casios' in the *Gaz. Arch.* 1880 vi. 142—144 (*id.* in the *Revue de l'histoire des religions* 1881 iii. 41, *id.* in Daremberg—Saglio *Dict. Ant.* i. 935) that the Aramaean god *Qaṣiu* was Hellenized into Zeus *Kásios* or Zeus *Keraūnios*: 'Qaṣiu = Zeus Casios était donc positivement un dieu-foudre ou un dieu-aérolithe, ce qui nous induit à tirer son nom de la racine originairement bilitère qui donne à l'hébreu *qāṣaṣ*, "tailler, rompre," et *qāṣah*, "tailler, couper," au syriaque *qāṣ*, "briser," en rapportant le sens primitif à l'explosion qui accompagne et précède de quelques secondes la chute de tout aérolithe.' On this showing, as Wainwright says (p. 189), 'meteorite, omphalos, and thunderbolt were all one and the same thing in religion.' He further dwells on the close association of 'the three partners, Amūn, Min, and Horus' (p. 190), and adopts Newberry's interesting suggestion (*Ann. Arch. Anthr.* 1911 iv. 99 n. 2) that Min's worship was established at *Akhmim* just because the rocks there are full of *Lithodomi*, a fossil much like belemnites (*supra* ii. 767 n. 2, 932 n. 1).

Id. 'Letopolis' *ib.* 1932 xviii. 159—172 argues for the existence of a similar thunderbolt-cult at Letopolis and claims that 'the way into heaven, which was offered there by a rope ladder, was derived from the flight of a meteorite' (p. 169). The cult was established at Letopolis because another quasi-thunderbolt, the fossil *Nerinea Requieniana*, abounds in the rocks there and seems to be characteristic of the locality.

Id. 'The Bull Standards of Egypt' *ib.* 1933 xix. 42—52 contends that the bull, which occurs on the standards belonging to four of the nomes in the Delta (the sixth, Xoïs; the tenth, Athribis; the eleventh, the Cabasite; the twelfth, Sebennytus), in each case has reference to the sky- or storm-god, and that the symbols in front of the said bulls, viz. mountain, shield(?), sickle-shaped meteorite(?), calf, are at least consistent with this interpretation.

Id. 'Jacob's Bethel' in *Palestine Exploration Fund Quarterly Statement for 1934* pp. 32—44 applies the results gained from the foregoing investigation of Egyptian meteor-cults to a study of the Palestinian Bethel. Impressed by common features (the ladder set up from earth to heaven, the gate of heaven, the golden calf, etc.) and confirmed by the equation *bethel* = *βαῖτυλος*, Wainwright concludes: 'Thus, there can be no reasonable doubt that Jacob's bethel was a sacred meteorite, or an omphalos its substitute.'

Classical literature, if we exclude the speculative explanations of philosophers¹, is seldom concerned with meteorites. But epic poetry has two possible allusions. The *Iliad* makes Athena dart from heaven to earth like a brilliant and scintillating star that Zeus sends as a sign to men²—in short, like a meteor. And the *Hymn to the Pythian Apollon* represents that god as having landed at Krisa in the same meteoric form³.

The most famous of all Greek meteors, the aerolite that fell at Aigos Potamos in 405 B.C., was perhaps associated with the Dioskouroi⁴. A lurid account of it has been left by Daimachos of Plataiai, an early Hellenistic historian⁵, who says⁶:

'Before the stone fell, for seventy-five days in succession, there was seen in the sky a fiery body of vast size like a flame-coloured cloud, not resting in one place but borne along with intricate and irregular motions, so that fiery fragments broken from it by its plunging and erratic course were carried in all directions and flashed fire like so many shooting-stars. However, when it had sunk to earth at that point and the inhabitants, recovering from their fear and amazement, had come together, no effect or trace of fire was to be seen'⁷—only a stone

Id. 'Some aspects of Amūn' in *The Journal of Egyptian Archaeology* 1934 xx. 139—153 returns to the charge and considers further the relation of Amūn to Min. 'Amūn was derived from the much older Min, with whom he had much in common. Yet they differed somehow. Min had the thunderbolt, while Amūn had the meteorite. Min became a fertility-god, while Amūn became solarized. Min belonged to the bull-god and was related to Horus, while Amūn belonged to the ram-gods and inclined towards Seth. Amūn also differed somewhat from the other ram-gods, for their ram was not his. They were Heryshef, Khnum, and the Lord of Mendes. They primarily controlled the waters on earth, a function not foreign to Amūn, who came to do so as well. But from the beginning he had been an air-, sky-, and weather-god. ... He was the blue firmament, the heavenly counterpart of the earthly waters. His sacred object was clearly a meteorite which came to earth from his very self. Like other meteorites its representatives were omphaloi, of which one at least suggests a fallen star in its material.'

These articles, taken together, certainly present us with a consistent picture of meteorite-cult over a wide area of the ancient world. I feel bound, however, to enter two pleas for caution: (1) The equation of thunderbolt=meteorite=*omphaloi* is not universally valid. Other things beside meteorites might be reckoned as thunderbolts, e.g. flint implements (*supra* ii. 505 ff., 643). And other things beside meteorites might be represented as *omphaloi*, e.g. a tomb (*supra* ii. 219 n. 4), a mound of earth (*supra* ii. 187), a mountain (*supra* ii. 983 n. o). (2) Apart from this assumed equation, we have no adequate proof that Min or Amūn had any connexion with meteorites. That the aniconic form of Amūn was a meteoric fragment is an attractive hypothesis, but hardly more.

Plutarch¹ states that the great stone was still shown in his day by the dwellers in the Chersonese, who held it in reverence, and adds that Anaxagoras had predicted the possibility of a fixed star becoming loosened and falling to earth as a heavy stone. Pliny² improves on this: Anaxagoras in 467/6 B.C. had predicted the days within which a stone would fall from the sun, a prediction fulfilled when this burnt-looking stone, a waggon-load in size, fell in the daytime at Aigos Potamos. Both Aristotle³ and Pliny⁴ remark that there was also a comet shining in the night at that time. Pliny⁵ goes on to mention that in the gymnasium at Abydos another aerolite was worshipped. It was a smallish stone, but Anaxagoras was said to have predicted that it would fall in the middle of the earth. Yet another was worshipped at Kassandreia, the ancient Potidaia, which had been founded on the spot where it fell. Pliny⁶ concludes by informing us that he had himself seen such a stone which had recently fallen in the territory of the Vocontii, a tribe of Gallia Narbonensis. One other incident of the sort is on record. Kedrenos⁷ the Byzantine annalist notes that in the year 460 A.D. three huge stones fell from the sky in Thrace and Eudokia wife of Theodosios ii died at Jerusalem.

(b) *Baityloi, Baitylia, and Zeus Bétulos.*

Few terms in the nomenclature of Greek religion have been more loosely used than the word *baitylos*. It is so persistently misapplied to sacred stones in general¹ that in 1903 Professor G. F. Moore² of Harvard felt constrained to protest against its indiscriminate employment and quite rightly insisted that *baityloi* or *baitylia* formed a distinct class of holy stones endowed with the power of self-motion. Yet more than thirty years later Sir Arthur Evans still strews broadcast his allusions to 'baetylic' pillars and 'baetylic' altars.

Sotakos³, a well-informed lapidarist of the early Hellenistic age⁴, states that certain *cerauniae*, black and round, were sacred. Towns and fleets could be captured by their means. And they were called *baetuli*.

Sanchouniathon of Berytos in his Phoenician history⁵ had more to say. Ouranos married his sister Ge and had by her four sons—Elos called Kronos, Baitylos, Dagon that is Siton, and Atlas⁶. Later we read that Ouranos invented *baitylia* or living stones⁷.

The qualities of magic potency mentioned by Sotakos and animation recorded by Sanchouniathon both come out in Photios' extracts from Damaskios' *Life of Isidoros*⁸. The Isidoros in question

888 *Baityloi, Baitylia, and Zeus Betylos*

was the neo-Platonic philosopher, who was in Athens at the time of Proklos' death (485 A.D.) and shortly afterwards for a while succeeded Marinos as chief of the Athenian school¹. The scornful and at times indignant Photios gives the following *résumé* of Damaskios' narrative.

'He says that at Heliopolis in Syria Asklepiades² made the ascent of Mount Libanos and saw many of the so-called *baitylia* or *baityloi*³, concerning which he reports countless marvels worthy of an unhallowed tongue. He declares too that he himself and Isidoros subsequently witnessed these things with their own eyes....

I saw, he says, the *baitylos* moving through the air. It was sometimes concealed in its garments, sometimes again carried in the hands of its ministrant⁴. The ministrant of the *baitylos* was named Eusebios⁵. This man stated that there had once come upon him a sudden and unexpected desire to roam at midnight away from the town of Emesa as far as he could get towards the hill on which stands the ancient and magnificent temple of Athena⁶. So he went as quickly as possible to the foot of the hill, and there sat down to rest after his journey. Suddenly he saw a globe of fire leap down from above, and a great lion standing beside the globe. The lion indeed vanished immediately, but he himself ran up to the globe as the fire died down and found it to be the *baitylos*. He took it up and asked it to which of the gods it might belong. It replied that it belonged to *Gennatos*, the "Noble One." (Now the men of Heliopolis worship this *Gennatos* and have set up a lion-shaped⁷ image of him in the temple of Zeus.) He took it home with him the self-same night, travelling, so he said, a distance not less than two hundred and ten furlongs. Eusebios, however, was not master of the movements of his *baitylos*⁸, as others are of theirs; but he offered petitions and prayers, while it answered with oracular responses.

Having told us this trash and much more to the same effect, our author, who is veritably worthy of his own *baitylia*, adds a description of the stone and its appearance. It was, he says, an exact globe, whitish in colour, three hand-breadths across. But at times it grew bigger, or smaller; and at other times it took on a purple hue. He showed us, too, letters that were written on the stone, painted in the pigment called *tingibari*, "cinnabar".⁹ Also it knocked on

⁹ An odd parallel may be seen in G. Pansa *Miti, leggende e superstizioni dell' Abruzzo* Sulmona 1927 ii. 39 ff. G. Mascitti, an abbot who lived at Pentima at the end of the seventeenth century, in his MS. description of Corfinium states that about 1695 there was

a wall; for this was the means by which it gave the enquirer his desired response, uttering a low hissing sound, which Eusebios interpreted.

After detailing these marvels and many others even more remarkable concerning the *baittylos*, this empty-headed fellow continues: "I thought the whole business of the *baittylos* savoured of some god; but Isidoros ascribed it rather to a *daimon*. There was, he said, a *daimon* who moved it—not one of the harmful nor of the over-material kind, yet not of those either that have attained to the immaterial kind nor of those that are altogether pure." He adds in his blasphemous way that different *baittyloi* are dedicated to different deities—Kronos, Zeus, Helios, etc.¹

At this point codex *A*, the Venetian manuscript of Photios¹, appends a marginal note, which is worth translating.

'I too,' says the annotator, 'have heard of a *daimónion* of this sort in Greece. The people who live there told me that it appeared in the neighbourhood of Parnassos². They recounted other things concerning it even more singular, which deserve to be passed over in silence and not set forth.'

From *Kefr-Nebo* near Aleppo came a dedication, dated 223 A.D., 'to Seimios and Symbetylos and Leon³.' Since the Syrian god Seimios appears to have had a consort variously spelled Seimia, Semea, Sima⁴, it is possible that she is here designated by a Greek appellative *Symbétylos* meaning 'Partner in his *Baittylos*⁵.' But the papyri of Elephantine in the fifth century B.C. repeatedly unite two divine names in a compound of which the second element is *Bethel*, e.g. *Anathbethel*, *Ishumbethel*, *Herembethel*⁶. It may be, therefore, that we have here a late Syrian parallel to the older formation, and that—as O. Eissfeldt⁷ suggests—Symbetylos actually represents the *Ishumbethel* of Elephantine. In which case the first element Sym- would stand for the Babylonian fire-god Ishum. But Professor

found near the valley of Virana a very ancient stone fallen miraculously from the sky. It was a '*ceraunio*' of planispherical shape, four ounces in weight, and milky white in colour. Sundry lines like little veins of cinnabar made raised letters on its surface and were read by the learned as D. DE. SVPER on one side of the stone and IPRIO on the other. To this apparent inscription some magical meaning was attached.

² The mention of Parnassos suggests that this curious note may contain a Byzantine reminiscence of the stone of Kronos, which was set up γράλως ὑπο Πάρνησσίῳ (Hes. *theog.* 499) and is often called *baittylos* (*infra* p. 936 n. 4). But the whole district was, and is, grossly superstitious. For the beliefs of the peasants at Arachova beneath Parnassos see *supra* ii. 505 n. 6, 993 n. 2.

890 *Battýloi, Baitýlia, and Zeus Bétýlos*

S. A. Cook¹ reminds us that *Ishumbethel* at Elephantine is strictly 's-m-bethel, where vocalisation and meaning are alike uncertain. For, while some take 's-m to be the Hebrew *shēm*, 'Name,' a reverential substitute for a divine name, he would prefer to write *Ashima-bethel*². The choice between the Greek and the Semitic interpretation of *Symbétýlos* is indeed far from simple.

More to our purpose, however, is a quadrangular altar (0.72^m

Diphilianus, to his national god Zeus *Betylos*. And the lettering of the inscription points to a date early in the third century A.D. But whether the appellative implies that the Greek Zeus was here worshipped under the form of a *baitylos*, or that he had succeeded to the position of some Semitic deity of the *-bethel*-type¹, is not clear². Sanchouniathon's personified Baitylos³ is hardly decisive.

It is commonly assumed as self-evident that the Greek word *baitylos* is an approximate transliteration of the Hebrew *Bēthēl*, 'House of God.' But the equation is not free from difficulties. My colleague Mr H. St J. Hart points out to me that in Scripture the name Bethel is attached to two quite distinct places. The better known one, twelve miles north of Jerusalem, is in Hebrew *Bēthēl*, in Greek *Baithēl*⁴. The other, in the Negeb or 'Dry' plateau of Judah, is variously spelled—not only as Hebrew *Bēthēl* = Greek *Baithēl*⁵, but also as Hebrew *Bēthūl* = Greek *Bathouil*⁶ and Hebrew *Bēthūēl* = Greek *Bathouēl*⁷. It may therefore be argued that the Hebrew *Bēthēl* had an alternative form *Bēthūēl*, which gave rise to the Greek *baitylos*, *betylos*⁸. Failing that, we are driven to posit some dialect (Phoenician?) in which the same connective *u*-sound occurred.

Whether Jacob's stone at Bethel was an ordinary *Maṣṣēbhah*, as I have supposed⁹, or a meteoric block, as Mr G. A. Wainwright thinks possible¹⁰, is a further problem. The name *Bēthēl* is intelligible on either hypothesis. But to cite¹¹ in support of the latter view certain neo-Babylonian cylinders on which appear shield-shaped objects marked with a ladder and set upright on divine seats (figs. 722—724)¹² is, I fear, to explain *ignotum per ignotius*.

892 *Battyloi, Baitýlia, and Zeus Bétýlos*

Yet, whatever be the case with the stone at Bethel, there can be little doubt that the Syrian *battyloi* or *baitýlia* really were—as G. F. Moore¹ contended—either smallish meteorites or neolithic implements believed to have fallen from heaven².

Fig. 722.

Fig. 723

Fig. 724.

The Syrian cult of meteorites is attested by one other record, which does not contain the actual word *battylos*. Sanchouniathon³ states that Astarte⁴, 'as she travelled round the world, found a star fallen from the sky, picked it up, and consecrated it in the holy island of Tyre.' Sir G. F. Hill⁵ would bring this statement into connexion with an omphaloid stone in a portable shrine represented on imperial coins of Tyre. But we have already ventured to explain that stone as the emerald-block of Herakles⁶, who at Tyre bore

the star of I-shhtar and the crescent of Sin. It may represent, in a corrupted form, the horned turban of the god as seen, two or three together, on kudurrus.⁷

the remarkable epithet *Astrochiton*, 'He of the Starry Robe'¹. Since the Tyrians treated the celestial Herakles (Melqarth²) as consort of the celestial Astarte³, the two explanations are not necessarily irreconcilable.

(c) Kybele and meteorites.

An odd tale, which associates Kybele with the fall of a meteorite, is told by Aristodemos⁴ of Alexandria, a pupil of Aristarchos⁵. It appears that a certain flute-player named Olympichos was being instructed by Pindar on the mountain where he used to practise. Suddenly there was a loud report, and a flame came flashing downwards. Pindar, perceiving it, discerned a stone image of the Mother of the gods falling at his feet. Whereupon he set up close to his house an image of the Mother of the gods and of Pan. Meantime the citizens sent to enquire of the god concerning the portent. He bade them build a sanctuary for the Mother of the gods. So, astonished at Pindar's anticipation of the oracle, they joined the poet in his cult of the goddess.

We have here, if I am not mistaken, an attempt to give historicity to a myth. Pindar teaching the flute-player Olympichos on a mountain-side is but Pan teaching the flute-player Olympos⁶, eponym of the Mysian mountain⁷. If historical happenings may give rise to myths, it is also true that myths may give rise to would-be historical happenings.

The story is of interest, however, because it suggests a meteoric origin not only for the sacred stone of the Mother in her temple on the Mysian Ide⁸, but also for her 'Zeus-fallen image⁹' at Pessinous in Phrygia. This celebrated image is expressly said to have dropped

the Phrygians worship the Mother of the gods, something would shortly fall from heaven and must be brought to Rome. Not long afterwards news came that the image had fallen, and to Rome it was brought. Indeed the day of its arrival is still kept as a festival for the Mother of the gods. The story goes that the ship bearing it stuck in the mud of the river Tiber and could by no means be floated off until the soothsayers predicted that it would follow only if drawn by a woman pure from intercourse with strangers. Claudia Quinta¹, who had been charged with adultery, but not yet tried, and on account of fast living was thought a most likely culprit, vehemently called the gods to witness her innocence and fastened her girdle to the hull. Thereupon the goddess followed, and Claudia passed from the depth of infamy to the height of fame. But before this affair of Claudia the Romans had been bidden by the Sibylline books to transport the image from Phrygia by the hands of their best man. So they had sent the man reckoned their best at the moment—Scipio Nasica, son of Cn. Scipio who had been general in Iberia and had fallen there. Nasica was cousin of the Scipio that had robbed the Carthaginians of their empire and first earned the title Africanus. In this way the goddess was brought to Rome by the best of their men and women.'

Once received at Rome the black stone of Kybele was treated with exceptional honours. A. Audin³ even contends that it was regarded as a second *Palládion* imported to replace the Trojan original, whose protective power would not last beyond the fated limit of a thousand years⁴. The stone was housed at first in the temple of Victory on the Palatine⁵, and subsequently in a temple of its own dedicated to the Magna Mater at the top of the Scalae

Maffei supposed that *Navisalviae* was a single word designating the divinised Claudia as 'Ship-saving' on account of her exploit. But Orelli with far greater probability took *Navis Salviae* to mean 'the Ship *Salvia*,' associated in cult with the goddess whom she carried. L. Bloch *loc. cit.* points out that a trireme in the praetorian fleet at Mi-num was actually called *Salvia* (E. Ferrero *L'ordinamento delle armate romane* Torino 1878 p. 29), being presumably a namesake of Kybele's well-omened vessel. A ship built with timber from the pine-woods of Mt Ide (Ov. *fast.* 4. 273 f.) was a fitting vehicle for the Mater *Idaea* (*supra* ii. 950 n. o).

¹ Ioul. *or.* 5 p. 209 Hertlein speaks of these miracles as *κοινῇ μὲν ὑπὸ πλείστων ἱστοριογράφων ἀναγραφόμενα, σωζόμενα δὲ καὶ ἐπὶ χαλκῶν εἰκόνων ἐν τῇ κρατίστῃ καὶ θεοφιλεῖ Ῥώμῃ*. A statue of Claudia in the vestibule of the temple of the Magna Mater on the Palatine survived two conflagrations of that edifice, in 111 B.C. and 3 A.D. (Val. Max. 1. 8. 11, Tac. *ann.* 4. 64).

² Not impossibly Claudia would be conceived as attaching her girdle to the sacred stone of the goddess, much as the Ephesians at the time of Kroisos' invasion bound their gates and walls by cords to the columns of Artemis' temple (Ail. *var. hist.* 3. 26), or as Kylon and his men fastened a braided thread to the statue of Athena on the Akropolis at Athens (Plout. *v. Sol.* 12). The object in each case was to maintain close contact with the goddess. Cp. *supra* ii. 408 and perhaps ii. 657 figs. 591—593.

Audin reckons that 1000 years from the fall of Troy (1184 B.C.), when Kassandra the Trojan Sibyl announced the migration of her countrymen to Rome, would expire in 184 B.C. The importation of the Mater *Idaea* in 205, at the advice of the Sibylline books, might secure a new lease of life for the state!

This black, *quasi*-human face, with its silver setting and its rich jewellery, must indeed have presented a singular sight, comparable with that of some black mediaeval Madonna⁵.

But its original form is imperfectly known. E. Beulé⁶, followed

M. Mayer in Roscher *Lex. Myth.* ii. 1525 thinks that the stone from Pessinous was placed in the mouth of the statue; but he appears to be mistranslating the words of Arnobius.

at first by B. V. Head¹, made the interesting conjecture that it is represented on new-style tetradrachms of Athens bearing the names Kleophanes and Epithetes (figs. 727—730)². The magistrate's badge on these coins is an upright conical stone with projections suggestive of a face and seemingly with a *kteis* beneath it. Attached to its apex by a knot is a fillet or covering, which hangs down on either side and recalls Damaskios' description of the *baittylos* 'concealed in its garments'³.

A possible parallel to the *baittylos* of Kybele, set in silver and decked with a necklace, may be found in a singular object here published for the first time (pl. lxvii and fig. 731). It is, essentially, a neolithic pounder (6½ inches high) of dull green stone, which has been subsequently faceted and inlaid with tin⁴. Since faceted axe-hammers occur sporadically throughout central Europe towards the end of the stone age⁵, and since tin-inlay is frequent on the contemporaneous pottery of the Swiss pile-dwellings⁶, it may be inferred on technical grounds that this pounder was decorated c. 2000 B.C. Several of its features—green

stone, surface facets, projecting bands and bosses—are seen again in an axe-hammer from the second city of Troy¹ and serve to confirm the suggested date. Even the tin-inlay, though not itself discovered at Troy, is at least postulated by the Homeric description of Achilles' shield² and Asteropaïos' corselet³. However, the really remarkable thing about our pounder is the arrangement of its decoration, which transforms the neolithic tool into a *quasi*-human shape⁴. The head is surmounted by a conical tin cap, secured by three tags or tenons of tin, any one of which might suggest a nose. The shoulders are covered by a broad tin cape. The waist is represented by a deep groove. Below this is a double belt of tin. Lower down, the faceted surface looks like folds of drapery encircled by a tin band, from which hang four pairs of tin pendants symmetrically placed. Finally, at the foot, opposite each pendant is a hole for the insertion of a stud, perhaps of amber or vitreous paste. In short, we may venture to recognise a primitive idol comparable with the bottle-shaped goddesses figured on coins of Asia Minor (figs. 732—737)⁵. Now neolithic implements are

Akin to the stone of Kybele at Pessinous in Phrygia was the stone of Elagabalos the god of Emesa in Syria⁴. This too was a 'Zeus-fallen' stone, of large size, conical shape, and black colour. It was marked with certain small projections and impressions;

attribute plastically rendered in gold¹, and in any case is to be viewed as the solar eagle of Syrian art². It led the Romans to equate Elagabalos with their own supreme deity Iupiter³.

This stone of the Emesenes, as F. Cumont⁴ insists, was in all probability an actual aerolite. It rose into sudden notoriety when its youthful high priest, Varius Avitus Bassianus, through the intrigues of his grandmother Iulia Maesa was proclaimed emperor by the troops in Syria (218 A.D.). He was saluted as Marcus Aurelius Antoninus; but, since the Syrian priest identified himself with his god, he was commonly called Elagabalus. On quitting Emesa for Rome he took his stone with him. A temple, which Marcus Aurelius had built for Faustina at the foot of Mount Tauros, Elagabalus dedicated to his own godhead⁵. At Rome Elagabalus erected two temples for his god, one on the Palatine close to his own residence², the other in some suburb by way of summer quarters³. The exact position of both is disputed⁴.

In the temple on the Palatine he surrounded the stone with the most venerated objects of Roman cult, including the stone from Pessinous⁵ and others of the like sanctity⁶. He even imported the ancient image of Ourania from Carthage to be the consort of his

On the left stands Minerva with *aigis* and helmet; on the right, Iuno(?). Both lay a hand caressingly on the stone. The third person of the Capitoline triad, Jupiter, is identified with the stone itself and attested by the eagle placed in front of it. The scene is completed by Victory sacrificing a bull, behind which is Tellus with *cornu copiae* and child.

Once a year, at midsummer, the stone was taken from the Palatine to the suburb temple. Elagabalus himself conducted it on a chariot resplendent with gold and jewels³ (figs. 741⁴, 745, 746⁵). But these vagaries were terminated by his death in 222 A.D. The

At Emesa, however, the cult continued to flourish. The usurper Uranius, whose full name was Lucius Iulius Aurelius Sulpicius Uranius Antoninus, issued not only bronze coins showing the temple (fig. 747)³ or the stone in the temple with its two parasols and a lunar crescent in the gable (figs. 748, 749)⁴, and billon coins showing the solar eagle with a wreath in its beak (fig. 750)⁵, but

Urbanus' domination was brief (248—253 A.D.). But a fresh fillip was given to the cult, when Aurelian in 272 routed the forces of Zenobia near Emesa and entered the town to pay his debt of gratitude to its guardian god. After founding temples on the spot and enriching them with vast donations³ he returned to Rome in 273 and there built the famous temple of the Sun, whose porphyry columns are still to be seen at Constantinople in the church of

(e) The stone of Dousares.

Dousares³, the ancestral god of the Nabataean Arabs, was likewise represented by a black stone. Clement⁴ of Alexandria says simply: 'The Arabs used to worship their stone.' Our next witness, Maximus Tyrius⁵, is more explicit: 'The Arabs worship I know not whom; but their image I have seen—it was a square stone.' A century later Arnobius⁶, who cannot claim to be an eye-witness, calls it contemptuously 'a shapeless stone.' Finally Soudas⁷, drawing from some unknown source, writes as follows:

'Theusares, that is the god Ares at Petra in Arabia. The god Ares is worshipped by them, for him they honour above all others. The image is a black stone, square and unshapen, four feet high by two feet broad. It is set on a base of wrought gold. To this they offer sacrifice and for it they pour forth the victims' blood, that being their form of libation. The whole building abounds in gold, and there are dedications galore.'

The evidence of the texts is borne out by that of the coins. At Adraa in the *Haurân* imperial bronze pieces show a hemispherical stone set on a cubical base (Arabic *ka'bah*) or seat (Aramaean *môtab*), which is approached by a flight of steps (figs. 754—756)⁸.

Dussaud⁴ remarks that the same triad of stones is to be seen on other Nabataean monuments. Thus at *el-Umta'iyeh*, some hours

rock-cut niches adjoining the hewn chamber called *el-Diwān* offer similar groups of sacred stones (figs. 764—766)¹. Such triads of stones, *maṣṣēbhōth*, are indeed wide-spread throughout the Semitic world² and presumably stand in some relation to the 'āshērīn³—tree-stems or sacred posts frequently figured in Cypriote art⁴. Possibly the plurality of the 'āshērīm led to the pluralisation of the *maṣṣēbhōth*. But the problem is a complex one and still awaits solution⁵.

⁵ The analogy of Woodhenge and Stonehenge in the west suggests that the sacred tree or trees were genetically prior to the standing stone or stones. It seems not unreasonable to suppose that a tree, which in time became a leafless tree or bare trunk (e.g. *supra* ii. 681 figs. 621—624), might be conventionalised into a post or pole (*supra* ii. 157 n. 1). And, since any object of timber ultimately decays, it might—like the wooden columns of the oldest Greek architecture—be replaced by the substitution of a permanent stone pillar (*supra* ii. 56 ff.). If so, the earlier forms would of course continue to sub-sist alongside of their later equivalents. Some such evolution has in fact already been indicated and exemplified (*supra* ii. 149).

Nevertheless this pedigree remains, in part at least, conjectural. Confining ourselves to verifiable facts, we might conclude with A. Lods *La croyance à la vie future et le culte des morts dans l'antiquité israélite* Paris 1906 p. 201 f.: 'nous avons la preuve que la *maṣṣēbhā* servait à un véritable culte des morts. Il serait pourtant possible aussi que, au temps de David, on regardât la *maṣṣēbhā* funéraire comme destinée simplement à perpétuer le souvenir du défunt. Mais, même dans ce cas, la stèle n'était pas un simple aide-mémoire pour les vivants; c'était une sorte d'incarnation du défunt lui-même, lui permettant de "faire figure parmi les vivants" [F. M. J. Lagrange *Etudes sur les religions sémitiques*² Paris 1905 p. 199]....La *maṣṣēbhā* a donc, au fond, le même sens lorsqu'elle est dressée sur une tombe et lorsqu'elle est érigée dans un sanctuaire; elle est le corps, la demeure d'un esprit.' *Id.* *Israel from its Beginnings to the Middle of the Eighth Century* trans. S. H. Hooke London 1932 pp. 87 f. with pl. 5, 1 and 2, 94 f. 116 n. 2, 227, 258—263 ('the most probable explanation seems to be that advanced by Robertson Smith: the purpose of the sacred stone was to provide the god who had manifested himself in a particular place, with an abode, a body, and to enable the worshippers to establish permanent relations with him. The reason why a stone was selected for this purpose was because it was the most suitable object to receive the sacrificial blood'). As such, the *maṣṣēbhōth* had a long history, not to say pre-history, behind them; for, whether they marked a sepulchre or a sanctuary, they cannot be separated from the megalithic erections of Palestine and Syria, and so take us back through the Bronze Age to Neolithic times (see now P. Thomsen in Ebert *Reallex.* viii. 106—115 pls. 34—37 and especially *id.* *ib.* pp. 139—143 pl. 44).

At a late stage in their evolution they began, like the standing stones of Sardinia or the *menhirs-sculptés* of France, Siebenburgen, etc., to be shaped into quasi-human form—witness a curious block of grey, polished, stone (height 0.74^m) found in 1922 on

Soudas' attempt to explain Dousares as a form of Ares¹ is, of course, a piece of puerile etymology, though Cumont² may be right in thinking that the same whimsy gave rise to the genitive *Dousárceos* found earlier in inscriptions³. When viticulture was introduced into Arabia, Dousares as principal god of the country may have taken it under his protection: Isidoros of Charax on the Tigris, a geographer of s. i A.D.⁴, made Dousares a Nabataean name

for Dionysos¹. The same native god was perhaps Hellenized as Zeus *Epikárpios* at Bostra², for a Nabataean vizier is known to have erected a votive offering to Zeus *Dousáres Sotér*(?) at Miletos³. A solar aspect of the god has also been deduced from the occurrence of Helios' epithet *Aníketos* in connexion with him⁴.

As regards the ritual of Dousares, apart from Souidas⁵ our sole informant is Epiphanius⁶, bishop of Constantia in Kypros. This

prelate in a noteworthy passage of his *panárion*, 'A Medicine-chest to cure all Heresies' (374—378 A.D.¹), is concerned to record pagan parallels to the Christian Epiphany² as celebrated on the night of January 5 to 6:

'First at Alexandreia in the *Kóreion* as they call it—a very large temple, the precinct of Kore³. All night long they keep vigil, chanting to their idol with songs and flutes. The nocturnal service over, at cock-crow torch-bearers go down into an underground chamber and bring up a wooden image, sitting naked on a litter, with the imprint of a golden cross on its forehead, two similar imprints on its hands, and other two on its knees, all told, five golden marks impressed upon it. They carry the image itself seven times round the central part of the temple with flutes, timbrels, and hymns. And after the procession they bring it down again to its underground quarters. If asked what they mean by this mystery, they make answer: "This day and hour Kore (that is, the Virgin) has given birth to Aion⁴."

These lucubrations tend to show that the Hellenistic cult of Aion was a semi-philosophical synthesis of several elements, all derived from the near east—the Chaldaean connexion of eternity with astrology; the old Persian god Zervan, underlying the later Mithraic Kronos or Aion (*supra* ii. 1053); the Phoenician Oulomos 'Eternity' (*supra* ii. 1037), and Aion the human son of Baat 'Night' and Kolpias 'Wind' (*supra* i. 191); the Egyptian Heh, god of Eternity, who as Aion came to be equated with Osiris and Adonis, and appears not only as a sun-god (Osiris) but even as a moon-goddess (Isis); and finally the Gnostic series of Aiones, whose supreme summation was the absolute Aion. In short, it would appear that the cult of Aion was the product of a comprehensive religious movement, which in some ways recalls the all-embracing ontology of Neo-Platonism.

¹ The text of Epiphanius, here dependent on a single manuscript (Maecianus 125) reads *Χααμοῦ*, which is kept by both K. W. Dindorf and K. Holl. The latter cites in support B. Moritz 'Der Sinaikult in heidnischer Zeit' in the *Abh. d. Gott. Gesellsch. d. Wiss.* Phil.-hist. Classe 1916 Abh. ii. 18, who records numerous inscriptions with such names as *Χααμον*, *Χααμος*, *Χααμέους*, *Χααμω*, *Χαταμος*, etc.

But E. Meyer in Roscher *Lex. Myth.* i. 1206 would read *Χααβοῦ*, adding '... dagegen bedeutet Ka'abū allerdings eine blühende Jungfrau; dabei ist...der Nachdruck nicht auf die Jungfräulichkeit, sondern auf die strotzende Fülle zu legen. Ob diese Mutter des Dousares mit dem in Mekka verehrten Steinklotze, der Ka'aba, an die sich bekanntlich auch die Verehrung mehrerer Göttinnen, der Allāt, der 'Uzza und der Manat, anschloss (*Qoran* 53, 19 f.), identisch oder nahe verwandt ist, muss bei dem gänzlichen Mangel genauer Nachrichten dahingestellt bleiben.'

F. Cumont, too, in Pauly-Wissowa *Real-Enc.* v. 1866 writes: 'Dieses Baetylion, das als jungfräuliche Mutter des Gottes angesehen wurde, wie die *Petra genitrix* der Mithrasmysterien, war *Χαάβου* genannt, d. h. wohl כֶּבֶר "der Wurfel".'

R. Eisler in the *Archiv f. Rel.* 1912 xv. 630 prints *Χααβοῦ* and notes: 'der hs. Lautbestand *Χααμοῦ* entspricht der bekannten, auch im Babylonischen nachweisbaren Aussprache von *m* wie *w*; das *-ou* ist die im Nabatäischen auch für Femmina übliche Endung auf *y*; zum Namen selbst, dessen Identität mit der altnekkanischen "Ka'aba" bekannt ist, sowie über seine Doppelbedeutung "Wurfel" und "Jungfrau," wörtlich "Madchen mit reifer, voller Brust," vgl. “Kore” or “Virgin,” and her offspring *Dousáres*, that is “Only-begotten of the Lord¹.”

In the town of Elousa² also the same thing takes place that night as happens there in Petra and at Alexandria³.

¹ The derivation of *Δουσάρης* is disputed. The name is commonly interpreted as *Δηύ*, ‘Lord’ (= north Semitic *Ba’al*), of *Sharā*, a place-name. This might be one of several localities (J. Wellhausen *Reste arabischen Heidentums*² Berlin 1897 p. 51), but was probably a mountain-range in Arabia (cp. Steph. Byz. *Δουσάρη*: σκόπελος καὶ κορυφή ὑψηλοτάτη Ἀραβίας. εἰρήται δὲ ἀπὸ τοῦ Δουσάρου. θεὸς δὲ οὗτος παρὰ Ἀραβῶν καὶ Λαχαρρηνοὶς τιμώμενος. οἱ οἰκοῦντες Δουσαρρηνοί, ὡς Λαχαρρηνοί)—the scriptural ‘mount Seir’ (Smith *Dut. Geogr.* ii. 952). G. Dalman *Petra und seine Felsheiligtümer* Leipzig 1908 i. 49 hazards a Sumerian etymology *Dū-šar-ra* = ‘Allbesieger.’ In any case the notion that *Δουσάρης* meant *μονογενὴς τοῦ δεσπότου* is absurd.

² Elousa (*Halaṣa*) was a town in Idumaea, 71 miles from Jerusalem (I. Benzinger in Pauly—Wissowa *Real-Enc.* v. 2457). The local cult is mentioned incidentally by Hieron. c. *Hilarion*. 25 (xxiii. 42 B—C Migne) vadens (sc. St Hilarion) in desertum Cades ad unum de discipulis suis visendum, cum infinito agmine monachorum pervenit Elouam eo forte die, quo anniversaria solemnitas omnem oppidi populum in templum Veneris congregaverat. colunt autem illam ob Luciferum, cuius cultui Saracenorum natio dedita est... quos ille blande humiliterque suscipiens, obsecrabat ut Deum magis quam lapides colerent. F. Boll in the *Sitzungsber. d. Heidelb. Akad. d. Wiss. Phil.-hist. Classe* 1910 Abh. xvi. 16, 40 ff. publishes a calendar from Lower Egypt drawn up c. 200 A.D. by the astrologer Antiochos, in which Dec. 25 is marked as Ἡλίου γενέθλιον’ αὔξει φῶς. Nevertheless K. Holl in his note on Epiphany in *Janar. haeres.* 51. 22. 11 insists ‘dass Epiphanius—ob mit Recht oder Unrecht—hier nicht den 25. Dez., sondern den 6. Januar meint.’

This curious passage, whatever else it implies, at least asserts that at Petra in the fourth century Dousares was viewed as the offspring of Chaamou, a goddess comparable with Kore, the Greek Queen of the Underworld, and further that his birth was the subject of an annual mystery-show. Of his sire we hear nothing except the improbable claim that *Dousáres* meant the 'Only-begotten of the Lord.' Beyond these obvious pronouncements it would not be safe to speculate¹.

We are not then, so far as I can see, in a position to state definitely that the black stone of Dousares was an actual meteorite. At the same time we must concede that it is found in suspiciously stellar company. Its analogues at Alexandria and at Elousa were both of the starry order. For Aion at Alexandria was marked

¹ R. Eisler in successive articles ('Kuba—Kybele' in *Philologus* 1909 lxxviii. 118—151, 161—209, 'Kuba—Kybele' in the *Revue des études anciennes* 1909 pp. 368—372, 'Das Fest des "Geburtstages der Zeit" in Nordarabien' in the *Archiv f. Rel.* 1912 xv. 628—638) has maintained that throughout the near east the Semites worshipped a great matriarchal goddess under various connected or connectible names—Χααβού, Χαμάρ, Χαβάρ, Χαβέρ, Χουβάρ, Κουβάρ, Καβήρ, Καβέρ. In Asia Minor she was the Mother of the gods, *Kybele*, the *Matar Kūbile* of Phrygian inscriptions (F. Schwenn in Pauly—Wissowa *Real-Enc.* xi. 2250), whose cult had spread to Greece by s. vi B.C. and reached Rome in 204 B.C.

These names, linked together 'durch das Band des Gleichklangs und der Buchstaben-gleichheit, die Basis aller morgenländischen Wortmystik und religiösen Begriffsbildung,' were associated with three distinct word-groups: (1) Arabic *ku'ub*, Greek κύβος, Latin *cubus*, English *cube*—the goddess being represented by a stone block (cp. Lyd. *de mens.* 4. 63 p. 114, 8 Wunsch Κυβέλη από του κυβικού σχήματος). (2) Arabic *ka'aba* 'to have swelling, prominent, or protuberant breasts' (see E. W. Lane *An Arabic-English Lexicon* London and Edinburgh 1885 Book I Part vii p. 2615 f.). *ku'ub* 'maiden with full breast,' *ku'ub* 'bosom,' *ku'ba* 'virginity.' Cp. the Hittite Mother of the gods, whose sign is < > a pair of breasts (F. Hommel *Ethnologie und Geographie des alten Orients* München 1926 p. 52 n. 2), the Ephesian Artemis (*supra* n. 405 n. 4 figs. 307—315), and the Persian Anahita from Arabic *nahada* 'to be full-breasted' [E. Blochet 'Le culte d'Aphrodite-Anahita chez les Arabes du Paganisme' in the *Revue de linguistique et de philologie comparée* 1902 xxxv. 8 n. 1 'nāhida désigne une "fille aux seins arrondis"; ce mot est très probablement une transcription du nom de la grande déesse perse Anāhita, l'aspect iranien de l'Astarte sémitique.' But my colleague Prof. H. W. Bailey tells me that this derivation is frankly impossible: *Anāhita* means 'Undeiled.' Again, Eisler blunders badly when in this connexion he speaks of 'der kleinasiatischen "Demeter" Μεγαλόμαχος und Δεκάμαχος': see Gruppe *Gr. Myth. Rel.* pp. 84 n. 2, 1178 n. 7]. (3) Greek κύββα, κύββα, κύπελλον. Latin *cupa*, and other words for 'cup' or 'hollow.' The Meccan *Kū'aba*, a feminine substantive, was originally a goddess embodied as an aerolite and annually draped in accordance with an ancient marriage-rite. In her case the 'hollow' was of course the womb, cp. the *ktels* on the stone of Kybele (?) (*supra* p. 897 f. figs. 727—730) and on that of Elagabalos (*supra* p. 906 figs. 752, 753).

From μήτρα Eisler passes on to όμφαλός, contending that the Lydian Omphale was a form of Kybele—witness her lion-skin etc.—and dealing with many other topics which do not immediately concern us. On the whole, his articles are brim-full of learning and abound in novel suggestions, some of which deserve to be followed up; but they are, to my thinking, largely vitiated by an admixture of doubtful or worse than doubtful etymologies.

with five golden crosses, a star-spangled child; and Venus at Elousa was worshipped 'on account of the Morning Star.' The phrase recalls Astarte's discovery of a star dropped from the sky¹—Lucifer fallen from heaven². If we were right in regarding the dropped star of Tyre as a meteorite, the black stone of Dousares may have been meteoric too.

That conclusion was reached more than a century since by F. Münter³ and F. v. Dalberg⁴, who went on to argue that the black stone still to be seen in the Ka'bah at Mecca was in pre-Islamic times the meteoric form of an Arab deity, either Dousares himself (Münter) or the Moon (V. Dalberg). They rightly drew attention to Arab beliefs concerning the origin of the stone⁵ and its early history⁶. Of these the most important is contained in an extract from Niketas Choniates⁷ written between 1204 and

So R. F. Burton *Narrative of a Pilgrimage to Meccah and Medinah* London—Belfast 1879 p. 493 n. 3 'Moslems agree that it was originally white, and became black by reason of men's sins. It appeared to me a common aerolite covered with a thick slaggy coating, glossy and pitch-like, worn and polished. Dr Wilson of Bombay showed me a specimen in his possession, which externally appeared to be a black slag, with the inside of a bright and sparkling greyish-white, the result of admixture of nickel with the iron. This might possibly, as the learned Orientalist then suggested, account for the mythic change of color, its appearance on earth after a thunderstorm, and its being originally a material part of the heavens. Kutb el-Din expressly declares that, when the Karamitah restored it after twenty-two years to the Meccans, men kissed it and rubbed it upon their brows; and remarked that the blackness was only superficial, the inside being white.'

1210 A.D.¹ but based on the earlier evidence of Euthymios Zigabenos (c. 1100 A.D.)². From this it appears that the stone was marked with the shape of Aphrodite, presumably a *kteis*³, and associated traditionally with the union of Hagar and Abraham. It was, long since surmised by Falconnet⁴ that the allusion must be to a natural stone simulating the womb. Such stones were known to early naturalists as 'hystérolithes'⁵, 'Hysterolithen'⁶.

Sir Richard Burton, who made his famous pilgrimage to Mecca in 1853, has described and illustrated the Ka'bah as decked in its annual attire, a covering of brilliant black with a golden band

But there can be little doubt that the τύπος in question was a *kteis*.

bearing inscriptions (fig. 771)¹. He adds a sketch of the Black Stone, which is now built into the south-east corner of the Ka'bah near the door and forms part of the sharp external angle at a height of four feet nine inches above the ground (fig. 772). He endorses the words of Burckhardt, who says²:

'It is an irregular oval, about seven inches in diameter, with an undulating surface, composed of about a dozen smaller stones of different sizes and shapes, well joined together with a small quantity of cement, and perfectly well smoothed: it looks as if the whole had been broken into many pieces by a violent blow, and then united again³.... color is now a deep reddish-brown, approaching to black. It is surrounded on all sides by a border composed of a substance which I took to be a close cement of pitch and gravel of a similar, but not quite the same, brownish color. This border serves to support its detached pieces: it is two or three inches in breadth, and rises a little above the surface of the stone⁴. Both the border and

⁴ Fig. 773, *a* and *b*, are reduced (scale $\frac{1}{4}$) from the half-size section and elevation of the Black Stone and its border given by Sir William Muir *The Life of Mahomet from original sources*³ London 1894 p. 27. Muir says: 'This stone, which is semi-circular, measures some six inches in height and eight in breadth; it is of a reddish-black colour, and notwithstanding the polish imparted by myriads of kisses, bears to the present day in its undulating surface marks of a volcanic origin.' But see L. Beck *Die Geschichte des Eisens in technischer und kulturgeschichtlicher Beziehung* Braunschweig 1884 i. 18:

the stone itself are encircled by a silver band, broader below than above, and on the two sides, with a considerable swelling below, as if a part of the stone were hidden under it¹. The lower part of the border is studded with silver nails.'

The silver setting of the Black Stone is of interest, for it forms a point of comparison with the Black Stone of Kybele which was likewise set in silver².

(f) The stone *siderites* or *oreites*.

If the meteoric stone was sometimes regarded as a mother, marked with a *ktéis*³, and draped in a veil⁴, it was also on occasion viewed as a babe, carried in the arms, and wrapped in swaddling bands. An example of the latter treatment is afforded by the stone known indifferently as *siderites* the 'iron-stone' or *oreites* the 'mountain-stone.'

Of this Pliny⁵, our earliest authority, has little to say. He is aware of its twofold name, but adds merely that the stone is globular in appearance and unaffected by fire.

Much more may be learnt from Damigeron⁶ the Mage, who wrote a lapidary attributed to s. ii A.D. Some fragments of the original Greek have come down to us⁷, but the whole text is available only in a Latin version⁸ of s. v fathered upon an Arabian king Euax⁹, who in a prefatory letter greets the emperor Tiberius. This prose work was rewritten in Latin hexameters by Marbode,

'Es ist dies das älteste aufbewahrte Meteorit. da sich das angebliche Meteoreisen von Pompeji durch die Untersuchung von Gustav Rose als künstliches Eisen erwiesen hat.'

¹ Burton *op. cit.* p. 494 n. 3 observes: 'Ibn Jubayr declares the depth of the stone unknown, but that most people believe it to extend two cubits into the wall. In his day it was three "Shibr" (the large span from the thumb to the little finger tip) broad, and one span long, with knobs, and a joining of four pieces, which the Karamitah had broken. The stone was set in a silver band.'

bishop of Rennes, between 1067 and 1081, and in that form became the most popular lapidary of the middle ages. More than a hundred manuscripts of it are extant, not to mention versions in six or seven languages¹.

The Latin Damigeron² distinguishes three varieties of *oreites* or *siderites*. The first is deep black and round³. It is good for bites. If pounded and rubbed in with rose unguent, it quickly cures wounds made by wild animals. If tied on to the sufferer, it makes his sinews unite⁴. Whoever takes it with him will foil any attack by wild beasts. Hence it is worn by the Magi when they cross the desert. The second sort is green with whitish spots. If genuine, it will not be consumed by the fiercest fire⁵. It is invaluable as a protection against all dangers and alarms. The third kind looks like an iron plate smooth on one side but studded with sharp nails on the other⁶. Great are its virtues. Kings bind it upon their concubines to prevent them from losing their good looks, or from producing imperfect offspring, or from failing to conceive at all. Indeed, so powerful is its effect on childbirth that, placed on a pregnant woman, it will at once bring on her delivery⁷.

The 'Orphic' *Lithiká*, a work assigned on stylistic and other grounds to the latter part of the fourth century⁸, expatiates in a tasteless way on the virtues of the stone as recorded by Damigeron⁹, but prefixes a passage¹⁰ of much mythical and magical interest drawn from some unknown source—hardly Damigeron, certainly not Orpheus¹¹.

Helenos—we read—advised the Greeks to fetch Philoktetes from Lemnos to Troy, and the arrival of Philoktetes meant the

death of Paris. But how came Helenos to give such fateful advice? It was because Phoibos Apollon had bestowed upon him—

A voiceful stone, the unerring *siderites*,
Which some the live *oreites* please to call,
Round, somewhat rough, strong, black of hue, and dense,
While over and about it every way
Stretch sinews like to wrinkles drawn upon it¹.

For ten days Helenos observed rules of ceremonial purity touching bed and bath and food. Meantime he washed the wise stone² in flowing water, and tended it like a babe with clean garments. He offered sacrifices to it as if it were a god, and brought breath into it by the use of potent spells³. He lit lights in his hall, and dandled the godfearing stone⁴ in his arms as a mother might dandle her infant. Anyone who does the same will at last hear the stone utter a cry like that of a new-born babe whimpering for milk. It will then and there answer truly any questions that you may choose to ask it. After which, if you lift it and look closely at it, you can see it die down in wondrous fashion⁵. It was through hearkening to this prophetic stone⁶ that Helenos told the sons of Atreus how his fatherland might be taken.

Helenos the seer was, like his sister Helene, a genuine figure of Trojan mythology. And Troy was dominated by the mountain-range of Ide, where iron was first discovered by the Idaean Daktyloi⁷—Kelmis, Damnameneus, and Akmon—servants of the mountain-mother⁸. It was, therefore, natural that the 'iron-stone' or 'mountain-stone' described by Damigeron should sooner or later be connected with Helenos. Moreover, it is often maintained that the earliest iron to be worked was meteoric iron⁹. That is doubt-

indeed a meteorite like others already found in the service of Kybele. It may be that the varieties distinguished by Damigeron include both the telluric and the meteoric sort. Certainly the epithets chosen in the *Lithiká*—somewhat rough, black, dense, covered with sinews like wrinkles—would be easy to parallel from actual meteorites of the kind called siderites¹.

(g) *Ákmon*.

The name *Ákmon* in this Idaean context raises a point of interest. In a familiar passage of the *Iliad*² Zeus awakes on the summit of Ide and, angered at Hera's deception³, threatens her with the lash. He goes on to taunt her with past punishment⁴:

Dost thou not mind how thou wast hung aloft,
While to thy feet I fastened anvils twain
And bound thy hands too with a golden bond
That none might break? In the *aithér* and the clouds
Thou hangedst helpless, ay and all the gods
In long Olympus were exceeding wroth,
Yet could not take thy part or loose thy chain.

W. Leaf⁵ observes that the word rendered 'anvils' (*ákmonas*) 'originally meant large stones, especially meteoric stones, commonly known as thunderbolts.' And Eustathios⁶ informs us that some texts here added a couple of lines:

Till I unfettered thee and cast the clogs
Down on Troy-land—for future folk to see.

This sounds like a piece of local lore. Two conspicuous blocks in the Trojan plain were pointed out as being the very 'anvils' dropped by Zeus. Moreover, since the term used of them (*mýdros*) means properly 'a glowing mass of metal⁷', Leaf⁸ is justified in concluding that 'such blocks can only have been meteoric masses.'

¹ See O. C. Farrington *Meteorites* Chicago 1915 pp. 78 ff. ('Crust of meteorites'), 85 ff. ('Veins of meteorites'). L. Beck *op. cit.* p. 19 states that the earliest exact description of meteoric iron is in Plin. *nat. hist.* 2. 147 item ferro in Lucanis (*sc. pluisse*) anno ante quam M. Crassus a Parthis interemptus est (53 B.C.) omnesque cum eo Lucani milites. quorum magnus numerus in exercitu erat. effigies quo pluit ferri spongiarum similis fuit.

F. Münter¹ thought it not impossible that the meteorites in question might yet be identified.

But the philologists have more to tell us. R. Roth² of Tübingen in 1853 first drew attention to a group of related words, which may be amplified as follows³:

Greek <i>ákmon</i>		sky ⁴	thunderbolt(?) ⁵	pestle ⁶	anvil
Sanskrit <i>ásman-</i>	stone	sky(?) ⁷	stone missile, thunderbolt	hammer-stone	anvil
Avestan <i>asman-</i>	stone	sky	stone missile, thunderbolt		
Old Persian <i>asman-</i>		sky			
New Persian <i>āsmān</i>		sky			
Sogdian <i>'sm'n</i>		sky			

Roth rightly inferred that there must have been a time when men of Indo-European speech thought the sky to be made of stone⁸,

The passage belongs to the 'emblemata vetustissima,' which F. Jacoby in his ed. p. 87 attributes to rhapsodes of s. vii—vi¹. Cp. F. Schwenn *Die Theogonie des Hesiodos* Heidelberg 1934 p. 17 n. 2. H. Stuart Jones in the new Liddell and Scott p. 51 says 'ἄκμων...orig. prob. meteoric stone, thunderbolt,' and illustrates that meaning by quoting χαλκεὸς ἄκμων οὐρανὸθεν κατιῶν from this Hesiodic passage. an inference now accepted by all philologists¹. Further it may be contended that the weapon of the sky-god—whether the thunderbolt of Zeus, the *vajra* of Indra, or the hammer of Thor²—was at first just a fragment of the stony vault broken off and hurled downwards. As such it would be essentially akin to a meteorite.

When the Stone Age passed into the Bronze Age, and the Bronze Age into the Iron Age, the thunderbolt—originally a stone missile³—

The Tyszkiewicz axe-head with a Sumerian inscription (*supra* ii. 510 with fig. 389, E. Unger in Ebert *Reallex.* ii. 449 pl. 213. a—c) is strictly an axe-hammer rather than a double axe. But the British Museum possesses (no. 54429) a small votive double axe in brown flint, acquired at Luxor and certainly of pre-dynastic date (H. R. Hall in S. took on metallic forms¹. But to the last a memory of the old thunderstone² lingered in the by-ways of Greek mythology and odd corners of Greek folklore. The sky-dynasty comprised three successive sovereigns—Ouranos, Kronos, Zeus³. Of these, Ouranos was reckoned as the son of Akmon⁴, if not as Akmon himself⁵. Kronos too was equated with Akmon⁶. And Zeus himself (as we shall see in the next two sections) exhibits certain features of both cult and myth strongly reminiscent of the same tradition.

(h) The stone of Kronos.

The stone *siderites* or *oreites*, wrapped in swaddling bands and treated as a babe⁶, recalls the stone swallowed by Kronos as a substitute for the infant Zeus. If the one myth was connected with Kybele and Mount Ide in the Troad, the other concerned Rhea and the mountains of Crete.

Hesiod¹, our primary source, tells the tale in the following form:

‘And Rhea, wedded to Kronos, bare splendid children—Hestia and Demeter and Hera of the golden sandals and strong Hades, who dwells beneath the ground with pitiless heart, and loud-sounding Ennosigaios² and Zeus the magician³, father of gods and men, by whose thunder the wide ground itself is shaken.’

And these great Kronos would swallow, as each came forth from the holy womb of his mother to her knees, with intent that none of Ouranos’ proud children save himself should have kingly honour among the immortals. [For he learned from Gaia and starry⁴ Ouranos that it was fated for him, mighty as he was, to be overcome by his own son, through the designs of great Zeus. Wherefore he kept no blind vigil, but ever on the watch would swallow his own children; and grief unforgettable had hold of Rhea.] But when she was about to bear Zeus, father of gods and men, then straightway she besought her dear parents (Gaia, to wit, and starry Ouranos) to devise some counsel with her, that she might in secret bear her dear child and might require the vengeance of her own father⁵ (for the children⁶, whom great Kronos of the crooked blade⁷ was wont to swallow). And they verily heard and hearkened to their dear daughter, and told her all that was fated to happen touching Kronos the king and his stout-hearted son⁸—[So they sent her to Lyktos⁹, to the fat land of Crete, when she was about to bear the youngest of her children, Zeus the great¹⁰. Him huge Gaia received from her to nourish and to rear in wide Crete.] [Thither she¹¹ came, carrying him through the swift black night, to Lyktos first; and taking

Gr.* 1926 xxxix. 194 n. 1 objects to my interpretation of ἀγκυλομήτης that the ending -της implies an agent, and cites in support of the orthodox view the epic word ποικιλομήτης. But nouns in -της are by no means always *nomina agentis* (see e.g. K. Brugmann *Griechische Grammatik*⁴ München 1913 p. 236 f.), and ποικιλομήτης, which occurs once in the *Iliad* (11. 482, with variants ποικιλομήτην, ποικιλόμητην), six times in the *Odyssey*, and always of Odysseus, may be a later formation based on a misunderstanding of ἀγκυλομήτης. I should say the same of all the post-Homeric compounds of -μήτης listed by E. Fraenkel *Geschichte der griechischen Nomina agentis auf -τήρ, -τωρ, -της (-τ-)* Strassburg 1910 i. 45.

him in her arms she hid him ^ain a sheer cave beneath the coverts of earth divine^a, ^bon Mount Aigaion¹ thickly clad with woods^b.] But to him she handed a great stone wrapped in swaddling bands, ^ceven to the son of Ouranos, ruling in might, the former king of the gods^c. That he then took in his hands and bestowed in his own belly, poor wretch, nor marked in his mind how that in place of the stone his own son was left behind, unvanquished and unvexed, who was soon like to overcome him by might and main and drive him forth from honour, himself to rule over the immortals.

[And quickly² thereafter waxed the strength and splendid limbs of the prince; and as the year came round again, ^abeguiled by Gaia's prudent promptings^a, great Kronos of the crooked blade brought up again his offspring, ^bvanquished by the arts and might of his own son^b. And he vomited first the stone that he swallowed last³. This Zeus set up in the wide-wayed earth at goodly Pytho beneath the glens of Parnassos, to be a sign thenceforward and a marvel to mortal men.

And he freed from their baleful bonds the brothers of his father, sons of Ouranos whom his father in the flightiness of his thoughts had bound. Grateful they were to him and mindful of his benefits, for they gave him thunder and the burning bolt and lightning, which ere that huge Gaia had hidden. Trusting in these he rules over mortals and immortals.]

The swallowing of the stone by Kronos was variously located. Some said that it happened on Mount Thaumasion in Arkadia⁴; others, on a rocky summit called Petrachos at Chaironeia in Boiotia⁵.

Be that as it may, the myth was accepted on the authority of Hesiod and made a lasting impression on the writers and artists of the ancient world.

The fifth century minimised the horrors. A red-figured *kratēr* with columnar handles, painted by one of the Attic 'Manieristen'⁶ c. 460—450 B.C., found in Sicily and now in the Louvre⁷, has for obverse design (fig. 775, α)⁸ a noble figure of king Kronos⁹, originally

white-haired¹, who sceptre in hand and swathed in an ample *himation* stands ready to receive from Rhea the well wrapped and carefully held substitute for the infant Zeus². Rhea, like an epic queen, is accompanied by a couple of handmaids³, who, to judge from the obvious alarm of the first and the simulated stance of the second, are both quite aware of the plot. The reverse (fig. 775, *b*)⁴ shows the sequel. Kronos in the same pose as before, only with staff instead of sceptre, has received the stone. And Rhea, her mission accomplished, turns herself about, partly to conceal her satisfaction, partly to give a message to the sympathetic Nike, who hurries from the presence of Kronos. Zeus, as Hesiod said, 'was soon like to overcome him by might and main'⁵.

Again, a red-figured *pelike* of c. 460—450 B.C., said to have come from Rhodes and now at New York, represents the famous ruse as conceived by 'the Nausikaa Painter' (?) (fig. 776)⁶. On the left stands Rhea, one foot supported⁷ on a rock (was she not a mountain-mother?) while she holds out the stone, convincingly dressed and capped like a long-clothes baby, towards the expectant Kronos. He stands on the right, raising one hand in amazement and holding his sceptre in the other. Clearly this scene⁸ is but

⁸ The scene on the reverse side of the New York *pelike* is not mythological at all, but

a slight elaboration of two figures on the contemporary Paris *kratér*.

Later Greek art was almost equally reticent. Pausanias¹ says:

'The Plataeans have a temple of Hera worth seeing for its size and its sculptural decoration. As you enter there is Rhea bringing to Kronos the stone wrapped in swaddling bands as if it were the child that she had borne. This Hera they call *Teleia*². It is an upright figure of large size. Both are made in Pentelic marble, wrought by Praxiteles.'

The precise character and arrangement of these sculptures is matter for conjecture. To me it seems probable that the statue of

² Cp. *supra* i. 20. ii. 893 n. 2, 1150.

Hera *Teleia*¹ stood on a square plinth decorated in relief with the figures of Kronos and Rhea, both statue and plinth being, rightly or wrongly, ascribed to Praxiteles². Obvious parallels are afforded by Pheidias' statue of Athena *Parthénos* on its sculptured plinth³, and Praxiteles' statues of Leto and her children on 'the Mantinean base⁴'. If so, it is likely enough that a Romanised copy of the Praxitelean relief survives in a beautiful composition on the *ara Capitolina* (fig. 778)⁵. Kronos, a kingly figure⁶, enthroned on the right, rests one hand on the veil that covers his head⁷ and extends the other to receive the stone from Rhea, who, veiled likewise, advances with dignity from the left. H. Stuart Jones⁸ observes:

¹ For numismatic evidence see Imhoof-Blumer and P. Gardner *Num. Comm. Paus.* i. 111. J. de Foville 'Les statues de Héra à Platées d'après les monnaies' in the *Rev. Num.* iv Série 1906 x. 253—261 figs. 1—3.

² Furtwangler *Masterpieces of Gk. Sculpt.* p. 102 argues that, since the temple of Hera at Plataiai was built in the year 427/426 B.C. (Thouk. 3. 68), its sculptures must be assigned to 'the elder Praxiteles,' whose *floruit* he would date c. 445—425. The same opinion is expressed by several modern critics, e.g. Collignon *Hist. de la Sculpt. gr.* ii. 179 n. o, G. M. A. Richter *The Sculpture and Sculptors of the Greeks* Yale Univ. Press 1929 p. 241.

But the existence of this 'elder Praxiteles,' postulated by W. Klein in the *Arch.-ep. Mitth.* 1880 iv. 1—25, is still highly problematic: see e.g. U. Koehler 'Praxiteles der ältere' in the *Ath. Mitth.* 1884 ix. 78—82, P. Perdrizet 'Note généalogique sur la famille de Praxitèle' in the *Rev. Et. Cl.* 1898 xi. 82—95, C. Picard *La sculpture antique* Paris 1926 ii. 77 ('le pseudo-Praxitèle l'Ancien').

To the examples cited by them may be added a malachite cameo (cp. *supra* p. 538 n. o) of Graeco-Roman date in my possession (fig. 777: scale $\frac{3}{4}$). The engraver has, quaintly enough, tried to represent 'hunc maestum, senem, canum, caput glauco amictu coopertum habentem, filiorum suorum voratorem' (Myth. Vat. 3. 1. 1) by using the darkest part of the stone for the sinister face, a lighter green for the hair and beard, and a white streak for the top of the veil.

The significance of Kronos' veil is far from clear. A. Jeremias *Der Schleier von Sumer bis heute* (Der Alte Orient xxxi Heft 1/2) Leipzig 1931 pp. 1—70 omits Kronos altogether. M. Pohlenz *loc. cit.* p. 2017, after dismissing earlier views, suggests 'alte Kultelemente wie bei der Harpe.' A. H. Krappe in his *Balor With the Evil Eye* Columbia University 1927 p. 23 ff. and in his courageous survey *Mythologie universelle* Paris 1930 p. 250 conjectures that the Greek Kronos and the Italian Saturn had, like the Irish Balor, a third eye in the back of the head, which being an evil eye 'had to be covered up lest it should strike innocent people with its destructive glance.'

Laurentum. Kronos and Rhea, both veiled, are sitting side by side. Rhea, in blue *chiton* and red *himation*, presses her hands nervously together. Kronos, completely draped in a large yellow *himation*, bends forward to seize a naked boy, who flings up his arm in a gesture of frantic supplication. But the ogre, with grim face and horrible wide mouth, has him by hair and hand and leg. His fate is apparently sealed; for the old and terror-stricken *paidagogós*, who, clad in a yellowish *chiton* and a blue *himation*, appears, stick in hand, from the background, will obviously arrive too late. But just in the nick of time a handmaid¹, in reddish *chiton* and yellow

himation, rushes forward to present Kronos with the stony substitute. There can, I think, be little doubt that this sensational picture—very possibly with some symbolic meaning²—presents the subject of Kronos' *teknophagia*, which we know to have been the theme of a late Greek pantomime³.

¹ I cannot agree with Visconti, who *loc. cit.* took the *paidagogós* and the handmaid to be Ouranos and Gaia! Nor yet with M. Mayer, who *loc. cit.* thought that the artist had combined two moments in the myth—Kronos about to rend and devour one of his sons *in propria persona*, and Kronos about to receive another of his sons *in effigie*. Least of all can I accept the verdict of A. Rapp, who *loc. cit.* includes this wall-painting in a list of monuments 'Ohne Wahrscheinlichkeit . auf Rhea gedeutet.'

The myth as a whole is a complex involving two originally distinct elements. On the one hand, there is the folk-tale *motif* of the Unnatural Parent who eats his Children¹. On the other hand, the acceptance of a swathed stone as a substitute for Zeus suggests the ritual of litholatriy and in particular recalls the draped meteorites worshipped in sundry Levantine cults². The stone swallowed by Kronos is described by late writers as bearing more than one significant name. It was *diskos*, perhaps with a solar connotation³. It was *battulos* because of its wrappings⁴. It was *abaddir*⁵, a Semitic term meaning 'mighty father'⁶.

These two elements, the folk-tale *motif* of the child-devourer and the ritual usage of a *baitylos*, were perhaps first fused in ancient Crete. For, on the one hand, the Kouretes had of old sacrificed children to Kronos¹ and saved the infant Zeus by deceiving his father², while, on the other hand, pillar-cults were admittedly rife³ and even natural stones might on occasion be treated as divinities⁴.

Further, in view of the relations between 'Minoan' Crete and Pytho⁵, it is not surprising to find that what purported to be the actual stone swallowed by Kronos was still to be seen at Delphoi in the second century of our era.

'As you leave the tomb of Neoptolemos,' says Pausanias¹, 'and pass on up the hill you come to a stone of no great size. On this they pour olive oil every day, and as each festival comes round they put upon it wool of the unspun sort. There is also a belief with regard to it that this stone was given to Kronos instead of the child and that Kronos spewed it out again.'

The stone oiled and clad in wool was certainly a *baitylos* and possibly, as Sir James Frazer² and others³ have conjectured, an aerolite. What it looked like we know from a silver *simpulum* with gilded details, found in 1633 at Wettingen near Basel⁴, which is decorated with the seven deities presiding over the days of the week⁵ (fig. 780). Kronos, the god of Saturday, stands beside a pillar topped by an oval stone: this can be none other than his Delphic monument.

(i) Zeus *Kappótas*.

Pausanias¹ in his account of south-western Lakonike says:

'About three furlongs from Gythion is an unwrought stone. The story goes that Ōrestes sat upon it and was thereby stayed from his madness; wherefore the stone was named Zeus *Kappótas* in the Doric tongue.'

Attempts to determine the exact site of this famous stone have led to some divergence of opinion. On the one hand, E. S. Forster² in an article dealing with Laconian topography writes as follows:

'Near the modern Gymnasium, at the side of the Sparta road, is an abrupt face of reddish stone some ten metres high, cut into the side of the hill of Kumaro and now called Πελεκητό. At a point about four metres above the level of the neighbouring road is the rock-cut inscription Μοῖρα Διὸς Τεραστίω³. It was cut by hammering with a round-pointed instrument, which made dot-like incisions.

The distance from this spot to the centre of the ancient site agrees well with the "about three stades" of Pausanias, and it may, I think, be regarded as certain that this inscription marks the site of the sanctuary of Zeus Kappotas. Τεραστίος must then be regarded as the official title of the god, Καππώτας as a local popular epithet. The spot as figured by Le Bas—Waddington [(fig. 781)⁴] shows a rocky platform at the foot of the cliff, which perhaps was the "unwrought stone" mentioned by Pausanias.'

On the other hand, W. Kolbe⁵, writing six years later in his *Inscriptiones Laconiae*, reverts to the view put forward by W. M. Leake⁶, that the stone called Zeus *Kappótas* was to be seen in antiquity some two hundred yards further south at the point where the rock still shows an archaic inscription in small letters difficult to decipher and interpret, but possibly prescribing penalties for any who should shift or damage the sacred object⁷.

The interpretation depends on the meaning assigned to the unknown verb ἀποστρυθῆσται. H. Stuart Jones in the new Liddell and Scott has 'ἀποστρυθῆσθαι, perh. = disturb, move, dub. in *IG* 5 (1). 1155. 2

Fig. 781.

Neither of these explanations is quite satisfactory. The first assumes that Zeus *Kappótas* was the popular name of the god officially called Zeus *Terástios*. But it is not easy to find a strict parallel to such double nomenclature. Besides, Pausanias' phrase 'an unwrought stone' (*argòs lithos*) suggests something isolated and smaller than 'a rocky platform at the foot of the cliff.' The second explanation is even more precarious. We are invited to think that a verb of unknown meaning in an inscription which does not mention Zeus at all perhaps referred to misdemeanants guilty of knocking bits off his sacred rock. I should sooner conclude that the relic in question was a comparatively small stone long since buried or lost.

The belief that 'Orestes sat upon it and was thereby stayed from his madness' recalls other curative stones¹, and implies a possible², but not very probable³, derivation of *Kappótas* from *katapaúein*, 'to stay.' Equally unconvincing is M. Mayer's⁴ con-

(Gythium). A. N. Skias *loc. cit.* suspected that ἀποστριβέσθαι meant λιθοτομείν or the like. L. Ziehen *loc. cit.* agrees that this gives the required notion. And W. Kolbe *loc. cit.* concludes: 'Neque vero de latomia cogitandum est, immo ne quis lapidem aërium laedat, interdicitur. Hunc ergo in modum titulum verterim: "ne quis decutiat; si quis decusserit, poenam dabit (sive ipse) sive servus."'

Zeus himself, when enamoured of Hera, would repair to the Leucadian rock and sit there till he felt better (Ptol. Hephaist. *ap. Phot. bibl.* p. 153 a 19 ff. Even portable stones might be possessed of great curative and preservative virtue, whether they were of natural origin like the *cretes* (*supra* p. 921), or artefacts such as neolithic celts (*supra* ii. 506 ff.). An interesting modern survival of the latter variety is recorded by T. F. G. Dexter *The Sacred Stone* New Knowledge Press, Treberran, Perranporth (1929) p. 37 § 76: 'Captain William Thomas, of Perranporth, tells me that he knew an old Cornish woman named Fanny Francis who had a remarkable cure for a bad leg—to rub it in "essence of thunder." This precious liquid was obtained by boiling a "thunderbolt" (apparently a neolithic implement) in a saucepan for twenty minutes. The owner of the "thunderbolt" was a miner at Pool who "lent it out" at 3d. a time! The Captain adds: "I knew the woman well and have heard her prescribe."'

tention that *Kappótas* means 'the Swallower.' For though in the Hesiodic myth Zeus swallowed Metis¹ and in the Orphic theogony Zeus swallowed Phanes and all that in him was², yet where a stone is in question we should inevitably think of Rhea's ruse and desiderate either Kronos the Swallower or Zeus the Swallowed. There is more to be said for S. Wide's³ suggestion that *Kappótas* involves the root *pet- pôt-*, which appears in the verb *pôt-á-omai*, 'I fly.' Only, we must not translate 'the Down-flier'⁴ or imagine that the reference is to a winged thunderbolt. There is little or no evidence to show that Greek thunderbolts were winged before the fifth century⁵, and this cult savours of a much hoarier antiquity. Rather, it should be borne in mind that the same root *pet- pôt-* had another meaning, 'to fall' as well as 'to fly'⁶. H. Usener⁷ and F. Solmsen⁸—a strong combination—between them went far towards proving that Zeus *Kappótas* really meant Zeus 'the Fallen,' and that his stone was in all likelihood a meteoric block.

If so, it must be conceded that among the peasants of Gythion we are face to face with extremely archaic beliefs. Zeus is the Sky⁹. The Sky is made of stone¹⁰. A bit of it breaks off and falls¹¹. That is Zeus 'the Fallen.' On this showing, our third volume ends where our first volume began, with the primary and yet age-long conception of the animate Sky.

§ 11. *General Conclusions with regard to Zeus as god of the Dark Sky.*

We have now gone the round of our subject, surveyed its main lines, and explored in detail some at least of its ramifications. It remains in a few concluding paragraphs to gather up results and attempt some estimate of their significance.

Starting from the primitive belief in an animate Sky, we surmised that already in remote pre-Homeric times *Zeús*, 'the Bright One'¹, had developed from Sky to Sky-god and was conceived after the fashion of an earthly weather-making monarch². He dwelt in isolated splendour where the summit of Mount Olympos (pl. lxviii)³ towers up through the cloudy *aér* into the cloudless *aithér*⁴. Universally recognised as head of the Hellenic pantheon, he came in the Hellenistic⁵ age to be connected more or less closely with sun⁶, moon⁷, and stars⁸—other manifestations of the same celestial brightness⁹.

Even when the sky was dark with a lowering storm, 'the Bright One' might be seen to flash downwards in a dazzling streak¹⁰. This was regarded sometimes as his destructive glance¹¹, more often as his irresistible weapon¹²—a double axe¹³, a spear¹⁴, a sword¹⁵, a lightning-fork or thunderbolt¹⁶. Zeus, who thus sent the lightning and the thunder, was naturally thought to send all kinds of weather, rain, snow, or hail¹⁷. Indeed, any phaenomenon of a meteorological sort was apt to be dubbed *Dioseμία*, a 'Zeus-sign,' and viewed as an omen of serious import¹⁸.

Prominent among such *Dioseμίαι* was the Earthquake¹⁹, attributed either to Zeus or to Poseidon, a specialised form of Zeus²⁰, whose trident was originally the lightning-fork of a storm-god²¹. Clouds, again, played a certain rôle in the ritual and mythology of Zeus²², as Aristophanes was aware when he wrote and rewrote his *Nephélai*²³ or elaborated that brilliant extravaganza his *Nephelo-*

*kokkygia*¹. The Winds too were not unconnected with Zeus². Their guardian Aiolos was one with Aiolos forefather of the Aeolians, and perhaps began life as a tribal chieftain believed to embody the sky-god³. Zeus' titles *Oúrios*, *íkmenos*, *Eudánemos*, *Bóreios* afford more definite proof of his power over the Winds⁴. A further group of his epithets—*Érrhos*, *Ersátos*, *Ikmatos*, and the like—associates him with the Dew⁵. The *Errhephóroi* were 'Dew-bearers' who carried dew, conceived as the very seed of the sky-father, down into the womb of the earth-mother⁶, while the dew-sisters Aglauros, Pandrosos, and Herse are best explained as successive names of the earth-mother herself⁷. More obvious and constant is the relation of Zeus to Rain⁸. Rain-magic is found at several of his cult-centres, in Arkadia, in Thessaly, on the Akropolis at Athens⁹. Moreover, the belief was rife that Zeus descended in rain to fertilise the earth—witness the poets in general¹⁰ and the myth of Danaë in particular¹¹. His appellatives *Ómbrios*¹², *Hyétios*¹³, *Hýes*¹⁴, *Chalázios*¹⁵ speak for themselves. Lastly, Zeus on occasion let fall a meteorite, a fragment of the solid sky, or even himself fell in meteoric form¹⁶. In which context we can cite, not only the Syrian Zeus *Bétylos*¹⁷ and the Arabian Zeus *Dousáres*¹⁸, but also the Laconian Zeus *Kappótas*¹⁹ and the stone devoured by Kronos²⁰.

Such in rough outline were the physical foundations of the cult of Zeus. I have used them throughout as providing a convenient framework for a somewhat discursive investigation of his worship. But the more nearly we study these aspects of it, the more clearly we perceive that they were after all just the ground-plan or lower storey of a greater and grander whole. Resting upon them and rising all the time, here a little and there a little, was a structure of fresh religious concepts, whose height and breadth—pinnacles of individual aspiration and prospects of interracial understanding—were quite without parallel in the pagan world. The fact is that always and everywhere the cult of a Sky-god²¹ has proved to be an

elevating and widening force. Inevitably so, for it tends to raise the thoughts of men from earth to heaven. And the quick-witted Greeks were prompt to seize the opportunity of such uplift and expansion.

Almost every section of this treatise serves to illustrate the process. Zeus *Hýpsistos*¹, for example, was 'the Highest,' not only literally, but metaphorically too. He may have started, like Zeus *Hýpatos*², as a Hellenic mountain-power. But he ended by becoming identified with the supreme deity of more than one non-Hellenic people, and not least of the Jews. This took place in the Hellenistic age, which also saw the rise of Zeus the Sun³ and his fusion with a variety of solar gods all round the eastern end of the Mediterranean—Āmen-Râ⁴ at Egyptian Thebes, Sarapis⁵ at Alexandria, *Ba'al-hammân*⁶ in north Africa, *Ba'al-šamin*⁷ in Syria, not to mention the Mithras⁸ of Chaldean magic. Moreover, it was as a pure sun-god that at Tripolis in Phoinike Zeus acquired the striking appellative *Hágios*⁹, and on the coinage of Gaza was actually equated with the Hebrew Godhead and inscribed with the trilateral form of the name Jehovah¹⁰. These and other such lines converged and ultimately met in the solar monotheism of Aurelian¹¹.

Again, the ram¹² and the bull¹³, whose procreative powers were connected by pastoral and cattle-breeding peoples with all the fertilising agencies of sun and storm, both alike served to facilitate the union of the Greek Zeus with similar gods in contiguous areas. The ram linked him to the Graeco-Libyan *Ammon*¹⁴ and the Thraeco-Phrygian *Sabásios*¹⁵; the bull, to the Amorite Adad¹⁶, the Babylonian Ramman¹⁷, and the Hittite god who in Roman times figures as Jupiter *Heliopolitanus*¹⁸ or Jupiter *Dolichenus*¹⁹.

Of all the attributes ascribed to Zeus the most formidable was

946 General Conclusions with regard to

the thunderbolt. Yet its terrors were not wholly terrific¹. Zeus might fall as a lightning-flash, but the *Dióbletos* or 'Zeus-struck' man was deemed divine and even treated as a god. The spot where the fatal bolt fell was *elýsion* and its victim *enelýsios*, literally 'in Elysium².' He had entered upon the 'road of Zeus,' the Elysian track, which led up the steepes of heaven and was identified by Pythagorean sages with the Milky Way³. He, like Er son of Armenios⁴, could stand at last on the axis of the world, the central column supporting the very sky, there to witness all that heaven could show⁵. The celestial ascent was sometimes conceived as a ladder⁶—a conception which begins with Egyptian amulets⁷, continues with Thracian and Orphic beliefs⁸, only to end with the mediaeval Ladder of Salvation⁹. Again, Zeus armed with a thunderbolt in either hand, a primitive storm-god, at Olympia was sublimated into Zeus *Hórkios*, 'God of Oaths,' a terror merely to perjurers¹⁰, just as on Italian soil *Dius Fidius*, 'the Cleaver,' a lightning-god, became, thanks to popular etymology, a peaceful 'Protector of Pledges¹¹.' In general it may be said that from the sixth century onwards the thunderbolt of Zeus begins to be replaced by his sceptre¹², surviving mainly as a symbol of omnipotence¹³ or continuous divine activity¹⁴. Indeed, under Constantine its old Anatolian form, the *lábrys*, was deliberately re-shaped into the *labarum* and adopted as the emblem of the all-conquering faith¹⁵.

Omnipotence leads on towards omniscience and omnibenevolence. A Hellenistic type of Zeus enthroned and sceptred shows the god with serious deep-set eyes, brow furrowed by thought, and head propped on hand in an attitude of serene¹⁶ meditation. We can hardly fail to recognise the insight and foresight of the divine ruler, who takes a kindly interest in the affairs of men. His mood, best described by the Greek term *prónoia* or the Latin *providentia*, comes close to our own conception of Providence¹⁷. Thus in imperial times *Iupiter Conservator* extends a strong protecting arm above the puppet emperor¹⁸, while his Syrian counterpart *Iupiter*

Dolichenus 'Best and Greatest, the Eternal' is hailed as 'the Preserver of the Whole Sky, a Godhead Pre-eminent, a Provider Invincible¹.'

More and more, as time went on and men's sympathies widened, the cosmic character of such a god tended to find expression in poetry, philosophy, and art. Homer began his *Iliad* with the parenthetic hint that its plot was but the progressive fulfilment of the will of Zeus². Sophokles³ ended his *Women of Trachis* with the reflexion—

In all which happenings is nought but Zeus—

and we are left with that impressive monosyllable ringing in our ears. An Orphic fragment paraphrased by Platon said:

Zeus first, Zeus midmost, Zeus hath all things made⁴.

And later Orphists under Stoic influence, or Stoics with a leaning towards Orphism⁵, expanded the same theme into hymns of a definitely pantheistic sort⁶. Theokritos⁷ and Aratos⁸ have echoes of the opening line, which for Cicero⁹, Virgil¹⁰, Ovid¹¹, and Calpurnius Siculus¹² passes into a poetical commonplace. Aratos¹³ in his great exordium dwells on the ubiquity and helpfulness of the god. The haunts of men are 'full of Zeus'—all the streets, all the markets, the sea and its harbours. Zeus distinguishes the seasons by his signs in the sky above and thereby determines the labours of the earth beneath. And all this with beneficent purpose. So men do well to worship him ever first and last; and the poet in a burst of gratitude cries—

Hail, Father, mighty marvel, mighty boon!

Even the dry-as-dust pedant with his faulty philology attempts to persuade us that Zeus gets his name *Zēna* as being the giver of

'life' to all things¹, and *Dia* as being the cause 'through' which they came to be². Zeus enthroned as cosmic lord is a frequent theme of imperial art. So he appears, surrounded by all the host of heaven, in a fine ceiling-fresco of Nero's Golden House³. And analogous designs were used to decorate minor works of art, an onyx *phalera*⁴, a terra-cotta lamp⁵, or what not? Anything circular would serve. Thus handsome bronze coins struck at Nikaia in Bithynia⁶ and Perinthos in Thrace⁷ show Zeus seated in the midst with smaller flanking figures of Sun and Moon, Earth and Sea, the whole enclosed by a broad band exhibiting all the signs of the zodiac—an irrefutable witness of his claim to world-dominion. Martianus Capella had indeed ample warrant for his hymn to Jupiter as ruler of the starry universe⁸. Small wonder that the type of the infant Zeus seated on a globe surrounded by stars⁹ was adapted for figures of the Father and the Son in church-mosaics of the fourth and following centuries¹⁰, or that the similar type of Zeus enthroned with the globe as his footstool¹¹ is found on a fourth-century gold-glass simply lettered CRISTVS¹².

Meantime morality was on the march, indeed was on the war-path. But reflexion shows that patristic satire on the *chronique scandaleuse* of Zeus¹³, however excusable in the heat of controversy, is not to be taken too seriously. It consists mainly of misdirected attacks on the alleged amours of the god with this, that, or the other mortal maiden. But in reality such *liaisons* point to the legitimate union of the sky-god with the earth-goddess, who in divers places had divers names and on occasion faded from goddess to heroine¹⁴. It might even be urged that this notorious characteristic of Zeus was a virtue rather than a vice, proving his permanence and adaptability in the face of changing conditions. The earth-mother 'of many names'¹⁵ took on a score of shapes: the sky-father remained constant to her in them all.

It was precisely this moral stability that made Zeus, not merely the wedding-god *par excellence* on account of his own *hieròs gámos*¹⁶,

For as husband of Ge *Thémis*¹ he was the natural guardian of *thémistes* or 'precedents'² and the parent of *Dike*³ 'the Right Way of Things,' that is 'Justice'.⁴ It was his to judge between the lawful and the lawless, whether human or otherwise. Watching the works of mortal men,

There are grounds for suspecting that the laws inscribed on Solon's *kýrbeis* and *áxones* were held to be the very voice of Zeus⁷. Aischylos⁸ makes Dike a close ally of her father. Sophokles⁹ speaks of her as seated at his side¹⁰. Euripides in the *Melanippe*

950 General Conclusions with regard to

*Bound*¹ scoffs at the crude Hesiodic² idea of Dike acting as court³ assessor to Zeus, but in the *Troades*³ still couples his name with hers:

O Earth's Upbearer on the Earth enthroned,
Whoe'er thou mayest be, hard to guess or know,
Zeus, be thou Nature's Law or Mind of Man,
To thee I pray; for stepping silently
Thou lead'st all mortal things on the path of Justice.

Orphic teaching represented both Dike⁴ and Nomos⁵ as *páredroi* of Zeus. And the eclectic author of the pseudo-Aristotelian work *On the Universe* (s. i B.C.)⁶, after quoting with approval an Orphic hymn to Zeus, concludes his treatise with the words⁷:

'God, then, as the old story has it, holding the beginning and the end and the middle of all things that exist, proceeding by a straight path in the course of

nature brings them to accomplishment; and with him ever follows Justice, the avenger of all that falls short of the Divine Law—Justice, in whom may he that is to be happy be from the very first a blessed and happy partaker!’

Plutarch¹ in his address *To an uneducated Ruler* is dissatisfied with such conventional views and protests that Dike is no mere *páredros* of Zeus but must, like Themis and the highest Nomos², be frankly identified with Zeus himself:

‘Now it is true that Anaxarchus, trying to console Alexander in his agony of mind over his killing of Cleitus, said that the reason why Justice and Right are seated by the side of Zeus is that men may consider every act of a king as righteous and just; but neither correct nor helpful were the means he took in endeavouring to heal the king’s remorse for his sin, by encouraging him to further acts of the same sort. But if a guess about this matter is proper, I should say that Zeus does not have Justice to sit beside him, but is himself Justice and Right and the oldest and most perfect of laws; but the ancients state it in that way in their writings and teachings, to imply that without Justice not even Zeus can rule well.’

When Antiochos i of Kommagene called himself by the bombastic title *Theòs Dikaíos Epiphánēs*, ‘the Just God Made Manifest,’ he was perhaps posing as Zeus *Oromásdes* incarnate³. In late times Zeus acquired the appellation *Dikaiósynos* as Judge of the just and unjust⁴, and at Karousa in Paphlagonia was worshipped as *Dikaiósynos Mégas*⁵.

But, before perfection can be reached, Justice must be tempered with Clemency, Mercy, and Love. Of which kindlier qualities there are stray hints and previsions in the cults of Zeus *Meilichios*⁶, Zeus *Hikesios*⁷, and Zeus *Philios*⁸. Particularly impressive for its moral implicates is the attitude of Zeus towards the man-slayer. It would seem that the bloodguilty person, who fled from the vengeance of his victim’s kin and appeared in some far off village as a suppliant stranger, was—according to ancient Greek usage—believed to be under the special protection of a divine escort⁹, nay more, was

originally regarded as himself a potential god¹. Hence we hear, not only of Zeus *Hikésios* 'the God of Suppliants,' but also of Zeus *Hikéias*, himself 'the Suppliant²,' and even of Zeus *alástor*, Zeus 'the curse³,'—a daring and desperate identification of the deity with the sinner. These things are strangely suggestive. Simple souls dwelling round the Mediterranean were prepared to believe that any day a god might appear in their midst in the likeness of a man⁴. Why not as 'the man Christ Jesus⁵'? Further, it would not stagger them to think that such an one might somehow condescend to identify himself with the sinner and even to 'become a curse for us⁶'.

Other 'august anticipations⁷' may be detected, by those who have ears to hear, in all parts of the ancient world. If for cultural and religious purposes Greece as a whole be divided into three zones, northern, central, and southern, it will naturally be found that of these the first and third were to a large extent independent and pursued their own lines of development, while the second lay open to influences received from either side. But in all three the same upward trend is observable.

Thus in the north the Thraco-Phrygians⁸ recognised a sky-god Dios, an earth-goddess Zemela, and their offspring Dios *Nýsos*, Dios 'the Younger.' The son was held to be a rebirth of the father⁹, whose name and nature he duplicated. Hence the ill-understood association of the Anatolian mother-goddess with a partner conceived at once as her husband and her child¹⁰—Kybele, for example, having a youthful consort invoked as *Attis*, 'Daddy,' or *Pápas*, 'Papa¹¹.' And hence too the success with which Christianity was propagated in Phrygia and Thrace among a people who already believed in a Father manifesting himself anew in the person of his Son¹². Even the rites and *formulae* of Attis might pass muster as *quasi-Christian*¹³.

In central Greece Dios, Zemela, and Dios *Nýsos* became naturalised as Zeus, Semele, and Dionysos¹⁴. But again there were

obvious points of contact between Dionysiac and Christian practice. The former, like the latter made much of collective emotion¹, treated the inspired devotee as one with his god², transcended the narrow limits of Hellenism³, and taught the mystery of life through death⁴. It is notorious that the *Christus Patiens*, a play written in the middle ages on the supreme tragedy of Calvary⁵, was composed largely of lines and half-lines culled from the *Bacchae*⁶.

In the south we have a similar but older triad—the sky-god Kronos⁷, the earth-goddess Rhea⁸, and their youthful son Zagreus or the Cretan Zeus, whose death and resurrection were annually celebrated as a means of reviving the life of all that lives⁹. Zeus *Idaios* in the fifth century had mystics, who by their sacraments assimilated themselves to their god and thereafter, clad in white raiment, led a life of ceremonial purity¹⁰. Zeus *Astérios* of Gortyna seems early to have taken on a solar character, but in the Hellenistic age is viewed as god of the starry sky¹¹. Aratos, when about to describe the whole series of constellations, starts with the Bears and tells how once in Crete they hid the infant Zeus in a cave and nurtured him there for a year, while the Dictaeon Kouretes were deceiving Kronos¹². Now Aratos was a native of Soloi or, some

³ The Dionysiac nomenclature was syncretistic. *Dionysos* came from Thrace (*supra* i. 695, 780, ii. 268, etc.). *Bakkhos* perhaps came from Egypt, where at Hermionthis men worshipped the bull *Bakha* (*supra* i. 436 ff., ii. 268 n. 4). *Zagreus* probably came from Mt *Zagros* or *Zagron* in Assyria, passing first through Phoinike and then through Crete (*supra* i. 651, ii. 268 n. 4). Thus elements drawn from north, south, and east combined to form a religion of well-nigh universal appeal.

⁴ Dionysos, the life-god of the Thracians (*supra* ii. 1024 f.), dies only to rise again. Those who took part in his *drömenon*, those who witnessed his *drama*, thereby became partakers of his immortality (*supra* i. 663 f., 673).

954 General Conclusions with regard to

said, of Tarsos¹. It is therefore of interest to note that Paul of Tarsos in his speech before the Areiopagos actually quotes the words used by his fellow-countryman with regard to the Cretan Zeus—

‘For we are also his offspring²,’

and in the same context cites, perhaps from a lost poem by Epimenides³, Minos’ panegyric of the god—

‘in him we live, and move, and have our being.’

Paul must have been struck, and struck forcibly, by the Cretan parallel—a divine child born to be king, hidden in a cave from his enemies, apparently weak and helpless, yet able to control the stars in their courses, one with whom his worshippers the world over could claim kinship, while dependent on him for life, and breath, and all things⁴. Truly the cult of Zeus *Astérios* has once more landed us on the very confines of Christendom.

Proofs might be multiplied, but I have said enough to show that the physical basis of the cult of Zeus involved mental, moral, and spiritual issues, which themselves rose to great heights and were prophetic of even greater things to come.

Many, if not most, of these sublimer aspects were caught and canonized when Pheidias at the very zenith of his fame made his statue of Zeus *Olympios* for the fifth-century temple in the *Altis*⁵. For a detailed description of it we are in the main dependent on the dry paragraphs of Pausanias⁶, eked out by allusions elsewhere⁷. It appears that the god, a colossal figure in gold and ivory, sat enthroned with a Victory likewise of ivory and gold, bearing a fillet and wearing a wreath, in his right hand and a sceptre, embellished with various metals⁸ and topped by an eagle, in his left. He had an olive-wreath on his head and golden sandals on his feet, his *himation*

of gold being inwrought with living creatures and lily-flowers¹. His throne, decked with gold and jewels, ebony and ivory, had upon it numerous figures painted and carved. It was surmounted by groups representing the daughters of Zeus—three Charites² and three Horai³. Each throne-leg showed four dancing Victories above, and two others below⁴. On the two front legs were Sphinxes grasping Theban children⁵, and beneath them Apollon and Artemis shooting down the Niobids⁶. The throne-legs were connected by four bars. The front bar carried seven, originally eight, figures illustrative of ancient athletic contests⁷. The other three bars had, all told, twenty-nine figures—Herakles and his allies, Theseus among them, engaged in fighting the Amazons. The throne was supported not only by four legs, but by four pillars between them. The space beneath it, however, could not be entered, being pro-

⁶ *Supra* ii. 475 n. 7.

⁷ Paus. 5. 11. 3 adds that the man binding his head with a fillet was said to resemble Pantarkes (cp. 6. 10. 6, 6. 15. 2), an Elean youth who won a victory in the wrestling-match of Ol. 86 (436—433 B.C.) and was the παιδικά of Pheidias.

Later writers affirm that Pheidias inscribed Παντάρκης καλός on the finger of Zeus (Clem. Al. *protr.* 4. 53. 4 p. 41, 18 ff. Stahlin, Arnob. *adv. nat.* 6. 13, Phot. *lex.* and Soud. s.v. 'Ραυνοῦσα Νέμεσις). But Gregory of Nazianzos tells the same tale of Athena Parthénos (Greg. Naz. *poemata* 1. 2. 10. 863 f. (xxxvii. 742 A Migne)); and Libanios, of Aphrodite (Liban. *ap. schol.* Clem. Al. *protr.* p. 313, 7 f. Stahlin)—perhaps meaning the Nemesis of Rhamnous (*supra* i. 275) ἐν Ἀφροδίτης σχήματι (Phot. and Soud. *loc. cit.*). Lastly, Eunapios, if his text be sound (v. *Acacii* 177 p. 101 Boissonade μήτε Φειδίᾳ τοῦ τὸν δάκτυλον παραλαβεῖν καὶ τὸν παῖδα πρὸς ἔπαινον τῆς θεᾶς), appears to connect the incident with a goddess; but D. Wytttenbach's ej. πρόδα for παῖδα may well be right (so J. F. Boissonade ed. 2 Parisii 1878 and W. C. Wright ed. London 1922). On the whole, this famous anecdote, if not absolutely incredible (it might conceivably be argued that an Olympic victor was an embodiment of the Olympic god (*Folk-Lore* 1904 xv. 399 ff.)), that Zeus mindful of Ganymedes might make allowance for the sculptor, that Παντάρκης could be explained away as πανταρκής—an epithet worthy of Zeus himself (Aisch. *Pers.* 855 f. πανταρκής ἀκάκας ἀμαχος βασιλεὺς, ἰσθθεὸς Δαρειός (cp. *supra* ii. 853), Hesych. s.v. πανταρκέα· πᾶσι βοηθὸν, πανταρκής· ὁ πᾶσιν ἀνταρκῶν), etc.), is at least highly improbable.

In any case Pheidias' statue of a boy binding a fillet on his head (Paus. 6. 4. 5) is not *ad rem* (see Furtwangler *Masterpieces of Gr. Sculpt.* p. 40 n. 1, Sir J. G. Frazer and H. Hitzig—H. Blumner *ad loc.*).

tected by barriers like walls¹. Of these, the one that faced the door was simply coloured blue; the rest were painted by Panainos the brother of Pheidias with pictures of Atlas and Herakles, Theseus and Peirithoös, Hellas and Salamis, Herakles and the Nemean lion, Aias and Kassandra, Hippodameia and Sterope, Prometheus and Herakles, Penthesileia and Achilles, and lastly two Hesperides. The footstool had golden lions² and a frieze showing Theseus'

The exact construction and decoration of the throne has long been a bone of contention among classical archaeologists: see e.g. H. In my restoration (*supra* ii pl. xlv) I have assumed (1) that the four bars (καθόρες), as the coins seem to show, carried small figures in the round (ἀγάλματα) representing athletes or combatants; (2) that the wall-like barriers (ἐρύματα), which prevented people from passing under the throne, were painted screens filling the four spaces between the legs (πόδες) and beneath the bars; (3) that the pillars (κίονες), equal in number to the legs (ἴσοι τοῖς ποσὶ), stood literally between the legs (μεταξύ ἐστηκότες τῶν ποδῶν), connecting the bar as stylobate with the seat as architrave (for an earlier arrangement see *supra* p. 669 with fig. 480). This would not exclude the possibility that, as in the case of Athena Parthénos (G. Fougères *L'Acropole d'Athènes Le Parthenon* Paris 1910 ii. 2 pl. 134, 1), there was a strong central pier or mast to ensure the stability of the whole colossal figure. Indeed, I suspect that a symbolic value was attached to this group of four pillars with a central stem. We have already seen (*supra* ii. 141 ff. fig. 83) a similar quincunx of columns apparently serving as a Sardinian model of the sky. The tomb of Porsenna at Clusium with its five *pyramides* and its superposed *petasus* (*supra* ii. 1219) is susceptible of the same interpretation. Recently L. Frobenius *Kulturgeschichte Afrikas* Zurich 1933 p. 173 ff. figs. 124—139 has cited interesting parallels from Yorubaland, Egypt, Crete (cp. *supra* ii. 193 n. 2 pl. xi), Etruria, etc., and in particular has shown that in Dahomey, Togoland, Yorubaland, and Assyria thrones for deities and kings often took this precise form. We may therefore justifiably conclude that, if Zeus sat on a seat supported by four pillars and a central stem, he did so in his character of sky-god.

² Lions was a traditional feature in the decoration of divine or royal thrones. The seat might be flanked by two lions (*supra* ii. 810 figs. 773 and 774, cp. i. 586 fig. 449) or

contest with the Amazons. The pedestal was adorned with an elaborate composition in gold. In the centre Aphrodite rose from

the foreparts of lions (i. 61 fig. 36), or it might have leonine legs (iii. 663 fig. 474, 664 fig. 475, 665 fig. 476, 668 fig. 480, 684 fig. 495, 716 fig. 530, 810 fig. 619) or leonine claws (i. 747 fig. 545, iii. 674 fig. 485, 680 fig. 491), or at least a footstool with leonine feet (i pl. i). And the usage could be traced further afield. Solomon's chryselephantine throne had lions standing beside the stays and on each of the six steps (1 Kings 10. 19 f.). Egyptian chairs of state often have leonine legs and arm-rests in the shape of lions (J. G. Wilkinson *Manners and Customs of the Ancient Egyptians* London 1837 ii. 196 with col. pl. 11). The finest example is the throne of Tut-ankh-Amen, which has leonine legs surmounted by lion-heads of chased gold (H. Carter—A. C. Mace *The Tomb of Tut-ankh-Amen* London 1923 i. 117 ff. with pls. 2, 62—64). In India too the lion is a symbol of royalty (A. de Gubernatis *Zoological Mythology* London 1872 ii. 153 ff.). Mr E. J. Thomas draws my attention to the Hindu *Simhāsana* or 'Lion-seat' (Sir M. Monier-Williams *A Sanskrit-English Dictionary* Oxford 1899 p. 1213 '*Simhāsana*, n. "lion's-seat," "king's seat," "a throne," MBh.; Kāv. &c.), the thirty-two statuettes of which related to king Bhoja thirty-two tales about their former owner king Vikrama (F. Edgerton 'A Hindu Book of Tales: the Vikramacarita' in the *Am. Journ. Phil.* 1912 xxxiii. 249 ff., *id.* *Vikrama's Adventures or The Thirty-two Tales of the Throne* Cambridge, Mass. 1926 vols. i and ii (Text, Translation, and Notes)). A Hittite god at Carchemish was enthroned on a pedestal representing two lions controlled by a servitor (G. Contenau *Manuel d'archéologie orientale* Paris 1931 iii. 1136 fig. 747). The archaic goddess from *Prinia* in Crete was similarly enthroned on a base adorned with a frieze of lionesses (E. Lowy in the *Jahresh. d. oest. arch. Inst.* 1909 xii. 246 fig. 123, V. Chapot in *Daremberg—Saglio Dict. Ant.* v. 280 with fig. 6917). The huge gilded throne in the Magnaura at Constantinople was guarded by lions with movable tongues, which could roar and lash their tails (Liudprand of Cremona *antapodosis* 6. 5 p. 154 J. Becker^d (cxxxvi. 895 A—B Migne)).

Such parallels are hardly fortuitous. Behind them all we can dimly discern that *Felidenkultur* of which L. Frobenius *Kulturgeschichte Afrikas* Zurich 1933 pp. 63—101 figs. 1—20 has much to say. Among the Baganda and allied tribes of Bantu speech the lion is a royal totem (J. Roscoe *The Baganda* London 1911 pp. 128, 187), and it is believed that kings after death are reborn as lions, their mortal remains breeding maggots which turn into lion-cubs (J. Roscoe *The Banyankole* Cambridge 1923 pp. 27, 54, F. H. Melland *In Witch-bound Africa* London 1923 p. 151 (chiefs of the Ba-Kaonde)). The king, then, as such was a lion. And I should conjecture that his throne with leonine legs originally emphasised his claim by transforming the human biped into the animal quadruped. Relics of these forgotten or half-forgotten beliefs may be found in prophecies (Aesch. *Ag.* 1223 ff., 1258 ff.), dreams (Hdt. 6. 131, Plout. *v. Per.* 3, Artemid. *oneirocr.* 2. 12, 3. 66, Achmes *oneirocr.* 267 (ἐκ τῶν Περσῶν καὶ Ἀγινπτίων περὶ λέοντος [καὶ θηρῶν]) p. 218 ff. Drexl), and popular locutions (Aristoph. *thesm.* 514 λέων λέων σοι γέγονεν, cp. Plout. *v. Lyc.* 3 βασιλεὺς ἡμῶν γέγονεν). Much ancient lore gathered about the birth of Alexander (Plout. *v. Alex.* 2 ἡ μὲν οὖν νύμφη, πρὸ τῆς νυκτὸς ᾗ συνέλρχθησαν εἰς τὸν θάλαμον, ἔδοξε βροντῆς γενομένης ἐμπεσεῖν αὐτῆς τῇ γαστρὶ κεραυνόν, ἐκ δὲ τῆς πληγῆς πολὺ πῦρ ἀναφθέν, εἶτα ῥηγνύμενον εἰς φλόγας πάντῃ φερούμεναι διαλυθῆναι. ὁ δὲ Φίλιππος ὑστέρῳ χρόνῳ μετὰ τὸν γάμον εἶδεν ὄναρ αὐτὸν ἐπιβάλλοντα σφραγίδα τῇ γαστρὶ τῆς γυναίκος· ἡ δὲ γλυφὴ τῆς σφραγίδος, ὡς ἔτεο, λέοντος εἶχεν εἰκόνα. τῶν δὲ ἄλλων μάντεων ὑφορωμένων τὴν ὄψιν, ὡς ἀκριβεστέρας φυλακῆς δεομένων τῷ Φιλίππῳ τῶν περὶ τὸν γάμον, Ἀρίστανδρος ὁ Τελμησσεὺς κῖεν ἔφη τὴν ἀνθρακον, οὐθὲν γὰρ ἀποσφραγίζεσθαι τῶν κενῶν, καὶ κῖεν παῖδα θυμοειδῆ καὶ λεοντώδη τὴν φύσιν), whose leonine looks were successfully rendered by Lysippos (Plout. *de Alex. Mag. fort. aut virt.* 2. 2) and—it may be added—most unsuccessfully by the later numismatic die-sinkers (e.g. *Brit. Mus. Cat. Coins* Macedonia, Etc. p. 19 no. 84 fig., p. 20 no. 87 fig., *Hunter Cat. Coins* i. 355 no. 1 pl. 24, 13, *M. Clean Cat. Coins* ii. 86 nos. 3716 and 3717 pl. 138, 10 and 11).

the sea, received by Eros and crowned by Peitho. On either side of this group were a dozen deities arranged in pairs—on the left, Zeus and Hera, Hephaistos and Charis, Hermes and Hestia; on the right, Apollon and Artemis, Athena and Herakles, Amphitrite and Poseidon. The whole assemblage was flanked on the left by Helios in his chariot, on the right by Selene riding her horse or mule.

In front of all this splendour, with its wealth of mythological meaning, was a bare black pavement of Eleusinian stone, which—whatever its practical purpose¹—aesthetically must have served, in the half-light of the temple, to isolate the statue from the spectator and to uplift the whole glittering vision towards the starry roof.

Pausanias' penultimate comment² is worth quoting:

'I am aware that the measurements of the Zeus at Olympia in point of height and breadth are on record³, but I cannot commend those who measured it. For even the measurements they mention fall far short of the impression made by the image upon such as have seen it. Why, the god himself, they say, bore witness to the art of Pheidias. When the image was finished, Pheidias prayed the god to grant a token if the work was to his mind. And, straightway, they declare, he hurled a thunderbolt into the ground at the spot where down to my time stood a *hydria* of bronze.'

What this masterpiece really looked like in the full glory of its ancient setting, we cannot, of course, hope to know. Any attempt to reconstruct it on paper (*supra* ii pl. xlv), partly from Pausanias' careful enumeration of details, partly from the small-scale copies of form and features on imperial coins of Elis⁴

These articles between them cover all the Zeus-types on the coinage of Olympia from the latter part of s. vi B.C. onwards.

Some at least of the earlier types (*e.g.* the seated Zeus *supra* ii. 757 figs. 700 and 701, 1224 fig. 1022) may well be reminiscent of a pre-Pheidias cult-image. I agree with

(pl. lxix)¹, must remain almost laughably inadequate. But, after all, as Pausanias implies, the important thing about the Pheidias Zeus was not his dimensions but his dignity, not his physical greatness but his moral grandeur. And if we cannot recreate his vanished effigy with much assurance, we can at least recall the impression

Miss G. M. A. Richter *The Sculpture and Sculptors of the Greeks* Yale Univ. Press 1929 p. 169: 'For the long interval between the completion of the temple and Pheidias' statue we may be permitted to hazard an explanation. Can we not suppose that originally a marble cult statue was made for the temple and stood duly in its place when the building was completed in 456? The existence of such an earlier image is indeed suggested by recent investigations of the floor of the temple which have indicated the presence of a substructure with ex'votos beneath the Pheidias construction [K. Lehmann-Hartleben 'Libon und Phidias' in the *Jahrb. d. Deutsch. Arch. Inst.* 1923/24 xxxviii/ix pp. 37-48]. Possibly the noble and severe head of Zeus (fig. 610) and the enthroned figure (fig. 611) which appear on the coins of Elis...were inspired by it. The expense of this statue—as well as of the temple—was defrayed from the spoils taken by the Eleans when they reduced Pisa and the other dependent cities which had revolted, just as Pausanias [5. 10. 2] tells us. Then thirty years later the same great earthquake which caused the mutilation of the crouching figures from the angles of the western pediment [cp. W. Dörpfeld in *Olympia* ii. 22]...also damaged this statue of Zeus. By this time the praise of the great gold and ivory statue of the Athena Parthenos was resounding throughout Greece; and Olympia determined to have a similar resplendent figure by the same master sculptor.'

But not till imperial times can we expect to find any accurate renderings of the Pheidias figure (P. Gardner *Types of Gk. Coins* pp. 77 ff., 146, 176 ff., 197 with pl. 15). Under Hadrian, when art took an antiquarian turn (W. Weber in *The Cambridge Ancient History* Cambridge 1936 xi. 320 f. and G. Rodenwaldt *ib.* p. 800 f.) and the emperor himself posed as Zeus *Olympios* (*supra* ii. 956 n. o, 959 n. o, 962 n. 2, 1120 n. o, 1121 n. o), we get our first really relevant copies of the final cult-statue.

¹ Pl. lxix gives photographic reproductions, to the scale $\frac{3}{8}$, of the four most important coins:

(1 a) and (1 b) are two differently lighted views of a unique bronze coin, struck by Hadrian, now at Paris. It was first figured by J. Friedlaender in the *Berliner Blätter* *loc. cit.* pl. 30, 2. See further Overbeck *Gr. Kunstmyth.* Zeus p. 36 Munztaf. 1, 34.

(2) is another bronze coin struck by Hadrian, now at Florence, which has long been known. See Overbeck *Gr. Kunstmyth.* Zeus p. 35 f. Munztaf. 2, 4. H. G. Evelyn-White in the *Journ. Hell. Stud.* 1908 xxviii. 49 fig. 1 illustrates it to the scale $\frac{1}{2}$. A second specimen, formerly owned by Queen Christina of Sweden (1626-1689), is lost. A third, from a slightly varied die, was found by H. Dressel, thickly oxidised, among the duplicates at Olympia and is published by R. Weil in the *Zeitschr. f. Num.* 1912 xxix. 368 f. pl. 10, 3a. The *obv.* bust of Hadrian is inscribed AVTOKPATΩP || AΔPIANOC || ΔIC, a very exceptional formula perhaps denoting an honour conferred on the emperor by the Panhellenes, when he was present in person at the Olympic festival of 129 A.D. (so Weil *loc. cit.* p. 370 f.).

(3) is a third bronze coin struck by Hadrian and secured by J. Friedlaender for the Berlin cabinet. H. G. Evelyn-White *loc. cit.* p. 51 fig. 2 illustrates it to the scale $\frac{3}{4}$. Several replicas were found at Olympia, of which the best preserved, now at Athens, is published by R. Weil *loc. cit.* p. 370 pl. 10, 4a.

(4) is a fourth bronze coin struck by Hadrian, also in the Berlin collection. H. G. Evelyn-White *loc. cit.* p. 51 fig. 3 illustrates it to the scale $\frac{3}{4}$. This coin, like no. (2), shows small projections on the stile of the throne representing the *ἀγάλματα* of the *καρῶνες* (*supra* p. 956 n. o), but the bared body of the god and his highly raised left arm (*supra* ii. 754) are concessions to the taste of a later age.

that it made on men of various tempers and types—the soldier, the man in the street, the scholarly thinker, the religious reformer, the eclectic moralist.

L. Aemilius Paullus after his brilliant Macedonian campaign travelled through Greece (167 B.C.), and having long been anxious to see Olympia made his way thither, only to find his expectations utterly eclipsed by the reality¹. Livy² puts it with dry, unconscious humour:

‘Passing through Megalopolis, he went up to Olympia. Here he saw sundry things worth seeing, and on beholding Zeus as it were face to face was moved in his spirit. And so, just as if he had been about to offer victims on the Capitol, he ordered a bigger sacrifice than usual to be made ready³.’

It took much to ‘move’ a Roman general of the old school⁴.

The popular verdict is voiced by Quintilian⁵:

‘As an artist Pheidias is held to have been better at making gods than at making men, but as a worker in ivory to have been quite without a rival—even had he made nothing beyond the Athena at Athens or the Olympian Zeus in Elis. The beauty of the latter is thought actually to have added something to the received religion; so far did the majesty of the work go towards equality with the god-head.’

Reflective minds would want to know the source of a beauty so striking that it could be described as a real contribution to Greek religion. Cicero⁶ speculates along Platonic lines:

‘I maintain that nothing is ever so beautiful as not to be beaten in beauty by that from which it is copied as a portrait is copied from a face, that original which cannot be perceived by eye or ear or any other sense but grasped only by

⁵ Quint. *inst. or.* 12. 10. 9 Phidias tamen diis quam hominibus efficiendis melior artifex creditur, in eboe vero longe citra aemulum vel si nihil nisi Minervam Athenis aut Olympium in Elide Iovem fecisset, cuius pulchritudo adieciisse aliquid etiam receptae religioni videtur; adeo maiestas operis deum aequavit.

Lucian in cynical mood bears witness to the same effect on the mind of the populace: *ὡς δ' οὖν οἱ παρόντες ἐς τὸν νεῶν οὔτε τὸν ἐξ Ἰνδῶν ἐλέφαντα ἐπιείκονται ὁρᾶν οὔτε τὸ ἐκ τῆς Θράκης μεταλλευθὲν χρυσίον, ἀλλ' αὐτὸν τὸν Κρόνον καὶ Πέας ἐς τὴν γῆν ὑπὸ Φειδίου μετακισμένον καὶ τὴν Πισαίων ἐρημίαν ἐπισκοπεῖν κεκλεισμένον, ἀγαπῶντα εἰ διὰ πέντε ὁλῶν ἐτῶν θέσει τις αὐτῷ πάρεργον Ὀλυμπίων.*

⁶ Cic. *orat.* 8 f. The passage ends: nec vero ille artifex, cum faceret Iovis formam aut Minervae, contemplabatur aliquem e quo similitudinem lucret, sed ipse in mente insidebat species pulchritudinis eximia quaedam, quam intuens in eaque defixus ad illius similitudinem artem et manum dirigebat. Sir J. E. Sandys *ad loc.* quotes Plotin. 5. 8. 1 ἐπεὶ καὶ ὁ Φειδίας τὸν Δία πρὸς οὐδὲν αἰσθητὸν ποιεῖσας, ἀλλὰ λαβὼν οἷος ἂν γένοιτο, εἰ ἡμῖν ὁ Ζεὺς δι' ὁμμάτων ἐθέλοι φανῆναι and an interesting parallel in a letter from

thought or mind. Thus we can think of forms more beautiful even than the statues of Pheidias, the most perfect things of their kind that we can see, or than those paintings that I have mentioned. Yet that great artist, when he was fashioning the shape of his Zeus or Athena, did not fix his gaze on any individual whose likeness he drew. No, in his own mind dwelt an ideal of surpassing beauty. Beholding that and lost in the contemplation thereof he turned art and hand to the task of reproducing its likeness.⁷

Platonic too in its essence is the remark attributed by Philostratos to that eccentric genius Apollonios¹ of Tyana:

'When he saw the statue enthroned at Olympia he said "Hail, good Zeus, whose goodness consists in giving of thine own self to men."

In the summer of the year 97 A.D. Dion of Prousa delivered a semi-Stoic discourse to the Greeks assembled at Olympia². The greater part of it is concerned with the cult-effigy of Zeus, to which the orator returns again and yet again with an ever fresh ardour of devotion and an astonishing variety of encomiastic phrases. He describes it as being 'of all the images on earth the most beautiful and the most beloved of heaven³.' And he calls upon Pheidias, 'this wise, inspired maker of a creation at once solemn and supremely beautiful⁴,' to expound and justify his rendering of Zeus.

All would admit, says Dion, that it is 'a sweet and welcome vision, a spectacle of untold delight to Hellenes and barbarians alike⁵.' Nay, even brute creatures, could they but observe it, would be impressed: bulls led to the altar would be content to suffer, if it pleased the god; eagles, horses, lions would lose their wildness and be soothed at the sight⁶. 'While of men, whosoever is utterly

This is not the colloquial ὦ 'γαθὲ, but a more serious use of the adjective as in Plat. *Tim.* 29 D—E λέγωμεν δὴ δι' ἥντινα αἰτίαν γένεσιν καὶ τὸ πᾶν τότε ὁ ξυνιστὰς ξινέστησεν. ἀγαθὸς ἦν, ἀγαθῷ δὲ οὐδεὶς περὶ οὐδενὸς οὐδέποτε ἐγγίγνεται φθόνος· τοῦτου δ' ἐκτός ὦν πάντα ὅ τι μάλιστα γενέσθαι ἐβουλήθη παραπλήσια εἶναι. weary in soul, having drained many sufferings and sorrows in his life without the solace of sweet sleep, even he, methinks, if he stood over against this statue, would forget all the terrors and hardships of humanity¹. Aforetime, adds Dion, in lack of clear knowledge we dreamed our several dreams and fashioned our individual fancies, or at most combined the unconvincing likenesses produced by previous craftsmen². 'But you,' he says turning to Pheidias, 'through the potency of your art have conquered and combined Hellas first and then the rest of the world by means of this marvel, a work so amazing and brilliant that no man who had once set eyes on it could afterwards readily form a different conception³.'

Yet, granted all this, continues Dion, in making a human figure of more than human beauty and magnitude out of these pleasing materials, did you really select the right type and create a form worthy of the god⁴? To which penetrating question Pheidias in his own defence replies⁵, that he was not the first exponent and teacher of truth heard by Hellas in her infancy. He had to deal with a people already grown up and holding earnestly enough religious views already accepted and established. He would not stress the agreement of sculptors and painters in the past, but look rather to those other craftsmen, the poets, older and wiser than himself. They by virtue of their poems could lead men to form concepts, whereas his handiwork could at best raise a sufficient probability.... Mind and wisdom no modeller or painter can portray. Their task is to know the human body in which these qualities reside, and they attribute the same to God. In default of the original, they seek by means of that which is seen and imaginable to show forth that which is unimaginable and unseen, using a symbol superior to the animal types by which barbarians represent the divine.... Nor can we maintain that it would have been a better plan to have made no statue or semblance of the gods, but to have looked only upon the heavenly bodies. The wise man worships every one of these, deeming that he can see the blessed gods afar off. But all men are so disposed towards the divine that they feel a passionate

desire to honour and tend it near at hand, approaching it and touching it with conviction, offering sacrifices to it and setting wreaths upon it. Just as little children, when torn away from father or mother, are stricken with sore longing and yearning, and often in dreams stretch out their arms to the absent ones, so men, justly loving the gods because of their kindliness and kinship, are eager to associate with them in every way and to share their company. Hence many barbarians through poverty and lack of art give the name of gods to mountains, rough tree-trunks, and shapeless stones, things that are assuredly no more suitable than this form of ours¹. In choosing the human shape I have followed the lead of Homer...though handicapped by the limitations of my art. Poetry is opulent and can afford to lay down its own laws. It has such resources of language and phrase that it can express every wish of the heart and proclaim aloud any conceivable aspect or achievement, mood or magnitude.... Not so I, who am restricted to a special spot in Elis or Athens. You, Homer, wisest of poets, were admittedly the first to show the Greeks many fair portraits of all the gods, their greatest included, in shapes sometimes gentle, sometimes terrible and appalling. 'But ours is a god of peace and universal mildness, overseer of a Hellas free from faction and at harmony with itself. By the help of my art and the counsel of Elis, a state both wise and good, I have established him, gentle and solemn with untroubled mien, the giver of livelihood and life and all good things, the common Father and Saviour and Keeper of mankind, imitating so far as mortal thought can imitate the nature that is divine and beyond our ken².' See, then, whether you will not find this his effigy aptly reflecting all his titles. For Zeus alone of the gods is called both Father and King, *Poliús* and *Homógnios* and *Phílios* and *Hetaireíos*, aye and *Hikésios* and *Phýxios* and

Xénios and *Ktésios* and *Epikárpios* and countless other appellations, all of them good¹....

The speech, which had risen like a rocket, might have concluded with that burst of stars, lingering awhile in memory as a galaxy of glittering points. But the speaker, being Greek, prefers to end on a note of greater quietude and self-restraint. He does so very simply, very effectively, by contrasting the human workman, a Pheidias or a Polykleitos, who has made the most of his paltry materials and trumpery tools, with Zeus the creator of the universe, whom Pindar² addresses as—

‘Mighty Lord of Dodona, Best of all Artificers, our Father.’

How comes it that this great statue, for centuries the acknowledged masterpiece of ancient religious art, has not, like many others of less merit, left behind it a trail of Greek and Roman copies? Apart from the wonderful Zeus of Mylasa (*supra* ii pl. xxviii), a fourth-century head of modified Pheidias style³, there is hardly an extant marble or bronze in which we can trace with certainty the influence of the original at Olympia⁴.

• No doubt, there were critics of its scale and proportions. Strabon¹ says:

‘It was wrought of ivory, and so huge was its size that, although the temple is very large, the artist is thought to have missed the proper symmetry; for he represented the god as seated but almost touching the roof with the crown of his head, and thus produced the impression that, if he arose and stood upright, he would unroof the temple.’

Others, as we might infer from Pausanias², felt the force of the objection, and Caecilius the rhetorician, a contemporary of Strabon, even ventured—the blasphemer—to speak of ‘the blundered colossus³’. To which detractors Pheidias might well have retorted that the temple-roof was expressly designed to suggest the starry vault of heaven.

But the real reason for the comparative unpopularity of the statue was not a mere matter of measurements. The gravamen was this. Pheidias, seeking to express a beneficent supremacy, had deliberately omitted the thunderbolt⁴, formerly the essential characteristic of the sky-god. The populace could not, or would not, understand the omission, and some writers who ought to have known better actually describe the figure as if it were equipped with the familiar attribute. Seneca⁵, for example, in defiance of plain fact, can say:

‘Pheidias never saw Zeus, yet made him as it were thundering’—

Damit ist die auch sonst haltlose Beziehung auf den Koloss des Nero vorab beseitigt. Aber der Gedanken-zusammenhang fordert auch, dass der verfehlte Koloss ein berühmtes, von anderen als musterhaft anerkanntes Werk ist. Er muss sich zu Platon verhalten wie der Kanon Polyklets zu Lysias. Da kann man auch den Koloss des Chares nicht brauchen, der nicht der Vertreter eines erhabenen, aber incorrecten Stiles sein konnte. Wer es ist, lehrt ein Zeitgenosse des Caecilius, Strabon, der bei Gelegenheit der Hera sagt, dass “die Werke des Polyklet an Kunst die schönsten waren, wenn sie auch an Kostbarkeit und Grosse denen des Pheidias nachstuden” [Strab. 372].’

while Lucian¹ goes much further and in a passage of bitter sarcasm upbraids Zeus for failing to use the thunderbolt in his hand:

'O Zeus, where is now your resplendent lightning, where your deep-toned thunder, where the glowing, white-hot, direful bolt? we know now 'tis all fudge and poetic moonshine—barring what value may attach to the rattle of the names. That renowned projectile of yours, which ranged so far and was so ready to your hand, has gone dead and cold, it seems; never a spark left in it to scorch iniquity.

If men are meditating perjury, a smouldering lamp-wick is as likely to frighten them off as the omnipotent's levin-bolt; the brand you hold over them is one from which they see neither flame nor smoke can come; a little soot-grime is the worst that need be apprehended from a touch of it. No wonder if Salmoneus challenged you to a thundering-match; he was reasonable enough when he backed his artificial heat against so cool-tempered a Zeus. Of course he was; there are you in your opiate-trance, never hearing the perjurers nor casting a glance at criminals, your glazed eyes dull to all that happens, and your ears as deaf as a dotard's.

When you were young and keen, and your temper had some life in it, you used to bestir yourself against crime and violence; there were no armistices in those days; the thunderbolt was always hard at it, the aegis quivering, the thunder rattling, the lightning engaged in a perpetual skirmish. Earth was shaken like a sieve, buried in snow, bombarded with hail. It rained cats and dogs (if you will pardon my familiarity), and every shower was a waterspout. Why, in Deucalion's time, hey presto, everything was swamped, mankind went under, and just one little ark was saved, stranding on the top of Lycoreus and preserving a remnant of human seed for the generation of greater wickedness.

Mankind pays you the natural wages of your laziness; if any one offers you a victim or a garland nowadays, it is only at Olympia as a perfunctory accompaniment of the games; he does it not because he thinks it is any good, but because he may as well keep up an old custom. It will not be long, most glorious of deities, before they serve you as you served Cronus, and depose you. I will not rehearse all the robberies of your temple—those are trifles; but they have laid hands on your person at Olympia, my lord High-Thunderer, and you had not the energy to wake the dogs or call in the neighbours; surely they might have come to the rescue and caught the fellows before they had finished packing up the swag. But there sat the bold Giant-slayer and Titan-conqueror letting them cut his hair, with a fifteen-foot thunderbolt in his hand all the time!

So Lucian, like Seneca, was labouring under the delusion that Zeus *Pheidiakós*², as he came to be called, was fulminant. Roman rhetoric and Greek satire had equally failed to grasp the sculptor's new conception.

In truth that new conception was too exalted for a public which preferred truculence to tranquillity and could appreciate

a triumphant victor or even a threatening tyrant more readily than a peaceful, undemonstrative ruler. The god whose government was based upon right not might, love not fear, was an ideal for future ages, born five hundred years in advance of his time.

During those five centuries his statue experienced some surprising vicissitudes. The descendants of Pheidias, entrusted by the Eleans with the task of cleaning it, were called officially the *Phaidryntai* or 'Burnishers,' and before setting about their duties used to sacrifice to Athena *Ergane*¹. Oil was poured out in front of Zeus to preserve the ivory from decay², a dark oil made from pitch being regarded as best for the purpose³. H. C. suggests that the wooden core of the great chryselephantine figure was pierced by tubes or channels, which conveyed the oil in all directions and prevented the wood from being affected by changes of temperature. A similar device was employed for Endoios' *xóanon* of Artemis at Ephesos¹ and for the cult-image of Saturn at Rome². Such precautions notwithstanding, by the middle of the second century B.C.³ the ivory of Zeus *Olímpios* was cracked and had to be refurbished by the sculptor Damophon⁴.

But graver dangers than slow disintegration were to follow. In the days of Julius Caesar the statue is said to have been struck by lightning⁵, we do not know with what effect. Worse than that, in 40 A.D. Caligula actually gave orders that it should be brought to Rome. P. Memmius Regulus, commissioned to carry out the sacrilege, was warned by the architects that the removal of the statue would entail its destruction, and was further deterred by the occurrence of incredible portents. Accordingly he abandoned the attempt and wrote to the emperor explaining his reasons. These scruples might have cost him his life⁶, had it not been for the opportune assassination of the tyrant on January 24, 41 A.D.⁷

Caligula's intention had been to replace the head of Zeus by a portrait-head of himself. But whenever the workmen approached to lay hold of the pedestal, loud laughter burst from the lips of the statue and put them to instant flight. Also, the ship built to transport it was shattered by thunderbolts. So Caligula, after threatening Zeus, had perforce to substitute another effigy in his own temple on the Palatine¹. About the middle of the second century Lucian² mentions that thieves, greatly daring, had recently cut off two of Zeus' golden tresses weighing six minas apiece. In 394 A.D. Theodosios i, pursuing his policy of suppressing all paganism³, abolished the Olympic festival⁴ despite its unbroken record of 1169 years. And in the reign of his grandson Theodosios ii (408—450 A.D.) the temple of Zeus *Olympios* perished in a conflagration⁵.

Not so the great statue, which had hitherto contrived to escape the successive threats of decomposition and lightning, mutilation and robbery. At some uncertain date, after the overthrow of its worship and before the destruction of its temple, it was removed to Byzantion and set up in the House of Lausus⁶ among such world-famous works as the Samian Hera of Athenis and Boupalos, the

Cnidian Aphrodite of Praxiteles, and the Kairos of Lysippos¹. But its exile was of no long duration. The Lauseion in turn was burnt in 462 A.D.², and with it disappeared for ever the masterpiece of Pheidias.

The statue had gone; its influence remained. Theodoros Anagnostes³ (c. 530 A.D.) tells a strange tale of a certain painter who ventured to portray the Saviour in the guise of Zeus. The hand with which he painted thereupon withered away, but was restored again in answer to the prayers of Saint Gennadios. Later writers⁴ repeat the incident, Theophanes⁵ and Kedrenos⁶ referring it to the year 463—just a twelvemonth after the destruction of the statue. Theodoros and most of the later authorities add the comment that the type with curly and short hair was the more authentic likeness.

We have here a clear recognition of two main types in the iconography of Christ—the one youthful and beardless, with comparatively short, curly hair, the other more mature and bearded, with moustache and flowing tresses. It used to be thought that the beardless type was considerably earlier than the bearded, the former alone being found till the end of the fourth century, the latter dating from the first half of the fifth⁷. But we now know that the two had existed side

⁷ V. Schultz *Grundriss der christlichen Archäologie*. München 1919 p. 132 contends that, in the absence of authentic portraiture, throughout the first four centuries of our era the prevalent conception of Christ, derived alike from the Old Testament (Psa. 45. 2) and

by side at least from the second half of the second century¹, though their relative frequency underwent continuous change. At first the

the New (John 1. 14, 2 Cor. 4. 4, Col. 1. 15, Hebr. 1. 3), necessitated an ideal rendering of him as the Son of God: 'Daraus ergaben sich für das Christusbild der Kunst zwei Forderungen und Forderungen, Schönheit und Jugend. Cp. Nikephoros Kallistos Xanthopoulos *hist. eccl.* 6. 15 (cxlv. 1160c—1161 A Migne). J. Wilpert 'Alte Kopie der Statue von Paneas' in the *Strena Buliciana* pp. 295—301 has shown that this much-discussed monument was certainly Christian not pagan in character, but represented the Syrophoenician woman (Mark 7. 26) rather than the woman with an issue of blood (Mark 5. 25). He accepts the suggestion of R. Garrucci *Storia della arte cristiana nei primi otto secoli della chiesa* Prato 1881 v. 44—47 pl. 323. 4—6 that a marble sarcophagus (no. 174) now in the Lateran Museum (O. Marucchi

beardless type was by far the more common, the bearded was rare and exceptional. But scenes of judgment, law-giving, and teaching, in which stress was laid on the majesty of the central figure, gradually popularised the maturer type¹ until it almost superseded the more youthful. It seems probable that both were to some extent influenced by pre-existing pagan types. I have already suggested that the boyish figure of Christ on the chalice of Antioch is reminiscent of the child Zeus or Dionysos². And Furtwängler³,

I monumenti del museo cristiano Pio-Lateranense Milano 1910 p. 22 pl. 29, 2, 2A, 2B) has preserved on its right-hand side a faithful copy of the Paneas bronze. If so, the figure of Christ was of the bearded type. Asterios, bishop of Amaseia, *ap. Phot. bibl.* p. 505 b 5 ff. states that the bronze was destroyed by Maximinus, i.e. Galerius Valerius Maximinus (305—314 A.D.). But Philostorg. *hist. eccl.* 7. 3 (lxv. 537 C—539 C Migne) puts its demolition in the time of Julian (361—363 A.D.), as does Sozom. *hist. eccl.* 5. 21 (lxvii. 1280 B—C Migne) adding a story that, when Julian set up a statue of himself in its stead, this was struck by lightning: Philostorgios claims that the head of Christ was separately preserved by the Christians; Sozomenos, that the fragments of the whole figure were piously put together and bestowed in the church. See for details E. von Dobschütz *Christusbilder* Leipzig 1899 p. 250* ff.

The *hypogaeum* discovered at Rome in 1919 close to the Viale Manzoni was decorated with paintings which range from the second half of s. ii to the first half of s. iii A.D. (G. Bendinelli in the *Not. Scavi* 1920 pp. 123—141 with figs. 1—8 and pls. 1—4, *Am. Journ. Arch.* 1921 xxv. 304, R. Paribeni *Antichissime Pitture Cristiane a Roma* Milano 1921, R. Lanciani in *The Illustrated London News* for Jan. 14, 1922 p. 54 f. with 7 figs.). These include fine portrait-figures of the eleven Apostles, four representations of the Good Shepherd carrying a ram on his shoulders, and some more problematic landscape scenes. The most impressive of the second-century paintings shows a bearded man sitting on a wooded or bushy hillside with an open roll in his hand: below him sheep and kids are assembled (Bendinelli *loc. cit.* p. 131 f. pl. 3, M. H. Swindler *Ancient Painting* Yale Univ. Press 1929 p. 402 fig. 621, E. Strong *Art in Ancient Rome* London 1929 ii. 155 with fig. 492). We can hardly fail to recognise the Shepherd-Judge and Divine Ruler (*supra* ii. 1208 f.). And Bendinelli does well to recall the epitaph of Aberkios μαθητῆς ποιμένος ἀγροῦ, ὃς βόσκει προβάτων ἀγέλας ὄρεσιν πεδίοις τε. ὀφθαλμοῦς δὲ ἔχει μεγάλους πάντη καθορώντας. | οὗτος γάρ μ' ἐδίδαξε < > γράμματα πιστά (text and commentary in C. As to the bearded type in the Catacomb of Domitilla, J. Sauer in the *Strena Buliciana* p. 310 observes: 'Es findet sich in der Domitilla-Katakomben, Cubiculum III (Wilpert Taf. 40. 2; 54, 2 und S. 107) aus der 1. Hälfte des 3. Jahrhunderts: der Heiland ist hier als Richter oder Lehrer dargestellt mit langem Haupthaar und kurzem aber vollem Barthaar. An der Identität dieser Figur ist trotz der Einwendungen von Victor Schultze [*Grundriss der christlichen Archäologie* p. 141] nicht zu zweifeln; die Nachweise Wilperts hiefür [Wilpert p. 406] sind unseres Erachtens völlig überzeugend.'

new faith. Even the lower classical conception of Zeus as a threatening storm-god appealed to the barbarians of the empire and finally made its way into the religious art of the Renaissance (fig. 782)¹.

beginnings, its slow mental and moral growth, its adolescent complexities, its later multifarious advances, approaches, contacts, overlappings, fusions, and identifications? That is a grave question, which I find hard to answer unless, like Browning's Ixion,

'Out of the wreck I rise—past Zeus to the Potency o'er him.'

Let us be bold to assert that throughout all ages and in every clime God has been making his mute appeal to men, drawing them, Jew and Gentile alike, with the cords of love nearer and nearer to Himself. Progressive illumination has been given them from above as they were able to bear it. The poets and thinkers of Hellas were receptive souls, and to them were vouchsafed glimpses and more than glimpses of eternal truth. If Pherekydes¹ taught that Zeus transformed himself into Love when he created the world, if Aischylos² found in Zeus the only possible solution for the problem of evil, if Aratos³ said that 'always we all have need of Zeus,' if Dion⁴ described Zeus as 'the common Father and Saviour and Keeper of mankind,' then Pherekydes and Aischylos and Aratos and Dion were not far from the Kingdom. And, unless I am greatly in error, the cult of Zeus took them one stage, one long stage, on the road thither. Platon⁵ in the *Phaidros* speaks of those who follow Zeus and all the gods by an uphill path to the summit of the heavenly vault, the right view-point of the universe. What is the panorama that greets their purified eyes? A vista of ideal verities, says Platon⁶, such as 'no earthly bard has ever yet sung or ever will sing in worthy strains.'

Christ, seated on the globe of heaven (*supra* i. 50 f.), is distinguished from Zeus or Iupiter only by the wounds in his hands and feet. ⁷ Eur. *ap.* Aristoph. *vesp.* 751. The schol. *ad loc.* says: κείνων ἔραμαι· ἐξ Ἰππολύτου Εὐρπιδου. F. H. M. Blaydes, after L. C. Valckenaer, supposes a quotation from the earlier Ἰππόλυτος καλυπτόμενος. In any case the meaning of the original may be divined from Eur. *Alc.* 867 f. ζηλῶ φθιμένους, κείνων ἔραμαι, | κείν' ἐπιθυμῶ δώματα ναίειν.
